

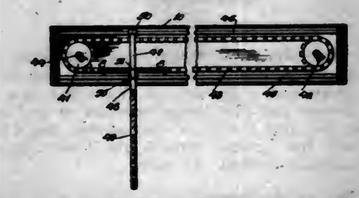
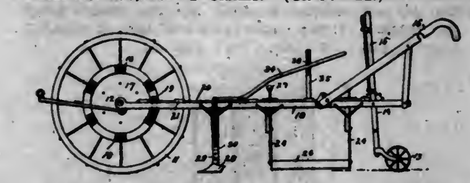
A conveyer belt for fruit slices, comprising a relatively flat body, the outer face whereof has a series of inverted V-shaped ribs extending lengthwise thereof in parallel relation, the ribs being spaced a distance apart materially greater than the height of the ribs so that one may pass his fingers inwardly between the ribs and beneath the fruit slice which may rest thereon.

1,484,249. MANUFACTURE OF ALKYL COMPOUNDS. WALTER BADER, Spondon, near Derby, England, assignor to Dr. Henry Dreyfus, London, England. Filed Oct. 13, 1921. Serial No. 507,577. 10 Claims. (Cl. 260—98.)



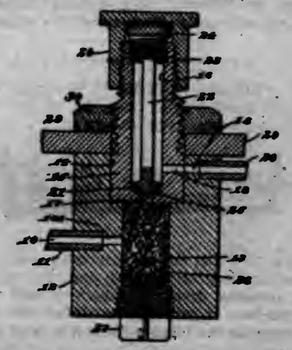
1. In a process for the manufacture of neutral alkyl sulfate, subjecting liquid containing free alkyl hydrogen sulfate to distillation under reduced pressure in a manner whereby at any given moment only that small part of the liquid which is actually undergoing distillation is under the influence of heat, and removing the products of distillation quickly and continuously from the distillation point and from contact with the distilling liquid.

1,484,250. WATER WHEEL. JAMES L. BARNES, Fostoria, Ohio. Filed Aug. 15, 1922. Serial No. 582,007. 1 Claim. (Cl. 170—110.)



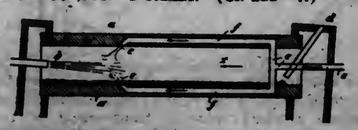
A water wheel comprising a hub, spokes radiating from the hub, pairs of wings having hinge members engaged with the spokes, and segmental brackets secured upon the spokes between adjacent hinge members, said brackets being provided in their opposed sides with pockets extending in opposite directions from the central radius of the bracket toward the side edge portions thereof and each defining divergent walls projecting into the paths of the hinge members and adjacent portions of the wings to limit the swinging movement of the wings.

1,484,251. WINDSHIELD WIPER. FRANCIS H. BRENNAN, Albany, N. Y. Filed Aug. 20, 1921. Serial No. 493,860. 3 Claims. (Cl. 74—14.)



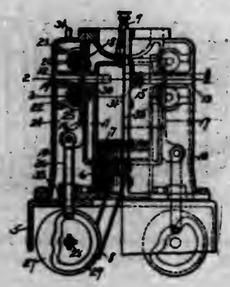
1. A device of the class described comprising a reciprocating element, an actuating member for said element, suitable connection between said element and said actuating member, a casing for said actuating member, a guide for the actuating member, and means in said casing for moving said actuating member along said guide; said means including a motor, an endless chain having pivoted links, one of the link pivots being bifurcated and engaging with said actuating member, and sprocket wheels associated with said motor and supporting said chain.

1,484,252. COTTON CHOPPER. JAMES A. CARY and JESSE C. CARY, Tupelo, Ark. Filed Feb. 11, 1920. Serial No. 357,955. 2 Claims. (Cl. 97—21.)



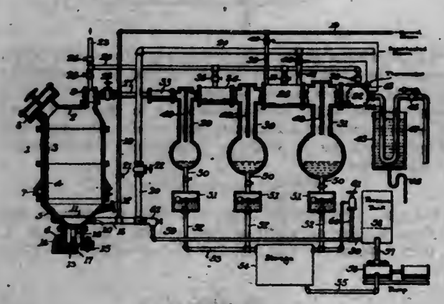
1. A machine of the class described having a wheel-supported frame, a pair of implement-carrying standards, a pivoted connection between each of said standards and the frame on which the standards may move to and from each other, yielding means tending to swing said standards in one direction of their relative movement, and manual means to move them in the opposite direction comprising a hand lever extending longitudinally of the machine, a rod pivotally connected with said lever and extending downwardly therefrom between said standards and links extending between and connecting such standards pivoted together and to the lower end of said rod.

1,484,253. RESTRICTION VALVE. FRANK B. COMINS, Newton, and JOSEPH ARMSTRONG, Malden, Mass., assignors to American Moistening Company, Boston, Mass., a Corporation of Maine. Filed May 28, 1921. Serial No. 473,331. 1 Claim. (Cl. 137—111.)



The combination, in a fluid passage, of a filtering chamber; a cylindrical valve chamber with axial openings one of which constitutes the entrance from the filtering chamber, and with a lateral discharge opening; a valve in the valve chamber, comprising a stem having at one end a surface adapted to close abruptly the said entrance except for a channel continuously permitting restricted flow, and having at its other end means removably engaging the sides of the valve chamber, adapted both to close the other axial opening and to support the stem.

1,484,254. PRODUCTION OF CEMENT AND THE LIKE. OTTO DOHMANN, Stettin, Germany. Filed May 25, 1922. Serial No. 563,503. 4 Claims. (Cl. 222—7.)

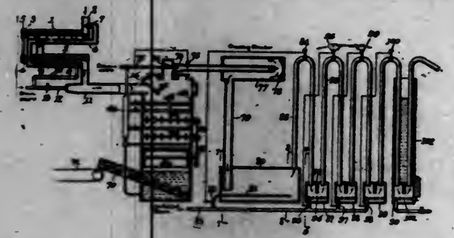


1. The method of producing cement, and more particularly Portland cement, consisting in heating the raw material in a revolving furnace and damming-up or choking the heating gas current in the zone of calcination by a veil of air substantially extending transversely across the furnace.

1,484,255. INTERNAL-COMBUSTION ENGINE. KAY FREDERICK ELLEGARD, Hartford, Conn. Filed July 16, 1920. Serial No. 396,773. 9 Claims. (Cl. 123—75.)

5. An engine including a cylinder, a jacket inclosing said cylinder, a multiple part sleeve valve located between the jacket and cylinder and having a flat bearing surface on one side of each part, said jacket being constructed to be applied to the cylinder from opposite sides thereof, a bearing shaft to engage said flat bearing surface on the valve, and antifriction bearings on the opposite ends of said shaft and removed from said valve.

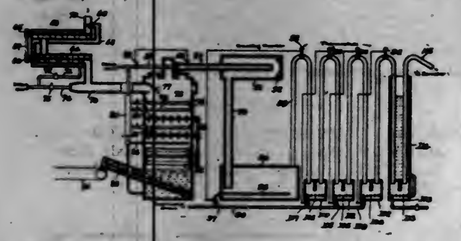
1,484,256. INTERMITTENT SYSTEM FOR TREATMENT OF COAL. JAMES T. FENTON, Salt Lake City, Utah. Filed Aug. 24, 1922. Serial No. 584,038. 17 Claims. (Cl. 196—19.)



10. Apparatus for the distillation of coal comprising a closed retort, means for supplying superheated steam under pressure thereto, a series of separators, a main vapor pipe leading from the retort and connecting the separators, the separators and pipe being larger as the distance from the retort increases whereby the consequent decrease in pressure produces a relative decrease in temperature, and an auxiliary vapor pipe leading from the retort to the separator.

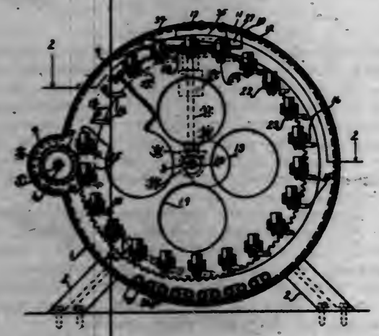
15. Apparatus for the distillation of coal comprising a retort, a superheated steam line for supplying steam thereto, a pipe for conducting the vapors to a series of separators, means for conducting the condensate to a storage tank, and means for forcing the condensate in the form of spray into the superheated steam line and thence into the retort for further cracking.

1,484,257. CONTINUOUS SYSTEM FOR THE TREATMENT OF COAL. JAMES T. FENTON, Salt Lake City, Utah. Filed Aug. 24, 1922. Serial No. 584,039. 11 Claims. (Cl. 202—6.)



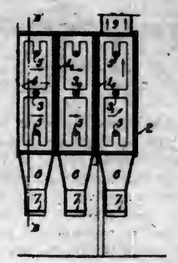
1. Apparatus for the distillation of coal comprising a retort, means for supplying coal thereto continuously, a

plurality of pipes within the retort for admitting superheated steam in the form of jets, a plurality of agitators



within the retort, withdrawal cylinders and a conveyor for continuously withdrawing the treated coal.

1,484,258. PROCESS FOR THE TREATMENT OF COAL. JAMES T. FENTON, Salt Lake City, Utah. Filed Aug. 24, 1922. Serial No. 584,040. 24 Claims. (Cl. 202—8.)

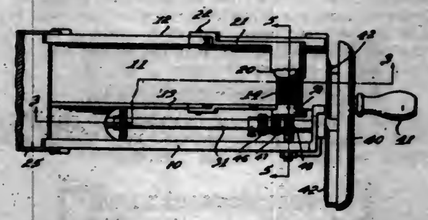


24. A process of manufacturing coke from coal which consists in subjecting it to the action of superheated steam at a temperature of about 1000 degrees F. in a closed retort under such pressure as to thereby remove all smoke producing elements but retain elements that although volatile at a higher temperature are consumed in combustion.

1,484,259. EXHAUST BOX. GEORGE W. FOWLE and FRED F. FELDMANN, San Jose, Calif. Filed Sept. 7, 1922. Serial No. 586,753. 15 Claims. (Cl. 126—272.)

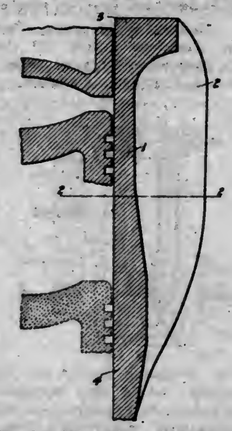
1. A device of the character indicated comprising a supporting frame, a plate revolubly mounted thereon, a second plate revolubly mounted in parallel and eccentric relation to said first plate, a plurality of annularly arranged cranks revolubly mounted in and connecting said plates, and driving means connected to one of said plates.

1,484,260. APPARATUS FOR SUBLIMATION. HARRY D. GIBBS, San Francisco, Calif., by mesne assignments dedicated to the People of the United States for their free use and enjoyment. Filed Jan. 24, 1919. Serial No. 272,902. (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.) 6 Claims. (Cl. 183—11.)



2. In condensing mechanism of the character set forth the combination with a casing, of means for introducing vapors to be condensed into the casing, means for permitting the escape of the residues, screens in the casing between the introducing and escape permitting means, brushes acting against the screens, means for effecting a relative movement between the screens and brushes, and means operating over the bottom between the screens for separately collecting the materials condensed and deposited in the different compartments formed by the screens, and separately discharging the same from the casing.

1,484,261. LABEL HOLDER. WILLIAM GRIESBACH, Greenfield, Mass. Filed Mar. 22, 1923. Serial No. 626,780. 5 Claims. (Cl. 40—16.)



4. A label receiving device comprising a member having a U-shaped channel for receiving and retaining the label, a spring actuated device attached to said member in parallel relation thereto for retaining the member in place by engaging the inner sides of a door of a container.

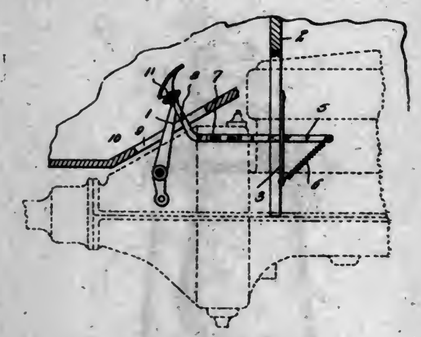
1,484,262. CUTTING MACHINE. JOSEPH I. GRODIN, East Cleveland, Ohio. Filed Apr. 12, 1922. Serial No. 551,754. 9 Claims. (Cl. 107—21.)

2. In combination, an inclined runway, a serrated feed roll mounted beneath the runway and protruding slightly thereabove, a shaft mounted transversely of the feed roll, sets of worms having single, double and triple pitch threads thereon respectively, for operating the worm wheel, a rotary cutter mounted on said shaft adjacent the end of the runway, and means whereby relative movement of the cutter and feed roll may be selectively controlled.

1,484,263. CONSTRUCTION OF INTERNAL-COMBUSTION-ENGINE CYLINDERS. VERNON BALFOUR HARLEY-MASON, Cheam, England. Filed May 7, 1923. Serial No. 637,306. 2 Claims. (Cl. 74—108.)

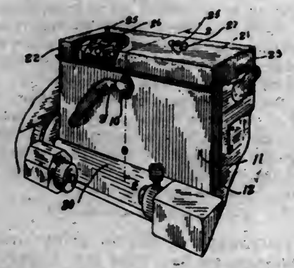
1. A cylinder for internal combustion engines having that part of its wall which in the operation of the engine is subjected to the higher temperature and pressure stresses formed thin and strengthened by integral ribs connected to thicker parts of the cylinder wall.

1,484,264. FLEXIBLE RELIEF DECORATION. PAUL M. HEERWAGEN, Fayetteville, Ark. Filed Sept. 15, 1922. Serial No. 588,474. 2 Claims. (Cl. 41—24.)



1. A new article of manufacture including a relief decoration member for application to a wall or the like, formed of flexible material having the edge portion disposed laterally to its major portion and defining an open work design composed of a plurality of interconnected design forming elements, said edge portion being continuous and forming a support for the relief portion extending from the central portion to the outer edges, said major relief portion including depressions and projections.

1,484,265. HYDRAULIC JACK. JOHN B. HIRD and JOHN B. HIRD, Jr., Seattle, Wash., assignors, by direct and mesne assignments, to Ideal Machinery Company, a Corporation of Washington. Filed July 20, 1922. Serial No. 576,199. 6 Claims. (Cl. 138—9.)

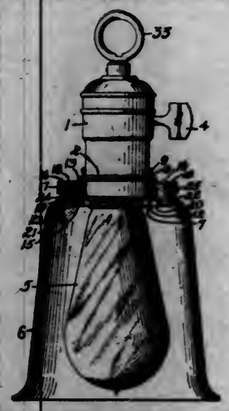


2. A lifting jack embodying a wheel supported frame, hydraulic jack mechanism mounted on the forward end of said frame, lever means on the rear end of said frame for operating said hydraulic jack mechanism and foot operated release means connected with said hydraulic jack mechanism and operable from the rear end of said frame.

1,484,266. CLUTCH-PEDAL MECHANISM FOR AUTOMOBILES. MATHIAS A. HOLTZBAUER, Belmond, Iowa. Filed May 24, 1922. Serial No. 563,356. 1 Claim. (Cl. 74—81.)

The combination with the foot lever of an automobile, of a thrust bar, having one end pivotally connected therewith, a plate supported forwardly of the thrust bar and having a slot thereon, the bar being provided with a V-shaped notch adapted to receive one edge of the plate at predetermined times and a triangular shaped latch element pivoted in the notch adapted to close the notch at times to cause the notch to ride over the plate and a contractile spring having one end secured to the thrust bar and its opposite end connected to the plate.

1,484,267. ENGINE COVER. WILLIAM W. HULL and CHARLES H. HULL, Denver, Colo. Filed Aug. 25, 1923. Serial No. 659,406. 1 Claim. (Cl. 123—90.)

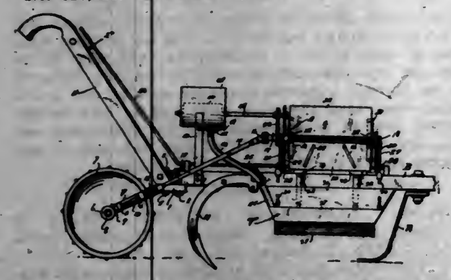


An engine protective cover comprising a section having a side and two end portions, said end portions being bent at right angles to the side, the upper edge of the side and ends being bent downwardly and then upwardly so as to form a gutter, the outer wall of said gutter being lower than the inner wall; and an open boxlike section adapted to cooperate with the first-named section, one side and a portion of each end wall of said boxlike section cooperating with said gutter.

1,484,268. LAMP-SHADE SUPPORT. FRANK J. LIESKE, Detroit, Mich. Filed Mar. 17, 1922. Serial No. 544,532. 2 Claims. (Cl. 240—133.)

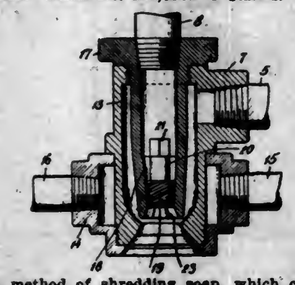
1. The combination with an electric light socket having a circumferential bead, of a threaded sheet metal member having a bead at the upper edge and adapted to be sprung over the bead of the socket, a second threaded member for contracting and maintaining the first member on the socket, said second member having a knurled bead providing a shoulder at the upper end, an

annular member threaded on said second member seating against the head and having a lateral flange and a peripheral depending flange, and an additional annular



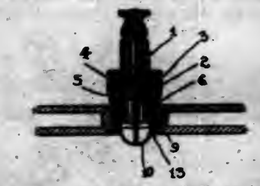
member threaded on the last named annular member and having a lateral flange, the said flanges providing a means for supporting a lamp shade.

1,484,269. METHOD AND ARRANGEMENT FOR PRODUCING NONDAMPED OSCILLATIONS. EMIL MAUER, Charlottenburg, Germany. Filed June 21, 1923. Serial No. 646,098. 4 Claims. (Cl. 250—36.)



1. The method of operating an apparatus for the production of continuous oscillations of the type in which a charging circuit is connected to an oscillatory circuit and is periodically short-circuited by an interrupter, said method comprising the adjustment of the point of short-circuit to occur at the instant when the current in the charging circuit becomes equal to and in the opposite direction to the initial value of the oscillatory current, with respect to the short-circuit through the interrupter, and adjusting the point of the interruption of the short-circuit to occur at the instant when the oscillatory current through the interrupter becomes equal and opposite to the current from the charging circuit.

1,484,270. BOLL WEEVIL ERADICATOR. GEORGE W. MOBLEY, Waynesboro, Ga. Filed Feb. 5, 1923. Serial No. 617,028. 2 Claims. (Cl. 43—142.)

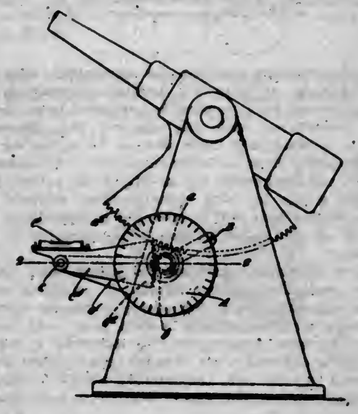


1. A machine of the class described comprising a beam, a trough positioned therebelow, upstanding arms carried by the trough, guide brackets carried by the beam through which the arms are slidably disposed, a rock arm carried by the beam, an operative connection between the rock arm and trough for vertically adjusting the trough, a brushing medium carried by the beam, said brackets being adjustable toward or from the beam, and means for holding the brackets in a fixed position.

1,484,271. PROCESS AND APPARATUS FOR SHREDDING SOAP. SAMUEL B. MURDOCK, Chicago, Ill., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 9, 1919. Serial No. 322,695. 8 Claims. (Cl. 87—16.)

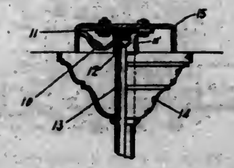
1. A method of shredding soap, which consists in directing an expanding jet of high pressure superheated steam against a moving film or stream of molten soap, in a direction substantially transverse to the direction of movement of the stream but inclining in such direction whereby to seperate irregular shreds of soap from the stream.

1,484,272. SPARK PLUG. AUGUST W. OFELDT, West Hoboken, N. J. Filed Oct. 24, 1921. Serial No. 510,120. 2 Claims. (Cl. 123—169.)



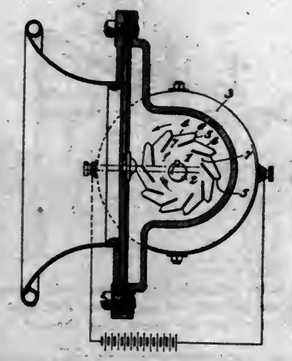
1. A spark plug comprising a shell, an insulation member therein having a recess in its forward portion, a central electrode carried by the insulation member and extending out through the recess, an apertured cap electrode in spark gap relation with the central electrode, and a sleeve disposed concentrically between the recessed portion of the insulation member and the shell, the sleeve having external end flanges which coact with the shell in the provision of an annular air space, to prevent heat radiation and thereby maintain a high temperature within and about the insulation member.

1,484,273. ELEVATOR DOOR. ROBERT S. PEELLE, Hollis, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1920. Serial No. 363,530. 4 Claims. (Cl. 189—46.)



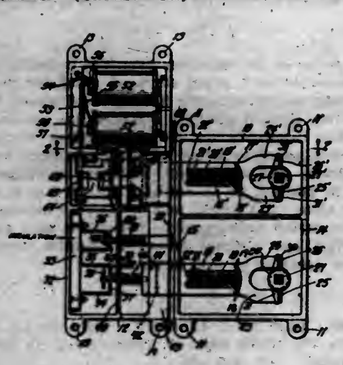
1. An elevator door embodying therein a metal frame, a metal sheathed wooden panel, a bolt passing through said metal frame and said panel, and a nut having a body portion imbedded in the wood of said panel, and an enlarged head bearing upon the surface thereof, whereby the wooden portion of the panel is compressed about said body portion and the metal sheathing of the panel is deformed by and interposed between a portion of said body portion of the nut and the wood of the door.

1,484,274. LEVEL-CORRECTION DEVICE FOR ORDNANCE. ARTHUR LEONARD PERHAM, East Moseley, England, assignor to Vickers Limited, Westminster, London, England. Filed June 8, 1923. Serial No. 644,118. 13 Claims. (Cl. 33—48.)



1. A level correction device for ordnance, comprising in combination a member by which the gun is laid, a levelling element and a connection between said member and said element operating to adjust said member to compensate for the error due to the tilt of the training axis of the gun.

1,484,276. MOUNTING DEVICE FOR LIGHTING FIXTURES. JOHN K. RIDDLE, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio. Filed Oct. 17, 1923. Serial No. 669,084. 2 Claims. (Cl. 240—85.)

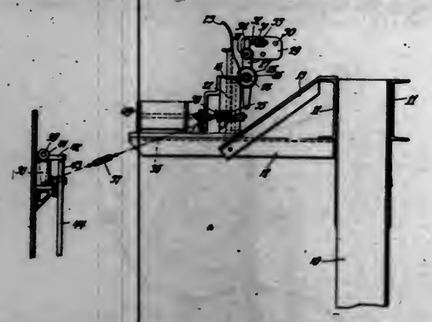


1. An article of manufacture comprising a fixture mounting, a hickey having a central cylindrical tube, a plurality of lugs extending radially from one end of said tube there being a hole through each of said lugs, internal threads in one end of said tube and internal threads in the other end of the tube, two of the lugs being spaced apart and an open slot extending through the wall of said cylindrical tube between the spaced lugs.

1,484,276. CAM-ACTUATED DIAPHRAGM HORN. SAMUEL W. RUSHMORE, Plainfield, N. J. Original application filed Dec. 28, 1921, Serial No. 525,358. Divided and this application filed Feb. 9, 1922. Serial No. 535,122. 4 Claims. (Cl. 116—144.)

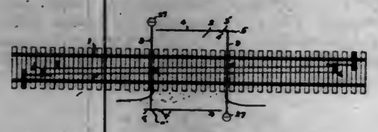
2. The cam specified by claim 1 and wherein the cam faces are planes and the slots extend inward from near the faces of the rear faces of the teeth.

1,484,277. ELECTRIC AUTOMATIC DOOR-LOCKING SYSTEM. JACOB D. SCHAKEL and JOSEPH RICE, Chicago, Ill., assignors to Elevator Company of America, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,752. 16 Claims. (Cl. 187—31.)



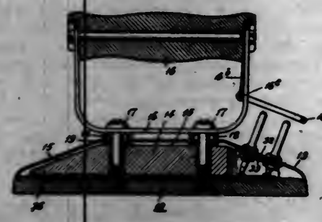
8. A locking system for elevator doors comprising a lock electrically operated to unlock the same, a source of current and control means interposed between said lock and source of current, said means comprising switching mechanism controlled by the position of the elevator car, switching mechanism controlled by the controlling mechanism of said elevator car and manually operated switching mechanism, said lock being provided with a manually operated emergency unlocking device.

1,484,278. ELEVATOR-DOOR-LOCKING DEVICE. JACOB D. SCHAKEL, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1922. Serial No. 599,374. 10 Claims. (Cl. 187—31.)



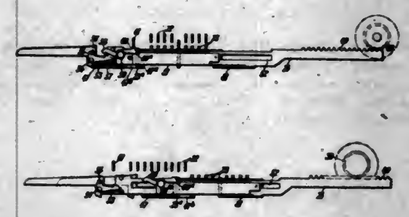
5. In an elevator door lock, a member engaging the door to lock the same against movement, and means for moving said member out of locking position, comprising a pivoted lever carried by the elevator, a roller operatively connected with said member mounted in the ele-

vator shaft, a solenoid for holding said lever out of roller engaging position when the elevator operating current is on, and means for swinging said lever about its



pivot into roller engaging position, said solenoid and means being on one side of said pivot and said lever engaging said roller on the other side thereof.

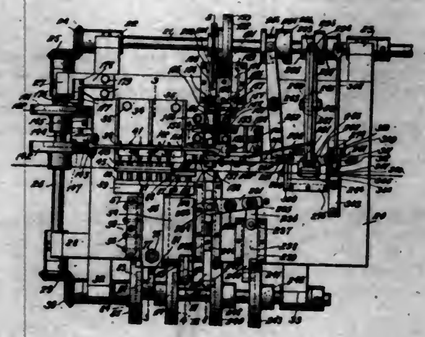
1,484,279. GUARD FOR RAILWAY CROSSINGS. FRANK J. SCHLUETER and MANUEL LOZANO, Houston, Tex.; said Lozano assignor of one-fifth of his right to said Schlueter. Filed Oct. 23, 1922. Serial No. 596,477. 6 Claims. (Cl. 246—293.)



1. A device of the character described including a pivotally mounted road guard arranged alongside the railway track, means normally holding said guard in approximately vertical position, a mechanism connected to said means through which the same may be released to permit said guard to swing into approximately horizontal position, said mechanism including a member arranged in position to be actuated by the truck wheels passing along said track, and to thereby release said means to permit said guard to swing into said horizontal position, and a signal device in operative connection with and actuated by said mechanism.

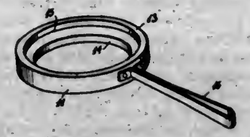
1,484,280. ELECTRIC SADIRON. OTTO SPAHR, Philadelphia, Pa. Filed Sept. 27, 1922. Serial No. 590,790. 21 Claims. (Cl. 219—25.)

1. An electric iron comprising a body, a heating element therein, a pair of terminals connected with said heating element whereby the latter is connected with a source of electricity, said terminals being located in line with each other along the major longitudinal axis of the iron and thereby interposing a resistance against unintentional removal of the connecting plug due to pulling strains upon the wire whereby said plug and iron are connected with a source of electricity.



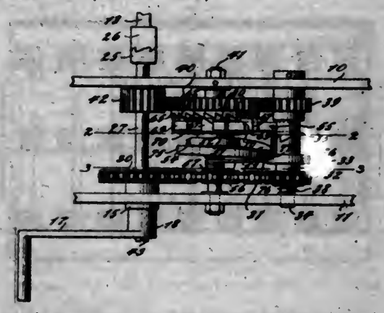
1,484,281. COMBINED TYPEWRITING AND COMPUTING MACHINE. ANDREW W. STEIGER, Hartford, Conn., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,289. 81 Claims. (Cl. 235—60.)

3. In a computing machine, the combination with computing wheels, of bars for severally actuating said wheels, numeral keys, numeral-key-operated index devices set in accordance with the numeral keys depressed, means to actuate said index devices for actuating said wheel-actuating bars in accordance with the index devices set, and mechanism for modifying the action of the actuating means for said index devices, whereby said wheel-actuating bars will be actuated in accordance with a setting of said index devices complementary to that established.



8. In a computing machine, the combination with a register, including register wheels, of actuating means for said register wheels, comprising a general operator and means for transmitting motion from said general operator to said register wheels, including a register bar, a frame carrying a set of index pins slidably mounted on said register bar, and latching means for holding said frame against movement relative to said register bar.

1,484,282. MACHINE FOR MAKING METAL ARTICLES. HAROLD S. WEBBER, New York, N. Y., assignor to Cross Metal Products Company, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1919. Serial No. 290,690. 16 Claims. (Cl. 79—3.)



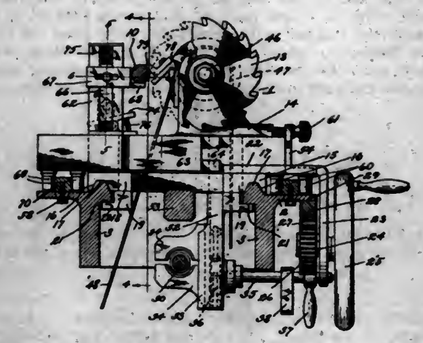
1. A machine for making metal articles comprising means for feeding strips of stock from which the articles are to be made through the machine, means for initially forming heads upon the articles while still in the strip, punching means to remove the headed articles from the strip and having means associated therewith for rolling the rims of the articles, rotary means adapted to subsequently receive the headed and rim-rolled articles and for rotating the same, and means to engage the inner portions of the necks of the heads during the rotating operation to reduce such necks.

1,484,283. METHOD OF AND APPARATUS FOR FINISHING STRAW HATS. OSCAR WIEDEMAN, Narberth, Pa. Filed June 3, 1921. Serial No. 474,706. 14 Claims. (Cl. 223—31.)

1. The method of finishing stiff straw hats after they have been shaped and pressed which comprises raising the braid which has been crushed in the pressing by steaming the outer surface of the hat with a portion of the surface covered to protect it from direct access of the steam.

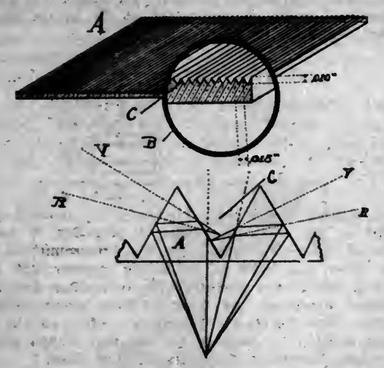
1,484,284. STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. BERNARD ZAIKOSKI, New York, N. Y. Filed Apr. 17, 1922. Serial No. 553,681. 11 Claims. (Cl. 123—185.)

1. A starter for internal combustion engines, comprising a force receiving member, a force applying member, a connection between said members including a normally closed clutch, a rotatable member connected with the force applying member, a normally stationary clutch actuating member coaxial with said rotary member and arranged to release said clutch by a backward angular movement, and means adapted to connect said rotatable member with said normally stationary member when said rotary member is turned backwards.



1,484,285. MOCCASIN. DONALD B. ABBOTT, Auburn, Me. Filed Sept. 7, 1922. Serial No. 586,569. 5 Claims. (Cl. 36—47.)

1. A moccasin, the vamp portion of which on its under side has a seam extending longitudinally of the vamp from its rear edge towards the ball portion of the vamp and another seam in front of that first mentioned which extends cross-wise of the vamp.

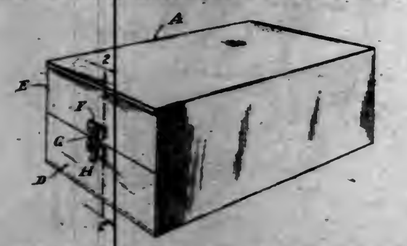


5. A blank for a moccasin vamp having a tapered open portion in the rear part of its under side extending toward the ball portion of the blank and which has two sides of substantially the same length, said blank having also an open portion of general triangular shape forward of the first mentioned open portion, two of whose sides together substantially equal in length the third side of said triangular opening.

1,484,286. WOOD-TURNING LATHE. GEORGE ALBEE, Columbus, Ohio, assignor of one-half to H. W. Unkel, Columbus, Ohio. Filed July 23, 1921. Serial No. 487,116. 1 Claim. (Cl. 142—50.)

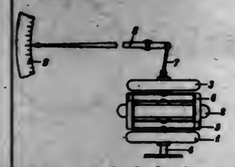
In a wood working lathe, a bed, head and tail stocks carried by the bed, a carriage associated with the bed and having a rotary cutter associated therewith, said carriage including a base and top plate and an intermediate plate, said plates being relatively movable, a bar slidable on the intermediate plate and having a work support carried thereby, said support including a finger for engaging the work, a cam carried by the top plate for raising the finger when the bar and cutter are moved toward each other, as and for the purpose set forth.

1,484,287. PRODUCTION OF LIGHT. FRANK H. BAILEY, Cincinnati, Ohio. Filed May 17, 1921. Serial No. 470,469. 4 Claims. (Cl. 240—1.)



1. A glass for transmission of light, comprising a body of bluish color with a series of fine markings substantially parallel to each other engraved in the surface thereof, for the purpose described.

1,484,288. RECEPTACLE. JOSEPH A. BENEDICT, Chicago, Ill. Filed Jan. 4, 1921. Serial No. 434,968. 1 Claim. (Cl. 220—57.)

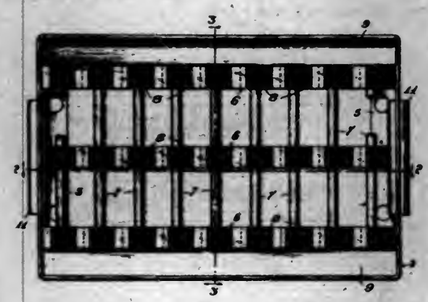


A receptacle having side walls and a top and bottom wall, said receptacle open at one end and said top and bottoms projecting beyond the ends of the side walls, there being a groove in the lower face of the projecting end portion of the top wall, a closure for said open end comprising two plates, one thereof hinged to the projecting end portion of the bottom wall and the other thereof hinged along one edge to the free end of the

first-named plate, the combined length of said plates being such that when flush with each other the free edge of the last-named plate is adapted to engage in said groove, the side edge portions of said plates adapted to abut against the ends of the side walls of said receptacle when in closed position, said plates adapted to be angularly disposed with relation to each other as they are moved to closed position and brought flush with each other as the free end of the second-named plate strikes the ends of the side walls to thereby project said

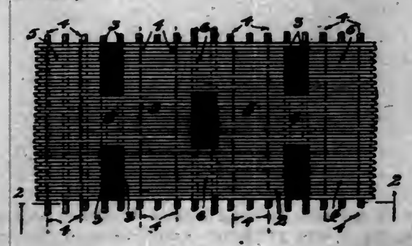
free end into said groove, and means for maintaining said closure member in said position comprising a latch member pivotally secured to one of said plates, a coacting latch element rigidly mounted on the other plate and adapted to engage the free end portion of said pivoted member as the latter is turned to position spanning the hinge connection between said plates, to thereby coact with said ends of said side walls to prevent relative pivotal movement of said plates and disengagement of said free end of said second plate from said groove.

1,484,289. ANEROID BAROMETER. KURT BENNEWITZ, Charlottenburg, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Aug. 30, 1921. Serial No. 496,941. 1 Claim. (Cl. 73—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



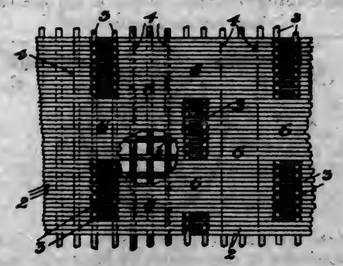
An aneroid barometer particularly for indicating the height of air craft comprising a plurality of aneroid boxes of different elastic properties interconnected with each other and with an indicating member, the boxes forming two groups operating the indicating member in opposite directions, the boxes of each group being so selected that the elastic deformation effect on the indicating member is different for the two groups whereas the elastic inertia effects neutralize each other.

1,484,290. VALVE OR GAS COCK. FRED W. BIRTCH, Laporte, Ind., assignor to Bastian-Morley Co., Laporte, Ind., a Corporation of Indiana. Filed Oct. 19, 1922. Serial No. 595,019. 4 Claims. (Cl. 67—121.)



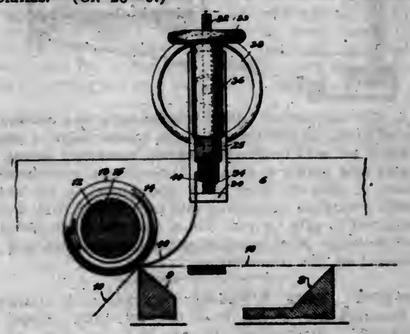
1. In a gas regulating valve, the combination of a casing, a valve arranged in the casing, said casing being provided with an extension having a passage controlled by said valve, the end of the extension being provided with a plurality of separated, substantially parallel fingers, one end of each of said fingers being connected together and terminating in a conical shaped end portion, the conical shaped end portion being formed to provide a gap between said fingers, which extends to a point within the diameter of said passage and said end portion, having an aperture which is arranged in substantial alignment with said valve controlled passage, said extension being threaded, a thimble arranged upon the threaded portion, said thimble being adjustable and in spaced relation to the extension, an aperture provided in said thimble, said last mentioned aperture being arranged to cooperate with the conical shaped end portion of the extension to regulate the flow of gas through the aperture in said thimble.

1,484,291. DISH-HOLDING BASKET. GEORGE S. BLAKESLEE, Chicago, Ill. Filed July 25, 1919. Serial No. 313,307. 4 Claims. (Cl. 141—9.)



1. A dish-holding basket for use in dish washing machines comprising a rectangular metal frame, a plurality of narrow strips disposed on edge therein parallel with and spaced apart from each other, said strips having alined V-shaped notches in their upper margins, and a plurality of transverse rods connecting said strips above the lower margins thereof.

1,484,292. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1923. Serial No. 631,177. 4 Claims. (Cl. 139—391.)



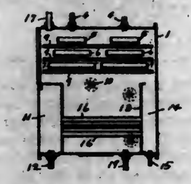
1. A textile fabric comprising a woven base fabric having a plurality of looped threads secured to it and arranged on its front face, the points of securement of some of said threads to the base fabric being located intermediate of the points of securement of other of said threads, portions of said looped threads being adapted to form pile areas and other portions of said threads being adapted to be cut between their points of attachment to the base fabric and removed to render visible portions of the base fabric located between the pile areas.

1,484,293. PROCESS OF MAKING ORNAMENTAL PILE FABRICS. JOHN S. BOYD, Williamstown, Mass., assignor to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1923. Serial No. 631,178. 4 Claims. (Cl. 26—9.)

1. The process of producing a pile fabric consisting in forming a fabric with a woven base and a plurality of threads extending across one face thereof and secured to said base at intervals, the points of joinder of some of said threads to the base being located intermediate of the points of joinder of other of said threads whereby said threads form independent groups arranged in staggered relationship, in cutting said threads and removing portions of said threads from the base to render portions of the base in back of the removed threads visible and thereafter treating the remaining attached thread to form the same into spaced pile areas.

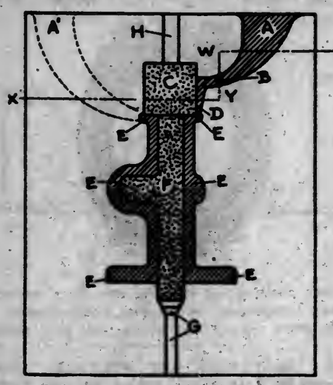
1,484,294. THREAD-HOLDING MEANS FOR PILE-CUTTING MACHINES. JOHN S. BOYD, Williamstown, Mass., assignor to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1923, Serial No. 631,179. Renewed Jan. 12, 1924. 5 Claims. (Cl. 26—9.)

1. In a machine of the class described, a support over which the fabric is adapted to be moved, a plurality of spaced knives adapted to cut threads on the upper face of the fabric while said fabric is moved over the support, a bar, a plurality of spring members having free ends extending downwardly from said bar and projecting between the knives and bearing down on thrads cut by the knives, means for regulating the pressure of said spring members, and means for adjusting the position of said members relative to the knives.



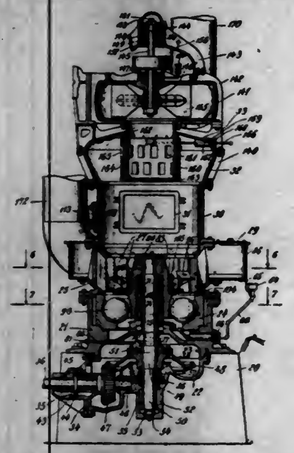
1,484,295. UPSET-TUBE FITTING. HARRY W. BUNDY, Detroit, Mich. Filed Nov. 16, 1922. Serial No. 601,387. 8 Claims. (Cl. 285—124.)

1. In a pipe union, the combination of a coupling comprising a nipple part and a socket part provided with a bevelled seat and which engage each other, and a tube having its end folded over and upset to form a crowded-together thickened portion bevelled on the outside complementary to said bevelled seat in the socket, the said



upset end of the tube being forced against the seat of the socket when the nipple part and the socket part are engaged.

1,484,296. PREHEATER. PHELOGAN BUTAUD, West Columbia, Tex. Filed Mar. 6, 1922. Serial No. 541,459. 4 Claims. (Cl. 261—114.)



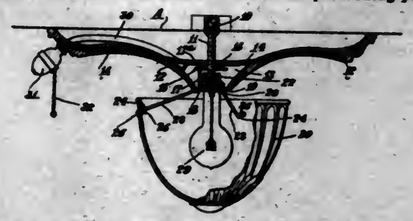
1. A pre-heater, including a casing, a water pipe entering the top of the casing, means for controlling the inflow of water, a pan in the upper part of the casing aligned underneath the discharge end of said water pipe, an outlet pipe leading from said casing, chambers on opposite sides of the casing, one of which is open on one side, an inlet entering the other chamber, a conduit connecting said chambers providing for the passage of a heating medium therethrough.

1,484,297. CASTING OF IRON IN PERMANENT IRON MOLDS. DE FOREST W. CANDLER, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Mar. 16, 1922. Serial No. 544,114. 5 Claims. (Cl. 22—102.)

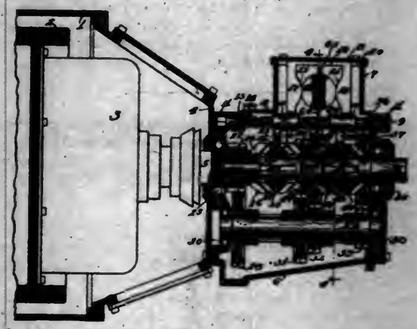
1. In combination with a permanent iron mold for the die-casting of iron of a substantially vertical sprue and a substantially horizontal gate of restricted area both located within the mold, a substantially vertical dry sand core against which the molten iron is delivered laterally, a descenting passage for the iron from the gate past the core into the matrix of the mold.

1,484,298. PULVERIZER MILL. HARRY RAYMOND COLLINS, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Nov. 8, 1919. Serial No. 336,571. 18 Claims. (Cl. 83—45.)

2. A pulverizing unit comprising a casing, means within the casing for pulverizing material, a conduit leading from the top of the casing, means at the top of the casing for forcing a current of air laden within pulverized material through the conduit, means connected to the conduit for separating the material from the air, a return conduit from the separating means to the casing, a member mounted within the casing at the top thereof and provided with ports, means movably mounted upon the first-named member and provided with ports adapted to register with the ports of the first-named member, and means connected to the movable member and extending to the outside of the casing whereby the position of the movable member may be adjusted to regulate the amount of air which may pass through the ports to the means for forcing the air through the conduit.



1,484,299. CORE. JOHN B. DAVIES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 21, 1922. Serial No. 555,839. 8 Claims. (Cl. 18—45.)



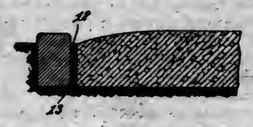
1. A core adapted for molding the inner surface of a tire casing comprising, an arcuate body portion, and a removable plate countersunk in one side face thereof.

1,484,300. ELECTRIC-LIGHT FIXTURE. PERCY I. ELIAS and MICHAEL ANGELO ELIAS, 2d, New York, N. Y. Filed Jan. 15, 1921. Serial No. 437,411. 1 Claim. (Cl. 240—78.)

In a lighting fixture, a reflector having a central opening therein, a metal bar embedded in said reflector, and having a portion thereof protruding from the reflector, said portion being spaced substantially from and disposed over the opening in the reflector and having an opening therein axially alined with the opening in the reflector, and supporting means engaging the said protruding portion through said opening therein to hold the reflector in suspended position, said means comprising a nut having a flange provided with threaded openings, said nut being adjustable against the under surface of the protruding portion of the bar and over a depending wall pipe, and a plate for the opening in the reflector provided with upstanding screws adapted to engage the openings in the flange of the nut to support the reflector, said plate being further provided with an opening to receive the threaded end of a lamp.

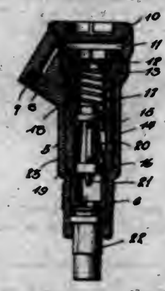
1,484,301. TRANSMISSION CONTROL. CARLYLE B. FUNK, Chicago, Ill. Filed Oct. 22, 1920. Serial No. 418,649. 2 Claims. (Cl. 74—59.)

1. The combination with a transmission, of a mechanism for effecting an adjustment of the transmission, a pinion engaged on said mechanism, spring controlled means engaging said pinion to hold the same against accidental rotation, a rack in mesh with said pinion, a tie rod, a double spring set connecting said rack and tie rod, a lever connected to said tie rod, and a foot pedal for operating said lever to effect rotation of said mechanism and adjustment of the transmission.



1,484,302. FIRE KINDLER. CLARENCE Y. GARRETT, Fountain Inn, S. C. Filed Oct. 29, 1923. Serial No. 671,574. 13 Claims. (Cl. 44—34.)

1. As an article of manufacture a fire-kindler in the form of a porous cake, composed of wood shavings, the individual shavings being thoroughly impregnated and coated with a suitable resinous material.

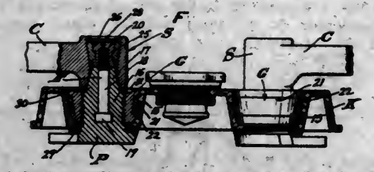


1,484,303. MEANS FOR FORMING EXPANSION JOINTS IN ROADWAYS. HENRY R. GUNDLACH, Baltimore, Md., assignor to The United States Asphalt Refining Company, New York, N. Y., a Corporation of South Dakota. Filed Feb. 7, 1922. Serial No. 534,738. 5 Claims. (Cl. 94—18.)

1. A slab for roadway expansion joints, formed of asphalt, and having a stiffening core of metal with corrugations running longitudinally of the slab to permit expansion widthwise, and spaced from the edges of the slab

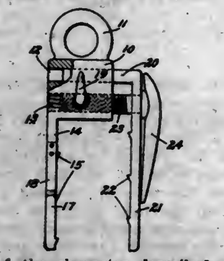
to provide wearing areas of appreciable width on each side of said core.

1,484,304. TORPEDO. ANDREW T. HALL, Newport, R. I., assignor to the Government of the United States. Filed Aug. 9, 1920. Serial No. 402,433. 2 Claims. (Cl. 60—44.)



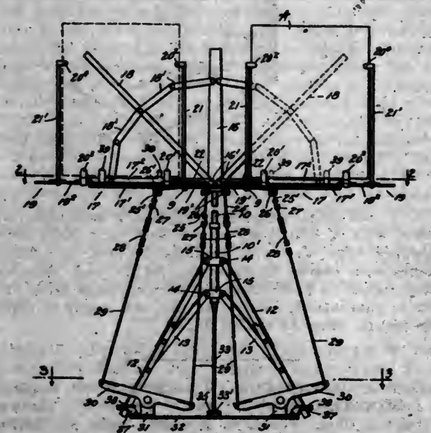
1. A firing mechanism for the combustion flasks of torpedoes comprising a member adapted to carry a cartridge, a firing pin normally held in locked position out of engagement and away from the primer, a firing pin member carrying the firing pin, spring arms carried by said member, a spring engaging said firing pin member and adapted to be compressed on admission of fluid pressure, a second spring adapted to be compressed on admission of fluid pressure, a sleeve interposed between said springs and adapted to co-act with the spring arms carried by the firing pin member to release the same after said springs have been compressed whereby said first spring moves the firing pin into engagement with the primer.

1,484,305. FIREPLACE HEATER. ROBERT P. JENSEN, Seattle, Wash. Filed July 25, 1923. Serial No. 653,628. 5 Claims. (Cl. 126—121.)



1. In a chimney having a fireplace, a flue therefor, an air heating chamber, a second flue, and an inlet passage for said fireplace, a stove provided in said chamber, a stove pipe connecting said stove with said second flue and also with said passage, a system of dampers provided for said pipe, and means for regulating said dampers whereby smoke products from the stove may be directed, selectively, into the second named flue or into said passage.

1,484,306. SELF-SEALING POLE FOR STORAGE BATTERIES. WILLIAM A. MACKENZIE, Long Beach, Calif. Filed Dec. 14, 1921. Serial No. 522,362. 10 Claims. (Cl. 204—29.)

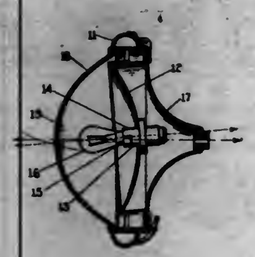


1. A battery cell cover having a socket therein, a post sustaining plug within the socket, and a fusible sealing agent between the wall of the socket and said plug.

1,484,307. DROP CLAMP. ANTON MAZZANOVICH, Los Angeles, Calif. Filed June 27, 1921. Serial No. 480,628. 6 Claims. (Cl. 24—243.)

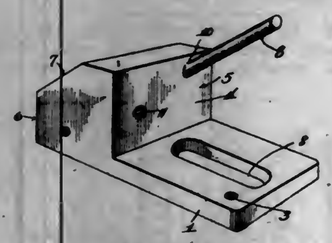
1. A device of the character described comprising L shaped plates, one of which is slotted and notched to form a hook, one arm of the other plate being slidably fitted in the slot of the first plate, a screw threaded rod extending loosely through the second plate and threadedly engaging the first plate, a ring form on the short arm of the first plate, and a spring spanning the mouth of the notch and bendable inwardly.

1,484,308. COMBINED MUSIC-LEAF HOLDER AND TURNER. MATTI NIEMI, Seattle, Wash. Filed July 5, 1921. Serial No. 482,492. 1 Claim. (Cl. 84—503.)



In apparatus of the class described, a frame comprising a centrally disposed bar and two horizontally aligned bracket members pivotally connected thereto, a lever

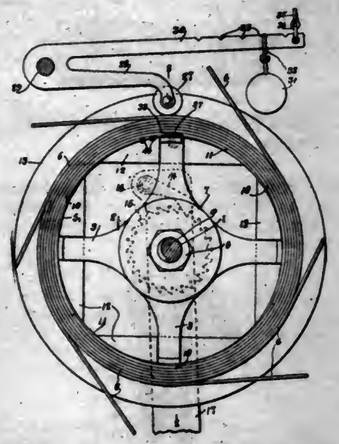
pivotally connected to each of said bracket members, said pivots being disposed with respect to the levers to afford a long and short arm to each of the latter, sheet engaging clips provided on the nolg arms of the respective levers, pedal devices, and flexible connections between said devices and the short arms of said levers for turning the latter about their respective pivots



---

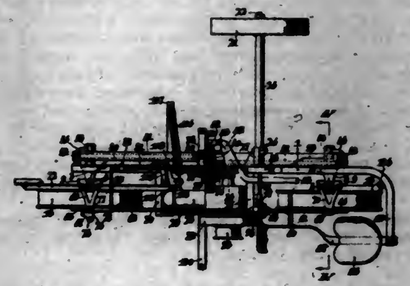
1,484,309. VEHICLE LAMP. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Nov. 28, 1923. Serial No. 677,404. 4 Claims. (Cl. 240—41.)

1. A vehicle lamp comprising a housing, a shallow reflector with a long focal length secured therein, its axis being inclined slightly downwardly from the axis of the housing, a light source mounted substantially at the focal point of the reflector, an outwardly projecting light emitting closure to inclose the light source, the relative positioning of the reflector, housing and light source being such that the light source is in advance of the housing and a concentrated beam is projected forwardly and slightly downwardly therefrom and direct rays are released to illuminate a circular area forwardly and rearwardly therefrom.



1,484,310. TOOL HOLDER. HAROLD SPENCER, Detroit, Mich. Filed July 17, 1920. Serial No. 397,117. 4 Claims. (Cl. 125—11.)

1. A tool holder and tool comprising a base plate provided with a tool head at one end, said head being equipped with transverse openings disposed at different angles with respect to the surface of the base plate and with respect to each other, the said openings being of a size to conveniently receive the tool and means to fasten the tool in either of the openings.



1,484,311. APPARATUS AND METHOD OF MAKING LAMINATED STRUCTURES. FRANK V. TISCHER, Dayton, Ohio. Filed Feb. 28, 1923. Serial No. 621,700. 25 Claims. (Cl. 154—1.)

18. In a method of forming a laminated structure, mounting successive laminations on a volute ring, applying glue to such laminations, applying pressure to the laminations successively as they are wound on the ring,

and arranging the end of the laminations initially applied to the ring against the ends of the volute portion of the ring.

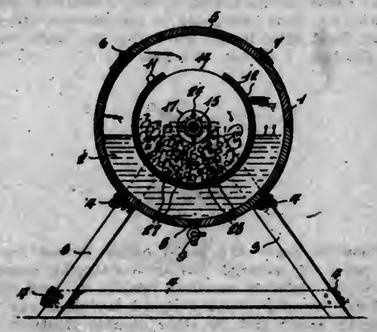
1,484,312. SYN-MOTOR. HERBERT I. WASHBURN, Laurel Springs, N. J. Filed Aug. 21, 1917. Serial No. 187,494. 19 Claims. (Cl. 97—49.)

1. In a device of the class described the combination of a supporting frame; a pair of tractor wheels with supporting mountings pivoted to said frame; swivel nuts carried by said mountings to enable the wheels to shift angularly with reference thereto; and a steering shaft having oppositely threaded ends engaging said nuts for simultaneously shifting said wheels through similar angles in correspondence to the curvature of traction.

11. In a device of the class described, the combination of a structural frame, a pair of tractor wheels pivotally attached to said frame, means for manually turning one of said wheels for steering purposes, means for irreversibly transmitting complementary movement therefrom to the other wheel, a motor for simultaneously driving both wheels, and means for automatically controlling the device independent of the manual steering means when desired.

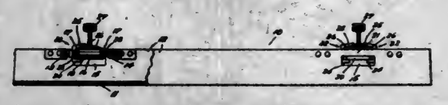
15. In a device of the class described, the combination of a structural frame, a pair of tractor wheels pivotally attached to said frame, means for manually turning one of said wheels for steering purposes, means for irreversibly transmitting complementary movement therefrom to the other wheel, a motor for simultaneously driving both wheels, an ignition circuit for the motor, a cut-out switch interposed in said circuit including a fixed contact, a spring influenced movable switch member cooperative with the said contact, and a laterally disposed

guide wire connected to said switch member for steering the device independently of the manual steering means, said guide wire exerting a steering pull through the contact between the make-and-brake parts of the switch so as to maintain the switch closed only while itself intact.



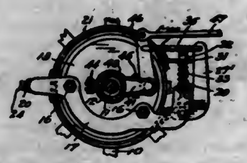
19. In a device of the class described, the combination of a structural frame work; tractor wheels pivoted to said frame work by pivots whose axial lines pass through the point of engagement of the respective wheels with the ground; manually operable means for irreversibly transmitting steering movement to said wheels; and means for automatically steering the device including a guide wire extending laterally therefrom and attached to the mounting of one of said wheels; so that the inequalities of the ground traversed by the wheels are substantially without influence thereon in opposition to said guide wire.

1,484,313. SHOULDER-PATCH-INSIGNIA-ATTACHING MECHANISM. CHARLES R. WELSH, Schofield Barracks, Territory of Hawaii. Filed Oct. 6, 1923. Serial No. 667,031. 10 Claims. (Cl. 40—1.5.)



1. A shoulder patch comprising a support member for the identification mark, a cooperating member, one of said members being resilient, an engaging tongue secured to one of said members, and means on the other member to engage and securely hold said tongue.

1,484,314. REFRIGERATING BARREL. JOSEPH B. WISE, New York, N. Y. Filed June 6, 1923. Serial No. 643,698. 4 Claims. (Cl. 259—50.)

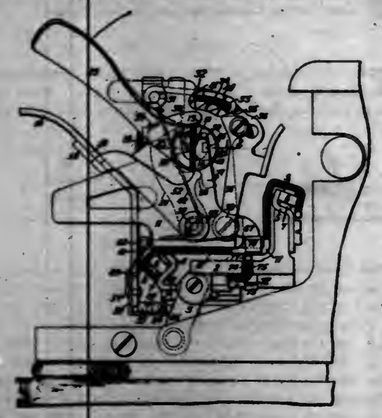


1. A confection stick freezing apparatus, comprising an outer horizontally extended closed container for the freezing mixture, an inner perforate container for the articles to be frozen horizontally disposed within and spaced from the walls of said outer container, said inner container having an upper peripheral opening, and means for oscillating said inner container about a horizontal axis to cause the agitation of the articles in said inner container, the oscillatory movement of said inner container being limited to prevent the discharge of articles through said opening into said outer container.

1,484,315. COMBINED TIE AND RAIL FASTENER. FREDERICK GORDON ALFORD, Algona, Wash. Filed Aug. 7, 1922. Serial No. 580,040. 2 Claims. (Cl. 238—64.)

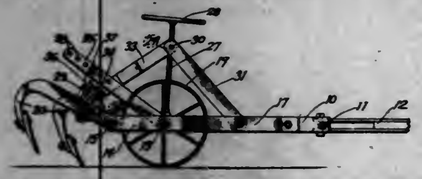
1. The combination with a track-rail, and a metal tie of a substantially U-shape transverse section having apertures in its side elements and provided with spaced struts rigid with the tie and extending between its side elements, of a bridge member of greater length than the width of the tie and engageable in said apertures and, movable lengthwise of the tie between said struts, a pair of rail-engaging members connected to said bridge member, and means connecting the tie struts with the rail-engaging members for regulating and clamping the same successively to the tie.

1,484,316. AUTOMOBILE BRAKE. JOHN W. BAILEY, Seattle, Wash., assignor to Bailey Brake Co., Seattle, Wash., a Corporation of Washington. Filed Feb. 14, 1921. Serial No. 444,661. 2 Claims. (Cl. 188—77.)



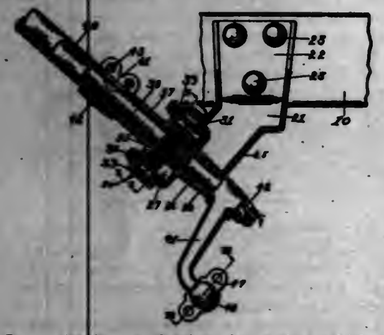
1. An apparatus of the character described, the combination with a vehicle wheel, a brake drum rigidly secured thereto, an axle for said wheel, an axle housing provided with a circular flange element, a brake band, a bell crank lever connected to one end of said brake band and a screw threaded rod connecting said bell crank lever to the other end of the brake band, of a bracket bar rigidly secured to the housing flange at substantially diametrically opposed sides of the brake drum, the opposite ends of said bar respectively serving as a support for the brake band and as a guide for said rod, a nut provided on said rod to limit the separation of the brake band ends with respect to each other, a spring interposed between the rod guiding end of said bar and the brake band, an arbor secured to the axle housing, a sleeve mounted upon said arbor and provided with an arm; a link making connection between said arm and the bell crank lever, a second arm mounted on the sleeve and manually operable connections to the second arm to impart rotary motion to said sleeve for actuating the brake band through the medium of said link and the bell crank lever.

1,484,317. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 27, 1923. Serial No. 615,202. 16 Claims. (Cl. 197—186.)



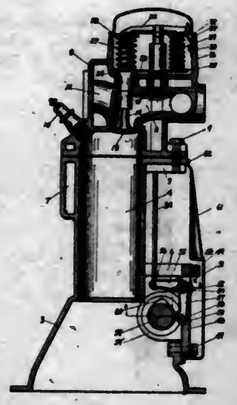
1. In a typewriting or like machine, the combination of a platen, a spindle adapted to telescope in the platen and to be moved from a contracted position to an expanded position for use and having a transverse notch

or groove therein, a finger piece mounted on said spindle, a locking latch adapted to enter said notch and hold the spindle against longitudinal displacement in either



direction, a line spacing pawl, and means controlled by a turning movement of said spindle for actuating said pawl.

1,484,318. TRACTOR CULTIVATOR. ANDREW J. BARNHART, Placentia, Calif. Filed Sept. 22, 1921. Serial No. 502,468. 3 Claims. (Cl. 97—157.)

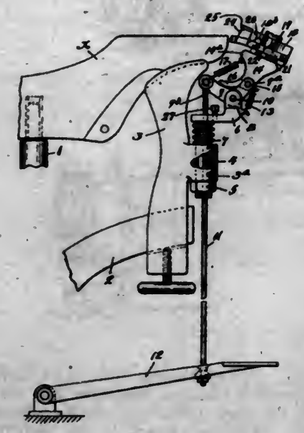


1. In a tractor cultivator, a wheel supported frame and its axle rod, a series of plow carrying beams pivotally connected to the rear portion of said frame, a pair of links pivotally connected to the plow carrying beams, a pair of links pivotally connected to the frame of the cultivator, a block to which the inner ends of the pairs of links converge and are connected, a threaded shaft passing through said block and swiveled on said rod.

1,484,319. STEERING MECHANISM. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 26, 1917. Serial No. 182,857. 14 Claims. (Cl. 74—79.)

1. In a steering mechanism for motor vehicles, the combination of a supporting bracket provided with a recess and carrying a spider disposed in said recess; a shaft carried by said bracket and provided with a steering arm; pinions rotatably mounted on the arms of said spider; a ring mounted on said bracket and provided with an internal gear, meshing with said pinions; a plate secured to said bracket and covering said recess; a shaft journaled therein; a central pinion fixed on said shaft, and meshing with said first mentioned pinions; and a steering column having its lower end secured to said shaft.

1,484,320. VALVE-OPERATING MECHANISM FOR ENGINES. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 21, 1919. Serial No. 284,140. 7 Claims. (Cl. 123—90.)

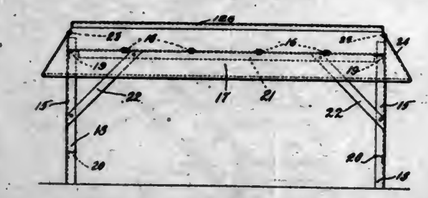


1. In a multiple cylinder internal combustion engine, a frame, a vertically disposed plate secured to said frame and extending longitudinally of said engine, said plate having inwardly projecting extensions thereon, a cam shaft journaled in said extensions and removable longitudinally from the plate, a rocker shaft journaled upon said plate, and a series of rocker arms carried by said shaft.

1,484,321. COMBINED PAPER AND PENCIL HOLDER. PETER A. BROUILLETTE and ARTHUR R. BECK, Sioux City, Iowa, assignors of one-third to Riley J. Beck, Sioux City, Iowa. Filed Aug. 30, 1922. Serial No. 585,143. 1 Claim. (Cl. 24—10.)

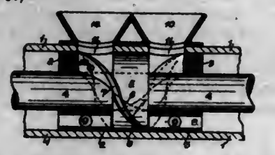
A combined paper and pencil holder formed from a single piece of material having overlapping members parallel and yieldably mounted relative to each other, one of said members being designed to engage one side of a user's pocket and the other member yieldably supported and parallel with the first said member and designed to engage the inner face of the pocket, said second member having yieldably curved pencil supporting portions, the adjacent edges of the first and second members being formed in a cylindrical rib designed to rest on the top edge of the pocket member, the pencil retaining members being so arranged that a pencil when inserted therein will engage said cylindrical rib, said second member being provided with a paper retaining member yieldably mounted relative thereto and to said first member, the adjoining edges of said second member and said yieldable member being provided with a yieldable rib of a greater resiliency than the first said cylindrical rib.

1,484,322. SOLE-POSITIONING DEVICE FOR SHOE-LAST JACKS. FRANK CHATEAUNEUF, Lynn, Mass. Filed Apr. 15, 1921. Serial No. 461,534. 20 Claims. (Cl. 12—33.)



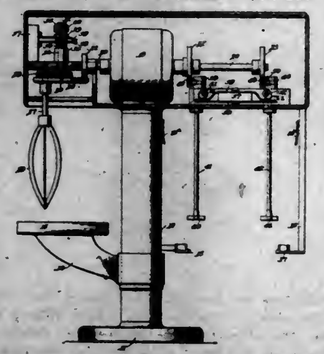
1. In combination with a support adapted to hold a last in inverted position, last-engaging devices for the opposite sides of the last, adjacent its toe-end, mounted to swing about a vertical axis into position in front of said end and to swing about a horizontal axis, longitudinally of the last, into last-engaging position, and sole-edge engaging means movable with said engaging devices into sole-positioning relation with the last.

1,484,323. BRAKE-BEAM FULCRUM. FRANK DITCHFIELD, Montreal, Quebec, Canada, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 20, 1920. Serial No. 375,378. 2 Claims. (Cl. 188—282.)



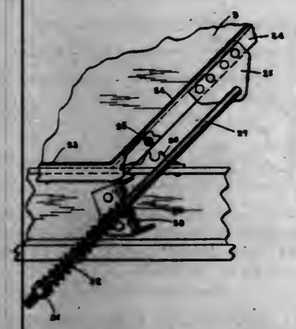
2. A brake beam fulcrum comprising a body member, a reversible lever bearing mounted to turn therein and means for holding said bearing in either of two positions comprising intersecting bolt passages formed in the bearing and bolts adapted to be inserted through said passages and the body member to hold the bearing against turning movement.

1,484,324. ELECTRIC DRYING APPARATUS. EDWIN L. EMERSON, Braintree, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 19, 1920. Serial No. 352,409. 12 Claims. (Cl. 219—19.)



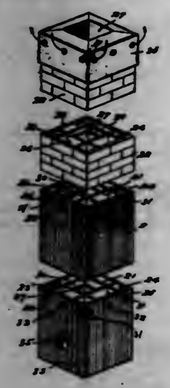
1. A device of the class described comprising a heat generating element, a casing covering said element, and a foraminous table located above said element for supporting articles to be dried.

1,484,325. APPARATUS FOR TREATING PLASTIC SUBSTANCES. SAMUEL FLOOD, Liverpool, England. Filed Oct. 19, 1921. Serial No. 508,765. 7 Claims. (Cl. 259—9.)



1. A machine of the type described, comprising a casing, cam members therein and one of said cam members provided with a discharge opening, and a rotary member between said cam members adapted to be reciprocated when rotated.

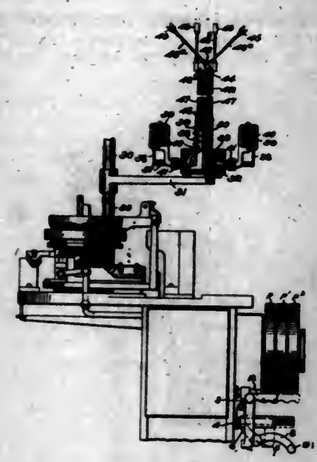
1,484,326. MIXING DEVICE. WILLIAM EARL GRAHAM, Gary, Ind., assignor of one-half to Alex N. Orphan, Gary, Ind. Filed Dec. 9, 1922, Serial No. 605,918. Renewed Dec. 10, 1923. 5 Claims. (Cl. 259—131.)



1. A mixing machine comprising a standard supporting a casing, power means within the casing for driving a shaft disposed therein, a plurality of vertically depending spindles journaled through the bottom of the casing and carrying spinner disks, and selectively operable clutch means for driving either or all of said spindles from said shaft, and operating knobs located on the front of the casing and having stems extending thereinto and carrying clutch control means, said power device being electrically operated, and a plurality of circuit closers arranged in parallel and connected in the circuit to said drive device, and means carried by said stems for operating said circuit closers automatically when the stems are moved to engage the clutch devices.

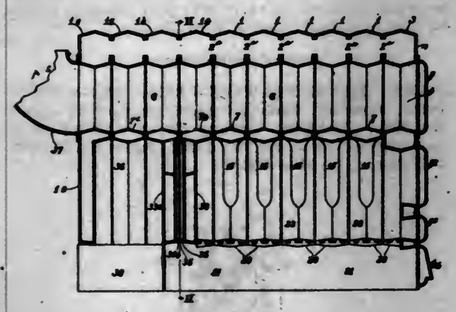
1,484,327. DUMPING BODY FOR VEHICLES. JULIUS P. HEIL, Milwaukee, Wis., assignor to The Heil Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 7, 1921. Serial No. 513,542. 2 Claims. (Cl. 298—10.)

1. The combination with the frame of a vehicle, of a body normally positioned on the frame in load retaining position but capable of moving relative thereto into load discharging position, a rod slidably engaging a portion of the frame and pivotally connected at one end to said body, a stop on said rod, and a spring encircling said rod and interposed between said stop and said portion of the frame, for the purpose specified.



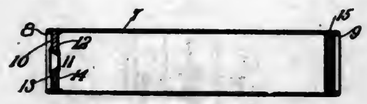
1,484,328. COMBINED VENTILATING FLUE AND CHIMNEY. ALBERT H. HEIMBACH, St. Paul, Minn. Filed Aug. 11, 1922. Serial No. 581,044. 3 Claims. (Cl. 72—92.)

1. A chimney tile consisting of spaced inner and outer rectangular shells, the former of which affords a central main flue, the sides of said inner shell being extended to the walls of the outer shell to form rectangular corner and intermediate flues that are entirely separate the one from the other, certain of said outer shells having holes that open directly into the corner and intermediate flues.



1,484,329. STOP MOTION FOR TEXTILE MACHINES. EDSON S. HIMELING, Apponaug, R. I., assignor to Himeline Engineering Company, a Corporation of Rhode Island. Filed Mar. 15, 1920. Serial No. 365,939. 5 Claims. (Cl. 66—7.)

1. An electrical stop motion for knitting machines having an upright creel rod, a receptacle supported from said creel rod, a fixed upright rod extending upwardly from the receptacle, a plurality of vertically movable rods corresponding in number to the number of yarns, a lever with a forked open end directly connected to each rod, a contact at the lower end of each rod, a mercury cup into which such contact is adapted to dip, and operative connections between the contacts and the shipper

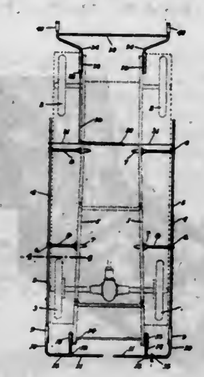


mechanism, the construction and relation of parts being such that the unduly tensioned yarn slips from the forked open end of the lever pertaining thereto substantially simultaneously with the contact in the mercury cup, whereby additional tightening of the yarn at the needles is prevented.

1,484,330. BOILER. CHARLES HOWARD HOOK and ARNOLD W. MILLER, Pittsburgh, Pa.; said Miller assignor to said Hook. Filed May 14, 1921. Serial No. 469,717. 3 Claims. (Cl. 122—225.)

1. In a boiler construction comprising a plurality of associated sections forming a fire box having a closed top and a combustion chamber into which the gases from the fire box must pass, the combination of two similar adjacent sections forming a partition across the end of the fire box and dividing it from the combustion chamber, the partition extending upwardly from the bottom of the fire box and provided with portions stopping short of the top of said fire box, and an opening through the said partition from beneath the fire box into the combustion chamber, whereby to supply heated air from beneath the fire box to the burning gases as they pass from the fire box to the combustion chamber.

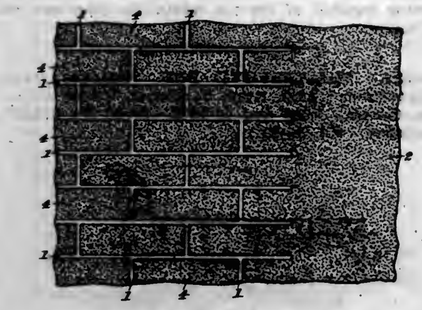
1,484,331. GREASE CONTAINER AND GUN THEREFOR. WARREN B. HOPKINS, Brookline, Mass. Filed Nov. 17, 1921. Serial No. 515,949. 2 Claims. (Cl. 221—79.)



1. A grease container having, in combination, a tube, an end closure fast thereto, an eyelet centrally located in said end closure, frangible means sealing said eyelet and another end closure slidable in said tube.

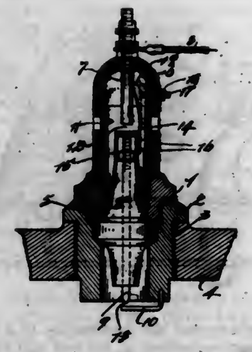
1,484,332. TOOL HOLDER. FERNANDO OSCAR JAQUES, Jr., Providence, R. I. Filed June 14, 1923. Serial No. 645,405. 6 Claims. (Cl. 29—96.)

1. A tool holder having a fixed lower jaw and a movable upper jaw pivotally secured to the holder and extending over the lower jaw, said tool holder having a constructino whereby the pivoted upper jaw is pivotally secured in place in the holder, by a sidewise movement of the pivoted upper jaw, for the purpose as described.



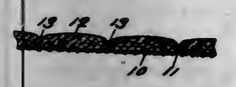
1,484,333. SAFETY FENDER FOR AUTOMOBILES. OSCAR E. JONES, Marysville, Calif. Filed Mar. 28, 1923. Serial No. 628,251. 7 Claims. (Cl. 234—29.)

1. A fender structure for automobiles comprising in combination with fender bars mounted on the vehicle and a speedometer mounted thereon, means between the bars and speedometer whereby a visible and permanent record of the speed of the vehicle at the time the bars are struck will be obtained.



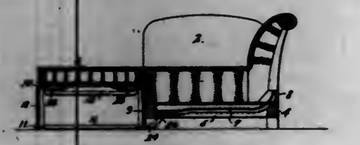
7. A fender structure for automobiles comprising in combination with fender bars, turnably mounted along the sides of the vehicle and a speedometer likewise mounted on the vehicle, said speedometer having a speed indicating needle and a dial movable theretowards, a marking element carried by the needle, means between the bars and dial for moving the latter into engagement with the marker with the rotation of the bars, rear fenders on the vehicle arranged for horizontal movement, and means between the side and rear fenders whereby when such movement is imparted to the latter the side fenders will be rotated, and means whereby the side fenders may be rotated alone without imparting any movement to the rear fenders.

1,484,334. PROCESS OF SURFACING WALLS. THEODORE KERNER, Milwaukee, Wis. Filed Feb. 27, 1919. Serial No. 279,487. 2 Claims. (Cl. 41—38.)



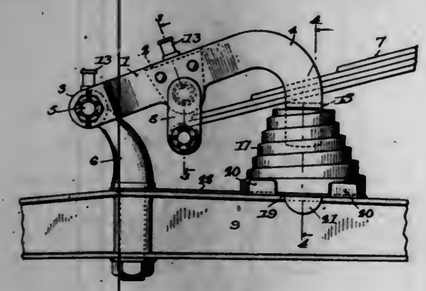
1. The process of surfacing walls of stationary structures, which consists in applying a coating of adhesive material to one side of a fixed substantially rigid wall, spreading a coating of sand evenly over the adhesive coating while it is soft, and scraping off parts of the sand coating according to a predetermined design, thus forming a fixed substantially rigid base having a sand surface with portions in low relief between incisions formed by removal of intervening portions of the sand coating, the incised portions presenting a relatively smooth surface compared with the low-relief sand portions.

1,484,335. SPARK PLUG. WILLIAM P. KERRIGAN, Astoria, N. Y. Filed July 15, 1922. Serial No. 575,247. 12 Claims. (Cl. 123—169.)



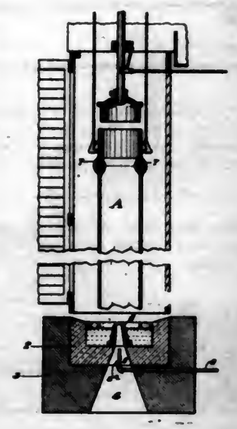
1. A spark plug having in combination with its spark gap a supplemental spark-intensifying gap, and electrical conducting thermostatically operated means arranged to bridge said gap.

1,484,336. METHOD OF MAKING SEAT COVERS. ADOLPH H. LICHTER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 279,016. 6 Claims. (Cl. 155—184.)



1. The method of making seat covers comprising the securing of the filler to the base fabric, the scoring of the surface of the sheet material thus formed, and the stitching together of the top fabric, the filler and the base fabric.

1,484,337. CHESTERFIELD BED. CHARLES OSCAR MORLOCK and AXEL NORD, Vancouver, British Columbia, Canada. Filed Aug. 2, 1922. Serial No. 579,201. 7 Claims. (Cl. 5—21.)

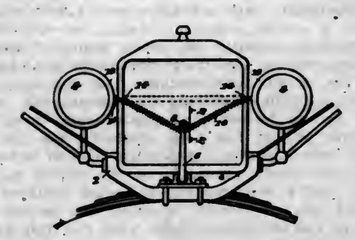


7. An improved Chesterfield bed, comprising the combination with a couch having a low positioned open rectangular frame supported a short distance from the floor and upholstered to provide a flat seat portion and a flat unbroken front, removable cushions cooperative with said flat seat, a rectangular extensible and foldable bed frame supported wholly by said couch frame when in the normal folded position, means whereby said bed frame may be extended so that the extended portion may rest wholly on the floor, and other means whereby said bed frame may be vertically extended from its normal folded position to a height for supporting the removable cushions on a plane with the seat portion of the couch.

1,484,338. SHOCK ABSORBER. GUSTAV A. NOETZEL, Waukesha, Wis., assignor to Pressed Metal Mfg. Co., Waukesha, Wis., a Corporation of Wisconsin. Filed July 18, 1921. Serial No. 485,417. 6 Claims. (Cl. 267—17.)

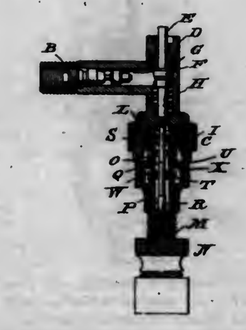
1. In a shock absorber the combination of a forker lever having a fulcrum connection at one end and its fork arms at the other end offset to form bearings for engagement with the under side of a leaf spring straddled by said arms and connected with the lever between its ends, and a volute spring adapted to engage at its upper end the under sides of the offsets of the fork arms and to rest at its lower end on a supporting member below the leaf spring.

1,484,339. MANUFACTURE OF GLASS CYLINDERS. CLYDE S. ROBB, Charleroi, Pa., assignor of one-half to Charles J. Kunzler, Pittsburgh, Pa. Filed Jan. 14, 1920. Serial No. 351,389. 5 Claims. (Cl. 49—17.1.)



5. In apparatus for drawing glass cylinders, a batch containing vessel, a conduit extending upwardly therethrough opening directly within the formative zone of the article being drawn and in open communication with the atmosphere below, and an air supply pipe leading to but spaced away from said conduit to supply air upwardly through the conduit while allowing for return flow of excess air backwardly through said conduit and around said pipe.

1,484,340. SOUND-REPRODUCING MECHANISM. STANLEY CORYTON HUGH ROBERTS, London, England. Filed Apr. 24, 1922. Serial No. 556,221. 2 Claims. (Cl. 274—2.)

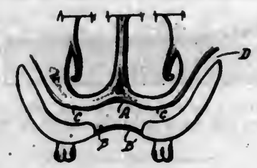


1. A phonograph cabinet, comprising a body and a cover hinged thereto, said cover being deeper at the front than at the back and open at the front, an amplifying horn in said cover, a record carrier rotatably mounted in said cabinet body, a tone arm, a standard at one back corner of the cabinet for supporting said tone arm so that it may connect with the inlet to the horn, one side of said horn being formed by one side of the cover near said inlet, while the opposite side of said horn extends diagonally across the cover to form a space therein in which the tone arm can move across the records above the level of the lower edge of the amplifier.

1,484,341. CRANK HOLDER FOR CARS. MARTIN SEVERSON, Galesville, Wis. Filed Mar. 26, 1923. Serial No. 627,900. 3 Claims. (Cl. 74—33.)

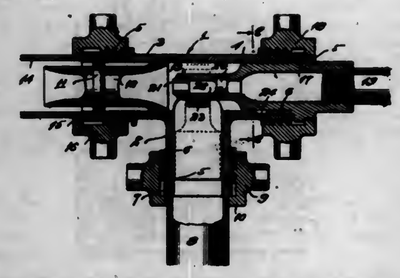
1. A starting crank holder comprising a coil tension spring and means at its ends for respectively connecting with the head-lamps upon each side of the vehicle.

1,484,342. ADAPTER FOR PUMP COUPLINGS. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y. Filed Apr. 5, 1919, Serial No. 287,820. Renewed July 14, 1921. Serial No. 484,819. 2 Claims. (Cl. 152—11.5).



1. An adapter comprising a member having an externally threaded portion adapted to engage the threads of a pump coupling, and an internally threaded portion adapted to engage the threads on a valve stem different from those adapted to receive the pump coupling, a tubular element within said member and rotatively connected thereto and a packing gasket carried by said tubular element adapted to make a leak-tight joint with the end of a valve stem.

1,484,343. METHOD OF MANUFACTURING HINGE BUTTS. JOSEPH SOSS, Brooklyn, N. Y. Filed Oct. 16, 1922. Serial No. 594,781. 10 Claims. (Cl. 29—11.)



1. The herein described method of manufacturing hinge butts, which consists in providing two sheet metal blanks, shaping one of said blanks to form a substantially hook-shaped end portion having top and bottom flanges, and flanges extending longitudinally of the opposite sides of said blanks, shaping one end portion of the other of said blanks to form a plurality of projecting fingers, fashioning said fingers to form substantially circular knuckles and securing the separate fashioned blanks, together with the knuckles of the last named blank, within the hook shaped portion of the first named blank.

1,484,344. UPPER DENTAL PLATE. WILLIAM M. STANBROUGH, Newburgh, N. Y. Filed Feb. 23, 1922. Serial No. 538,778. 1 Claim. (Cl. 32—4.)

An upper artificial denture having in combination a plate, teeth connected therewith, a palatine portion comprising a composition core, a plurality of layers of metallic foil superimposed thereon, susceptible of being severally removed by a scalpel or other instrument, substantially as and for the purposes as hereinbefore set forth.

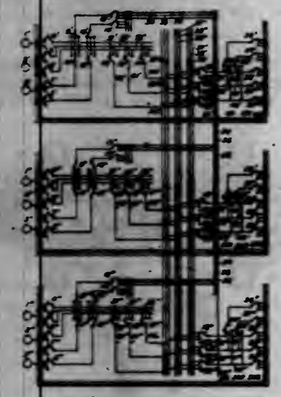
1,484,345. JET MECHANISM. GUSTAV STOELTING, Kiel, Wis., assignor to Stoelting Brothers Co., Kiel, Wis. Filed May 23, 1923. Serial No. 641,027. 6 Claims. (Cl. 162—1.)

5. An injector of the class described having a casing provided with angularly disposed branches, a discharge tube arranged within one of said branches, an inlet nozzle detachably connected to either of the other branches, said inlet nozzle having adjacent its outlet a second outlet at right angles to the former, means for closing either of said outlets and opening the other dependent upon the branch to which the inlet nozzle is connected, a suction pipe secured to the other branch, and said inlet nozzle adapted to discharge into said discharge tube.

1,484,346. PROCESS FOR PRODUCING NEGATIVES FROM NONTRANSPARENT ORIGINALS FOR USE IN PREPARING PRINTING PLATES. MAX ULLMANN, Zwickau, Germany, assignor to Karl Werth, The Hague, Netherlands. Filed Apr. 14, 1921. Serial No. 461,454. 2 Claims. (Cl. 95—88.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

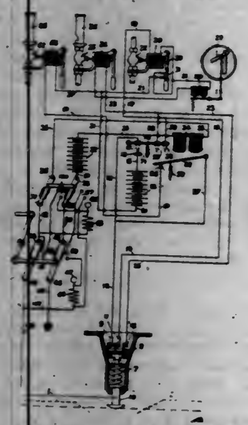
1. That method of producing negatives for use in the preparation of printing plates from originals which are adapted to reflect light from a portion of their surfaces characterized by rendering the photographic image resistant to objectionably actinic light by dyeing the same with a suitable soluble dye and thereafter making the same waterproof by treatment with a compound of opposite acid or basic character.

1,484,347. PROCESS FOR PRODUCING NEGATIVES FROM NONTRANSPARENT ORIGINALS FOR USE IN PREPARING PRINTING PLATES. MAX ULLMANN, Zwickau, Germany, assignor to Karl Werth, The Hague, Netherlands. Filed Apr. 14, 1921. Serial No. 461,455. 4 Claims. (Cl. 95—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



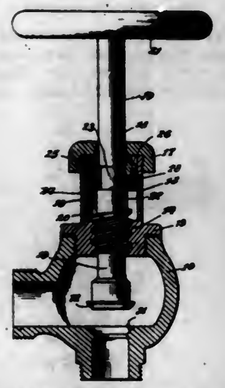
1. A method of producing negatives adaptable for use in preparing printing plates characterized by supporting a

sensitized layer on a plate by means of a supporting transparent film, actinizing the layer to produce an image, photographically developing the image, covering



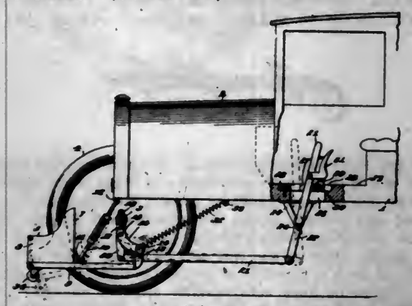
the layer with a second transparent film and stripping from the plate the layer with the covering films on either side.

1,484,348. MACHINE-SWITCHING TELEPHONE SYSTEM. FRITZ ALDENDORFF, Wilmersdorf, Berlin, Germany. Filed Dec. 17, 1914. Serial No. 877,781. 24 Claims. (Cl. 179—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a telephone system, a switch with groups of bank contacts, telephone lines connected to the groups of bank contacts, sets of brushes on the switch adapted to be shifted onto the said groups of bank contacts in succession, a link circuit coordinated to the said brushes, a group testing relay for testing each group of lines onto which the sets of brushes are set, and individual test relays for testing a line through one set of brushes and extending a free line to the said circuit.

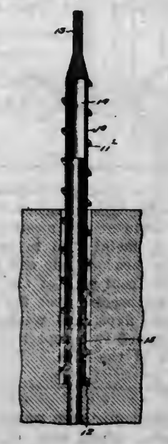
1,484,349. RAILWAY SAFE-RUNNING DEVICE. ARTHUR REGINALD ARGUS, London, England. Filed Apr. 14, 1913. Serial No. 761,043. 11 Claims. (Cl. 246—23.)



1. A train protecting device comprising warning and stopping means on the train, solenoids controlling the action of the said warning and stopping means, a source of energy operatively connected to the solenoids, a train contact operatively connected to the source of energy and adapted to disconnect the latter from said solenoids when displaced, track contacts coacting with the train contact, a second source of energy, an electromagnet operatively connected to the second source of energy, an armature coacting with the electromagnet and adapted to break the circuit comprising the first source of energy and the solenoids controlling the warning and stopping means and to introduce a substitutional circuit when the train contact has been displaced and the track is in a clear condition, a manually operated commutator switch operatively connected to the second source of energy, and a compensating resistance designed to be switched into the circuit including the second source of energy and the electromagnet when the train has been reversed on a loop or the like.

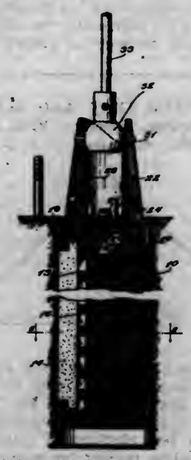
1,484,350. VALVE PACKING. CHARLES M. CUSICK, Steubenville, Ohio. Filed Apr. 10, 1922. Serial No. 551,357. 2 Claims. (Cl. 286—36.)

2. In a valve having a housing, a valve stem and a bonnet in which said stem is threaded, said bonnet having a cylindrical chamber around said stem; a packing for said stem comprising split metallic rings fitting tightly in said chamber, a washer and a retaining bushing confining said rings between them in axial direction, and means for locking said washer and bushing rigidly to said stem, a shoulder being formed on said stem for supporting said washer, and a space being formed adjacent said shoulder between said bushing and said stem thereby providing a liquid retaining space around the stem.



1,484,351. VEHICLE FENDER. LARIS GRELLA, Brooklyn, N. Y. Filed July 31, 1923. Serial No. 654,884. 8 Claims. (Cl. 293—34.)

3. A fender for automobiles comprising longitudinal bars, a catcher on the outer end portions of said bars, a rock shaft, arms carried by said shaft and having fixed

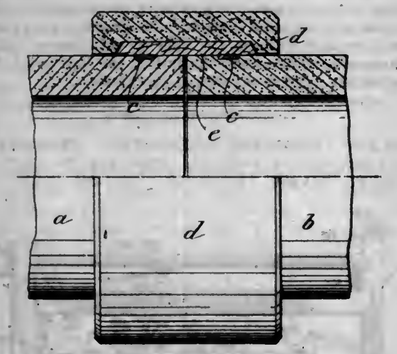


pivots connected to the inner end portions of said bars, said inner end portion of the bars being bent upwardly from the main portions thereof, whereby said main portions of the bars and the catcher are normally carried close to the road, and means for rocking said shaft.

1,484,352. AUGER, BIT, OR DRILL. HENRY IZARD, Mobile, Ala. Filed Dec. 10, 1919. Serial No. 343,736. 1 Claim. (Cl. 145—120.)

An auger, bit or drill for removing bolts or the like and including a central longitudinally extending body portion having a concentric longitudinally extending bore open at its outer end and having a working fit around the bolt or other object to be removed, said body portion being formed with transversely elongated staggered openings designed to establish communication between the bore and the outer surface of the body portion and spaced apart along the length of the body portion, said openings being arranged at an incline with respect to the longitudinal axis of the body portion to facilitate the discharge of material from the bore.

1,484,353. HONING DEVICE FOR BORES OF INTERNAL-COMBUSTION ENGINES. IRA R. KIDWELL, Pontiac, Mich. Filed Oct. 5, 1922. Serial No. 592,639. 7 Claims. (Cl. 51—206.)

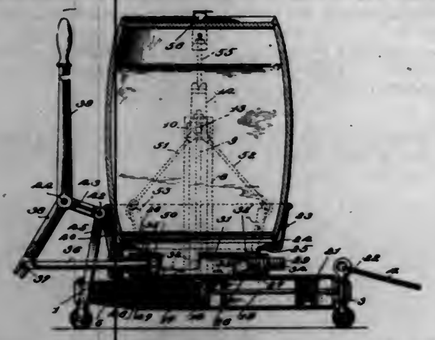


1. A honing tool for cylindrical bores comprising a body member, provided with longitudinal channels opening along the outer periphery thereof, the sides of said channels converging towards the bottom of the channel, a honing element of substantially rectangular cross section inserted in each of said channels, compression springs between the bottom of the channel and said honing element, said element having a projecting tongue at each end and a collar at each end of said body member provided with an annular ledge engaging over said tongues.

1,484,354. NECKTIE HOLDER. DAVID W. MCLEAN, Los Angeles, Calif. Filed Sept. 12, 1922. Serial No. 587,748. 1 Claim. (Cl. 24—56.)

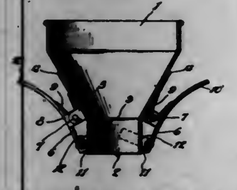
A tie holder comprising a tongue, a forwardly extending body portion integral with the tongue, spaced fingers extending downwardly from the body portion in a plane substantially parallel with the plane of the tongue, there being a button receiving slot in the tongue and having a large button head receiving portion extending into the body, said tongue being offset forwardly between its ends to provide overhanging shoulders constituting button retaining means.

1,484,355. JOINT FOR CONCRETE PIPES AND THE LIKE. DONALD MOIR and HUGH BUCHANAN, Rosario de Santa Fe, Argentina. Filed Sept. 27, 1922. Serial No. 590,920. 4 Claims. (Cl. 285—89.)



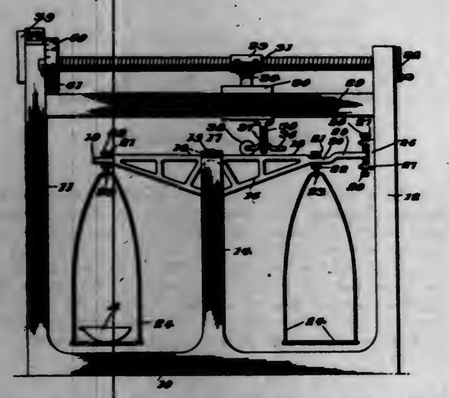
1. In a pipe joint, an annular member capable of absorbing moisture and swelling, and an elastic sealing ring in direct contact therewith, the material of the annular member aforesaid being exposed at both sides of the elastic ring to the surface with which the joint is to be made and the resultant increase in volume of the annular member due to swelling causing the same to compress the elastic ring upon the said surface and also to directly engage said surface at each side thereof.

1,484,356. GREASE-DISPENSING DEVICE. JAMES H. MONTGOMERY, San Francisco, Calif. Filed Mar. 1, 1921. Serial No. 448,763. 7 Claims. (Cl. 221—102.)



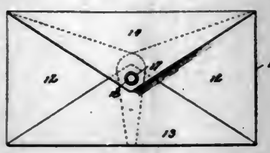
1. A device of the class described comprising a movable truck, hoisting means mounted thereon, a closure for a

lubricant container, means for attaching said closure to an open end of said container, means for connecting said con-



tainer and attached closure to said hoisting mechanism, and means for discharging lubricant from said closure.

1,484,357. FUNNEL. HARRY L. MULLEN, Baltimore, Md. Filed Feb. 3, 1923. Serial No. 616,719. 2 Claims. (Cl. 226—31.)

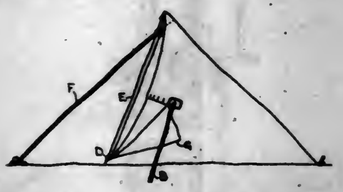


1. A funnel provided with a nozzle, a clamping member pivotally mounted upon the side of the funnel and having its lower end provided with an inwardly projecting jaw and disposed adjacent the nozzle, and yieldable means secured between the side of the funnel and the said member and holding the jaw at the lower end thereof normally against the side of the nozzle.

1,484,358. WEIGHING APPARATUS. FREDERICK H. NORTON, Langley Field, Va. Filed Aug. 29, 1922. Serial No. 584,990. 10 Claims. (Cl. 265—56.)

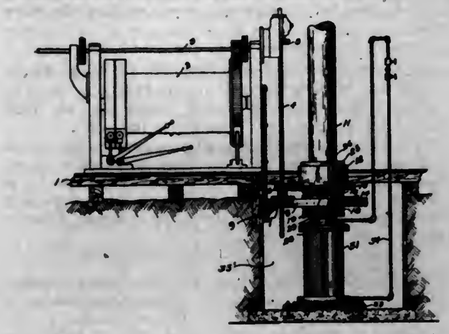
1. In weighing apparatus, a pivotally mounted scale beam, a roller poise continuously supported on said beam for rolling longitudinally thereon, means supported independently of said scale beam for movement longitudinally thereof, and means connecting said poise with the said movable means without the transmission of vertical loads therefrom to the poise, the said poise adapted to be rolled longitudinally of the scale beam by said movable means.

1,484,359. SAFETY-SEAL ENVELOPE. JOSEPH PICCIRILLI, Plainfield, N. J. Filed Nov. 17, 1921. Serial No. 515,926. 1 Claim. (Cl. 229—78.)



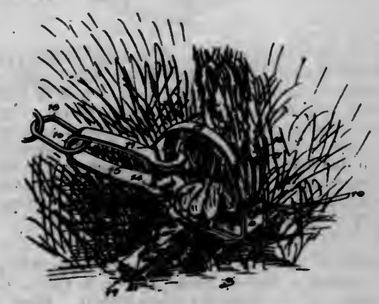
In combination, an envelope including a front wall, upper, lower and end flaps attached thereto, said flaps having openings therein at the meeting edges of the respective flaps, a soft metal stud to be inserted through said openings, a flat head at one end of the stud to be inserted between the front wall of the envelope and said flaps, a washer to be inserted over the stud, pins extended through the head, flaps, and washer, said projecting end of the stud designed to be upset to form a head and to receive the ends of the pins.

1,484,360. ELECTRIC SOCKET PLUG. ELMER H. POLZIEN, Manilla, Iowa. Filed Sept. 13, 1922. Serial No. 588,061. 5 Claims. (Cl. 173—360.)



2. A plug of the class described including a pair of non-conducting blocks, a non-conducting bar spacing the blocks from each other, a pair of spring fingers one on each edge of the bar and between the blocks, a cup-shaped cap for receiving the upper ends of the blocks and the bar, a wire connecting the fingers, a contact on the bar, a second wire connecting the contact and both of said wires passing through an aperture in said cap.

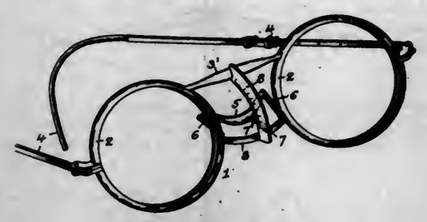
1,484,361. COMBINED TENT AND SLEEPING BAG. ALF SÖYLAND, Bergen, Norway. Filed Jan. 12, 1922. Serial No. 528,765. 6 Claims. (Cl. 5—343.)



1. A combined tent and sleeping bag constituted by a wide rectangular sleeping bag having its aperture continued a distance downwards along the two side edges of the bag so as to form two free portions, means engageable with said free portions at points between the ends of the front edges thereof for maintaining the bag aperture substantially upright, fastening members arranged at both ends of the rear edge of the bag to maintain said rear edge flat upon the ground.

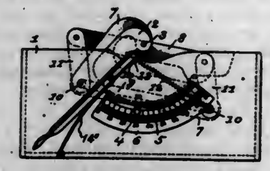
1,484,362. ROTARY DRILL. FREDERICK STONE, Spokane, Wash., assignor to Diamond Drill Contracting Company, Spokane, Wash. Filed May 23, 1922. Serial No. 563,029. 8 Claims. (Cl. 255—22.)

1. The combination in a drilling machine with a vertically reciprocable cross head and means for operating said head, of a relatively rotatable drill head carried in said cross head, means in said drill head for clamping a drill rod, and means for rotating said drill head.



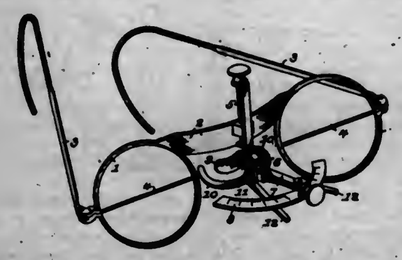
1,484,363. TRAP. JOHN ANDERSON TUBBS, Ellis, Kans. Filed Feb. 7, 1922. Serial No. 534,703. 1 Claim. (Cl. 43—93.)

A trap of the class described comprising a base, a pair of curved jaws having their extremities pivoted adjacent to each other at the ends of the base and their intermediate portions angularly twisted, a spring connected with the base and a pair of the adjacent ends of the jaws and tending to normally close said jaws, a bar secured at one end to the base and projecting outwardly at right angles therefrom, a trigger pivoted near the outer end of the bar and having a tread plate at the inner end thereof, said trigger having a notch in radial alinement with and above the pivot, said notch providing top and bottom walls to receive the intermediate twisted portion of one jaw, said portion of the jaw radially alining with the pivot, snugly fitting the notch, and locked against movement by the top and bottom walls of the notch whereby accidental displacement of the jaw from the notch is prevented, the jaws being movable out of engagement with the notch only when the trigger is depressed to release and permit the jaws to spring together.



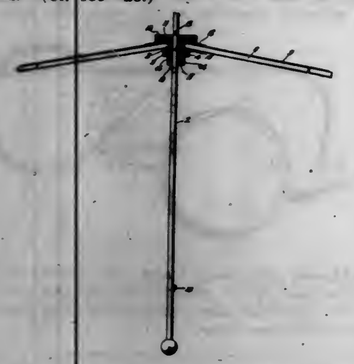
1,484,364. ANGLE-MEASURING INSTRUMENT. WILLIAM R. UHLEMANN, Evanston, Ill., assignor to Uhlemann Optical Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1922. Serial No. 541,273. 2 Claims. (Cl. 33—200.)

1. In an instrument for indicating the angle of the resting surface of the nose bridge with relation to the plane of the lens rings of an eyeglass frame, the combination of a pair of lens holding rings, temple bars attached to said rings, a transverse frame of a yoke shape connecting said lens rings in spaced relation, a gage piece pivotally mounted at its respective ends in the



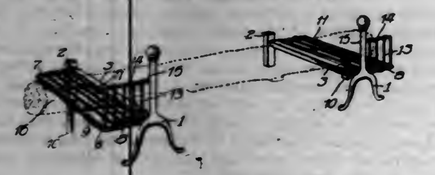
ends of said yoke shape frame and adapted for bearing upon the nose of the person being fitted, a pointer moving with said gage piece, and a graduated scale carried by the transverse frame.

1,484,365. OPTICIAN'S ANGLE GAUGE. WILLIAM R. UHLEMANN, Evanston, Ill., assignor to Uhlemann Optical Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1922. Serial No. 541,274. 7 Claims. (Cl. 33—200.)



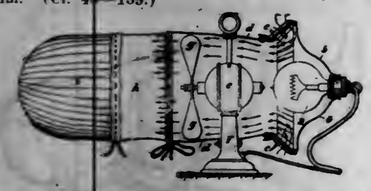
1. In a testing instrument for use in adjustment of parts to attain a required angular relation between the bearing surface of the nose bridge and the face of the lens supporting rings of an eyeglass frame, the combination of a support carrying an index dial, a pair of holding jaws and an arm carrying a trial edge mounted in operative relation on said support in manner to permit of relative movement to and from each other, said arm having pivotal attachment to its mounting, and a pointer turning in unison with said arm and in indicating relation to the dial aforesaid.

1,484,366. OPTICIAN'S MEASURING INSTRUMENT. WILLIAM R. UHLEMANN, Evanston, Ill., assignor to Uhlemann Optical Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1922. Serial No. 559,628. 5 Claims. (Cl. 33—200.)



1. In an optician's instrument for measuring the relation of the nose to the pupils of the eyes, the combination of a pair of rings, a rail connecting said rings together in transverse spaced relation, temple bars attached to the sides of said rings, a nose rest carried by said rail midway of said pair of rings, a pair of adjustable caliper jaws spanning the nose rest, and graduated scales for indicating the adjustment of said caliper jaws.

1,484,367. UMBRELLA. SIDNEY C. VINCENT, Baltimore, Md. Filed Apr. 12, 1922. Serial No. 551,786. 2 Claims. (Cl. 135—28.)

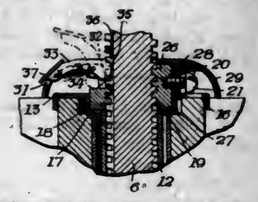


1. In an umbrella, in combination, a rod, a hollow cap secured to the upper part of said rod, a carrier secured to the upper part of the rod below the cap, a plurality of ribs having their inner ends pivoted in said carrier, said carrier being formed with a downwardly extending central portion embracing the rod, a spreader slidable on the rod and having a recess therein to receive the lower end of the central portion of the carrier when the spreader is in its uppermost position, and means for locking the spreader in such position.

1,484,368. FIREDOG OR ANDIRON. CHARLOTTE O. ALFORD, St. Pauls, N. C. Filed Oct. 23, 1923. Serial No. 670,315. 7 Claims. (Cl. 126—298.)

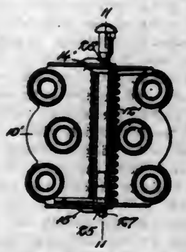
2. As an improved article of manufacture, a fire dog provided with a pivotally mounted grate section.

1,484,369. FLYCATCHER. CARLO ANDREUCCI, Rome, Italy. Filed June 6, 1922. Serial No. 566,289. 1 Claim. (Cl. 43—139.)



A device for catching flies and the like comprising a main stand, a cylindrical casing constituting a dark chamber carried by the stand, a fan mounted on the stand and having the blades thereof positioned within and near the rear end of the chamber, a hose connected to the rear end of the chamber, a receptacle of permeable material associated with the outer end of the hose, a shade having a reflecting surface on its interior, a lamp supported concentrically of and within the shade and a plurality of connecting links arranged in circular series about the forward edge of the dark chamber and the outer edge of the shade for connecting the shade in spaced relation to the chamber and being arranged in spaced relation with respect to each other so as to leave openings through which flying insects are drawn by the air suction generated by the fan and subsequently forced by the fan through the hose and into the receptacle.

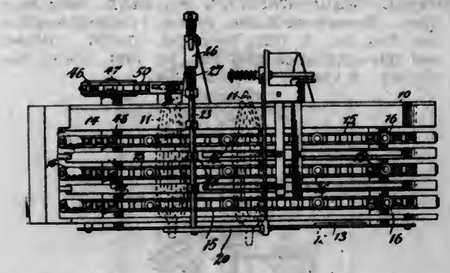
1,484,370. COMPOSITION SUBSTITUTE FOR WOOD, TILE, OR OTHER BUILDING MATERIAL. FRANCIS A. BARTLETT, Stamford, Conn. Filed Oct. 16, 1920. Serial No. 417,358. 1 Claim. (Cl. 106—30.)



The herein described composition-substitute for structural material comprising sawdust about 100 parts, asbestos about 5 to 25 parts, cement about 10 to 30 parts, all the parts being by weight, together with sufficient soluble silicate binder to form a strong coherent mass.

1,484,371. REVOLVING CHAIR. CHARLES A. BROWN, Gardner, Mass., assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1920. Serial No. 371,360. 2 Claims. (Cl. 155—93.)

2. In a revolving chair, a threaded spindle attached to the chair seat, a nut carried by the spindle and rotatably supported by the hub of the chair, a locking member pivotally mounted on said nut for preventing relative rotation between the nut and the spindle, a stud carried by the hub to secure the nut thereto, and a cover inclosing both the locking member and the stud, the said cover being provided with an opening to permit movement of said locking member therein and to give access to said stud.

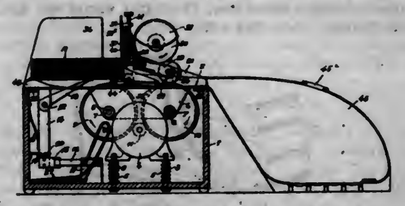


1,484,372. HINGE. WILBERT J. EDWARDS, Freeport, Ill., assignor to Stover Manufacturing & Engine Co., Freeport, Ill., a Corporation of Illinois. Filed Jan. 24, 1923. Serial No. 614,553. 13 Claims. (Cl. 16—189.)

1. A hinge comprising a pair of sections, a pintle pivotally connecting said sections, and means whereby the sections may be separated in different relative positions thereof while the pintle is engaged through both sections.

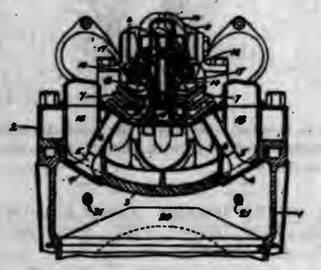
1,484,373. CONVEYER FOR THE BUTT REMOVERS OF CORN HUSKERS, ETC. CLARENCE A. HOY, Buffalo, N. Y., assignor to Peerless Husker Company, Buffalo, N. Y., a Copartnership. Filed Jan. 15, 1921. Serial No. 437,422. 1 Claim. (Cl. 146—84.)

A trimming apparatus for removing the butt ends of ears of corn comprising a conveyer provided with an operative portion moving lengthwise and arranged substantially horizontal and adapted to support the ears of corn to be trimmed on its upper side and in a position crosswise of the direction of movement of the operative portion of the conveyer, a gage arranged along one longitudinal edge of the operative part of the conveyer and adapted to be engaged by one end of the ear of corn, a cutter past which the gaged end of the ear is adapted to be moved by the conveyer, a plurality of wings ar-



ranged at intervals on said conveyer throughout the length thereof and adapted to engage with the rear side of said ears and composed of a plurality of rollers projecting at right angles from said conveyer and pivotally mounted on the latter and arranged in a transverse row on the same, and a positioning device adapted to engage with the front and top sides of said ears and move the same transversely on the conveyer and the rows of wings and toward said gage.

1,484,374. WRENCH. JOHN H. ILLIG, Buffalo, N. Y. Filed Aug. 9, 1921. Serial No. 490,876. 4 Claims. (Cl. 81—165.)



1. In a wrench, the combination of a head provided with a guide slot and a fixed jaw, said slot including two parallel intersecting holes, a movable jaw having a substantially semi-cylindrical base arranged in one of said intersecting holes, a threaded stem extending substantially parallel to said base in the other of said intersecting holes, and a nut on said threaded stem and extending into the space between said base and said threaded stem.

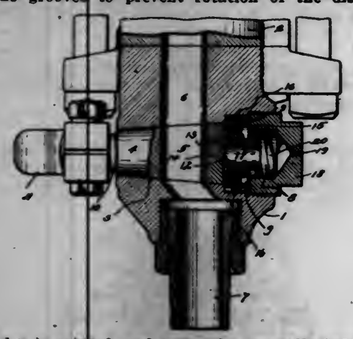
1,484,375. MAIL-MARKING MACHINE. PAUL ANDREAS JÄRVE, Krylbo, Sweden. Filed Dec. 7, 1921. Serial No. 520,680. 9 Claims. (Cl. 101—233.)

1. A machine for marking letters and the like including a prime mover, a feeding roller and a presser roller driven by the prime mover, a marking roller cooperating with the presser roller for marking letters passing between the same, a magazine for holding a stack of letters in such position that the feeding rollers will feed said letters, and means for controlling the starting and stopping of the prime mover provided with a member extending into the magazine and adapted to be depressed by the letters in the magazine for controlling the starting of the prime mover.

1,484,376. INTERNAL-COMBUSTION ENGINE. ETTORE LANZEROTTI-SPINA, London, England. Filed Feb. 21, 1921. Serial No. 446,624. 12 Claims. (Cl. 123—90.)

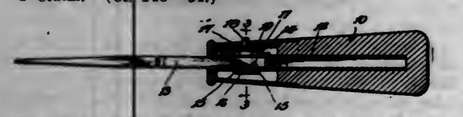
4. In an internal combustion engine the combination of a cylinder, a head, a plurality of inlet and exhaust valves in said head having stems converging together, inlet valves alternating with exhaust valves, a plunger co-axial with the cylinder operating all of the inlet valves and a second plunger co-axial with the cylinder operating all of the exhaust valves.

1,484,377. FEEDING APPARATUS FOR HAND OR BREAST DRILLS. DEAN MOOK, Rochester, N. Y. Filed July 13, 1923. Serial No. 651,259. 2 Claims. (Cl. 77—7.)



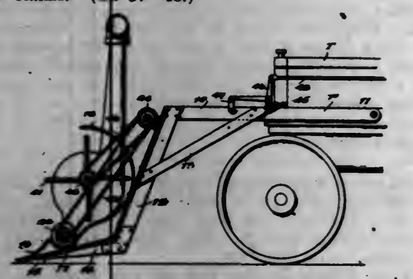
1. A feeding mechanism for hand or breast drills comprising a housing forming a socket for holding the handle of the hand or breast drill in one end of said housing, a pair of bearing blocks held in place in the other end of said housing, a nut held in place between said bearing blocks, a feed screw threaded into said nut and passing through said bearing blocks, a spindle forming an extension of said feed screw and projecting from said housing, a third bearing block for said spindle to rotate therein and a handle formed on the end of said spindle, said third bearing block being adapted to be rigidly clamped in place between the jaws of a vise and said housing being adapted to project between the jaws of the vise and be held against rotation during the feeding of said feeding mechanism.

1,484,378. THROTTLE-VALVE LOCK FOR ROCK DRILLS. GUSTAVE M. NELL, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Jan. 29, 1923. Serial No. 615,772. 3 Claims. (Cl. 251—163.)



1. In a throttle valve lock for rock drills, the combination with a back head, of a seat therein, a valve rotatable in the seat, said back head having a chamber therein adjacent the seat, said chamber having diametrically opposed grooves therein, a disk slidable in the

chamber and having peripheral ears for slidably engaging the grooves to prevent rotation of the disk when



the valve is rotated, and means for normally holding the disk yieldably interlocked with the valve, as and for the purpose set forth.

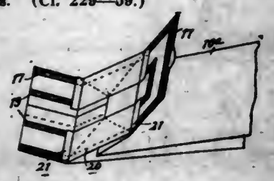
1,484,379. SCREW DRIVER. AUSTIN E. RAINEY, Grove City, Pa. Filed July 14, 1922. Serial No. 574,992. 1 Claim. (Cl. 145—64.)

In a screw driver, the combination of a ferrule having a forward end wall, a sleeve rigidly fixed at one end to said end wall terminating flush therewith, a handle bored to snugly accommodate the opposite end portion of the sleeve and wedged in the rear end of the ferrule, the sleeve being provided forwardly of the inner end of the handle with an opening and being bent up at opposite ends of said opening to define parallel thrust flanges, a bit slidable in the sleeve and provided with a notch, and locking means for the bit housed within the ferrule and mounted on said sleeve between the inner end of the handle and said end wall of the ferrule, said means including a block slidable between said flanges to extend through said opening engaging in said notch locking the bit against endwise movement, a yoke secured to the block straddling the sleeve and provided with a releasing button extending freely through the ferrule, and a flat bowed spring bearing between the yoke and sleeve for holding the block engaged in said notch sustained by said thrust flanges to coact between the bit and sleeve for diverting endwise thrust upon the bit to the sleeve.

1,484,380. SNOWPLOW. JOHN P. RUNCK, Casselton, N. Dak. Filed Aug. 31, 1922. Serial No. 585,444. 3 Claims. (Cl. 37—43.)

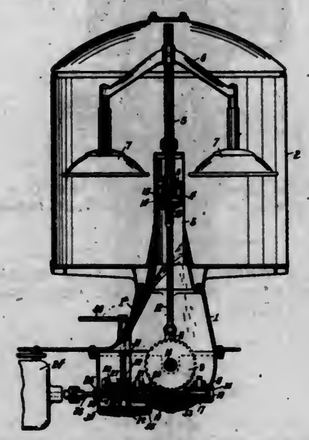
1. In a device of the kind described, a frame, a shield carried by said frame and having a trough shaped portion adjacent its forward edge, a blower fan located centrally above said trough shaped portion, a right and left hand conveyor mounted in the trough shaped portion and arranged to convey material toward the intake opening of the fan, a delivery pipe leading from said fan, means to drive the said conveyor and fan, and a lump breaking device mounted above said conveyor and to the rear thereof.

1,484,381. WARP-KNITTING MACHINE. AUGUSTIN SERRA, Essomes-sur-Marne, France. Original application filed Dec. 5, 1923, Serial No. 678,787. Divided and this application filed Jan. 11, 1924. Serial No. 685,643. 6 Claims. (Cl. 66—33.)



1. A warp knitting machine for making a fabric comprising two sets of threads, in which each individual thread is formed into a series of closed loops, each node is formed by the intermeshing of a plurality of loops of separate threads, and the threads are all pulled tight at the nodes, said machine comprising means for maintaining the fabric under tension and for tightly pulling the nodes of the fabric, and means for giving the yarn guides a greater vertical movement at each stitch than that required merely to pass the threads over the needles for the purpose described.

1,484,382. CLIP FOR ATTACHING ARTICLES OF WEARING APPAREL. THOMAS BERRY ALLITT, Coventry, England. Filed Aug. 31, 1923. Serial No. 660,334. 1 Claim. (Cl. 24—243.)



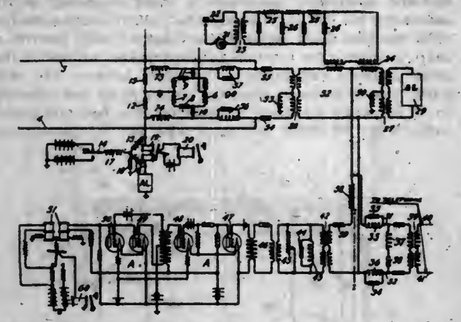
A clip for articles of wearing apparel, comprising two sheet metal members of an open-ended channel or trough formation, disposed with their concave or inwardly-bent faces towards one another, and having their longitudinal edges curled inwards or formed with an inwardly projecting beading, the edges or sides of the one member being adapted to be engaged between the edges or sides of the other member, so as to clip the material between the two members.

1,484,383. SQUARE-BOTTOM PAPER BAG. DANIEL APPEL, Cleveland Heights, Ohio, assignor to The Cleveland-Akron Bag Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,711. 13 Claims. (Cl. 229—59.)

1. A paper bag of the class described, having a bottom formed by overlying pasted flaps which are continuations of the four sides of the bag, two of the flaps having their outer marginal portions pasted for their full width to the adjacent portions of the sides of which said flaps are continuations.

1,484,384. POWER-TRANSMISSION MECHANISM AND LUBRICATING MEANS THEREFOR. WILLIAM EMIL BOCK, Eagle Point Colony, Ohio, assignor to Bertha M. Bock, Toledo, Ohio. Filed Oct. 14, 1920. Serial No. 416,783. 4 Claims. (Cl. 184—3.)

1. In combination, a hollow case having a plurality of aligned bearings, one being an open bearing through the case wall and also having an oil distributing pocket and an oil receiving pocket in its bottom spaced longitudinally of the bearings and having drainage communication one with the other, a shaft journaled in the bearings and extending at one end without the case through the open bearing, the normal level of oil in the distributing pocket which is adjacent to the open bearing being below the bearing and the normal level of oil in the other pocket partially submerging the adjacent bearings, and means operable by a rotation of the shaft to discharge oil from the distributing pocket to the receiving pocket.

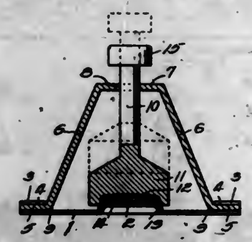


1,484,385. CASTER FOR FURNITURE. ALVIE C. CHIMMEL, Hartford City, Ind. Filed Mar. 16, 1923. Serial No. 625,432. 8 Claims. (Cl. 16—42.)

1. A caster for furniture, which comprises a pintle, a carrying bracket, a sliding shoe formed with an upwardly extending lug having therethrough a transverse bolt aperture, and a bolt connected with the carrying bracket and passing through the aperture in the lug.

1,484,386. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, East Orange, N. J., assignor to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,370. 7 Claims. (Cl. 179—4.)

1. In a telegraph system, a metallic line circuit connecting two stations, means for simultaneously transmitting both direct and alternating current telegraph signals over said line circuit, a composite set connected to said line circuit, telephone equipment associated with

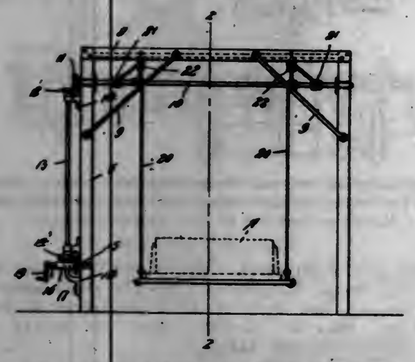


said composite set, and means comprising a set of filters for preventing the superimposing of said alternating current signals on currents in said composite set.

1,484,387. CABLEWAY. MERIAN H. DICKINSON, Seattle, Wash., assignor to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,118. 3 Claims. (Cl. 104—115.)

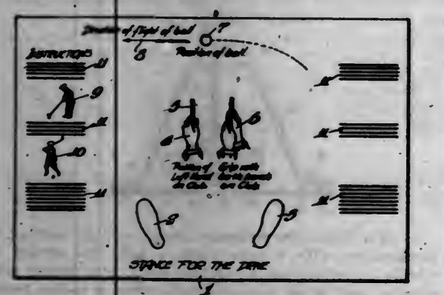
1. A cableway carriage comprising a frame, a running sheave and a retainer sheave, the flanges of said retainer sheave engaging the flanges of said running sheave and rotatable soley thereby, whereby said retainer sheave is driven by said running sheave.

1,484,388. DEVICE FOR RESHAPING CROWN CAPS. FREDERICK W. DOERING, St. Louis, Mo. Filed Mar. 31, 1922. Serial No. 548,545. 2 Claims. (Cl. 113—38.)



1. In a device for reshaping crown-caps for bottles, the combination with a base plate, a male die struck upwardly therefrom having sloping sides, a U-shaped brace member positioned upon said base plate, a socket formed at opposite ends of said base for receiving the lower ends of said brace member to hold the brace member in position on the base plate, a plunger rod passing through an opening in said brace member, a hammer engaging head at the upper end of said rod, and a female die formed at the lower end of said plunger rod to coact with the male die for reshaping a used crown cap adapted to be seated upon the male die.

1,484,389. HAYRACK AND WAGON-BOX LIFTER. HARM FOLKERS, Austinville, Iowa. Filed May 3, 1923. Serial No. 636,290. 1 Claim. (Cl. 254—47.)



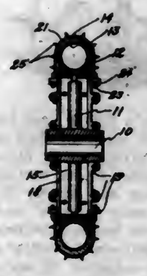
A wagon box lifter comprising posts fixed at points, said posts being arranged in pairs, the posts of each pair being spaced from each other, cross bars mounted upon

the posts of each pair and bracing the same between the posts, other bars interposed between the pairs of posts and the first mentioned cross bars, a shaft connected at its ends with the last mentioned bars, pulley blocks mounted upon the said shaft and movable longitudinally thereof, a shaft journaled for rotation in the members of one of the pairs of posts and bridging the space between the said posts, means mounted upon one of the posts and adapted to be manually operated for rotating the last mentioned shaft, a set of cables connected with the last mentioned

shaft and adapted to wind thereon and having end portions depending therefrom, a bar detachably connected with the free ends of the said cables and bridging the space between the said cables, other cables connected with the last mentioned shaft and arranged to wind thereon, the last mentioned cables being trained through the pulley blocks and having end portions depending therefrom, and a cross bar detachably connected with the free ends of the last mentioned cables and bridging the space between them.

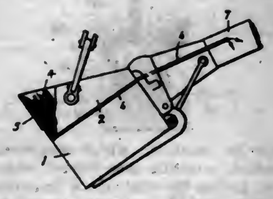
1,484,390. INSTRUCTION CHART FOR PLAYING GOLF. EDMUND D. GIBBS, Akron, Ohio, and THEODORE E. WIEDERSEIM, Philadelphia, Pa. Filed Nov. 1, 1922. Serial No. 596,270. 5 Claims. (Cl. 283—1.)

1. An instruction chart for the game of golf, consisting of a base of suitable material on which the user stands adapted to be placed on the floor or ground and having thereon indicia for determining the correct stance of the player and for indicating the correct position of a golf ball with respect to said stance.



1,484,391. LUBRICATING DEVICE. JOHN WALTER GRANTLAND, Cincinnati, Ohio. Filed Mar. 4, 1922. Serial No. 541,188. 8 Claims. (Cl. 184—6.)

1. In a force-feed lubricator, a reservoir, a delivery conduit attached thereto, a reciprocable hollow plunger connecting said reservoir and conduit, a reciprocating valve seating at one end of said plunger for controlling the lubricant supply thereto, in one stroke of said plunger, and

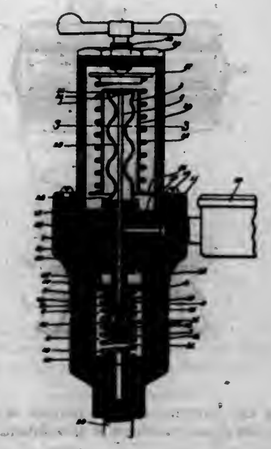


for providing a closure and plunger head in a reverse stroke for forcing a charge of lubricant through said conduit.

1,484,392. ANTISKID DEVICE. FRITZ HALLER, Bernardsville, N. J. Filed June 11, 1923. Serial No. 644,576. 3 Claims. (Cl. 152—14.)

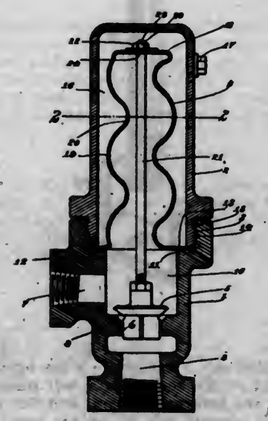
2. A non-skid device comprising a pair of rings secured to a vehicle wheel, said rings being notched to engage the wheel spokes, inreaching flanges formed with said rings, lugs extending oppositely outward from said flanges, said lugs being perforate, strips having bolt ends enterable through the perforations in said lugs, means for stressing said strips, and a plurality of spurs carried by said strips.

1,484,393. SHOVEL HEATING DEVICE. HARRY M. HANSON, Duluth, Minn. Filed Mar. 9, 1923. Serial No. 623,867. 4 Claims. (Cl. 214—145.)



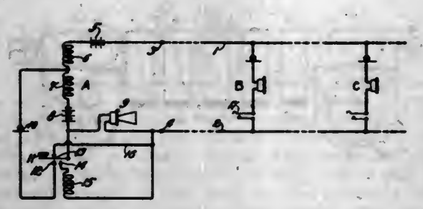
1. The combination with a mechanical shovel, of electric heating elements installed within the walls thereof, and means for supplying constant electric current to the heating elements.

1,484,394. PRESSURE-TRANSLATING DEVICE. ALEXANDER FREDERICK JENKINS, Baltimore, Md. Filed Dec. 4, 1920. Serial No. 428,413. 8 Claims. (Cl. 50—23.)



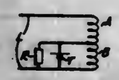
1. A pressure translating device in the form of a tubular container having its opposite sides substantially

parallel and formed in successive peaks and depressions of a depth less than half the diameter of the tube, means



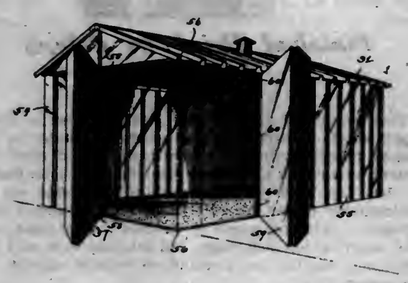
for applying a variable fluid pressure to said tube, changing the form and dimensions thereof, and means adapted to be actuated by said change of form and dimension.

1,484,395. RADIATOR TRAP. ALEXANDER FREDERICK JENKINS, Baltimore, Md. Filed Dec. 4, 1920. Serial No. 428,414. 5 Claims. (Cl. 236—56).



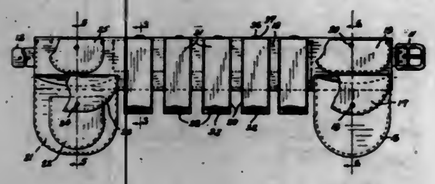
1. A radiator trap having an actuating member consisting of a tube bent in the form of alternate peaks and depressions, the opposite sides of the tube forming the peaks and depressions, being substantially parallel and so spaced and related as to admit a valve rod inside the tube and permit it to be reciprocated longitudinally therein, a valve rod in said tube, a valve on said rod, and a valve seat with which the said valve co-operates.

1,484,396. TELEPHONE SYSTEM. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,522. 12 Claims. (Cl. 179—81.)



1. A telephone system comprising, a pair of line conductors; a bridge across said line conductors including a transformer, a neutral receiver and a source of energy in series; a second bridge across said line conductors for completing a circuit through said receiver and source.

1,484,397. SUBSTATION CIRCUITS. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,804. 5 Claims. (Cl. 179—81.)



1. A substation circuit comprising a transmitter and a receiver, connections from said instruments to a line, said instruments being connected effectively in parallel with each other with respect to signaling currents from said line, said connections comprising a two-winding auto-transformer between at least one of said instruments and said line, and a battery connected to send current through said line, said last mentioned instrument being energized by direct current from said battery.

1,484,398. SHEET-METAL BUILDING STRUCTURE. BENJAMIN KEEBER, Baltimore, Md. Filed Dec. 24, 1921. Serial No. 524,722. 7 Claims. (Cl. 189—1.)

1. In a sheet-metal building the combination with a corrugated wall structure with lateral flanges at the upper edge between the corrugations, of a corrugated roof having flat portions between its corrugations which flat portions extend over the lateral flanges on the upper edges of the wall structure and fastening devices passing through the flat portions of the roof and the said lateral flanges of the wall structure for holding the roof down.

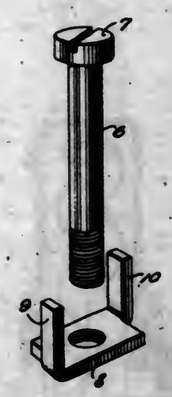
1,484,399. CASTING-TACKLE BELT. FRANCIS J. KROHA, Danbury, Conn. Filed July 21, 1922. Serial No. 576,512. 3 Claims. (Cl. 224—5.)

1. A fisherman's belt including means for securing it about the body of the user, said belt having pockets opening adjacent its upper edge, relatively large pockets secured to the front of the belt adjacent the opposite ends thereof, said pockets opening at the top and provided with overhanging closures, and self closing boxes adapted to hold casting tackle secured to the belt between the latter pockets, said boxes comprising outer members secured to the belt and open at the top and front, a box shaped container pivoted between the side members adjacent its lower end, said container being open at the rear and closed on all other sides, and a spring tending to hold the container in an upright position with its open side against the outer member.

1,484,400. METHOD OF MAKING COLOR PLATES FOR USE IN LITHOGRAPHY, PHOTO-ENGRAVING, ETC. EDWIN D. LOUNSBURY, White Plains, and OTTO ZIMMER, Brooklyn, N. Y. Filed July 26, 1919. Serial No. 313,646. 1 Claim. (Cl. 95—5.1.)

Finished Print in Colors

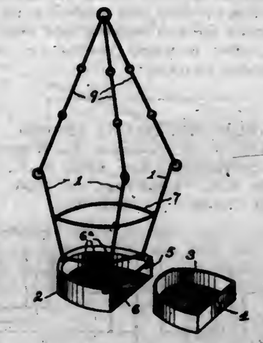
That method of making color plates for use in lithography which consists in taking separation negatives and making photographic prints from them, one of each color desired, retouching a separate print for each color desired so that the work may be practically finished on the photographic prints, photographing each retouched print through a half-tone screen to produce a high light half-tone negative for each color, and printing each said last mentioned negative on a sensitized element suitable for photo-engraving.



1,484,401. INDICATOR LINE FOR CYLINDRICAL CHART SCALES. GEORGE M. LUDLOW, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,371. 7 Claims. (Cl. 235—87.)

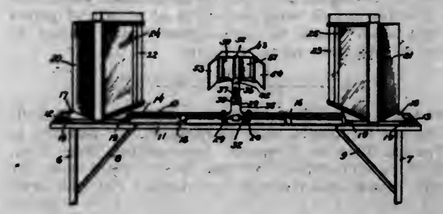
1. In an indicator for scales having a plurality of aligned charts, a single line adapted to extend across and present different portions thereof in reading relation to the respective charts, and independent means for adjust-

ably fixing the direction of each portion of said line with respect to the chart to which it is related.



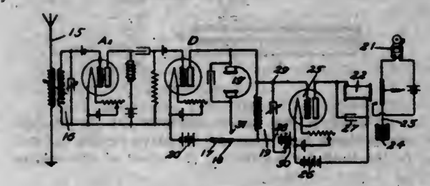
1,484,402. FASTENING FOR TELEPHONE KEY BASES. HAROLD T. MARTIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,302. 8 Claims. (Cl. 179—91.)

1. In combination; a key shelf; a key base; a pair of bars supported on the key shelf; a bolt passing through the key base and between the bars, said bolt being rotatable from the external side of the key base; and a nut for the bolt of a size to pass between the bars and shaped to engage them automatically when the bolt is tightened.



1,484,403. FLOWERPOT HOLDER. JANNETTE MILLER, Eau Claire, Wis. Filed June 14, 1922. Serial No. 568,268. 4 Claims. (Cl. 47—35.)

1. A holder for flower pots and the like, including a box, upstanding wire arms projecting from the box, connecting means between the upstanding arms to provide a skeleton frame to receive a flower pot, wires extending transversely across the top of the box to support the

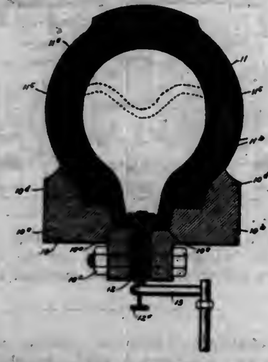


flower pot, and a tray slidably mounted within the box to receive the drainage of the flower pot, said tray being removable independently of the flower pot.

1,484,404. STEREOSCOPE. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,797. 6 Claims. (Cl. 88—29.)

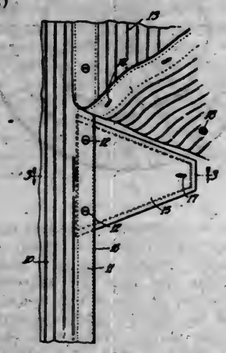
1. The combination, with a pair of supports for stereoscopic objects to be viewed, of a stereoscopic head divided into separate parts, one for viewing each object, one of said parts being adjustable relatively to the other, in a predetermined plane, said stereoscopic head as a whole being adjustable bodily in a plane crossing the plane first mentioned.

1,484,405. SIGNALING SYSTEM. ARTHUR A. OSWALD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 350,983. 13 Claims. (Cl. 250—2.)



2. In a radio signaling system, means for transmitting a radio frequency wave modulated by a wave of signaling frequency, receiving circuits for selecting the modulated wave and detecting and selecting the wave of signaling frequency, a slow-acting indicator actuated by the wave of signaling frequency and means in circuit with said indicator for increasing the voltage-operating ratio of said indicator.

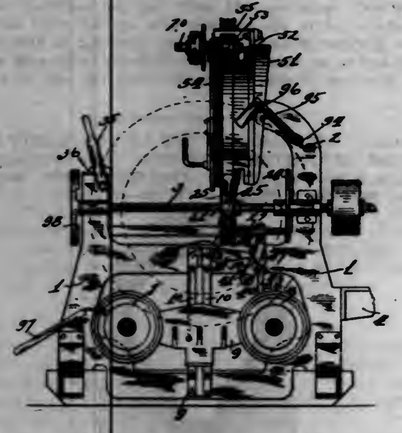
1,484,406. HANDLE-ATTACHING MEANS FOR DOOR LATCHES. LEON OTTINGER, New York, N. Y. Filed Jan. 20, 1923. Serial No. 613,809. 8 Claims. (Cl. 292—350.)



1. In combination with an automobile door latch having a casing, a rollback lever mounted therein and an exterior operating handle shaft for said lever having an end portion adapted to be fitted in a bore formed in the rollback lever, a locking element adjustable from the exterior of the latch casing and provided with a part to coact with means on said shaft end and positively lock the shaft end in the rollback bore against axial movement in either direction, and also operating to urge the shaft end in an angular direction relative to its axis and into frictional binding engagement with the wall of said bore.

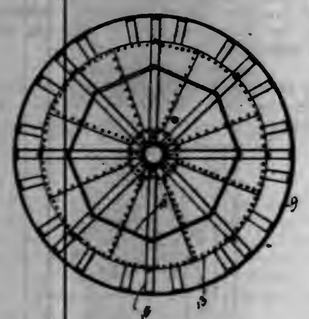
1,484,407. AIR BAG FOR USE IN THE MANUFACTURE OF PNEUMATIC TIRES. JOHN FULLERTON PALMER, St. Joseph, Mich. Filed Mar. 6, 1920. Serial No. 363,909. 5 Claims. (Cl. 18—45.)

5. An air bag of the type described comprising a tube of rubber having imbedded therein a knit fabric expansible in all directions and superimposed reinforcing strips applied to the inner periphery of said bag and terminating on either side thereof.



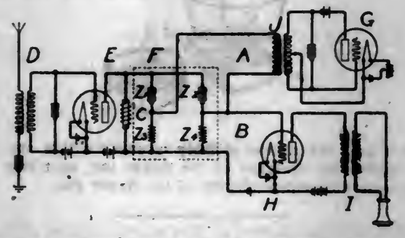
1,484,408. SHIRT. PAUL M. PAMPERIN, La Crosse, Wis. Filed Oct. 29, 1923. Serial No. 671,324. 4 Claims. (Cl. 2—41.)

1. The combination with a coat shirt having buttons along one front edge thereof and co-operating buttonholes along the other and overlapping edge thereof, of



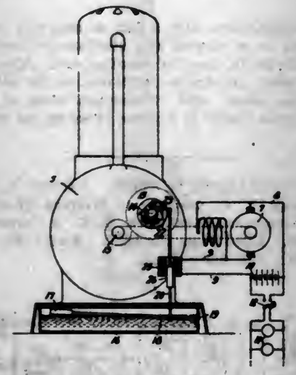
an auxiliary abdominal bandage, one end of which is sewn along said button edge, said bandage extending beyond said button edge and beneath the overlapping side of said shirt, the opposite end of said bandage and an inwardly spaced point on said overlapping side being provided with co-operating fastening means for preventing the spreading apart of said two edges between two of said buttons on said button edge and for tending to prevent said shirt from working up at the waist line by presenting a smooth fitting surface across the abdomen.

1,484,409. WRAPPING AND UNWRAPPING MACHINE. FRANK M. PIRACE, Chicago, Ill. Filed Apr. 29, 1920. Serial No. 377,531. 2 Claims. (Cl. 242—6.)



1. In a machine of the class described, a rotatable shuttle, a reel rotatably mounted on the shuttle, and a chain drive for rotating the reel enclosed by the shuttle.

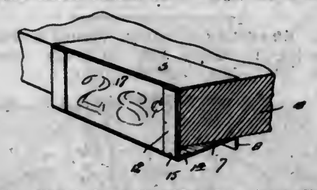
1,484,410. MARINE VEHICLE. OTTO S. PRIDGEN, Richmond, Va. Filed Oct. 2, 1923. Serial No. 666,163. 1 Claim. (Cl. 115—1.)



A marine vehicle including a floatable hull adapted to provide passenger and freight carrying compartments, floatable supporting wheels rotatably mounted on the hull for supporting the same for movement over the ground or the surface of the water, means for effecting the movement of the vehicle, said supporting wheels being formed of side plates arranged in spaced relation, said side plates being formed of a plurality of interconnected radially extending plates, a tread portion of curved section connecting said side plates, said tread portion being composed of a plurality of interconnected arcuate plates, whereby an enclosed floatable body is formed by the side plates and the tread portion, radial supporting sections mounted within the wheel body and engaging the tread portion and spacing elements secured to the supporting sections between said side plates and adjacent the outer periphery thereof for holding said sections in spaced relation.

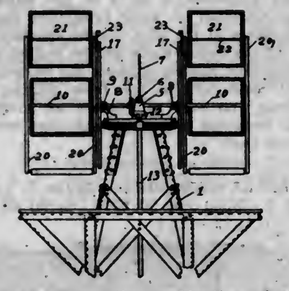
1,484,411. RADIO RECEIVING SYSTEM. HARRY S. READ, Ithaca, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,235. 11 Claims. (Cl. 250—20.)

3. In a circuit arrangement for radio receiving systems, a receiver circuit, a local oscillation circuit, a detector circuit and a mesh circuit coupling said circuits, the receiver and oscillation circuits being connected to conjugate pairs of points in said mesh, and the detector circuit being connected at a pair of points in said mesh which is non-conjugate with respect to either of said other pairs of points.



1,484,412. PRIME MOVER DYNAMO PLANT. CHARLES E. REDDIG, Kew Gardens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 20, 1922. Serial No. 602,026. 11 Claims. (Cl. 290—41.)

1. In combination, an engine operated by liquid fuel, a fuel supply tank, and means responsive to the amount of fuel in the tank for regulating the speed of the engine.



1,484,413. TICKET HOLDER. ALPHONSE ROBERGE, Somersworth, N. H. Filed Sept. 10, 1923. Serial No. 661,973. 1 Claim. (Cl. 40—16.)

A price ticket holder for shelves comprising a resilient sheet metal clasp embodying upper and lower jaws connected by a front member, said front member being adapted to engage the front edge of the shelf with the jaws engaging opposite faces of the latter and having end wings extending toward each other in front of said intermediate front member of the clasp to form guide ways for the ends of a price ticket, and means upon the lower ends of said wings for limiting downward movement of the ticket behind said wings, the clasp being

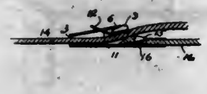
transversely slitted from its side edges inwardly at the points of connection of the jaws with the intermediate front member of the clasp, and said limiting means embodying tongues upon the lower ends of the wings extending rearwardly through said slits.

1,484,414. AIR MOTOR. PHILLIP K. RUCKEL, Saginaw, Mich. Filed Sept. 19, 1921. Serial No. 501,523. 3 Claims. (Cl. 170—24.)

1. In an air motor, the combination of a revolvable support, a tail carried by said support, a shaft rotatably mounted on said support and projecting radially therefrom, a pair of wheels fixed to each of the projecting ends of said shaft, the wheels of each pair spaced apart, a plurality of tiltable vanes mounted between the rims of said wheels, a radially projecting bar and a deflecting wiper secured to said vane, projections on the ends of said bar, a cam track of approximately circular shape throughout the length of its circumference and located in fixed position relative to said vanes, a fixed cam guide in the path of travel of said wiper, the projections on said bar movably engaged with and adapted to travel along said cam track.

1,484,415. TOOTH PASTE. JOHN P. SHEPHERD, Chicago, Ill., assignor, by mesne assignments, to Shepherd Chemical Company, a Corporation of Illinois. Filed Feb. 20, 1920. Serial No. 360,024. 4 Claims. (Cl. 167—9.)

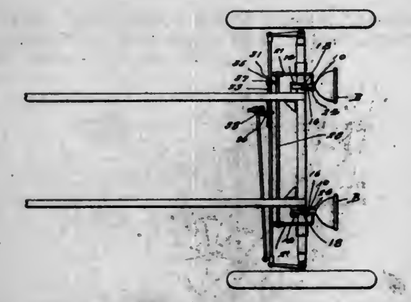
1. A dentifrice including an antiseptic substance, a soft abrasive and cholesterin.



2. In a dentifrice, cholesterin and iodine, constituting together less than ten per cent of the whole.

3. A dentifrice including iodine, cholesterin and a soft abrasive.

4. A dentifrice including cholesterin and a soft abrasive

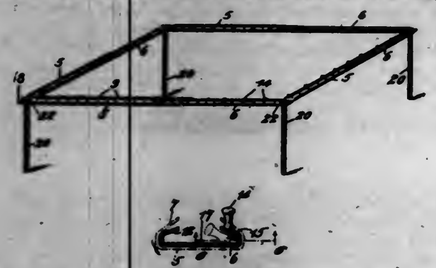


1,484,416. BELT BUCKLE. JOHN T. SKILLINS, Westbrook, Me. Filed July 7, 1922. Serial No. 573,386. 2 Claims. (Cl. 24—194.)

1. A belt buckle including a flat tube substantially straight on one side, thickened at or near the center and sloping toward the rear end with an inclined wall, a longitudinal slot being formed in said wall closed at its ends, a sliding binder having downward extending teeth at its forward end for holding the belt from slipping and having upturned flanges at its lateral ends with rearwardly inclined upper edges adapted to slide beneath said wall to force the binder into contact with

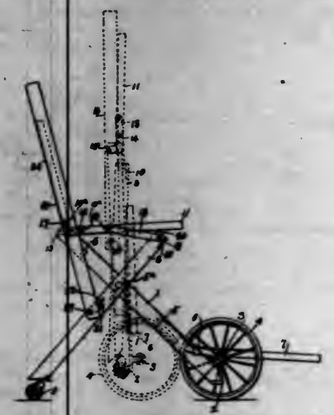
the belt and having rearward extending operating binder tongue extending through said slot at an angle with said binder and lateral wings on said tongue for tilting said binder with its engaging teeth in raised position to clear the belt, a cross wall at the forward end of the buckle to form the opening for one end of the belt and engaging devices on said wall for holding the belt.

1,484,417. MOVABLE HEADLIGHT. EMMETT H. SNEAD, Danville, Va. Filed June 3, 1922. Serial No. 565,556. Renewed Jan. 21, 1924. 1 Claim. (Cl. 240—62.)



The combination with a vehicle having a steering mechanism, and headlights each including a post, of a bracket for each headlight, a block pivoted on said bracket for horizontal swinging movement, each block including spaced bores arranged at right angular relation, one of said bores receiving the adjacent post of the headlights, angular shaped arms for the respective blocks, one end of each arm being received by the remaining bore of said block, a rod arranged transversely of the running gear of the vehicle, said arms having ball and socket connections with the terminals of said rod, a second rod having one end connected with the first mentioned rod by a ball and socket connection, a plate slidably supported on the second mentioned rod and connected with the steering mechanism of the vehicle, coiled springs surrounding the second mentioned rod and arranged at the opposite sides of said plate defining cushioning means, and said rod moving in unison incident to the steering of the vehicle to simultaneously turn the headlights as and for the purpose specified.

1,484,418. CURTAIN STRETCHER. DOROTHY SOLOMON, New York, N. Y. Filed Sept. 6, 1922. Serial No. 586,403. 2 Claims. (Cl. 45—24.)

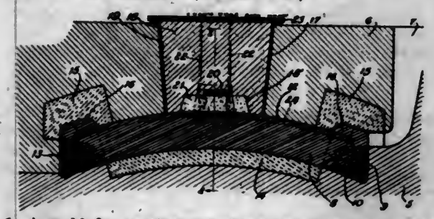


1. A curtain stretcher comprising frame members each consisting of two flat telescoping sections of unequal width, each section being provided with longitudinally extending lateral flanges having their ends spaced from the ends of said sections, the outer section being provided with a plurality of fixed curtain attaching pins, the inner section having a plurality of recesses formed

in one of its flanges and a plurality of curtain attaching pins hingedly connected to the flange of said section and adapted to be moved within the recesses of said flange

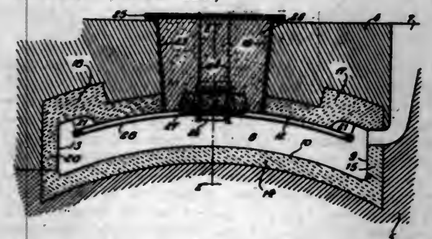
into alignment with the fixed pins of the outer section when in use, or to be pressed inward to permit the sections to be telescoped together.

1,484,419. FOLDING CHAIR. SARAH V. D. STIRLING, New York, N. Y. Filed Feb. 2, 1923. Serial No. 616,561. 4 Claims. (Cl. 155—30.)



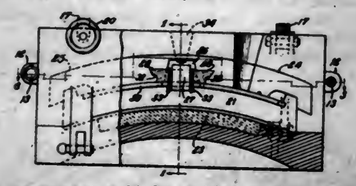
1. In a chair, the combination with a back pair of legs, a front pair of legs, an axle mounted on the latter, supporting wheels on the axle, a foot rest pivoted to said front pair of legs and adapted to rest upon the axle when in use, and to be folded back against the front pair of legs when not in use, of a seat pivoted to the upper portion of both pairs of legs and back bars pivoted to the seat and to the legs.

1,484,420. WRIST WATCH. MAX M. SUDEROV, New York, N. Y. Filed May 6, 1921. Serial No. 467,472. 3 Claims. (Cl. 58—88.)



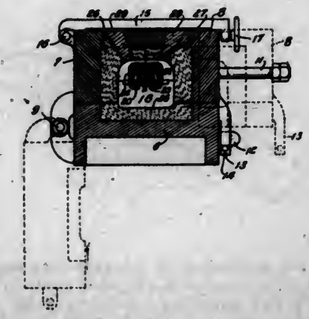
1. A wrist watch frame or case, comprising an elongated main body having a central opening for a watch case, the ends of said body being hollow, a combined reenforcing and spacing bead along the outer edge of the opposite sides of the frame, two covers hinged on opposite sides of the frame at one end and conformed thereto and adapted to close thereon against the bead, and snap shoulders formed on the opposite end of said main frame from said hinges and arranged to co-act with the adjacent ends of the covers to hold the latter closed.

1,484,421. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,769. 21 Claims. (Cl. 22—125.)



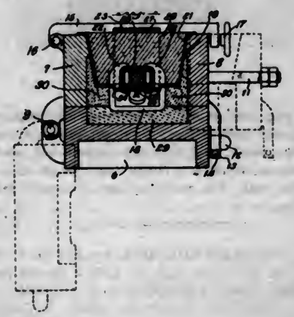
1. A mold for casting a brake shoe having an integral composite body, and comprising a metal drag and a metal cope with a brake shoe mold cavity therein, parts of the walls of said cavity being bare metal of said drag and cope and intermediate parts of the walls of said cavity being composed of solid refractory material so that those portions of the shoe casting opposite the bare metal parts of the cavity walls will be chilled and those portions of the shoe casting opposite the refractory parts of the cavity walls will be free from chilling effect of the metal drag and cope to produce an integral shoe body casting composed in part of soft cast iron and in part of chilled iron.

1,484,422. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,770. 9 Claims. (Cl. 22—126.)



1. A permanent mold for making castings, and comprising a metal drag and a metal cope with a mold cavity formed therein, the cope having an opening communicating with the mold cavity, a sand plug seated in said opening and forming a part of the top wall of the mold cavity, and sections of refractory material seated in the drag and in the cope and forming the remaining parts of the walls of the mold cavity.

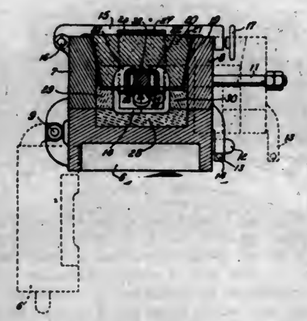
1,484,423. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,771. 27 Claims. (Cl. 22—101.)



1. A permanent mold for making castings, comprising a relatively fixed member, a hinged member, a slidable member, and means for securing said members together to close the mold.

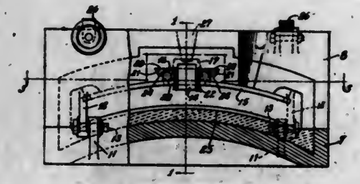
1,484,424. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,772. 4 Claims. (Cl. 22—126.)

1. A permanent mold for making castings, comprising a drag member and a two-member cope having a mold cavity therein, one member of the cope being relatively fixed and the other member being slidable, the drag member being movable relative to the cope members, a facing of refractory material on the drag and cope members and forming the walls of the mold cavity, and means for holding the mold members together during the casting operation.



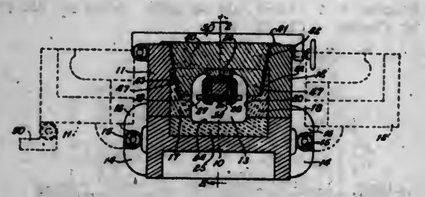
1,484,425. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,773. 7 Claims. (Cl. 22—126.)

1. A permanent mold for making castings, comprising a drag and a cope having a mold cavity therein, said cope having an opening communicating with said cavity, a sand plug in said opening, the drag member being movable bodily away from the cope to leave the bottom of the mold cavity open so that parts to be embedded in the casting may be inserted in the mold cavity through the bottom thereof, means carried by said plug for suspending said parts in the mold cavity, and means for securing the members of the mold in closed position during the casting operation.



1,484,426. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,774. 2 Claims. (Cl. 22—125.)

1. A permanent mold for making castings, comprising a drag and a cope having a mold cavity therein, said cope having an opening communicating with said cavity, a sand plug in said opening, the drag being bodily movable away from the cope to leave the bottom of the mold cavity open so that the parts to be embedded in the casting may be inserted in the mold cavity through the bottom thereof, means carried by said plug for suspending said parts in the mold cavity, a facing of refractory material on the

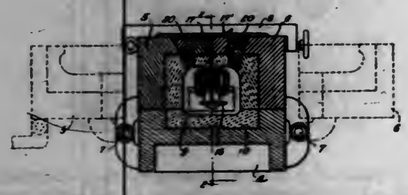


drag and cope members and forming the walls of the mold cavity, and means for securing the members of the mold in closed position during the casting operation.

1,484,427. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,775. 12 Claims. (Cl. 22—126.)

1. A permanent mold for making castings, comprising a drag and a two-member cope having a mold cavity therein, said cope members being hinged on the drag member to swing outwardly thereon, each of said cope members having a part of the mold cavity therein and adapted to accommodate a portion of the parts which are to be embedded in the casting, and means for holding said parts in one cope member and for permitting the other cope member to be swung to closed position without disarranging said parts.

1,484,428. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,776. 10 Claims. (Cl. 22—167.)

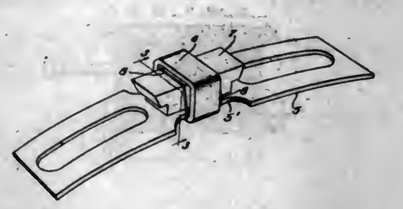


1. A permanent mold for making castings, comprising a drag and a two-member cope, each of said cope members having a part of the mold cavity therein and adapted to accommodate a portion of the parts which are to be embedded in the casting, and a centrally disposed sand plug having spaced portions of its surface forming portions of the mold cavity walls formed in said cope members.

1,484,429. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,777. 8 Claims. (Cl. 22—125.)

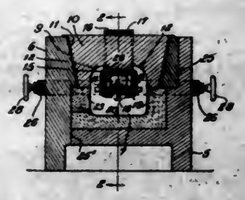
1. A permanent mold for making castings, comprising a drag and a cope having a mold cavity therein, said cope having spaced openings therethrough communicating with said cavity, porous cores in said openings, and wires embedded in said cores for suspending a member within the mold cavity to be embedded in the casting.

1,484,430. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,778. 10 Claims. (Cl. 22—125.)



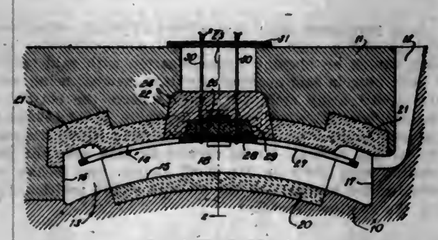
1. A permanent mold for making castings, comprising a drag and a cope having a mold cavity therein, the cope adapted to be opened to permit the insertion of a unit therein and also being provided with grooves extending therethrough and communicating with the mold cavity, and wires extending through said grooves and having angularly disposed means adapted to be turned to operatively engage the unit and the cope to suspend the unit in the mold cavity.

1,484,431. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,779. 13 Claims. (Cl. 22—126.)



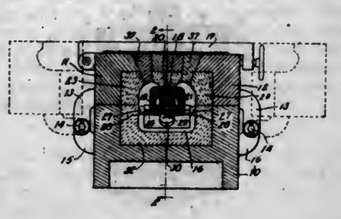
1. A permanent mold for making castings, comprising a frame, a drag pivotally mounted on the frame, and a two-member cope, each of said cope members being pivotally mounted on the frame.

1,484,432. MANUFACTURE OF BRAKE SHOES. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,780. 5 Claims. (Cl. 22—167.)



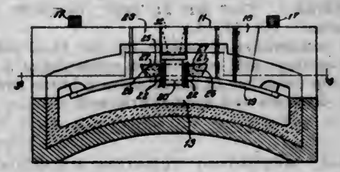
1. In the manufacture of brake shoes, an assembly unit of parts to be inserted in the mold cavity of the brake shoe mold, and comprising a reinforcing back, a core for forming the opening in the attaching lug of the shoe, and means for fastening the back and the core together.

1,484,433. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed July 20, 1923. Serial No. 652,781. 5 Claims. (Cl. 22—126.)



1. A permanent mold for making castings comprising a metal drag and a metal cope having a mold cavity therein, the bottom wall, one side wall and one end wall of the mold cavity being formed on the drag, and the top wall, one side wall and one end wall being formed on the cope.

1,484,434. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed Aug. 1, 1923. Serial No. 655,064. 12 Claims. (Cl. 22—126.)

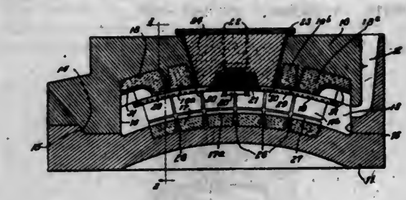


1. A permanent mold for making castings, and comprising a drag and a cope having a mold cavity therein, said cope having a recess communicating with the mold cavity and having an opening communicating with said recess, a porous plug seated in said recess, and means extending through said porous plug and through said opening for securing in place in the mold cavity the parts to be embedded in the casting.

1,484,435. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed Aug. 1, 1923. Serial No. 655,065. 11 Claims. (Cl. 22—125).

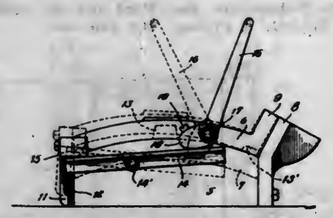
1. A permanent mold for making castings, and comprising a drag and a cope having a mold cavity therein, and means engaging the parting surface of the drag for holding in place in the mold cavity the parts to be embedded in the casting.

1,484,436. BRAKE-SHOE MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed Aug. 1, 1923. Serial No. 655,066. 8 Claims. (Cl. 22—167.)



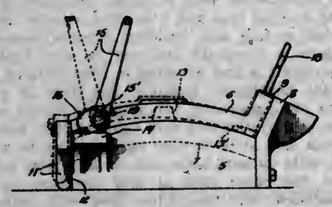
1. The combination with a core for forming the opening in the attaching lug of a brake shoe, of a permanent mold for casting the brake shoe and comprising a drag and a two-member cope having a mold cavity therein, each of said cope members having a part of the mold cavity therein, and one of said cope members having a recess adapted to receive the entire core.

1,484,437. MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed Nov. 20, 1923. Serial No. 675,792. 20 Claims. (Cl. 22—126.)



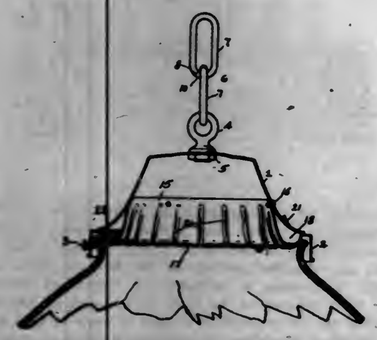
1. A mold for making brake shoes and other castings, comprising a metal drag and a metal cope and having a mold cavity therein, a refractory section seated in said mold and having a face thereof forming a wall surface of the mold cavity, the remaining faces of the refractory section being protected by the metal of the mold.

1,484,438. MOLD. JAMES S. THOMPSON, Pelham, N. Y. Filed Nov. 20, 1923. Serial No. 675,793. 6 Claims. (Cl. 22—126.)



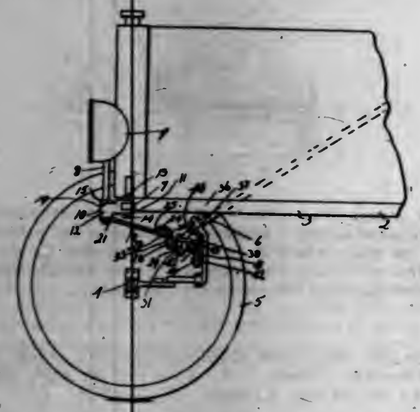
1. A mold for making brake shoes and other castings, and embodying a metal drag and a metal cope having a mold cavity therein, said mold cavity having a wall for forming an unchilled portion of the shoe or other casting and comprising a plurality of refractory sections having faces exposed in the mold cavity, and an inwardly projecting rib for protecting a face of each of two adjacent refractory sections, said protected faces of said sections forming edges with said faces thereof exposed in the mold cavity.

1,484,439. MOLD FOR MAKING CASTINGS. JAMES S. THOMPSON, Pelham, N. Y. Filed Dec. 28, 1923. Serial No. 683,162. 7 Claims. (Cl. 22—92.)



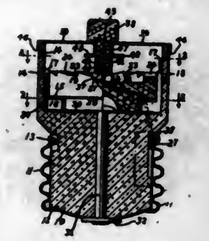
1. A permanent mold for making castings comprising a drag and a cope, a projection on the cope, and a lever on the drag adapted to be operated to engage the projection of the cope for loosening the cope from the drag and casting after the casting has been made.

1,484,440. MOLD FOR MAKING CASTINGS. JAMES S. THOMPSON, Pelham, N. Y. Filed Dec. 28, 1923. Serial No. 683,161. 4 Claims. (Cl. 22—92.)



1. A permanent mold for making castings comprising a drag and a cope, a projection on the drag, and a lever pivotally mounted on the cope to engage said projection for loosening the cope from the drag after the casting has been made.

1,484,441. LIGHTING FIXTURE. FREDERICK W. WAKEFIELD, Vermilion, Ohio, assignor to The F. W. Wakefield Brass Company, Vermilion, Ohio, a Corporation of Ohio. Filed June 28, 1923. Serial No. 648,219. 5 Claims. (Cl. 240—128.)

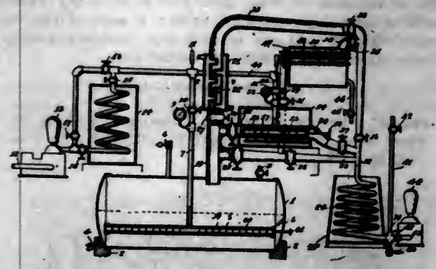


1. In a lighting fixture, the combination of a globe holder open at the bottom, a member secured within said holder and forming an annular channel, an opening in said holder above such channel, whereby weighting material may be inserted in said channel.

1,484,442. DIRIGIBLE HEADLIGHT. ROBERT WEBSTER, Philadelphia, Pa. Filed Jan. 11, 1923. Serial No. 612,041. 2 Claims. (Cl. 240—62.)

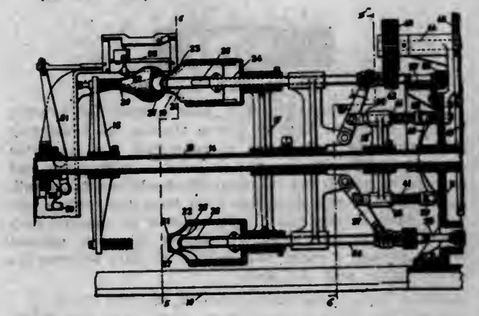
1. The combination with a vehicle including the ordinary lamp holding lugs and a steering column, of brackets attached to said lugs, bushings rotatably mounted in the brackets, a headlight mounted in each bushing to rotate therewith, a link attached to each bushing, means to hold the headlights, bushings and links in place, a connecting bar comprising two members having overlapping ends, said overlapping ends being slotted, bolts passing through said slots to hold the members in adjusted positions, nuts on said bolts, one of said bolts having a ball head, the outer ends of said members being upwardly inclined, ears projecting from said outer ends, means to pivot the other ends of the links to said ears, a hanger attached to the lower end of the steering column, an upwardly projecting arm pivoted to the lower end of the hanger and a pitman rigidly connected at one end to said arm and having a socket at the other end for connection to the ball head of bolt on the connecting bar.

1,484,443. MULTIPLE-FUSE PLUG. PETER B. WEILER, Detroit, Mich. Filed Apr. 8, 1921. Serial No. 459,672. 8 Claims. (Cl. 200—125.)



4. In a device of the class described, the combination of a body member having a recess in the top thereof, with a cover, a plurality of fuse elements disposed within the recess, a shank extended through said cover member, a brush connected to said shank to thereby be moved to successively contact with said elements, and combined means for fastening the brush to the shank, and for insulating the brush from the cover member.

1,484,444. COMPOSITION OF MATTER. JOHN MACNAULL WILSON, Montclair, N. J.; Cora Ellsworth Wilson, executrix of said John MacNaull Wilson, deceased, assignor to Wilson-Imperial Company, a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,047. 3 Claims. (Cl. 87—5.)



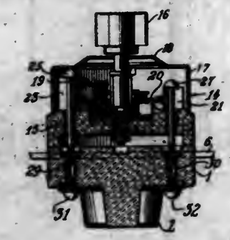
1. A composition of matter for use in cleaning protective coatings, said composition consisting of a mixture of a syrup consisting of gum Karaya solution and a solution of glycerine and hydrochloric acid.

1,484,445. METHOD OF TREATING HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Nov. 18, 1914, Serial No. 872,698. Divided and this application filed Feb. 28, 1921. Serial No. 448,735. 3 Claims. (Cl. 196—25.)

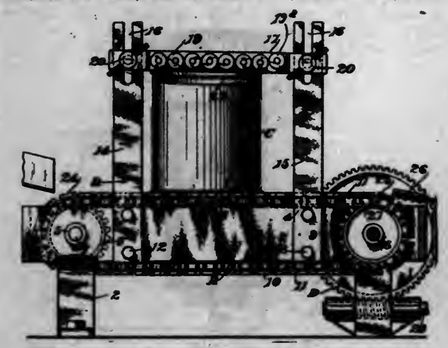
1. The process of producing gasoline-like products from heavier hydrocarbons of a boiling point higher than gasoline, consisting in subjecting the heavier hydrocarbons to a cracking temperature while in a still to decompose the same, in permitting an expansion of generated vapors in a suitable vapor space, in passing the vapors from said vapor space through a passageway to a reflux condenser located away from the still, in causing a retarded flow of the vapors in a restricted stream through said reflux condenser, in separating the heavier insufficiently cracked vapors from the gasoline-like vapors by condensing said substantially heavier vapors during their retarded flow through the reflux condenser without substantially condensing the gasoline-like vapors, by maintaining the temperature of the reflux condenser such as to condense the vapors that do not have a sufficiently low boiling point by the application of a temperature controlling medium to said reflux condenser, in recracking the reflux condensate, in discharging the uncondensed gasoline-like vapors from the reflux condenser to a final condenser without again admitting said vapors to the cracking still, in collecting the condensed gasoline-like oil, and in maintaining a superatmospheric pressure on the oil undergoing distillation in the still, and on the vapors while in the vapor space and during their retarded travel through the reflux condenser and while in the final condenser.

1,484,446. MACHINE FOR PEELING AND CUTTING PEARS. NARSETE FELIZIANETTI, San Leandro, Calif. Filed Mar. 14, 1923. Serial No. 624,923. 11 Claims. (Cl. 146—35.)

1. In a machine of the character described, a plurality of operating units mounted for movement about a common axis, said units comprising a halving blade, means for supporting a fruit in an operative position relative to said blade, and means for reciprocating said blade to halve the fruit.



1,484,447. STRAIN INSULATOR. HARRY B. GEAR, Chicago, Ill., assignor to G. & W. Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1917. Serial No. 160,669. 3 Claims. (Cl. 173—366.)

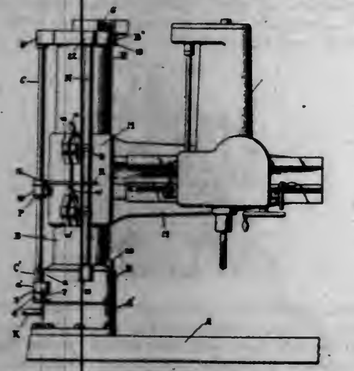


2. A strain insulator comprising in combination, a substantially frusto-conical inner body provided with a plurality of longitudinal grooves of various sizes in the peripheral face thereof, an outer body having a recess therein conforming substantially to the shape of said inner member for receiving the latter for longitudinal and rotative adjustment therein, said recess having disposed from end to end thereof a plurality of circumferential ribs, an integral end wall having a plurality of apertures adapted to be brought into alinement with some of the grooves in said inner body, and means for axially connecting said bodies.

1,484,448. COMBINED SWITCH AND FUSE BLOCK. GERALD W. HART, West Hartford, Conn., assignor to The Hart Manufacturing Company, Hartford, Conn., a Corporation of New Jersey. Filed Feb. 23, 1921. Serial No. 447,140. 4 Claims. (Cl. 175—298.)

1. In a combined fuse block and switch a fuse block having upon one face three binding posts and a fuse socket, said fuse socket comprising a screw shell terminal and a central terminal, and on the opposite face four successive equally spaced anchorages arranged in a circle and two bus-bars, one of said anchorages being electrically connected to one of said socket terminals and to one of said binding posts and one of said bus-bars being connected to the other terminal of said socket, another of said anchorages being connected to the other of said bus-bars, and the other two anchorages being intermediate and connected to the other two binding posts respectively, a rotary series-multiple snap-switch mounted on said opposite face, said snap-switch having four successive switch terminals, and means electrically and mechanically connecting said successive switch terminals to said successive anchorages respectively, the means connecting the anchorages and switch terminals together holding said switch in position upon said opposite face.

1,484,449. CAN-TOPPING MACHINE. CHARLES JOSEPH HULTEN, Oakland, Calif., assignor of one-half to Oliver S. Orrick, Oakland, Calif. Filed June 21, 1922. Serial No. 569,848. 2 Claims. (Cl. 113—27.)



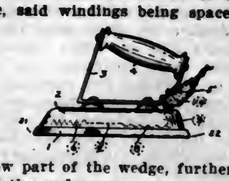
1. A can topping machine comprising a main frame, a pair of sprocket gears journalled at each end thereof, a pair of endless chains carried by said gears, cross bars connecting said chains and forming an endless receiving and supporting platform, means for transmitting a continuous drive to the sprocket gears and the chains and cross bars carried thereby, a longitudinal support engaging the underside of the cross bars, means for delivering cans in line formation to the endless platform, said cans being provided with friction lids, which have been loosely applied, a series of rollers successively engageable with the lids of the respective cans to force the lids gradually into place, and a relieving roller disposed at the end of the first named rolls.

1,484,450. COLUMN-CLAMPING MECHANISM. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 6, 1921. Serial No. 498,684. 2 Claims. (Cl. 77—28.)

1. A radial-drill combining a post; a sleeve pivoted thereto; an arm vertically adjustable on said sleeve; a clamp for locking said sleeve to said post; a clamp for

locking said arm to said sleeve; hand-levers for actuating said arm-clamp; an upright shaft operatively connected with said sleeve clamp; a bearing bracket secured upon said arm; a bearing sleeve journaled in said bearing

bracket and having a spline connection with said shaft; and a hand-lever fixed to said bearing sleeve and having its free end adjacent said arm clamping levers for manually actuating said sleeve clamp.

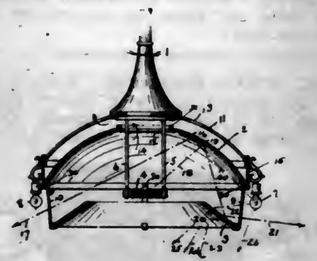


1,484,451. ELECTRIC WATER HEATER AND SWITCH. MILTON H. SHOENBERG, San Francisco, Calif. Filed Feb. 2, 1921. Serial No. 441,987. 6 Claims. (Cl. 219—39.)

1. An electric heater comprising a metallic sheath open at the top and extending into a casing through which a fluid is adapted to flow and sealed to prevent the entry of said fluid in said sheath, an electric resistance element inserted into said sheath and connections thereto introduced through said open top, a thermostat element constructed and adapted to move a latch under temperature variations and a switch adapted to make or break an electric circuit through said resistance, an escapement pin associated with said switch and adapted to engage said latch when said thermostat is below a predetermined temperature and which is released therefrom by the movement of said latch when said temperature is exceeded and spring means by which said switch is moved into open circuit position whenever said latch clears said pin.

1,484,452. ELECTRIC IRON. MILTON H. SHOENBERG, San Francisco, Calif., assignor to Majestic Electric Development Company, San Francisco, Calif., a Corporation of California. Filed Mar. 4, 1922. Serial No. 541,156. 7 Claims. (Cl. 219—25.)

1. In an electric iron a heating unit comprising an electrical resistance wound on insulation material resistance wound on insulation material of substantially flat wedge shape, said windings being spaced close together



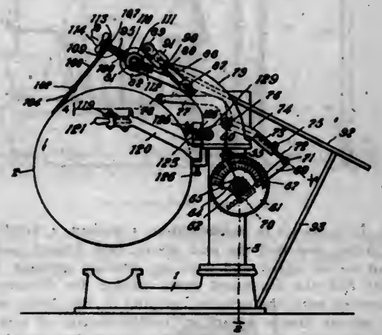
on the narrow part of the wedge, further apart over the wide part of the wedge.

1,484,453. LIGHTER. MILTON H. SHOENBERG, San Francisco, Calif. Filed June 8, 1922. Serial No. 566,830. 13 Claims. (Cl. 219—32.)

1. In an electric lighter a base member of annular form, a bottomed annular recess therein, an insulating plate covering said recess, a resistance wire mounted on said plate, switch means mounted in said recess and adapted to control the energization of said resistance coil, said resistance wire wound in helix form and column supports fixed in said plate and adapted to contact with the bottom of said recess to support the plate against distortion, and a guard ring closing the joint between the base member and the plate.

1,484,454. COMBINED LIGHTING AND HEATING UNIT. MILTON H. SHOENBERG, San Francisco, Calif. Filed Dec. 4, 1922. Serial No. 604,680. 2 Claims. (Cl. 126—85.)

1. A reflector for radiant energy in combination with a heating unit and a plurality of lighting units, said units positioned inside and outside of said reflector respectively, said heat element being located substantially about the focus and said light units positioned symmetrically about the periphery of the reflector and suspension means for said reflector and a passage way therethrough and a secondary reflecting surface spaced in front of said reflector and adapted to deflect a portion of the heat rays reflected from the first reflector.



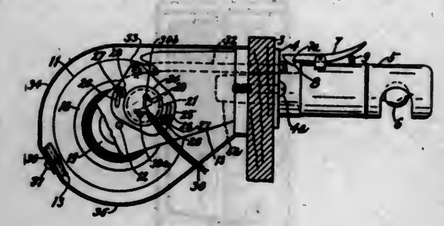
1,484,455. METHOD AND APPARATUS FOR MARKING TIRE FLAPS. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 8, 1921. Serial No. 475,953. 3 Claims. (Cl. 101—27.)

1. In an apparatus for marking tire flaps, in combination, a branding mechanism including metallic characters and means for heating the metallic characters, and

a work support, said work support and branding mechanism being shiftable to and from cooperative branding relation, and means for insuring similar location of a branding mark on successive flaps and a uniform intensity of branding on each flap despite inequalities in its thickness.

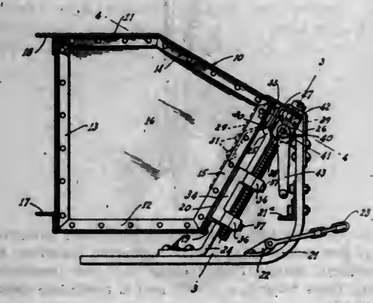
1,484,456. TIRE-BUILDING MACHINE. JOHN AXEL AHLFORS, Canton, Ohio, assignor to The Knight Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 11, 1921. Serial No. 451,496. 14 Claims. (Cl. 154—10.)

1. A tire building machine comprising a feed roll over which a sheet of fabric is arranged to be passed, a power driven annular core for drawing the sheet fabric from said feed roll, gearing operatively connecting said feed roll to the core to cause positive rotation of the feed roll at a relative speed with the core to stretch the fabric, and a rock arm engaging the core and operatively connected to the gearing for automatically varying the speed of the feed roll.



1,484,457. HAYSTACKER. JAMES O. ALLSTOTT, Pauls Valley, Okla. Filed Sept. 26, 1922. Serial No. 590,700. 30 Claims. (Cl. 214—91.)

1. A hay stacker comprising means for receiving and elevating a mass of hay or like material, means for disintegrating the mass and feeding it to a conveyor at a substantially uniform rate, elevating means for the material, means for receiving material from said elevating means, and manually controlled means for receiving material from said elevating means and distributing it on the stack, substantially as set forth.

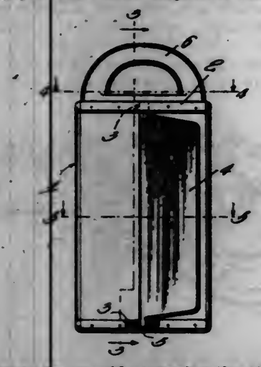


1,484,458. TROUBLE-LAMP FOR AUTOMOBILES. WILLIAM M. ANDERSON, New York Mills, Minn. Filed Feb. 8, 1923. Serial No. 617,854. 2 Claims. (Cl. 240—7.)

1. An electric lighting device of the kind described comprising an electric lamp detachably secured in a socket in a stationary element, means mounted on said element adjacent the socket and operatively connected with said lamp and with a source of current to provide electric current for the lamp while the latter is in its secured position on the stationary element or detached and removed some distance therefrom, said electric circuit comprising a cable having two wires having their rear ends connected with the lamp and their forward ends connected with two concentric conductive rings in the flange of a reel mounted in a frame secured to the stationary element and said cable normally wound on the reel, two stationary electrodes each normally contacting with one of said rings and means for sending an electric current through said electrodes, said frame having an integral plug in which said electrodes are se-

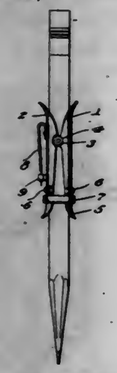
cured and said electrodes having their ends opposite from the reel exposed in the outer end of said plug and said means for sending an electric current through the electrodes comprising a cap adapted to be oscillated and normally spring pressed against the end of said plug, and secondary electrodes in said cap comprising the ends of wires connected with a source of current and adapted to contact with the first mentioned electrodes when the cap is rocked, to control the circuit to the lamp.

1,484,459. STONE SPREADER. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Oct. 12, 1921. Serial No. 507,201. 8 Claims. (Cl. 94—44.)



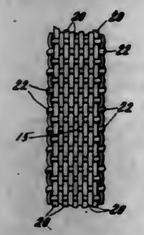
8. A road material spreading device comprising ground-engaging members, a hopper movably mounted thereon, and adjusting means associated with each side of the hopper, said means being operable at both sides simultaneously for raising or lowering the hopper and being independently operable for effecting lateral tilting of the hopper.

1,484,460. SOUNDING TOY. ANGELO BARBAR, Franklin, Pa. Filed Mar. 16, 1922. Serial No. 544,242. 2 Claims. (Cl. 46—46.)



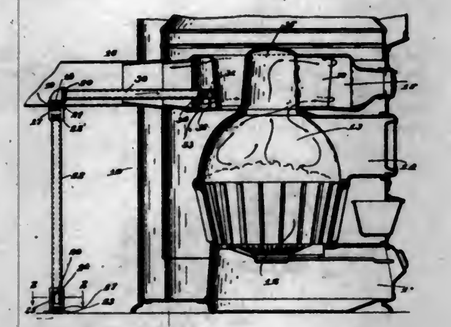
1. A sounding toy comprising a substantially oblong body having flat striking surfaces, a handle at one end of the body to be grasped for oscillating the body on a longitudinal axis, and a pair of clappers of substantially the same length as said body, said clappers being pivotally connected on one longitudinal edge to the body at a point midway between the longitudinal edges thereof, and each clapper having its opposed faces flattened to be alternately brought into contact with portions of the strik-

ing surface with which it co-operates on opposite sides of the pivot point, both of said clappers being simultaneously engaged with their respective striking surfaces



and the clapper on one side engaging the striking surface on a portion on one side of the longitudinal axis opposite to that with which the remaining clapper is engaged.

1,484,461. PENCIL HOLDER. FREDERICK BAYER, Jacksonville, Fla. Filed Feb. 21, 1922. Serial No. 538,301. 3 Claims. (Cl. 24—12.)



1. A pencil holder of the class described comprising a pair of jaw members pivotally connected together, a band of resilient material encircling the jaw members for causing them to grip a pencil and a retaining means for said band.

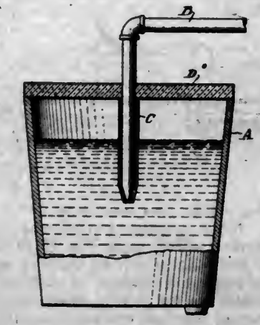
1,484,462. BRAKE BAND. GEORGE C. BEALS, Winchendon, Mass., assignor to Fibre Finishing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1922. Serial No. 537,234. 13 Claims. (Cl. 188—259.)

5. A fabric brake band comprising paper strands impregnated with water and grease repellent material.

1,484,463. AIR PREHEATER. HERMAN E. BEEDE, Arlington, Mass. Filed Sept. 6, 1922. Serial No. 586,516. 2 Claims. (Cl. 126—112.)

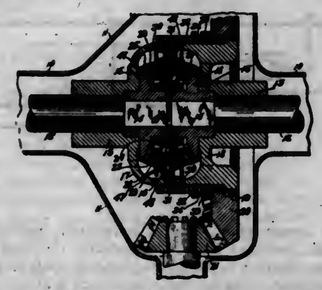
1. In a heater in combination, a firebox, a hemispherical dome mounted on and above said firebox and provided on its upper end with an exhaust opening, an exhaust flue for consumed gases having its entrance end connected with the exhaust opening of the dome, an oxygen supply means extending longitudinally of and adjacent the lower portion of said exhaust flue, said oxygen supply means having an intake located at a point below the bottom of the firebox and an exit end terminating adjacent the top of the hemispherical dome whereby oxygen is drawn from the exit end of said oxygen supply means into the hemispherical dome in a direction opposite to the direction of the normal draft of the consumed gases from the firebox.

1,484,464. CURTAIN FASTENER. ROSS L. BENSON, Kansas City, Kans. Filed July 18, 1923. Serial No. 652,423. 2 Claims. (Cl. 24—216.)



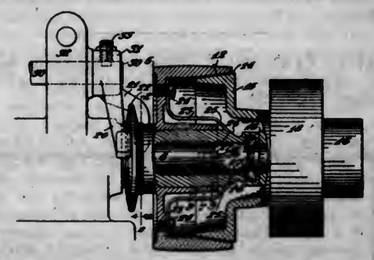
1. A fastener for curtains including a main body having a chamber, a plate closing the chamber on one side of the main body, tensioned spreading jaws in the chamber, posts projecting from the bottom of the chamber and disposed between the jaws for guiding them in register, said jaws having opposite recesses forming an opening to receive a stud on a curtain or a stationary part of a vehicle, a plate between which and the main body a curtain is disposed, the second plate having projections passing through the curtain and entering the posts to secure said parts, and means carried by the second plate and operatively connecting with the main body of the fastener for securing the second plate in position and securing the fastener to the curtain.

1,484,465. PROCESS OF TREATING MOLTEN CAST IRON OR STEEL. JAMES R. BILLINGS, Chicago, Ill., assignor to J. R. Billings Iron and Steel Company, Chicago, Ill., a Corporation of South Dakota. Filed May 12, 1922. Serial No. 560,446. 2 Claims. (Cl. 75—44.)



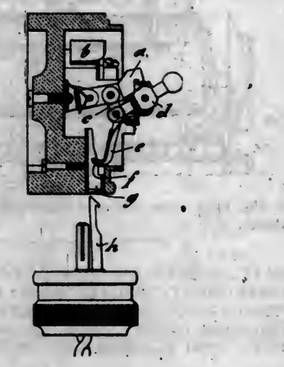
1. The process of treating molten cast iron or steel which consists in introducing air into the molten metal

for a sufficient time to cause, without oxidation of the iron itself or substantial decrease of carbon content, a



substantial rise in temperature, and then casting the metal into molds or ingots.

1,484,466. LOCK FOR DIFFERENTIAL GEARS. GEORGE BOYDELATOUR, Canton, Ohio. Filed Aug. 9, 1923. Serial No. 656,585. 8 Claims. (Cl. 74—100.)



1. The combination with a differential gearing including gears and pinions meshing with the gears, of a locking dog arranged to mesh with both gears and with two of the pinions.

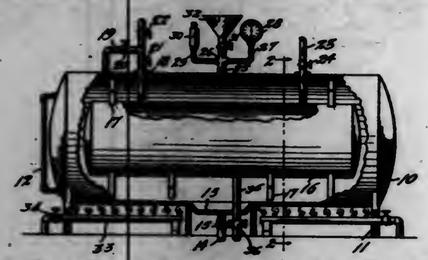
1,484,467. CLUTCH DEVICE. CARL A. BAINK, Cranston, R. I., assignor, by mesne assignments, to The New England Trust Company, trustee, a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,552. 10 Claims. (Cl. 192—93.)

7. The combination with a rotatable clutch-member, of a second member rotatable on the same axis and shiftable into and out from engagement with the first member, said second member provided with an annular flange having inclined faces on its sides, and means movable into position to normally clear the sides of the flange but adapted to be engaged with the inclined faces thereof to shift the shiftable member with a wedgeing action.

1,484,468. INTERLOCKING DEVICE FOR ELECTRIC SWITCH AND PLUG. EDWIN JOHN BROTHERS, East Dulwich, London, England, assignor of one-half to J. H. Tucker & Company Limited, Birmingham, England. Filed Feb. 17, 1921. Serial No. 445,759. 2 Claims. (Cl. 200—50.)

1. An electric switch including a movable contact member, an operating member therefor, a detent connected to the operating member, fixed means for engagement by the detent when the operating member and movable contact member are in open position, to hold said members in such position, and a plug having means to disengage said detent from said fixed means, when the plug is inserted, and thereby permit operation of the switch, and to also coact with said detent to hold the plug in inserted position while the switch is closed.

1,484,469. CLEAN-OUT DEVICE FOR PIPES. SIMON BRUCELARIE, West Hoboken, N. J. Filed Feb. 6, 1923. Serial No. 617,333. 2 Claims. (Cl. 137—70.)

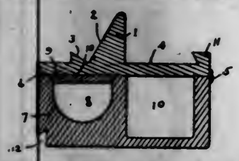


1. A clean-out device for pipes having a clean-out aperture, which includes a casting to be placed over the surface of the pipe adjacent the aperture, said casting being bored and having a dependent collar projecting into the aperture, a plug closing the outer end of the casting, wing portions on said casting having slots, a strap connected to one of said wing portions and passing around the pipe to the other of said wing portions and passing through the slot therein, and a key engageable with the other end of the strap, said key adapted to be wound up to roll up the free end of the strap and tighten the casting on to the pipe.

1,484,470. CLEANING AND PAINT-REMOVING APPARATUS. DAVID P. CLEVELAND, Dallas, Tex., assignor to Universal Paint Remover and Motor Cleaning Company, a Trust Estate, Dallas, Tex. Filed July 25, 1921. Serial No. 487,502. 3 Claims. (Cl. 299—95).

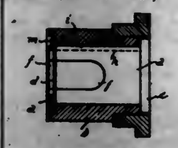
1. In an apparatus of the character described, a tank, a discharge pipe leading from the tank, an air drum disposed within the tank, means for supplying compressed

air to the drum, a by-pass connection between said compressed air supply means and the tank, a discharge pipe leading from the drum, means for introducing a charge



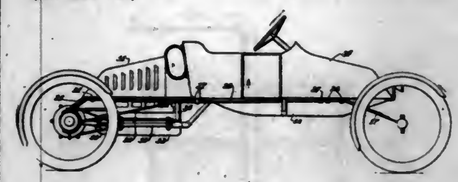
into the tank, and means for heating the tank and its contents.

1,484,471. SOUND RECORDING AND REPRODUCING INSTRUMENT. WILLIAM ERNEST CLIFTON and JOHN STURTON EWART, Nottingham, England, assignors to The Cliftophone Limited, London, England. Filed June 21, 1921. Serial No. 479,379. 11 Claims. (Cl. 181—32.)



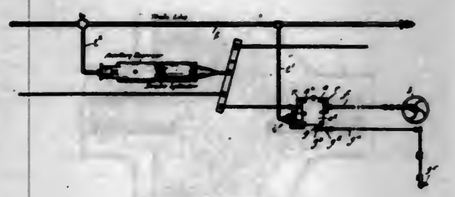
1. For a sound box of the type described, a diaphragm comprising a sheet of flexible and substantially non-resilient or only slightly resilient material having a relatively stiff portion formed for connection with the inner end of a stylus bar nearer one edge of the said portion than the other edges thereof and adjacent the center of the diaphragm, substantially as described.

1,484,472. COMBINED CASE AND RACK FOR GAMES. MIRIAM M. COWEN, San Francisco, Calif. Filed Mar. 29, 1923. Serial No. 628,447. 8 Claims. (Cl. 46—55.)



2. In combination with a box for holding gaming tiles, a top member having a rack for tiles and formed of a back receiving and a foot receiving surface and a tile receiving channel to the rear of said rack, and a tally strip adapted to slide longitudinally between the box and the member.

1,484,473. CYLINDER LOCK. JOHANNES CRONING, Hamburg, Germany. Filed Jan. 11, 1923. Serial No. 612,062. 3 Claims. (Cl. 70—46.)

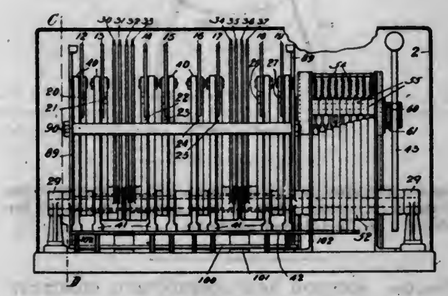


1. A cylinder lock of the kind described having a stationary cylinder and a rotatable flanged plug held in position therein, an annular stop plate securing said plug against axial displacement and a bayonet connection between the plate and plug.

1,484,474. MOTOR CAR. HARRY E. CROSS, Rockton, Ill. Filed Nov. 29, 1919. Serial No. 341,493. 14 Claims. (Cl. 180—1.)

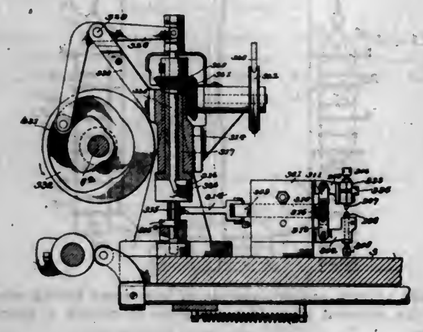
1. In a motor vehicle, the combination of a main frame supported by front steering wheels and rear driving wheels, an operator's seat supported in an intermediate and relatively low position on said frame, a motor rigidly mounted in an underhung position on said frame between the operator's seat and the driving wheels and adapted for driving the latter, and an operator's control and foot compartment, the floor of which is substantially below the main frame.

1,484,475. AUTOMATIC SAFETY LOCK FOR AIR BRAKES. WILLIAM F. CROWN, Chehalis, Wash. Filed Feb. 9, 1922. Serial No. 535,335. 5 Claims. (Cl. 303—89.)



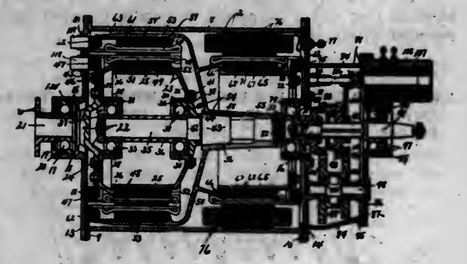
1. The combination with air-operated brake-applying devices of, auxiliary means for holding the brake applying devices against releasing movement, such means comprising a clutch-lever having a bore thru which the brake-operating member extends, automatic means for throwing said clutch-lever at an oblique angle to the line of motion of said brake operating member, a cylinder and piston therein operating to place said clutch-lever in a position normal to said line of motion, this cylinder having an air vent, a conduit connecting said cylinder with the source of air under pressure which supplies the air-brake cylinder, a valve controlling the admission of air from said conduit into said cylinder and the escape of air therefrom thru said vent, and automatic means holding said valve shut against a predetermined pressure in said conduit.

1,484,476. CAMP GRILL. TRENTON B. CURRIE, Houlton, Me. Filed Apr. 10, 1923. Serial No. 631,231. 3 Claims. (Cl. 126—30.)



1. A device of the character described comprising two slidable grill sections, each including a substantially rectangular shaped continuous wire frame, eyes on the adjacent ends of said sections through which the sides are adapted to slide, substantially U-shaped wire leg members pivotally mounted in the outer ends of said sections with the base of the U disposed beneath the plane of each section, and means on the outer ends of the sections to limit the outward swing of the leg members.

1,484,477. APPARATUS FOR CIPHERING AND DECIPHERING CODE EXPRESSIONS. ARVID GERHARD DAMM, Ronninge, Sweden. Filed Mar. 25, 1922. Serial No. 546,886. 1 Claim. (Cl. 35—13.)

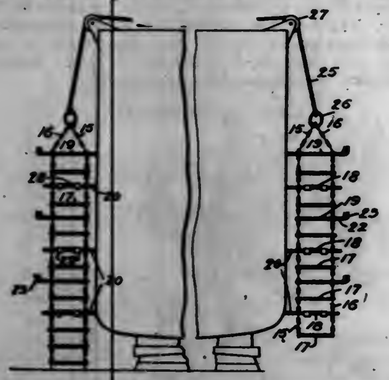


In an apparatus for recording in type-print two-letter syllables, always composed of one vowel and one consonant and constituting cipher-equivalents of two-figure groups, and for the rendering in type-print two-figure groups, constituting cipher-equivalents of two-letter syllables of said kind, the combination of a scale of adjustment, one part of which, for the ciphering of two-figure groups, comprises four series of figures, two of these series containing ten different figures in arbitrary order and the other two series containing each five figures in arbitrary order, these figures being different in one series as compared to the other, and the other part of which scale, for the ciphering of two-letter syllables, comprises four series of letters of which series two contain each ten different consonants in arbitrary order and the two other both contain the same arbitrary sequence of five vowels, and eight rotary type-wheels, four carrying letter-types and four figure-types, of which type-wheels those carrying letter-types are dependent, as to their movements, each on a member adjustable according to one of the four series of figures of the scale of adjustment, the arrangement of the letter-types being such, that the two type-wheels dependent each on a member adjustable according to the series of ten figures carry each ten consonant-types, for each wheel the same as are comprised in one of the series of ten consonants of the scale of adjustment, though in reversed order, and that the two type-wheels, which are dependent each on a member adjustable according to one of the series of five figures, carry the same five vowel-types repeated twice in the same sequence on each type-wheel and for each type-wheel in reversed order, as compared to that of one of the series of five vowels of the scale of adjustment, the four type-wheels carrying figure-types being dependent as to their movements each on a member adjustable according to the letter-series of the scale of adjustment, the arrangement of the figure-types being such that the two type-wheels, each of which is dependent on a member adjustable according to one of the series containing ten consonants, both carry the same figure-types, for each wheel in reversed order as compared to that of one of the ten-figure series of the scale of adjustment, and that the two type-wheels, each of which is dependent on a member adjustable according to one of the five-vowel series, carry each five different figures repeated twice in the same order on each wheel and for each wheel identical to those of one of the five figure series of the scale of adjustment, but arranged in reversed order.

1,484,478. NEEDLE-LATCH-RIVETING MACHINE. JOHN A. CALDER, Torrington, and WILLIAM H. DAYTON, deceased, late of Torrington, Conn., by James M. Dayton, administrator, Springfield, Mass., assignors to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Dec. 6, 1918. Serial No. 265,541. 9 Claims. (Cl. 78—23.)

1. A riveting machine including in combination, riveting hammers, an operating lever for each hammer, means for rapidly vibrating said levers and for automatically suspending the vibrations thereof so as to facilitate the placing of the rivet between the hammers.

1,484,479. ELECTRICAL POWER-TRANSMISSION DEVICE. ALBERT E. DOMAN, Elbridge, N. Y., assignor to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed Aug. 13, 1918. Serial No. 249,893. 3 Claims. (Cl. 290—12.)

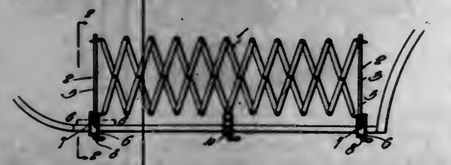


1. A power transmission mechanism comprising a driving shaft having a spider rigidly associated therewith, a cylindrical shell secured to the spider and axially aligned with the driving shaft, a field magnet system mounted on said shell, a driven shaft extending axially of and within the shell and rotatably associated with the shell to prevent independent radial movement of either the shell or driving shaft, a frame having a portion telescoped outside the field magnet system, another portion mounted on said driven shaft for simultaneous rotation therewith, an armature carried by the portion telescoped with the field magnet system, said frame provided with a flange concentric with the driven shaft and carrying a second armature and a field magnet system for said armature.

1,484,480. SCAFFOLDING. ALFREDO DONAGGIO, Winfield, Long Island, N. Y. Filed Feb. 24, 1920. Serial No. 360,681. 24 Claims. (Cl. 304—16.)

1. Scaffolding for ships' hulls comprising ladders made up of flexible side members and rungs connecting the same in spaced relation, means for supporting said ladders over the side of a ship with the rungs standing out

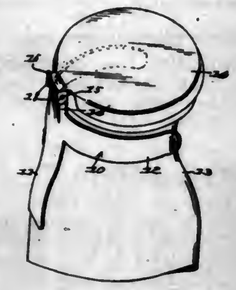
from the hull and staging sections extending between the ladders and having hook elements engaged with the



rungs of such ladders, certain of the rungs having eyes at the outward sides of the ladders to receive a guard line.

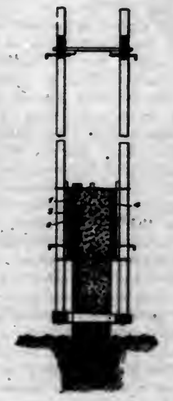
1,484,481. BATTERY CONNECTION. MILO H. DUNBAR, Canton, Ohio. Filed July 1, 1921. Serial No. 481,741. 3 Claims. (Cl. 204—29.)

1. In a battery terminal connection, a lead battery terminal post and a tin coated, internally threaded tube mounted within said post.



1,484,482. LUGGAGE CARRIER. WILLIAM G. DUNN, Clarinda, Iowa. Filed May 22, 1922. Serial No. 562,806. 4 Claims. (Cl. 224—29.)

1. A luggage carrier for the running boards of automobiles, comprising a side frame adapted to be disposed in an upright position along the outer edge of the running board, rigid end frames adapted to be disposed in upright position transversely across the running board and being pivotally connected to the ends of said side frame, said end frames including upright rods and horizontal rods having free ends which are disposed adjacent each other, and clamping means carried by said end frames and coacting with the horizontal rods thereof, said clamping means including brackets to which the free ends of said rods are rigidly connected.

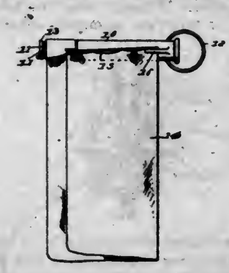


1,484,483. MILK-BOTTLE COVER. CLARENCE W. ECKER, Rockford, Ill. Filed June 8, 1921. Serial No. 475,898. 2 Claims. (Cl. 215—63.)

1. A milk bottle cover having a supporting member provided with a clamp for engaging the neck of the bottle, and a spring actuated cap pivotally mounted upon the supporting member for closing the mouth of the receptacle, said supporting member having upstanding bearing arms projecting above the plane of the clamp and an intermediate tongue, said arms being bent to form bear-

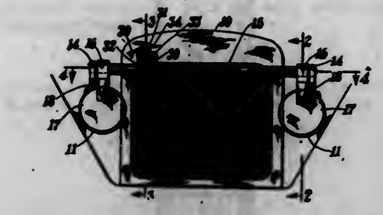
ings for the pivot pin of the cover, and the tongue being arranged in contact with the rear edge of the cover for locking it in its adjusted positions.

1,484,484. METHOD OF CONSTRUCTING CONCRETE WALLS. ERNEST FLAGG, New York, N. Y. Filed Feb. 28, 1923. Serial No. 621,818. 2 Claims. (Cl. 25—131.)



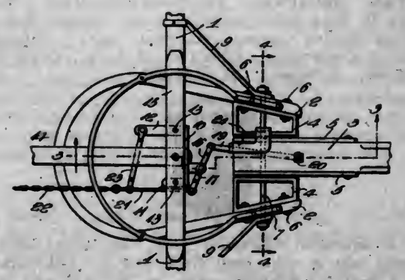
1. A method of constructing concrete walls in a building form having a plurality of mold boards forming the sides of the form and between each pair of which boards a seam is formed, which method consists in pouring concrete into the form up to a point just below the level of a seam, and then laying a row of bricks on the top of the concrete along the inner surface of the mold boards with one face of the bricks bearing against said seam.

1,484,485. SWITCHMAN'S FLAG. FRED FREAR, Monett, Mo. Filed Apr. 5, 1923. Serial No. 630,083. 1 Claim. (Cl. 116—173.)



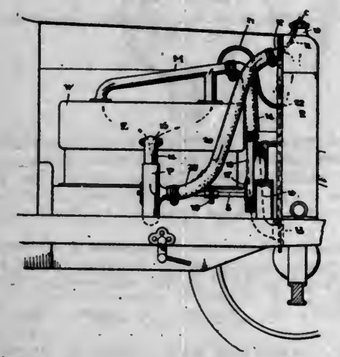
In combination with a flag having a binder cord applied to one edge thereof, a flag holder consisting of a staff comprising a plurality of telescoping sections including grip and terminal sections, and means for securing the extremities of the binder cord to the extremities of the grip and terminal sections, the grip sections adjacent the extremity remote from that to which the cord is secured

being provided with a spring retaining finger adapted to frictionally engage the field of the flag when the sections



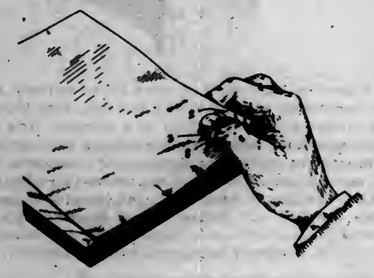
are collapsed and the flag is folded, said retaining finger at its edge abutting against the side of the cord to permit rolling the folded flag on the collapsed staff.

1,484,486. AUTOMOBILE HEADLIGHT SHIELD. WILLIAM GAMES, Providence, R. I. Filed Nov. 16, 1922. Serial No. 601,252. 2 Claims. (Cl. 240—45.6.)



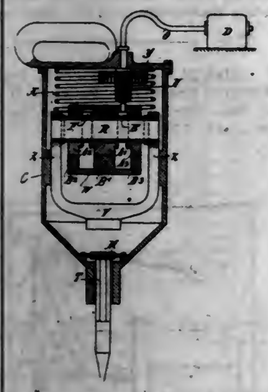
1. In an automobile, a headlight, a hollow shaft extending transversely of the automobile above said headlight, a hub fixed on said shaft, a hollow arm carried by said hub to be rotatable on an axis radial to said shaft, a shield fixed to said arm, an internal gear rigid with said arm, a pinion meshing with said gear, a short shaft in said hub radial to said hollow shaft and having said pinion on its outer end, a shaft extending through the hollow shaft, meshing bevel gears on said second and third shafts, and means for rocking said first and third shafts in unison on said third shaft independently of said first shaft.

1,484,487. WAGON-BRAKE-OPERATING MEANS. WILLIAM SULWIN GANDER, Russell, Pa. Filed Apr. 9, 1923. Serial No. 630,928. 4 Claims. (Cl. 188—120.)



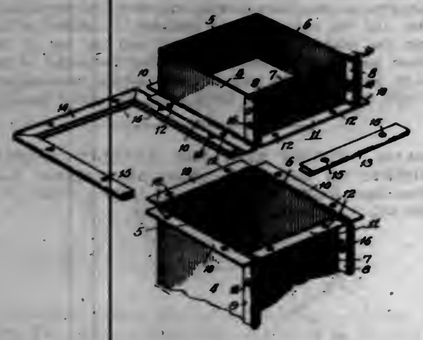
1. Wagon brake applying means comprising a horizontally elongated bar to abut the front side of the front axle, said bar having rearwardly extending arms adapted to be bolted to the axle, a fulcrum member extending forwardly from said bar, a lever fulcrumed between its ends on said fulcrum member, a thrust device connected with one end of said lever and extending forwardly therefrom to be operated by rearward force exerted by the draft animals, and a brake operating pull device connected to and extending rearwardly from the other end of said lever.

1,484,488. CIRCULATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. PALEMON H. GASKINS, Jacksonville, Fla. Filed Feb. 11, 1922. Serial No. 535,856. 1 Claim. (Cl. 123—174.)



In a circulating cooling system for internal combustion engines, a radiator, a cooling jacket for the cylinder of the engine, a connection between the outlet of the cooling jacket and the bottom of the radiator, a connection between the inlet of the water jacket and the top of the radiaor, and a bypass connection between the outlet of the cooling jacket and the radiator, said bypass communicating with the radiator at a point below the outlet thereof.

1,484,489. FINGER RING FOR HANDLING PAPER SHEETS OR THE LIKE. MARY ALICE GIVENS, San Francisco, Calif. Filed Nov. 25, 1922. Serial No. 603,332. 2 Claims. (Cl. 294—25.)



1. A finger ring adapted for use in handling sheets of paper, comprising in combination a ring portion having a widened plate-like portion on one side thereof adapted to be engaged by the ball of the finger, said plate having the opposite sides thereof serrated whereby a clinging member may be readily attached thereto.

1,484,490. MECHANICAL HAMMER. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsøgs-Aktieselskab, Ordrup, Charlottenlund, Denmark, a Company of Denmark. Filed Apr. 14, 1921. Serial No. 461,446. 13 Claims. (Cl. 78—36.)

1. A mechanical hammer comprising a reciprocatory tup, an element movable in relation thereto, and mechanism journaled on said tup for reciprocating said element and tup.

1,484,491. ELEVATOR LEG. JACOB J. GUTERMANN, Chicago, Ill., assignor to Weller Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 26, 1920. Serial No. 354,056. 3 Claims. (Cl. 137—75.)

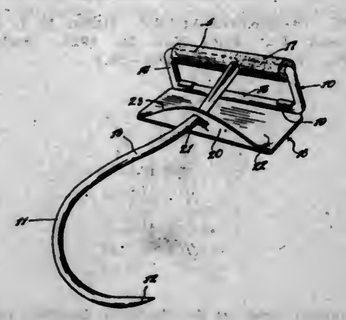
1. An elevator leg formed of sheet metal sections, each section comprising a member bent to form three integral sides, a fourth side being formed of a separate strip and having longitudinal integral flanges lapping the inner and outer faces of the margins of the oppositely disposed sides on said member and extending in the planes thereof, means extending through the flanges and end margins to secure the sides together, end flanges on and integral with the three-sided member and strip respectively, and means to secure the end flanges of contiguous sections together.

1,484,492. ELECTRIC SNAP PLUG. GEORGE A. HANSBROUGH, San Francisco, Calif., assignor of one-half to Baylies C. Clark, San Francisco, Calif. Filed May 20, 1920. Serial No. 382,753. 2 Claims. (Cl. 173—360.)

1. An electric plug comprising a plurality of externally threaded segments, a pair of members crossing each other substantially at their centers, a pivot passing through said crossed portions, each of said members carrying one of said segments on one end, a casing enclosing said members and having oppositely disposed holes therethrough, spring means adapted to force the segments outward, a pair of

finger pieces extending through each of said holes and each engaging the inner end of one of said pivot members and operable from the outside by finger pressure to collapse said segments.

1,484,493. PORTABLE LIGHT. RENÉ HARGOT, Chicago, Ill., assignor to Hyman Mishoulam, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,791. 1 Claim. (Cl. 240—8.5.)



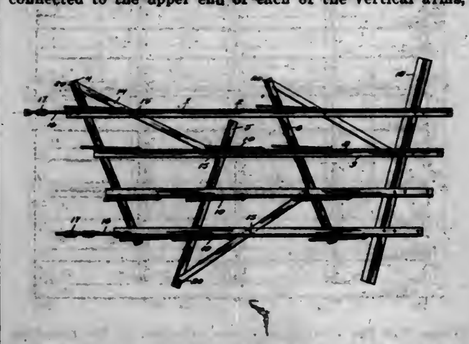
A portable light of the character described comprising a casing, lamps carried thereby a magneto arranged in the casing, gearing connected with the magneto, a manually operable rack bar, a spring motor connected with the gearing and rack bar, a handle carried by the casing, a pair of pivoted levers carried by the handle, one of which being connected with the rack bar, a brake element operated by the remaining lever and arranged within the casing adapted to engage the magneto to render the same inoperative, and an operating rod connected with one of the levers and the brake element respectively.

1,484,494. SEPARABLE ATTACHMENT PLUG. WILLIAM H. HARRINGTON, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 30, 1922. Serial No. 609,859. 3 Claims. (Cl. 173—343.)

1. A separable attachment plug base having an insulating body, a screw shell fitting over one end thereof, and a slotted insulating button on said end and said screw shell, in combination with two contacts in said body projecting through said screw shell, one of said contacts forming electrical contact with the screw shell and preventing the latter from rotating on said body.

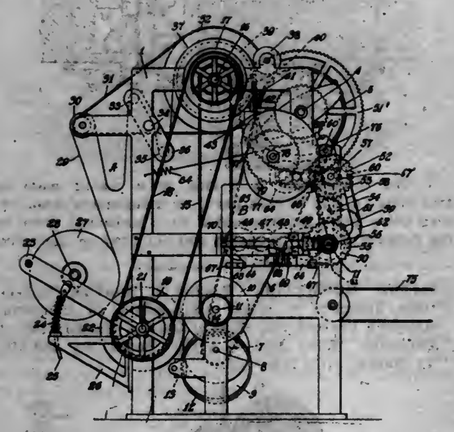
1,484,495. LIFTING HOOK. WILLIAM L. HATHERLEY, San Bernardino, Calif. Filed Jan. 10, 1923. Serial No. 611,910. 2 Claims. (Cl. 294—26.)

1. A lifting hook comprising a rectangular loop, a shank and a hook portion formed as integral parts from a metallic rod; one side of the loop constituting a finger guard and the opposite side a T-handle together with the shank extending at right angles medially therefrom, said shank terminating with the hook portion pointing in the direction of said finger guard.



1,484,496. AUTOMATIC LOOM STOP. JAMES KENNEDY HAYDOCK, Danville, Va. Filed Apr. 17, 1923. Serial No. 632,786. 2 Claims. (Cl. 139—339.)

1. In combination with the belt shifting rod, sand roll and cloth roll of a loom, vertical arms having U-shaped bearings at their upper ends, a cloth rod supported by the bearings and over which the cloth moves on its passage to the cloth roll, an arm having connection with the belt shifting rod, and a rod connecting the cloth rod and arm whereby movement of the cloth rod vertically within its bearings, results in a relative movement of the arm to rock the first mentioned rod.



1,484,497. ROAD SCRAPER. NORMAN W. HICKS, Malta, Mont. Filed July 19, 1922. Serial No. 575,988. 2 Claims. (Cl. 37—142.)

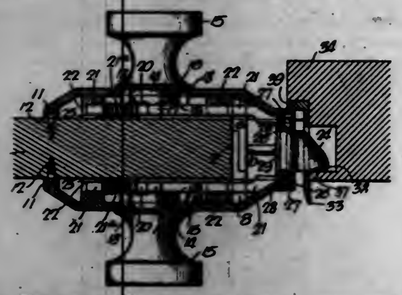
1. A road leveling drag, comprising spaced longitudinally disposed angle beams, a series of groups of right angled members each having a vertical and horizontal arm, each vertical arm being pivotally connected to an angle beam, transversely disposed alternately angularly arranged scraping blades connected to and carried by the horizontal arms of each group of right angled members beneath the angle beams, bracket bars secured at one end to each of the beams and at the other end adjustably connected to the upper end of each of the vertical arms,

brace bars connected at one end to the outer end of each of the scraping blades and connected at the other end to one or more of the beams, depending bracket members secured to the under side of the beams at the rear thereof, and a leveling bar carried by said bracket members.

1,484,498. CUTTING AND COILING CRÊPE PAPER. FRANK P. HILDEBRANDT, Saugerties, N. Y. Filed Dec. 14, 1921. Serial No. 522,288. 15 Claims. (Cl. 242—56.)

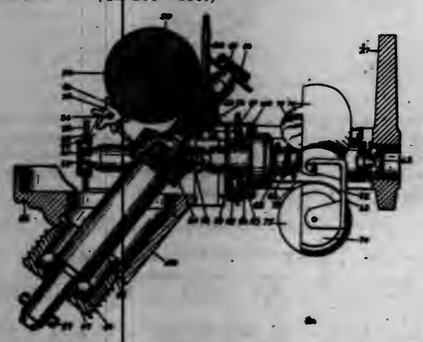
9. In a device of the class described, means for forming a coreless coil of crêpe paper without imparting appreciable tension or compression thereto and cooperating means for evening up the ends of the coil so formed, during the coiling operation.

1,484,499. CRATE. JACOB HOCHMAN, Wilkes-Barre, Pa., assignor to Isador Seeherman, Wilkes-Barre, Pa. Filed Mar. 17, 1923. Serial No. 625,857. 4 Claims. (Cl. 217—19.)



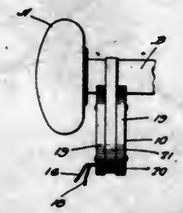
1. A device of the class described comprising a casing open at top and bottom, a plurality of supporting straps connected to two opposite members of said casing at their lower edges and in spaced relation, a cage within

said casing formed of a plurality of U-shaped members with the lower horisontal portions bearing on the spaced



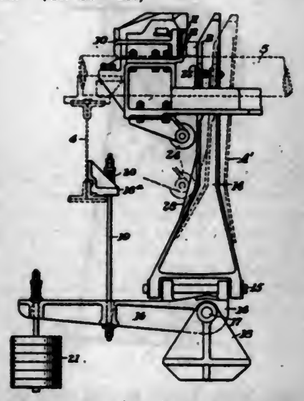
straps and the vertical portions attached to the members of the casing, and a plurality of spacer rods connecting the vertical portions of the U-shaped members.

1,484,500. DOORLOCK. JOHN HOPE, Jr., Providence, R. I. Filed Sept. 28, 1921. Serial No. 503,725. 9 Claims. (Cl. 292—220.)



1. The combination in a lock, of a casing made in two parts; a bolt in each part; an independent knob for each bolt; and a latch mounted on a horizontal pivot at the forward end of the casing and actuated by the bolts.

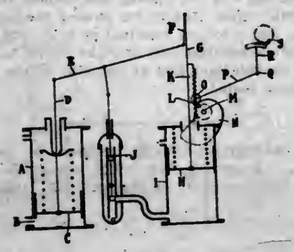
1,484,501. ODOMETER. ERNEST R. HUNTLEY, Toledo, Ohio, assignor, by mesne assignments, to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 6, 1919. Serial No. 269,879. 12 Claims. (Cl. 235—139.)



1. In a device of the class described, the combination of a plurality of registering units, transfer devices co-operating with said units, common means for supporting said transfer devices, and means co-operating with said supporting means to retain resiliently the transfer devices in co-operating relation with said registering units.

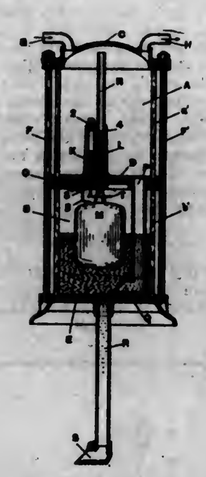
1,484,502. DOORKNOB ALARM. HENRY M. L. JAMES, Richmond, Va. Filed Nov. 28, 1921. Serial No. 518,361. 3 Claims. (Cl. 200—52.)

1. A circuit closer of the character described comprising a supporting member having an intermediate cut out portion, coiled wire contacts located within opposite ends of said cut out portion, a pendulum coiled wire contact pivoted within said cut out portion and movable to engage either of said first named contacts, cover plates secured upon opposite sides of said support and projecting therebeyond to define a groove, and a securing member engaged within said groove and adapted to be engaged upon the spindle of a door knob.



1,484,503. BILLET MANIPULATOR. LLOYD JONES, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1920. Serial No. 374,141. 12 Claims. (Cl. 80—48.)

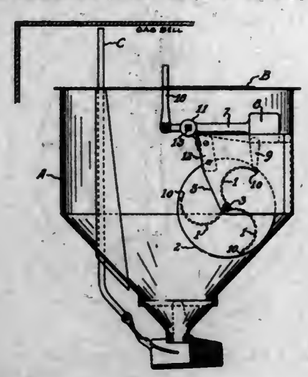
12. A manipulator for turning billets, comprising a movable table, a billet engaging member on said table having a plurality of independent billet engaging means for cooperating with billets of different cross sectional areas, and a second member relatively movable toward and from said means, said members being adapted to automatically receive therebetween and turn a billet during the movement of the table, substantially as described.



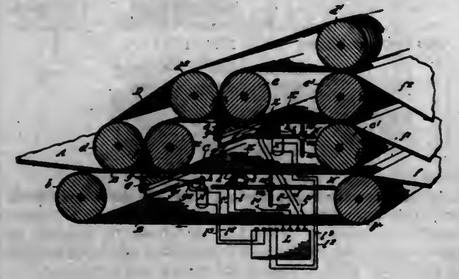
1,484,504. MEANS FOR REGULATING TURBOBLOWERS AND OTHER APPARATUS FOR DELIVERING FLUID UNDER PRESSURE OR SUCTION. LESLIE CHARLES KEMP, London, England. Filed Aug. 10, 1921. Serial No. 491,238. 6 Claims. (Cl. 103—12.)

1. Means for actuating the speed-controlling device of apparatus that is required to deliver fluid at an approximately constant rate against varying pressure, comprising in combination a loaded piston device subjected to and moveable by the static pressure at the place of delivery, means for transmitting motion from the said piston device to a speed-controlling device for the fluid-delivering apparatus in accordance with a determined relationship giving a rough approximation to the

speed adjustment required, and means acting upon said transmitting means for modifying the motion imparted by the piston device before it reaches the speed controlling device so as to produce a departure from the said relationship to a closer approximation to the required speed adjustment.



1,484,505. VACUUM TRAP. KARL KIEFER, Cincinnati, Ohio. Filed June 14, 1920. Serial No. 388,867. 24 Claims. (Cl. 137—103.)



1. In a vacuum trap, the combination of a chamber always under sub-atmospheric pressure, with a chamber alternately under sub-atmospheric and atmospheric pressure, said chambers having a single separating wall, and means entirely within said chambers, mounted in said wall, for transferring liquid accumulating in the first mentioned chamber to the atmosphere.

1,484,506. ACETYLENE GENERATOR. PIUS F. KILLIAN, Owensboro, Ky. Filed Apr. 12, 1920. Serial No. 373,375. 3 Claims. (Cl. 48—38.)

1. In an acetylene gas generator including a hopper having a charging opening in its top, and means to permit delivery from the hopper, a drum containing a plurality of compartments and rotatably mounted in the hopper in position to dispose one of the compartments below the charging opening in the top of the hopper, trip mechanism normally engaging the drum to restrain rotation of the same, and means to release said trip mechanism upon exhaustion of the charge in the hopper to permit rotation of the drum and delivery of an auxiliary supply from the compartment disposed below the charging opening in the top of the hopper.

1,484,507. FOLDING MACHINE. LEO M. KOHN, Philadelphia, Pa. Filed Feb. 16, 1920. Serial No. 358,916. 11 Claims. (Cl. 270—81.)

1. In a folding machine, the combination of a conveyer for carrying the article to be folded and including a plurality of tapes spaced apart, folding means arranged adjacent to the conveyer, and a controlling device having a part extending between a pair of tapes adapted to be engaged by the article as the same passes into the desired relation to the folding means without interrupting the movement of the article, said controlling device controlling the action of said folding device.

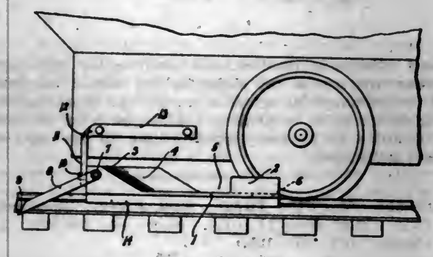
1,484,508. KEY-RING HOLDER. FRANCIS A. LASSERRE, Grosse Tete, La. Filed Mar. 27, 1923. Serial No. 628,044. 5 Claims. (Cl. 24—3.)

1. A key-ring holder of the class described comprising a main supporting member of substantially S-shaped contour, having an upper, an apertured intermediate and a lower portion, the upper end of which is curved over to form a depending bifurcated member, said lower portion merging into said intermediate portion and terminating in a rearwardly extending hook, a locking means having an upper, a constricted intermediate, and a lower portion, the upper portion of said locking means having its upper end reduced and curved over to form a depending tongue adapted to be positioned between the furcations of the bifurcated member, the lower end of said tongue being turned outwardly at right angles thereto and having laterally extending ears adapted to bear against the outer face of said furcations, said constricted intermedi-

ate portion passing through the aperture in the intermediate portion of the supporting member, the lower portion of said means provided intermediate its ends with an

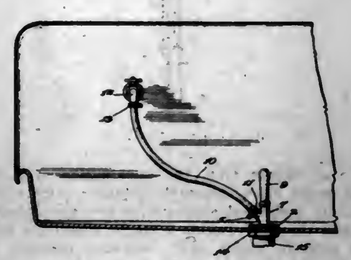
offset and terminating in a forwardly extending hook member constituting a seat for the hook of the supporting member.

1,484,509. MICROPHONE TRANSMITTER. HENRY G. LEACH, Brooklyn, N. Y., assignor to Electrical Industries Manufacturing Co., New York, N. Y., a Corporation of New York. Filed June 22, 1920. Serial No. 390,896. 1 Claim. (Cl. 179—123.)



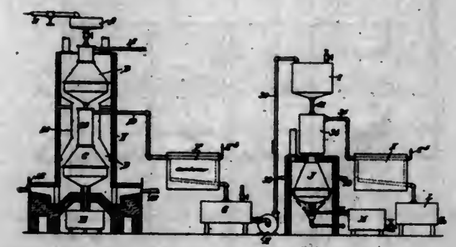
In a telephone transmitter of the character set forth and including a resistance varying diaphragm, a supplementary diaphragm separated therefrom to provide an intermediate air cushion and consisting of Japanese silk impregnated with collodion stretching the same.

1,484,510. MOTH-BALL HOLDER. ROBERT J. LEWERS, New York, N. Y. Filed July 10, 1923. Serial No. 650,718. 2 Claims. (Cl. 299—24.)



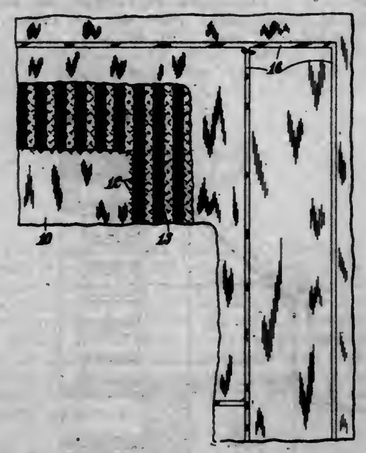
2. A moth ball holder comprising a single length of wire bent in helical form and providing an elongated tubular body, the intermediate convolutions of which are out of contact, one end of which is formed into a looped terminal disposed in a plane at an angle to the plane of the convolutions of the body and intersecting one end thereof to close the same, the opposite end having a plurality of contractile convolutions normally in contact, a disk-like closure insertable between two of said adjacent end convolutions and frictionally maintained in place by the contractile action thereof for closing the opposite end of the body, and a looped terminal at said latter end disposed in a plane substantially at right angles to the plane of the end convolutions and at one side of the periphery of the tubular body.

1,484,511. SAFETY DEVICE. ROBERT W. LIGHTBURN, Gans, Pa. Filed Apr. 12, 1923, Serial No. 631,631. Renewed Jan. 14, 1924. 4 Claims. (Cl. 104—261.)



1. A derailing device comprising a base having a raised portion at its rear provided with an inclined front edge to deflect the wheel, means pivotally connected with the rear part of the device for riding over the track when the device is pulled forwardly but will engage a track and stop the device when the same starts to move rearwardly and means for connecting the device to a car in such a manner that it will be dragged by the car but will become separated therefrom when the car starts to move rearwardly.

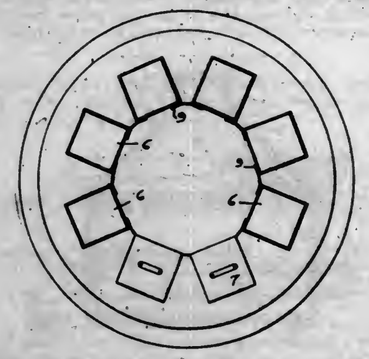
1,484,512. DEVICE FOR CLEANING SINKS. LEE L. LIGHTFOOT, Eau Claire, Wis. Filed Nov. 11, 1922. Serial No. 600,487. 1 Claim. (Cl. 4—255.)



A device of the class described comprising a tubular elbow having a bore of uniform diameter, one end of which forming a nozzle and the other end a hose receiving shank; a cup-like cavity being formed in said bore in substantially axial alinement with said shank, means for attaching a handle to said shank, a disk-shaped head integral with and surrounding the elbow between the end of the nozzle and the bend of the elbow, said head having a flat upper surface and a convex bottom surface, and a packing of flexible material secured to said convex surface.

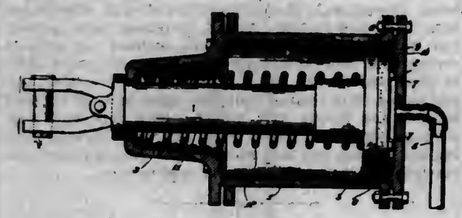
1,484,513. CONTINUOUS METHOD OF CRACKING HYDROCARBON OILS. ERNEST O. LINTON, Indiana Harbor, Ind., assignor to Linton Gasoline Process Company, Chicago, Ill., a Corporation of Delaware. Filed May 26, 1921. Serial No. 472,797. 4 Claims. (Cl. 196—25.)

1. The method of cracking heavy hydrocarbon oils, which consists in passing such oil as a thin sheet or film in continuous flow over heated surfaces within an externally heated still chamber, whereby vaporizable constituents are freely liberated into the still spaces, and are there subjected to a cracking temperature, permitting the hot vapors to expand into a heated expansion chamber, subjecting the vapors therein to further heating at a maintained cracking temperature, condensing the cracked vapors, and withdrawing the liquid residuum.



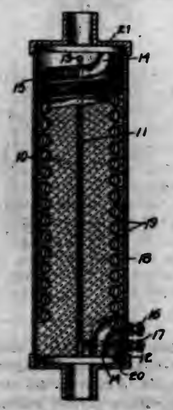
1,484,514. FLOOR OR PAVING FOR TENNIS COURTS AND OTHER PURPOSES. HENRY GARDINER LLOYD, Surbiton, England. Filed Oct. 21, 1921. Serial No. 509,341. 6 Claims. (Cl. 94—8.)

6. A floor or paving for tennis courts and other purposes comprising an uppermost layer of porous concrete, said porous concrete being formed of sand grains substantially spherical and substantially the same size and cement, in the proportions of from 3 to 4 parts by weight of sand to 1 part by weight of cement, only sufficient water being used in the formation of the concrete to produce a mixture of dry consistency.



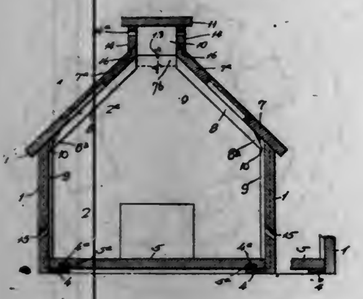
1,484,515. CONTAINER FOR FROZEN CONFECTIONS. CLINTON O. LUND, Yankton, S. Dak. Filed Mar. 6, 1922. Serial No. 541,504. 5 Claims. (Cl. 217—7.)

1. A refrigerating container embodying an outer casing for a refrigerating element, and a series of separate containers therein each isolated from the others and the outer casing and members connecting each container with



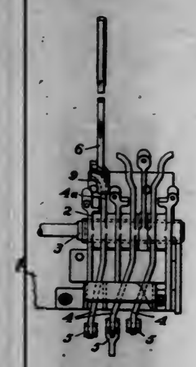
the adjacent container ot hold the container in fixed but spaced relation.

1,484,516. BRAKE CYLINDER. HELON B. MACFARLAND, Chicago, Ill., assignor to Leadizing Company, Chicago, Ill., a Corporation of Illinois. Filed July 8, 1920. Serial No. 394,753. 5 Claims. (Cl. 74—108.)



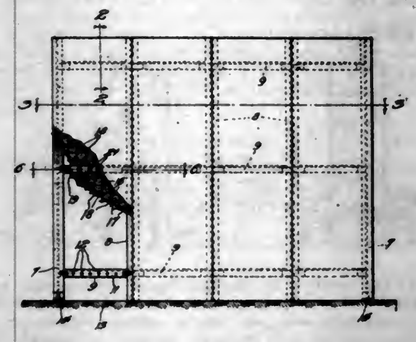
1. A brake cylinder of steel having a jacket of lead formed within the cylinder on the side walls thereof.

1,484,517. LIQUID HEATER OF THE ELECTRICALLY-CONTROLLED TYPE. BARNETT WRIGHT MACY, Jacksonville, Fla., assignor to Electric Heating Corporation, Jacksonville, Fla., a Corporation of Florida. Filed Mar. 27, 1922. Serial No. 547,089. 11 Claims. (Cl. 219—41.)



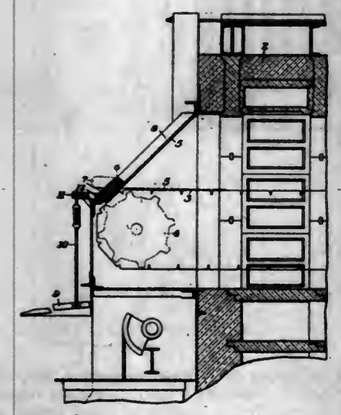
1. In an electric heating device, a container for liquid and a conductor immersed in the liquid and formed of material having less electrical resistance than the liquid, substantially as set forth.

1,484,518. COLLAPSIBLE HOUSE. JOHN L. MEADOWS, Hume, Ill. Filed May 11, 1923. Serial No. 638,323. 7 Claims. (Cl. 119—19.)



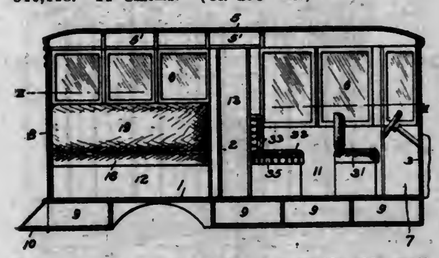
4. In a collapsible house, opposite sides having lower cleats, a bottom resting upon said cleats, the cleats projecting endwise beyond said bottom, and opposite ends having corner joint connection with said sides and resting upon the ends of said cleats, said corner joint connection being adapted to hold said opposite ends and sides in box form with said bottom removed therefrom, said opposite ends having tapered upper portions, inclined roof sections resting upon said tapered upper portions and spaced apart at their upper ends, and a longitudinal top section having spaced sides resting upon the upper ends of the roof sections and having ends provided with detachable connections with said opposite ends, said opposite sides having end notches and said roof sections having cleats having tapered lower ends engaging said notches.

1,484,519. SHAKER BAR. CONRAD L. MEISTER, Wilmington, N. C. Filed May 4, 1923. Serial No. 636,602. 8 Claims. (Cl. 126—169.)



1. In combination with a rocker arm having a curved locking surface, a shaker bar provided with a head having a passageway adapted to receive the curved surface of the arm and provided with a curved locking surface adapted to coact with the first mentioned locking surface to hold the bar in position upon the arm, the bar being separable from the arm by simultaneous lifting and turning movements only.

1,484,520. WALL STRUCTURE. CHARLES L. MICHOD, Chicago, Ill. Filed Dec. 11, 1920. Serial No. 429,921. 11 Claims. (Cl. 72—40).



1. A wall structure formed of an upwardly-extending framework, bodies arranged in edge-to-edge relation extending upwardly and flatwise opposing a face of said framework, a member adapted to support said bodies at their lower ends independently of said framework, and means connecting said bodies with said framework.

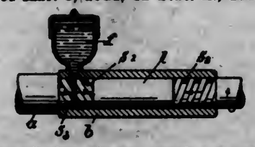
1,484,521. CHARGING DOOR FOR LEERS. EDWIN E. MILNER, Scott Township, Allegheny County, Pa., assignor to H. L. Dixon Company, Carnegie, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1921. Serial No. 453,465. 8 Claims. (Cl. 49—46.)

5. An annealing leer having a charging opening, inclined frame members arranged across such opening and spaced transversely from each other, a charging door pivotally mounted between each pair of said frame members and arranged to close upwardly and outwardly against said members, each of said doors having a counterweight substantially balancing the door but arranged to normally hold it in closed position, together with separate actuating means for opening each of said doors, substantially as described.

1,484,522. HABITABLE CAMPING VEHICLE. NINIAN R. MOORE, Dubois, Pa. Filed Mar. 1, 1922. Serial No. 540,148. 14 Claims. (Cl. 296—23.)

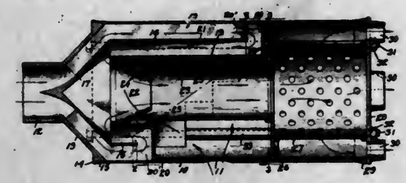
1. A camping vehicle having a movable side wall, a seat disposed in said vehicle, a movable back mounted on said seat and linkage mechanism connecting said back to said side wall.

1,484,523. SAUSAGE CASING AND PROCESS OF PRODUCING THE SAME. BERNARD JOSEPH MUMM and BERNARD JOHN MUMM, St. Paul, Minn. Filed Jan. 25, 1923. Serial No. 614,844. 9 Claims. (Cl. 17—45).



1. As a new article of manufacture, a seamless sausage casing in the form of an animal intestine having its particles permanently displaced by longitudinal extension and circumferential contraction, whereby the casing has greater length and less diameter than that of the original intestine from which it was made.

1,484,524. METAL-LATH CLIP. HARRY M. NAUGLE, Canton, Ohio. Filed Sept. 24, 1921. Serial No. 502,976. 2 Claims. (Cl. 72—118.)



1. The combination of a T-flange of a steel joist or the like with reticulated metal lath on the face of the flange, and a spring metal clip for securing the lath to the flange, comprising a body portion for abutting the face of the lath, a relatively long hook on one end for spring engaging one edge portion of the flange by an endwise movement to clamp the lath thereto and a relatively short hook at the other end for spring engaging the other edge of the flange to clamp the lath thereto and to draw the longer hook into clamping engagement.

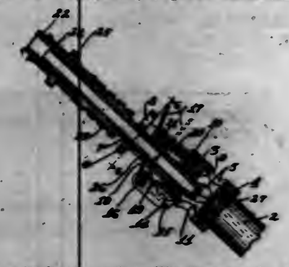
1,484,525. MEANS FOR DAMMING UP SEMISOLID SUBSTANCES. JACOB EMIL NOBOOMBATH, The Hague, Netherlands. Filed July 8, 1920. Serial No. 394,862. 1 Claim. (Cl. 64—24. (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A device for placing viscous substances under pressure comprising in combination, members in contact with one another, one being adapted to revolve relatively to the other, a spiral groove in the contact surface of one of said members, means for feeding a viscous substance into the suction end of said groove and another spiral groove in the contact surface of one of said members arranged to feed towards the pressure end of said first groove.

1,484,526. MUFFLER. MICHAEL J. O'CONNOR, Bloomingdale, N. J. Filed May 3, 1921. Serial No. 466,593. 12 Claims., (Cl. 137—160.)

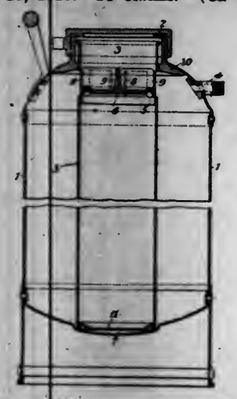
2. A muffler for explosive engines comprising a common passage adjacent the engine, branches of varying length extending rearwardly therefrom, a common passage to which said branches lead, means to subdivide the exhaust gases after leaving the last named common passage, and means surrounding the entrance of the last named common passage for admitting air thereto, substantially as set forth.

1,484,527. WELL-DRILLING BIT. JEFFERSON DAVIS PACE, Shreveport, La. Filed May 7, 1921. Serial No. 467,608. 6 Claims. (Cl. 255—72.)



1. In a well drilling tool, a rotary hollow drill pipe having a terminal shoe body with cutting teeth on the lower end and passages therethrough for the outflow of water, said shoe body having a central core opening, and a core barrel secured therein and rising above the shoe body within the drill pipe, said core barrel having a check valve at its upper end preventing passage of water into the barrel, a cylindrical cutter section secured to and extending downwardly from the shoe body in alinement with the core barrel and terminating in an annular cutting edge substantially at the same level as the cutting teeth on the shoe body and preventing water from entering the lower end of the core barrel when drilling.

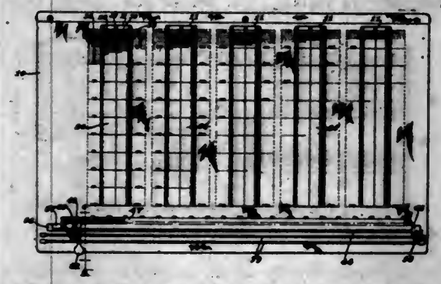
1,484,528. GAS-IRON HOSE CONNECTER. HERMAN A. PAQUETTE, Chicago, Ill. Filed Mar. 2, 1922. Serial No. 540,393. 6 Claims. (Cl. 285—173.)



5. The combination with an apertured housing and a grooved plug adapted to be inserted therein, of a pivoted apertured member on said housing adapted to receive the plug and engage in the groove thereof to hold the plug locked within the housing.

6. The combination with an apertured connecter housing having a mixing chamber therein, of a grooved plug adapted to be projected into the housing and into the combustion chamber thereof, an apertured lever pivoted on the housing and projecting therethrough to permit the plug to be inserted therethrough, guide members integrally

formed on said lever, and resilient means in said housing adapted to hold the lever inclined with respect to the plug to permit the lever to engage in the plug groove to hold the plug locked in the housing, said lever adapted to be depressed to permit release of the plug and withdrawal thereof from the housing.

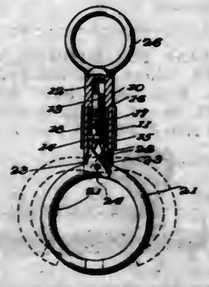


1,484,529. FIRE EXTINGUISHER. DUNCAN WHITE PATTERSON, New York, N. Y., assignor to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 8, 1919, Serial No. 316,153. Renewed May 22, 1923. 14 Claims. (Cl. 169—32.)

1. A fire extinguishing apparatus including an outer container, an inner container having unbroken vertical sides extending to a point adjacent to the top of the outer container, ports in said walls adjacent the upper end of the inner container, a stopple seat mounted on said walls and located below said ports, and a stopple resting upon said seat and closing the lower portion of the inner container, the construction being such that the sides of the container above said seat form guide means for directing said stopple toward and from the seat when the apparatus is inverted.

1,484,530. COMPUTING MACHINE. CLARENCE E. PERRY, Irasburg, Vt. Filed June 3, 1922. Serial No. 565,698. 4 Claims. (Cl. 235—86.)

1. A computing machine comprising a casing provided with a plurality of sight openings, a like number of rollers positioned adjacent the sight openings, a similar group of rollers spaced from the said first group of rollers, sheets wound about the pairs or rollers of the two groups and visible in par through each of the sight openings, manual means for rotating the rollers selectively in opposite directions to wind and unwind the sheets upon the rollers, numerical groups positioned upon the casing adjacent the sight openings, other numerical groups positioned upon the traveling sheets and displayed through the sight openings, said groups upon the sheets bearing mathematical relations each to the other, and a stop manually movable



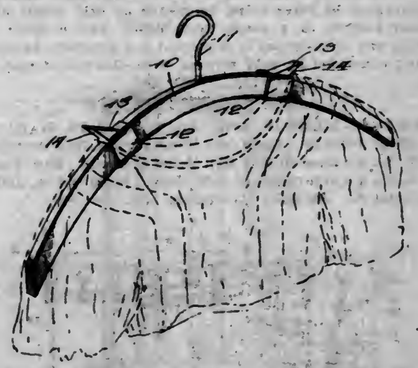
and numerically designated adapted to interrupt the movement of the sheets to display numerical groups predetermined by the positioning of the stop.

1,484,531. BROOM SHIELD. JAMES R. POWELL, Los Angeles, Calif. Filed Apr. 28, 1923. Serial No. 635,305. 4 Claims. (Cl. 15—175.)

1. In a broom shield, the combination with broom filaments and binding elements for the filaments, of a fabric shield member encasing the filaments, and extending above and below the broom binding elements, eyelets in the fabric and above and below the broom binding elements, binding cords passing through the eyelets and through the broom filaments above and below the broom binding elements, an elastic band forming the bottom of the shield body, and reinforcing elements within the body and extending vertically along the edges thereof.

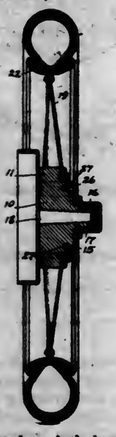
1,484,532. KEY RING. JAMES B. QUIGLEY, Independence, Mo. Filed Mar. 6, 1923. Serial No. 623,216. 8 Claims. (Cl. 59—96.)

1. In a device of the character described comprising a stem, a pair of jaws each having its one end pivotally connected to the similar end of the stem and the pivoted



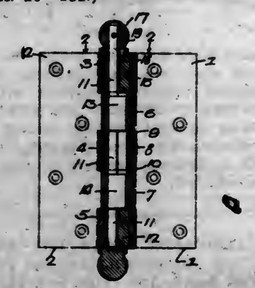
end of each jaw being formed with a projection, and means movable in the stem whereby to engage between the projections and lock said jaws in their closed position.

1,484,533. HYDRAULIC-VALVE PLUNGER. SAMUEL J. RANDALL, Youngstown, Ohio. Filed May 14, 1923. Serial No. 638,786. 4 Claims. (Cl. 74—109.)



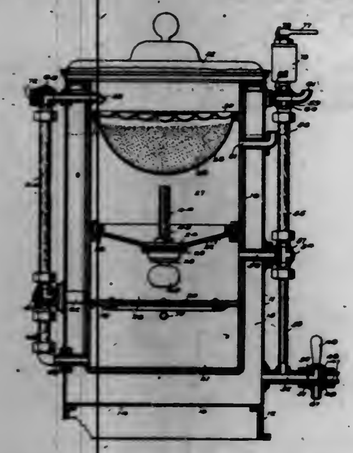
1. A hydraulic valve plunger including a stem, two spools thereon each having a reduced portion adapted to receive a metallic packing ring, the rings being narrower than the reduced portions, and a spool adapted to fit between the first mentioned spools and having oppositely disposed rims adapted to fit over the reduced portions and co-operate with them to form a pair of spaced-apart grooves for the metallic packing rings when the plunger is assembled, substantially as described.

1,484,534. MEANS FOR HOLDING GARMENTS ON HANGERS. FREDERICK M. RAUCH and WALTER J. BROOKS, Washington, D. C. Filed Apr. 23, 1923. Serial No. 634,063. 1 Claim. (Cl. 211—13.)



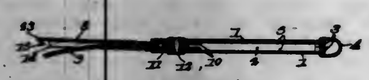
A garment hanger comprising a bar, provided at its middle portion with suspension means, and elastic sleeves mounted on said bar on opposite sides of the suspension means, each sleeve being provided with an upstanding lug formed with an outwardly disposed upwardly projecting undercut shoulder, said sleeves being adjustable longitudinally upon said bar towards and from each other for engagement with the neck portion of a garment to hold the same in distended condition upon the bar, the said shoulders being designed to engage the inner side of the neck portion of the garment and extending upwardly and outwardly over and above said neck portion a sufficient distance to prevent any accidental disengagement of the neck portion with the shoulder by a casual lifting of the garment at either side thereof.

1,484,535. VEHICLE WHEEL. JOHN W. SHEPARD, Tucson, Ariz. Filed Jan. 18, 1923. Serial No. 613,464. 5 Claims. (Cl. 301—64.)



5. In a vehicle wheel, a hub having a radially corrugated shoulder at one end, a disk having a tire supporting rim at its outer periphery and provided with a centrally apertured portion adapted to fit over the hub, corrugations extending radially from the apertured portion adapted to fit against the corrugated shoulder, a radially corrugated washer adapted to fit over the hub against the opposite side of the disk, and a plurality of beveled lugs extending radially from the hub at the opposite end from the shoulder, a clamping member having complementary beveled lugs adapted to engage the hub lugs for impinging the washer against the disk and for locking the same against displacement, an exteriorly threaded extension from said end of the hub and a cap threadedly engaged thereover for locking the clamping member against displacement, the threads of said cap having a reverse pitch to the inclination of the beveled lugs.

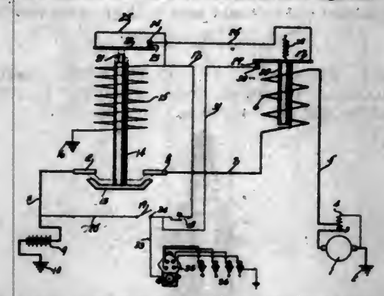
1,484,536. HINGE. ALBAN WARREN WAY, Philadelphia, Pa. Filed Jan. 23, 1923. Serial No. 614,411. 9 Claims. (Cl. 16—131.)



1. The combination in a hinge, of two leaves, each leaf having knuckles; a pintle adapted to be inserted into position from one end of the hinge, said pintle having a cam located in one of said knuckles; and an eccentric bushing detachably mounted in one of the other knuckles and through which the pintle extends so that, when the pintle is withdrawn, the bushing is also withdrawn.

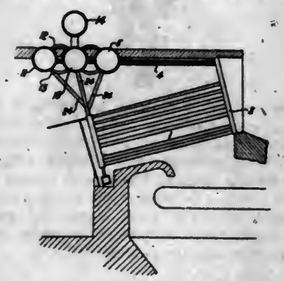
1,484,537. AUTOMATIC REPOURING COFFEE URN. JOHN V. WELLS, New York, N. Y. Filed Sept. 14, 1922. Serial No. 588,160. 8 Claims. (Cl. 53—3.)

1. An automatic repouring coffee urn, comprising a container divided into an upper and lower compartment, the division member for dividing the container being formed with an aperture, a valve seat positioned in said aperture and a valve member for closing said seat, said valve member being provided with a float adapted to cause the valve member to seat when the lower compartment has recevied a predetermined quantity of liquid, tubular means extending from the bottom of said lower compartment to a point above the upper compartment, foraminous means carrying ground coffee arranged in said upper compartment, and means for forcing water and steam into said lower compartment whereby the liquid in said lower compartment will be intermittently forced therefrom and discharged into the means carrying said ground coffee.



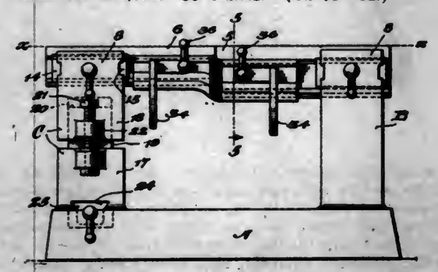
1,484,538. RAZOR-BLADE KNIFE. CHARLES P. WETMORE, Milwaukee, Wis., assignor to Wetmore Mechanical Laboratory Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 3, 1922. Serial No. 548,907. 5 Claims. (Cl. 30—10.)

1. In a razor-blade knife the combination of a handle having spaced sides and blade-clamping leaves one of which is resilient, pivotally connected with each other and with the sides of the handle and outwardly offset to exert a yielding outward pressure against the sides of the handle adjacent their pivot connection therewith and to react with a clamping pressure on the adjacent end of an interposed blade.



1,484,539. AUTOMATIC STARTING DEVICE FOR MOTORS. LOY MILTON WILLIAMS and CHARLES JAMES JEWETT, Fort Smith, Ark. Filed Dec. 21, 1921. Serial No. 523,911. 3 Claims. (Cl. 172—239.)

1. An automatic starting device for motors which comprises a main circuit including an electric motor, a battery, a main switch in said circuit, and a magnetic means, a holding circuit including a magnetic means for controlling movement of the main switch, an operator's switch connected between the battery and the second mentioned magnetic means, a switch controlled by the energization of the second mentioned magnetic means,



and a switch cooperating with the last mentioned switch for closing the holding circuit and operated upon energization of the main circuit magnetic means.

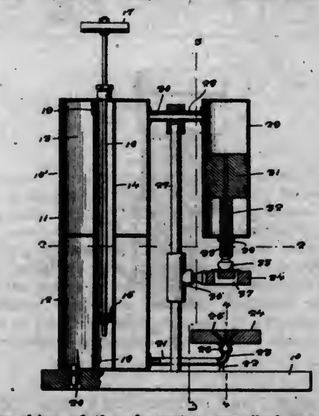
1,484,540. HIGH-PRESSURE WATER-TUBE BOILER. HENRY WITZ, Oberhausen, Germany, assignor to Babcock & Wilcox Company, New York, N. Y. Filed Mar. 5, 1923. Serial No. 622,966. 4 Claims. (Cl. 122—235.)

1. In a steam boiler, a bank of inclined water tubes vertically divided into groups, said tubes being connected at either end by headers, a plurality of transverse, interconnected drums, steam and water returns and water downtakes connecting said drums with said headers, each group of tubes being connected by said steam and water returns to a single drum other than a drum to which any other group is connected and alternate headers being connected by said returns with different drums.

1,484,541. METHOD AND MACHINE FOR MAKING STEP JOINTS. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Oct. 6, 1921. Serial No. 505,853. 35 Claims. (Cl. 78—82.)

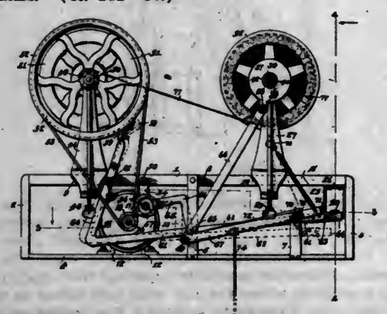
25. In an apparatus for making rail step joint bars, the combination of a supporting structure comprising a base, a pair of standards mounted thereon, a pair of dissimilar rail-dies respectively supported on said standards, means for relatively adjusting said standards whereby said rail-dies may be brought into surface alignment, and removable clamps for temporarily supporting a pair of half length plates positioned in fishing relation on said dies.

1,484,542. ABRASION UNIT FOR RAIL JOINTS. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1922. Serial No. 601,600. 8 Claims. (Cl. 238—244.)



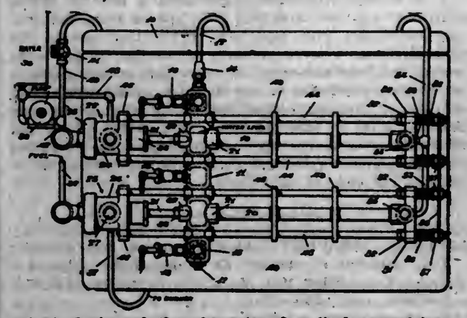
3. In a rail joint, the combination with a joint bar and the rail ends, of a divided longitudinally adjustable metal abrasion unit of greater length than the joint bar.

1,484,543. INSULATED RAIL JOINT. BENJAMIN WOLHAUPTER and CLARKSON A. DISBROW, New Rochelle, N. Y., assignors to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 9, 1923. Serial No. 650,451. 7 Claims. (Cl. 238—159.)



1. An insulated rail joint including a joint bar having a longitudinally disposed groove therein, a metal rail bearing block arranged in said groove and insulation seated in said groove and embracing the metal bearing block.

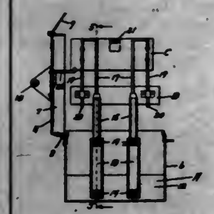
1,484,544. CASTING MACHINE. JAMES E. WOOD, Fairmont, W. Va. Filed Apr. 10, 1922. Serial No. 551,101. 2 Claims. (Cl. 22—78.)



1. A machine of the character described comprising a base, a tank rising from the base and divided into suction and pressure compartments, a pump associated with the tank and operable to produce suction within the suction compartment and pressure within the other compartment simultaneously, a flask support having a pipe connection with said suction chamber and a flask press having a pipe connection with the pressure chamber, said press consisting of a cylinder, a piston operating therewithin and having a piston rod, and a presser plate carried by the piston rod and connected therewith by a ball and socket joint, an upright guide rising from the base in spaced relation to the tank, and a carriage slidable upon said guide and having a ball and socket connection with said presser plate.

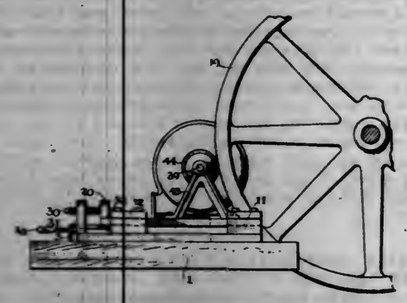
1,484,545. REWINDING MACHINE FOR MOVING-PICTURE FILMS. WALTER B. ASPLEY, Glasgow, Ky., assignor of one-half to John E. Richardson, Glasgow, Ky. Filed Mar. 28, 1923. Serial No. 628,320. 4 Claims. (Cl. 242—57.)

1. A rewinding machine for moving picture films comprising a rotatable element from which the film is unwound, a rewinding reel for the film unwound from said element, an electric motor including a driving circuit therefor, a transmission belt extending from said motor to said rewinding reel for operating the latter, a circuit opening and closing device for said driving circuit, a lever mechanism including means to constitute a brake for said reel and a tension applying roller for said belt and a contact breaker for said device, said brake and said contact breaker being in operative engagement with said reel and device and said roller being in inoperative engagement with said belt when the operation of the reel is discontinued, and a frictional drag mechanism connected with said element and maintained in operative position during the operation of said reel to hold said lever mechanism in non-braking position with respect to said reel and said roller in tension applying position with respect to said belt and said contact breaker clear of said device to provide for the closing of the driving circuit.



1,484,546. COMBINATION WATER COLUMN AND WATER AND FUEL CONTROLLER. HARTLEY O. BAKER, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Nov. 19, 1921. Serial No. 516,421. 8 Claims. (Cl. 122—448.)

1. A device of the character described comprising a water column, an expansion and contraction tube connected to the column, means connected to the tube and



slidable through the column, and controlling means having relatively movable parts connected to said means and column.

1,484,547. TOOL KIT. OLE T. BEKKEM, Bristol, S. Dak. Filed Mar. 16, 1923. Serial No. 625,613. 4 Claims. (Cl. 206—16.)

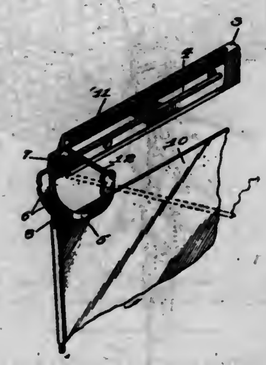
1. A device of the class described consisting of a box having a cover hinged thereto, a lower tray formed in the bottom of the box, upper trays arranged above the lower tray and normally resting thereon when the box is closed, collapsible means for spacing the upper trays in open position above the box when the latter is open, and means for detachably engaging the uppermost tray to retain the upper trays in said spaced relations.

1,484,548. BLOWER ATTACHMENT. WILLIAM O. BICKERSTAFF, Smithville, W. Va. Filed June 7, 1923. Serial No. 644,967. 6 Claims. (Cl. 74—26.)

1. A blower attachment comprising a base, a spring controlled platform arranged over, spaced from and slidably connected with said base, controlling springs for said platform, a lever pivotally connected to the outer side of the base and with the outer side of the platform for shifting the latter in one direction against the action of the platform controlling springs, a blower operating shaft mounted on said platform and provided at one end with means for connecting it with a blower for operating the same, and a frictional driving pulley carried intermediate the ends of said shaft.

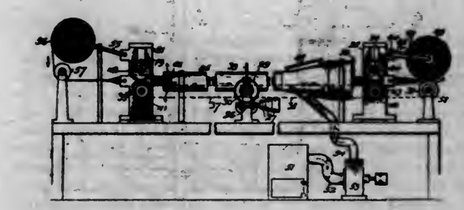
1,484,549. AIR PUMP. ALLEN BURNAM, San Antonio, Tex., assignor of one-half to C. M. Hocker, San Antonio, Tex. Filed Mar. 2, 1921. Serial No. 449,070. 1 Claim. (Cl. 230—27.)

In an air pump, a cylinder, a head closing the upper end of the cylinder and provided with an air inlet opening and with an axial depending sleeve, a piston slidable in the cylinder, a piston rod extending through the head and through said sleeve mounting the piston, an air inlet valve associated with the piston, a spider clamped between said head and the cylinder surrounding said sleeve.



a valve surrounding the sleeve and slidable longitudinally thereon, and a spring bearing between said spider and the valve normally holding the valve closed to overlie said opening.

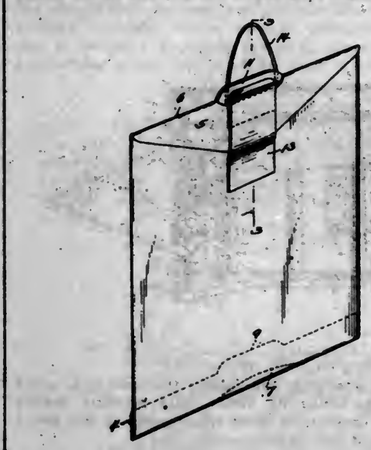
1,484,550. EXPANSION PLUG FOR LAMP SOCKETS. ARMHEAD C. CARSON, Columbia, S. C. Filed July 7, 1921. Serial No. 483,012. 5 Claims. (Cl. 173—360.)



8. In an expanding plug, a substantially cylindrical body portion having a longitudinal channel therein, an arm pivoted in said channel, resilient means normally holding the free end of the arm within the groove, and a cam for forcing the free end of the arm partly out of the groove.

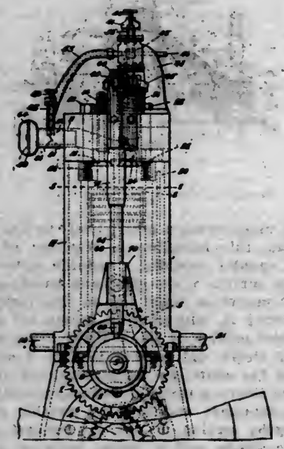
1,484,551. GLARE SHIELD FOR AUTOMOBILES. ARMHEAD C. CARSON, Columbia, S. C. Filed Aug. 14, 1922. Serial No. 581,806. 5 Claims. (Cl. 296—97.)

1. A glare shield, including a base, a frame hinged thereto, a resiliently mounted arm frictionally engaged by said frame, and resilient means for increasing the pressure of said arm against the frame.



1,484,552. MACHINE FOR STRETCHING AND DRYING TUBULAR FABRICS. SAMUEL COHN, New York, N. Y., assignor to Mantle Machinery & Patents Company, New York, N. Y., a Corporation of New York. Filed July 9, 1920. Serial No. 395,056. 8 Claims. (Cl. 26—16.)

1. A machine for evenly stretching tubular fabric including a mandrel supported by rolling supports, over which mandrel the tubular fabric is adapted to be advanced continuously past the rolling supports, said mandrel having spaced members of relatively large diameter against which the rolling members exert a rolling pressure on the fabric to advance it, said mandrel having an intermediate connecting member between the spaced members of relatively smaller diameter whereby the fabric will be normally suspended between said spaced members.

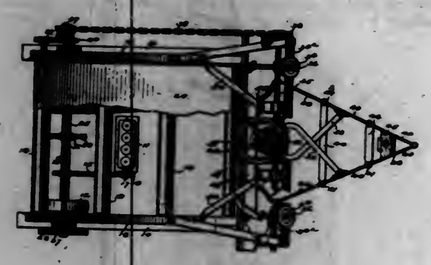


1,484,553. ARTICLE-CARRYING BAG. EARL A. CRAWFORD, Hudson Falls, N. Y., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed Aug. 11, 1922. Serial No. 581,184. 5 Claims. (Cl. 229—68.)

1. A bag of the character described comprising front and back sections closed at the bottom, a lip attached to one of said sections and foldable upon the other section to close the mouth of the bag, incisions being made in the lip adjacent to its line of fold to form a relatively short loop which projects upwardly above said line of fold when

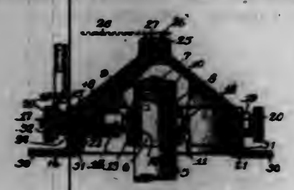
the lip is folded, and a locking and carrying member adapted to overlie the lip when closed and capable of insertion through and extending upwardly beyond said loop.

1,484,554. INTERNAL-COMBUSTION ENGINE AND METHOD OF OPERATING THE SAME. HARRY H. ELMER, Syracuse, N. Y. Filed Apr. 6, 1922. Serial No. 550,229. 8 Claims. (Cl. 123—33.)



1. The method of operating internal combustion engines comprising filling into the engine cylinder a combustion supporting atmosphere containing therein a combustible fuel and injecting into such atmosphere a combustible volatilized fuel uncombined with a combustion supporting atmosphere, at a temperature at or above the ignition point of such fuel.

1,484,555. SNOW-REMOVAL DEVICE. JOHN B. GHIONE, New York, N. Y. Filed Nov. 14, 1922. Serial No. 600,874. 3 Claims. (Cl. 37—44.)



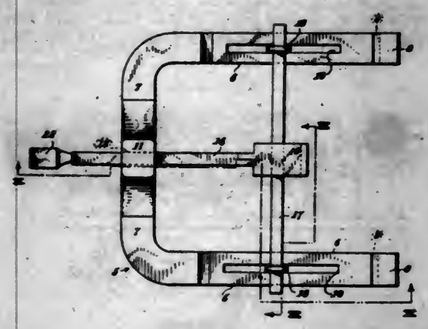
1. A device for clearing and removing snow from roadways comprising a self-propelled vehicle, means following in rear of said vehicle for receiving and conveying the snow, means on the vehicle for gathering up, elevating and discharging the snow in the path of movement of the

vehicle into the receiving and conveying means, and laterally flexible means disposed in advance of the vehicle

for splitting, separating and guiding the snow to be acted on by the gathering up means, said laterally flexible means being operable to effect the steering of the device upon flexing of the same.

1,484,556. TIMER. ERNEST VON HAMBACH, Chicago, Ill., assignor to Herbert D. Lafferty, Oakland, Calif. Filed Mar. 28, 1921. Serial No. 456,461. 2 Claims. (Cl. 200—26.)

1. In a timing device, a rotary shaft having a reduced threaded end, this reduction in diameter of the shaft forming an annular shoulder, a metallic sleeve fitting on said reduced portion of the shaft and having an interior longitudinal groove, a radial pin on the reduced part of the shaft fitting in said groove, a clamp nut on the end of the reduced portion of the shaft abutting against the end of said sleeve and serving to jam it against said shoulder on the shaft, an insulating-sleeve surrounding said metallic sleeve, a metallic contact extending through said insulating-sleeve and into the metallic sleeve, this contact thereby serving to lock the insulating-sleeve to the metallic sleeve, and a casing carrying a series of radial brushes bearing on the exterior surface of said insulating-sleeve.



1,484,557. COMBINED SNAP AND BUCKLE FOR HARNESS. JOHN H. LATHAM, Mashall, Mo. Filed Aug. 9, 1923. Serial No. 656,518. 5 Claims. (Cl. 24—165.)

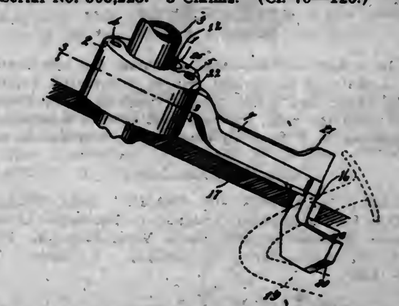
5. A combined snap and buckle comprising a body member provided with a hook portion at one end and a buckle portion at the other end, and means for closing the open part of the hook portion; said means including a dog hinged at the free end of the hook and a spring secured in the body member and adapted to engage with said dog to retain it in closed position, said dog having a heel and a toe forming a V into which the free end of said spring is adapted to engage, said body member having an opening adapted to receive said heel; said buckle portion including a pair of parallel arms medially connected by a cross-bar, and a top element connecting the upper ends of said arms,

said top element having a transverse slit and a hinged finger depending from said top element and adapted to contact with said cross-bar.

1,484,558. PIPE BENDER. LOUIS PETO, Vestaburg, Pa. Filed Jan. 31, 1923. Serial No. 616,145. 2 Claims. (Cl. 153—38.)

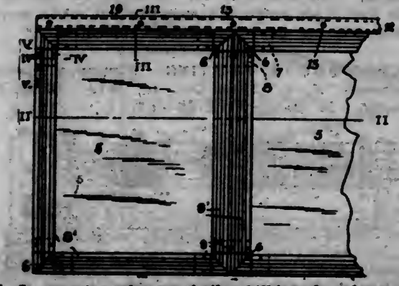
1. In a device of the character described, a U-shaped frame embodying spaced side arms having longitudinally extending slots formed therein, a cross piece connecting said arms, a boss formed on said cross piece, and upwardly bent ends formed on said arms, a movable head supported by said boss, a cross arm carried by said head, a link member carried by each end of said cross arm, said link members projecting through the slots formed in said arms, pins carried by the free ends of said link members, rollers carried by said pins, and means carried by said boss for moving said head toward the upwardly bent ends formed on said side arms.

1,484,559. LUGGAGE CARRIER FOR BICYCLES. HARLAN S. RECTOR, Chicago, Ill., assignor to The Beckley-Ralston Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,509. 7 Claims. (Cl. 208—45.)



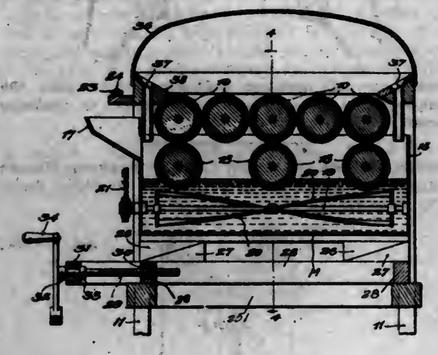
1. The combination of a stem adapted to be secured to a steering column, a supporting cross-bar fixedly secured

to the upper portion of the stem and a basket having a depressed portion over and overlying and secured to the



cross-bar, a portion extending below the cross-bar and sides at the ends of both portions of said basket.

1,484,560. LOCKING DEVICE FOR MOTOR VEHICLES. SIGMUND REISNER, Cincinnati, Ohio. Filed Oct. 4, 1921. Serial No. 505,223. 3 Claims. (Cl. 70—126.)



5. A device of the character specified comprising a housing, said housing being composed of two sections arranged when assembled to fit around the steering column of a motor vehicle, hardened pins for securing said sections together, an arm pivotally mounted on one of said pins, means in said housing operable by said arm and arranged to engage said steering column to lock the same against rotation, means for locking said arm against rotation, and means on the end of said arm arranged to engage a pedal of the vehicle to lock the same in a desired position.

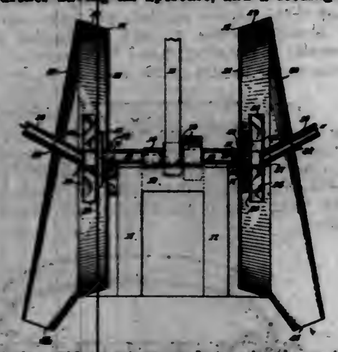
1,484,561. BILLBOARD. ERNEST RICHARDSON, College Hill Borough, Pa. Filed Oct. 5, 1923. Serial No. 666,738. 2 Claims. (Cl. 40—125.)

1. In a rectangular or similar bill-board, a frame having a raised border and a back member, in combination with a sheet-metal molding comprising side members and elbow-shaped corner members, the ends of the side and the corner members overlapping, and fastening devices extending though both members and into the frame, one of the molding members having at each overlapping place a slot to receive a fastening device to compensate for irregularities in the lengths of the sides of the frame.

1,484,562. APPARATUS FOR TREATING FRUIT AND THE LIKE. HOMER C. RICKETTS, Winter Haven, Fla., assignor to Brogden, Ricketts & Haworth Company, Winter Haven, Fla., a Corporation of Florida. Filed Feb. 23, 1922. Serial No. 538,424. 29 Claims. (Cl. 91—40.)

3. Apparatus for treating fruit comprising the combination, with a plurality of rotary brush rolls mounted in parallel to provide one or more fruit runways, of a container for coating material located below said rolls, and an adjustably mounted roll extending into said container and frictionally driven by one of said brush rolls.

7. Apparatus for treating fruit or the like comprising the combination with a plurality of rotary rubbing rolls mounted in parallel to provide one or more fruit runways, and driving means therefor, of a container mounted below said rolls, a rotary applying roll substantially shorter than said rubbing rolls mounted therebelow with its axis substantially parallel with the axes of said rubbing rolls, said applying roll extending into said container and arranged to engage at least one of said rubbing rolls.



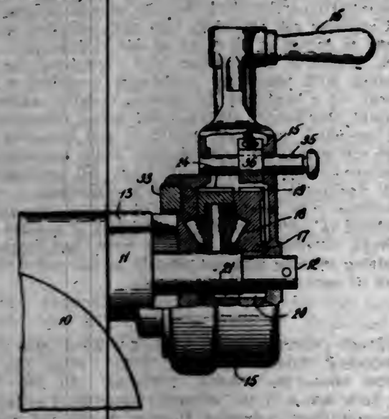
18. Apparatus for treating fruit comprising the combination, with brush roll mechanism providing a fruit runway, of a container for coating material adjustably mounted therebelow, applying roll means supported by and extending into said container and engaging said brush roll mechanism, and means for bodily adjusting said container toward and from said brush roll mechanism.

25. Apparatus for treating fruit comprising a series of rubbing rolls rotatably mounted side by side and cooperating in pairs to provide a plurality of parallel fruit runways, driving means for said rolls, and means for supplying treating material directly to the under side of a roll of each runway-forming pair.

1,484,563. CENTRIFUGAL NUT-CRACKING MACHINE. MAXWELL RIDDLE, Ravenna, Ohio. Filed Dec. 31, 1920. Serial No. 434,334. 2 Claims. (Cl. 146—9.)

1. In a device of the character described a support, a horizontal shaft journaled thereon, means for varying the speed of said shaft, a spider fixed to one end of said shaft, a disc secured to said spider, hollow radial spokes fixed to said disk and communicating at their adjacent ends, a drum enclosing the end of said shaft, said drum comprising a closed inner side, an oblique outer rim formed with said inner side, and a cover plate having

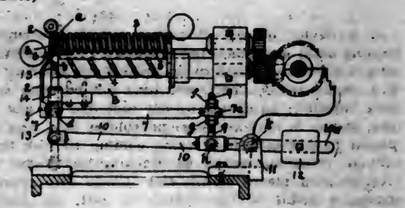
a discharge opening formed with said rim, said cover plate further having an aperture, and a feeding tube positioned in said aperture and terminating within the communicating space for said hollow spokes to discharge therein.



1,484,564. PACK OF GAME CARDS. RAYMOND HESSER RIFFNER, Philadelphia, Pa. Filed Nov. 1, 1921. Serial No. 512,025. 13 Claims. (Cl. 46—25.)

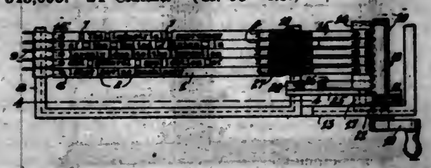
10. In a deck of cards, a plurality of cards, each card having numbers which differ from each other, the numbers on each card being different from the numbers on the other cards.

1,484,565. MULTIPLE-SPEED HANDLE. MALCOLM D. RIKER, Dover, N. J., assignor to McKiernan-Terry Drill Company, Dover, N. J., a Corporation of New Jersey. Filed July 23, 1921. Serial No. 487,207. 6 Claims. (Cl. 74—34.)



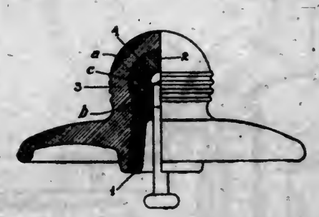
1. The combination with a shaft to be turned and a support therefor, of a frame rotatively mounted on the shaft, a pair of oppositely disposed racks supported by the frame, a gear cage between said racks having a gear meshing with said racks, ratchet teeth on said cage and on one of said racks, a pawl supported by the frame and adapted for cooperation with either of said ratchet teeth, means for selectively locking the gear cage or said ratchet-teeth-provided rack to the shaft, and means for locking the other said rack to said support.

1,484,566. THEATER CHAIR. LOUIS ROTH, New York, N. Y., assignor to Sterling Bronze Company, New York, N. Y., a Corporation of New York. Filed May 20, 1920. Serial No. 382,731. 9 Claims. (Cl. 98—27.)



6. In a device of the class described, the combination with a chair, of an upright grill in co-operative relation to the chair, and a flue member positioned for feeding air through the grill, the rear wall of said flue member terminating in a hood in overhanging relation to said grill.

1,484,567. GILL BOX OR FRAME. JOHN WILLIAM RYAN, Leeds, England, assignor to Fairbairn Lawson Combe Barbour Limited, Leeds, York, England. Filed Oct. 23, 1922. Serial No. 596,485. 5 Claims. (Cl. 19—129.)

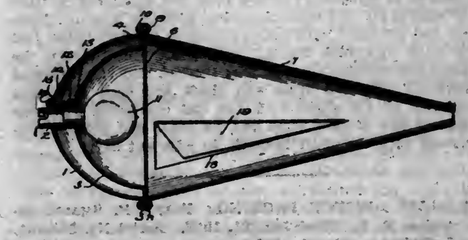


1. In a gill box or frame, the combination with upper and lower horizontal faller guides, faller bars, and screws adapted to move said bars along the guides, of a yielding arm extending into the path of the faller bars as they are successively forced from the upper guide, and means connected with said arm for receiving the bar as it leaves the upper guide and supporting it while moving downward to the plane of the lower guide.

1,484,568. ART OF PRINTING. EDWARD S. SAVAGE, Rochester, N. Y. Filed Dec. 15, 1919. Serial No. 345,095. 24 Claims. (Cl. 95—4.5.)

1. A method of preparing typewritten matter for duplication which employs a plurality of expansible strips each having a typed line thereon, and which consists in holding the letters at the beginning of the lines at points in alignment with each other, engaging the strips at points equi-distant from the ends of the typed lines, and shifting such points into alignment.

1,484,569. CERAMIC BODY. JOHANNES FRIEDRICH SCHEID, Margarethenhutte, Grossdubrau, Germany, assignor to the Firm: H. Schomburg & Söhne, Margarethenhutte, Grossdubrau, Germany. Filed Aug. 24, 1921. Serial No. 494,968. 3 Claims. (Cl. 18—59.)

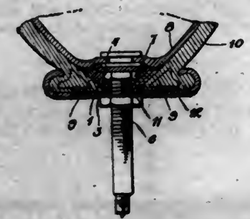


1. The method of fixing in a hollow of a ceramic body a second ceramic body of greater width than the opening of the said hollow, consisting in introducing said second body in baked condition in the hollow of said first ceramic body while this latter is still in a raw state and before it has been subjected to heat treatment.

1,484,570. PROTECTIVE BINDING FOR COLLARS. JAMES SCHEVENELL, New York, N. Y. Substitute for application Serial No. 297,540, filed May 16, 1919. This application filed Aug. 19, 1921. Serial No. 493,747. 5 Claims. (Cl. 2—67.)

1. An ornamental binding for collars, comprising a stand flange, a spaced face plate constituting a continuation of said stand flange, a spaced flap flange constituting a continuation of said face plate and having a crease flange extending upward into the space between said stand flange and said face plate and a guide adjacent said crease flange.

1,484,571. HEADLIGHT. EDWARD COOPER SEARLE, Hilo, Territory of Hawaii. Filed Aug. 22, 1922. Serial No. 583,577. 1 Claim. (Cl. 240—48.4.)

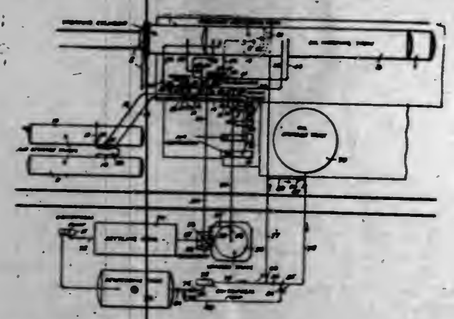


A shield of the character described of general tapering form, having a light passage in its smaller end, having light passages in its sides, and fixed plates constituting reflectors and located above the side light passages and inclined downwardly and outwardly from.

1,484,572. SHOCK ABSORBER. HARRY B. SHAFFER, Altoona, Pa. Filed Aug. 9, 1922. Serial No. 580,682. 7 Claims. (Cl. 267—10.)

1. A shock absorber comprising a spring drum adapted to be attached to one of two relatively movable parts, a frame pivoted coaxially with said drum, a pulley carried by said frame, a band engaging the surfaces of the drum and pulley secured at one end to the drum and at the other to a fixed anchorage, and means connecting the frame and the other of the said relatively movable parts.

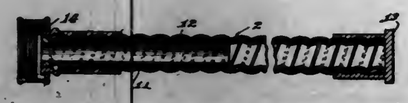
1,484,573. VALVE-STEM WASHER. LEWIS CLYDE SHARPE, Kerrville, Tex. Filed Nov. 8, 1922. Serial No. 599,686. 1 Claim. (Cl. 152—12.)



In combination a wheel rim, a pneumatic tire mounted on the rim, including a tube, a valve stem extending from the tube and through the rim, and a bridge washer having inclined end portions at all times free of contact with the rim, of a resilient washer having a central opening through which the valve stem passes, said resilient washer being formed with a broad surface which engages the bridge washer when acted upon by the tube when under pneumatic pressure, the washer having a conical outer surface confined and guided by the bridge washer and the inner surfaces of the bead of the pneumatic tire, said washer having a reduced edge at its smaller end adjacent the opening therein, whereby when pressure is introduced in the tube the inclined end portions of the bridge washer and the inclined surfaces of beads of the tire force the reduced edge of the resilient washer into the opening in the rim around the valve stem and forms a seal.

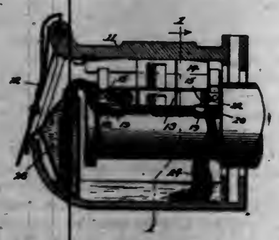
1,484,574. WOOD-TREATING PLANT. GRANT B. SHIPLEY, Pittsburgh, Pa. Filed May 10, 1922. Serial No. 559,807. 7 Claims. (Cl. 99—12.)

3. A wood treating apparatus comprising a treating cylinder, a superposed oil-working tank, a measuring tank, disposed in one end of the oil-working tank, a conduit connecting the bottoms of the oil working tank and treating cylinder, a conduit leading from the bottom of the measuring tank to the top of the treating cylinder, an air storage tank, a conduit establishing communication between the storage tank and measuring tank, the relative sizes of the air storage tank and measuring tank being such that the desired maximum pressure within the treating cylinder may be quickly obtained by causing equalization of the pressures within the last named tanks.



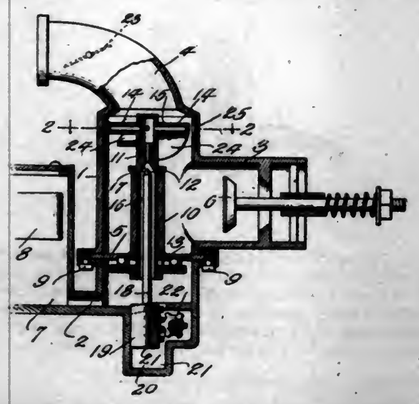
4. A wood treating apparatus comprising a treating cylinder, a superposed oil measuring tank, a conduit

establishing communication between the measuring tank and treating cylinder, an air storage tank, a conduit leading from the air storage tank to the measuring tank, the relative sizes of the air storage and measuring tanks being such that an equalization of pressures therein will result in the desired maximum pressure to be established



in the treating cylinder, a vacuum tank, a pipe connecting the vacuum tank and treating cylinder, the vacuum tank being of such proportions relative to the treating cylinder that an equalization of the pressures within the vacuum tank and treating cylinder will quickly produce the predetermined low pressure desired therein.

1,484,575. DISCHARGE MEMBER FOR USE IN IRRIGATING SYSTEMS. NEAL P. SHULIN, Butte, Mont. Filed Apr. 29, 1922. Serial No. 557,291. 1 Claim. (Cl. 299—104.)

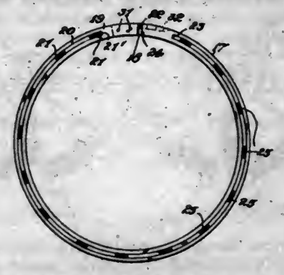


In a device of the character described, a discharge member comprising a flexible tubing made of superposed series of concentric spiral convolutions fashioned of two metallic strips, the convolutions of each strip being slightly spaced and the convolutions of the two strips being arranged in staggered relation, means for closing one end of the flexible tubing, means connecting with the flexible tubing at its other end for supplying liquid thereto, and a relatively short tubular baffle inserted in the last named end of the flexible tubing.

1,484,576. LUBRICATOR. GEORGE PHILIP SIMMONS, Herkimer, N. Y., assignor to Horrocks Desk Company, Herkimer, N. Y., a Corporation of New York. Filed Aug. 24, 1920, Serial No. 405,620. Renewed Oct. 7, 1922. Serial No. 593,143. 5 Claims. (Cl. 64—24.)

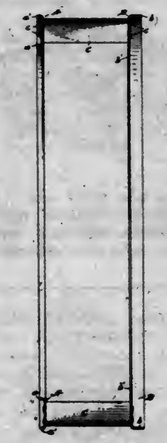
1. The combination of a journal box; a brass mounted therein; a journal turning against said brass; a wick composed of fibrous and metallic strands; and clips mounted on the sides of said brass, near the ends thereof, and having eyes with adjacent bowed retaining portions serving to retain the wick in contact with the journal at points intermediate said clips, through the inherent rigidity of the wick.

1,484,577. CARBURETOR. MOYLE SKAER, Augusta, Kans. Filed Aug. 18, 1921. Serial No. 493,245. 2 Claims. (Cl. 261—79.)



1. A carburetor comprising a vertically disposed casing having a fuel inlet at its lower end and a mixture outlet at its upper end and intermediate its height an air inlet, a partition in said casing beneath the air inlet and provided with an opening, a sleeve extending upwardly from said partition about the opening therein, a tubular shaft rotatably mounted in said sleeve and open at its lower end and closed at its upper end and intermediate its length internally thickened to provide a valve seat, arms extending in radiating relation from the upper end portion of said shaft and communicating with the interior thereof and having outlet openings, a valve element extending into the hollow shaft through the open lower end thereof and movable vertically into and out of seating engagement with the valve seat within said shaft, and means for imparting rotary motion to said shaft when the carburetor is in operation.

2. A carburetor comprising a vertical casing having a lower fuel inlet, an upper mixture outlet, and an intermediate air inlet, a partition in said casing beneath the air inlet and provided with a centrally disposed opening, a sleeve extending upwardly from said partition axially of said casing and open at its upper and lower ends, a hollow shaft rotatably mounted in said sleeve and open at its lower end and closed at its upper end, arms extending in radiating relation from the upper end portion of said shaft and communicating with the interior thereof, and provided with outlet openings for permitting fuel to pass upwardly through said shaft and through the arms out through the openings thereof, and vanes formed integral with the arms and shaft and each extending spirally of the shaft with one end connected with one side of one of said arms and its other end portion connected with the shaft beneath an adjacent arm.



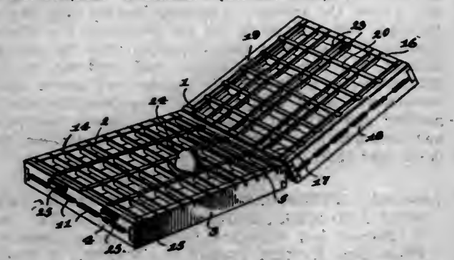
1,484,578. PISTON PACKING. FRANK E. SMALL, Jamaica, N. Y. Filed Jan. 21, 1922. Serial No. 530,751. 7 Claims. (Cl. 74—109.)

1. A piston packing for the grooves of pistons for the cylinders of internal combustion engines and the like, comprising a resilient split ring adapted to expand into contact with the cylinder bore by its own resiliency, said ring having a substantially annular groove in its lower face, and spring means within said annular groove for maintaining the ring under spring pressure within the piston groove, said spring means being provided with

means for substantially preventing the creeping of said spring within said annular groove and of said ring within said piston groove.

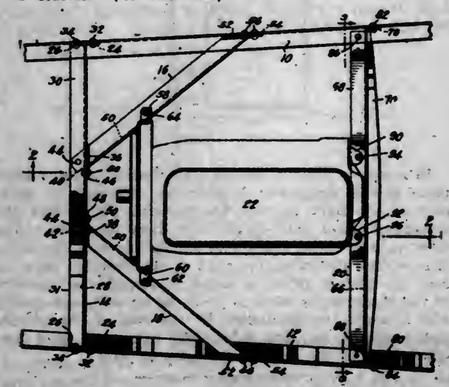
1,484,579. FAN WHEEL AND METHOD OF MAKING THE SAME. FREDERICK R. STILL, Detroit, Mich., assignor to American Blower Company, Detroit, Mich., a Corporation of Michigan. Filed May 25, 1920. Serial No. 384,056. 16 Claims. (Cl. 78—46.)

1. In a fan wheel, a blade supporting member and blade, the blade being provided at one end with an integral projecting portion of reduced size, and the blade supporting member having an aperture to receive the projecting end portion of the blade, the main end portion of the blade bearing against a face of the blade supporting member with the adjoining projecting end portion of the blade extending into the aperture of the blade supporting member and being electrically welded thereto.



4. The process of securing fan blades to end plates or rims consisting in providing a projecting portion on the end of the blade, and an aperture in the end plate or rim to receive the projecting end portion of the blade, forming the aperture of greater area than the initial cross sectional size of the projecting portion of the blade, and forming the projecting portion of the blade initially of a length to provide a mass of metal beyond the outer face of the end plate or rim, supporting the blade in position relatively to the end plate or rim with said projecting portion of the blade extending through the aperture of the end plate or rim; and simultaneously applying heat and pressure to the projecting end portion of the blade to melt down the projecting end portion of the blade to fill up the space between said end portion of the blade and the wall of the aperture, and weld the adjoining parts together.

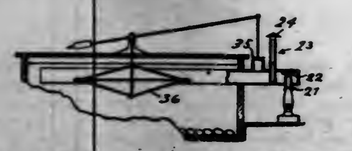
1,484,580. SPRING WHEEL. FREDERICK STITZEL, Louisville, Ky. Filed Mar. 20, 1923. Serial No. 626,301. 3 Claims. (Cl. 152—32.)



3. A spring wheel, comprising an inner member and an outer member, the inner member having outwardly projecting hangers and the outer member having inwardly projecting hangers arranged in pairs and staggered, the hangers being of rigid construction and rigidly connected to their respective wheel members, rigid rings engaged and supported by the hangers and a cushioning medium interposed between the said rings.

1,484,581. EGG CRATE. JAMES R. STOTHART and LEON BERNSTEIN, Coushatta, La. Filed Oct. 16, 1922. Serial No. 594,903. 3 Claims. (Cl. 217—27.)

1. An egg crate comprising a body section, a top section partitions disposed in said top and body sections and dividing the crate into a number of cells adapted to receive eggs, broad flat rubber bands stretched across the top and body sections above and below the opposite ends of the eggs, and pairs of relatively thin rubber bands held by said partitions for engaging the lateral portions of the eggs, substantially as described.



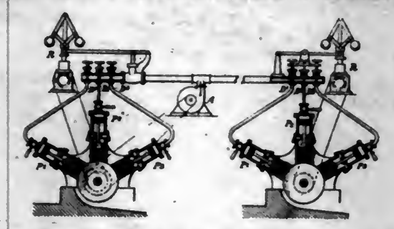
1,484,582. MOTOR-VEHICLE ENGINE-SUPPORTING STRUCTURE. ALFRED T. STURT, Flint, Mich., assignor to Durant Motors Incorporated, a Corporation of Delaware. Filed June 3, 1922. Serial No. 565,754. 4 Claims. (Cl. 180—64.)

1. A motor vehicle engine supporting structure comprising longitudinal side members, a transverse member, diagonal members secured thereto and to said side mem-

bers for supporting the engine at one end and a second transverse member comprising a web portion and oppositely extending flange portions, and means for securing the opposite end of the engine to the upper one of said flange portions at a lower level than the end supported on the diagonal members.

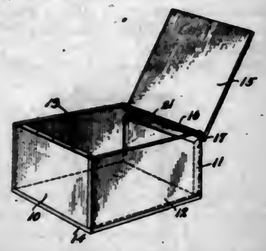
1,484,583. BROODER-HEATING DEVICE. MITSUJI TATEOKA, Gardena, Calif. Filed Oct. 29, 1921. Serial No. 511,279. 3 Claims. (Cl. 237—3.)

3. In a heater for brooders, the combination with a brooder housing, of a heater housing adjacent thereto, a lamp within the heater housing, a tubular circulating member extending from the heater housing and within the brooder housing, a hood enclosing the tubular member, a bracket within the hood and supporting the tubular member, a flue extending vertically from the lamp and within the tubular circulating member and having its upper end adjacent to the top portion of the tubular member, a smoke vent tube extending from the tubular member and having its bottom end adjacent to the bottom portion of the tubular member and spaced apart therefrom, a draft vent tube extending from the tubular member and adjacent to the flue and smoke vent tube, and automatically operated means for controlling the draft vent tube.



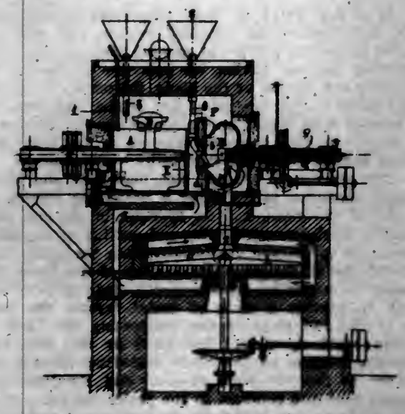
1,484,584. FINDER FOR MOTION-PICTURE CAMERAS AND SIMILAR OPTICAL APPLIANCES. ODO D. TAUERN and NIKOLAUS LYON, Freiburg, Germany. Filed Aug. 1, 1922. Serial No. 579,075. 1 Claim. (Cl. 95—42.)

In a motion picture camera, an objective, a plane glass plate placed diagonally behind the objective to cause part of the light to pass therethrough and deflect the remaining lesser part of the light rays laterally, a film window behind said glass plate and in line with the objective, a lens system in the path of the deflected rays behind the picture plane, a finder in which a real picture of the object to be taken is produced by said lens system and a screen corresponding to the size of the picture and arranged between said glass plate and said lens system and in the path of the deflected rays.



1,484,585. WOOD GRINDER. WILHELM THALER, Heidenheim-on-the-Brenz, Germany. Filed Aug. 15, 1921. Serial No. 492,485. 9 Claims. (Cl. 83—75.)

1. Wood grinding apparatus comprising grinder means, a plurality of associated presses, a common source of pressure for the latter, and means automatically and individually governing the delivery of power from said pressure source to the several presses to maintain the

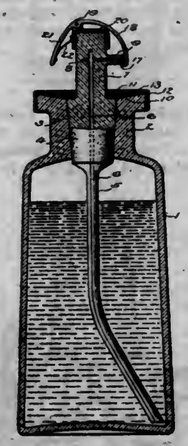


advance of the charges thereby substantially uniform regardless of variations in individual power demand for this purpose.

1,484,586. BOX CLOSURE. BUCK C. THOMAS, Shiro, Tex. Filed May 23, 1923. Serial No. 640,982. 5 Claims. (Cl. 217—57.)

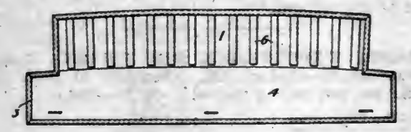
1. A box having side walls and a rear wall of less height, a cover provided with an angular flange at one edge to form a closure with said rear wall, and pivot pins for said flange extending through the opposite side walls.

1,484,587. PROCESS AND APPARATUS FOR THE CONTINUOUS PRODUCTION OF SULPHATES. LAURENT EMILE MARIE TREVOUX, Petit-Quevilly, France, assignor to La Societe Anonyme de Produits Chimiques, Etablissements Maletra, Siege Social, Petit-Quevilly, France. Filed May 24, 1921. Serial No. 472,231. 9 Claims. (Cl. 23—1.)



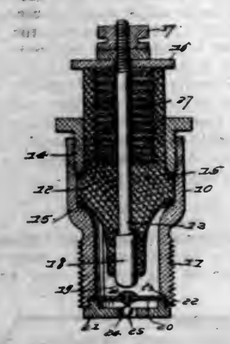
1. The process for the continuous production of sulphates from chlorides and sulfuric acid, which comprises methodically introducing the desired amounts of sulfuric acid and chloride within an already liquid mass of acid sulphate serving as a heat carrier, and assisting in the rapid transformation of the chloride into acid sulphate, thereupon adding an adequate amount of chloride to a liquid portion of said acid sulphate formed and intimately mixing to transform the mixture into a pasty mass and finally transforming said pasty mass into neutral sulphate by calcining said pasty mass whilst constantly stirring.

1,484,588. DEMOUNTABLE RIM. JOSEPH E. TROJAN, Columbus, Tex. Filed Sept. 28, 1921. Serial No. 503,758. 3 Claims. (Cl. 301—11.)



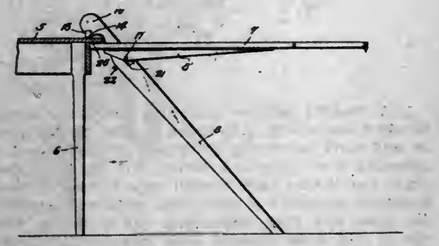
1. In a demountable rim construction for automobile wheels, a felly, a stationary rim on said felly, a demountable rim on said stationary rim, means cooperating with said demountable rim when the latter is slightly rotated on said stationary rim for securing said demountable rim against lateral displacement one of said rims being formed with a plurality of longitudinal ribs, partially spacing said stationary and demountable rims to facilitate said partial rotation.

1,484,589. BOTTLE. LEO TRUBEK, Hasbrouck Heights, N. J. Filed Nov. 21, 1922. Serial No. 602,447. 3 Claims. (Cl. 215—74.)



1. A perfume bottle which includes a body portion having a filling opening in the neck thereof, a stopper to be disposed in said opening, a tube dependent from the stopper within the bottle, said tube and stopper being provided with a continuous capillary passage, an extension on said stopper into which said passage extends, a nozzle on said extension, a lateral capillary passage in said nozzle extending to the first mentioned capillary passage, a valve for closing the end of the capillary passage on said nozzle, and means mounted on the extension for controlling the movement of said valve.

1,484,590. COLLAR. JOHN M. VAN HEUSEN, Boston, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed June 26, 1922. Serial No. 570,909. 8 Claims. (Cl. 139—386.)



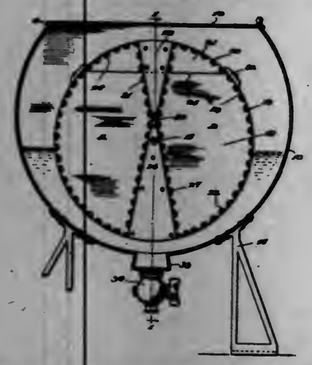
1. A folding collar of the built-up type, made in whole or in part of semi-stiff fabric comprising a neckband portion and a turn-down portion, said collar having woven in at least one of said portions a plurality of relatively narrow thickened zones which tend to stiffen the collar and which are adapted to facilitate the folding of the collar along a longitudinal curvilinear line of fold.

1,484,591. SPARK PLUG. MERRITT VAN SLYKE, Jacksonville, Fla. Filed Feb. 10, 1922. Serial No. 535,499. 5 Claims. (Cl. 123—169.)

1. A spark plug having a casing and terminals consisting of an apertured head at the inner end of the casing and a knob yieldingly suspended in the aperture for movement perpendicular to the plane of the head by pressure within the cylinder of an engine.

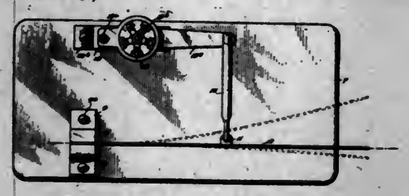
1,484,592. IRONING BOARD. MARTIN VARLAND, Radcliffe, Iowa. Filed Feb. 18, 1923. Serial No. 618,797. 1 Claim. (Cl. 68—10.)

An ironing board comprising a board member having a slotted end to fit beneath the edge of a support, parallel spaced cleats fixed beneath the slotted end of the board, a pivot secured in said cleats, a roughened block swingingly carried by said pivot, a leg having a slot near one end to slidably receive the block, a plate having a corrugated surface to engage with one face of the block fixed in said slot at one side, a clamping plate with a



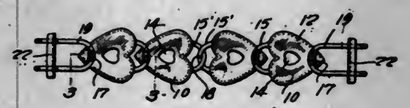
ribbed surface in the slot at the other side of the block, means to urge the clamping plate against the block, and a head on the leg received through the slotted end of the board and having a long strip to overlie the support and a cut-away part adjoining the head to receive the edge of the support.

1,484,593. DEMOUNTABLE RIM PULLEY. JAMES WALTERS, Birmingham, Ala. Filed Aug. 10, 1922. Serial No. 580,880. 2 Claims. (Cl. 74—106.)



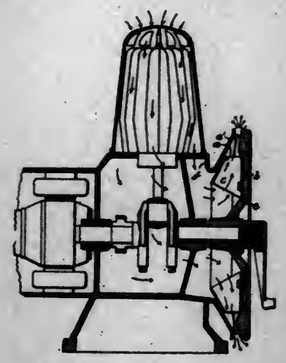
1. The combination with a tire supporting rim of a wheel, said rim having opposite annular shoulders, of a demountable pulley rim provided with an outer broad periphery provided with transverse grooves to effect frictional engagement with a driving belt, said pulley rim consisting of a continuous band provided with parallel annular interior major and minor ribs, said pulley rim being centrally thickened between the ribs constituting a wheel rim engaging seat bound by said interior annular parallel major and minor ribs which are offset substantially inwardly from the opposite edges of the pulley rim, the major rib extending radially inwardly, the minor rib offset outwardly, both ribs adapted to abut said annular shoulders of the tire supporting rim, thereby acting to limit the telescopical insertion of the pulley rim on the tire supporting rim.

1,484,594. WASHING MACHINE. HOWARD WARBURTON, Hamilton, Ontario, Canada. Filed Feb. 7, 1923. Serial No. 617,562. 3 Claims. (Cl. 68—18.)



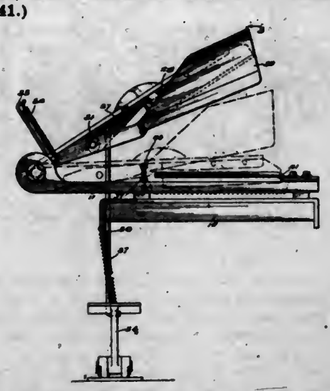
1. A washing machine comprising a casing, a revolvable shaft mounted in said casing, a drum rigidly secured on said shaft and having a plurality of longitudinal ribs extending from end to end thereof, said ribs being spaced apart and having their inward turned sides of convex formation providing a corrugated peripheral surface in the drum, and other longitudinal ribs of similar formation in said drum arranged along substantially diametrical planes therein and having either convex surfaces, facing the convex surfaces of said first ribs, said diametrical planes intersecting each other and said drum being divided into two mating segmental parts, the smaller of which forms a cover for the drum, and opposing wedge shaped supporting members or said other ribs secured respectively in said mating segmental parts of the drum.

1,484,595. DEMONSTRATING DEVICE. ARTHUR WATERMAN, East Orange, N. J., assignor to Edward V. Hartford, Inc., New York, N. Y., a Corporation of New York. Filed May 1, 1922. Serial No. 557,809. 5 Claims. (Cl. 35—16.)



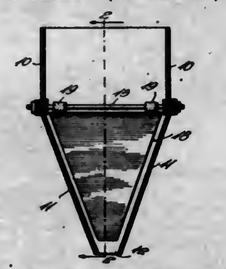
1. A device for demonstrating the functioning of anti-vibration devices for motor vehicles and the like, comprising a base, a spring and a support therefor, the spring and support being so associated that one end of the spring may vibrate freely, and means for supporting an anti-vibration device for connection to said spring whereby the vibration of the spring may be controlled.

1,484,596. TIRE CHAIN. GEORGE H. WATERS, Glenfield, N. Y. Filed Mar. 1, 1923. Serial No. 622,126. 2 Claims. (Cl. 152—14.)



1. A cross chain comprising a plurality of similar units, having each an outwardly extending flange and a tire-engaging base, loops formed upon the units and extending in parallelism with the bases, a cross-cut formed in the base extending into the flange of each unit proportioned to receive the loop of an adjacent unit, a lip formed upon the unit at the margin of the cross-cut adapted to be closed down over the loop contained therein, and means secured to the terminals of said organization for attaching the organization to side chains.

1,484,597. CENTRIFUGAL FAN. JAMES A. WATKINS, Detroit, Mich., assignor to American Blower Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 18, 1920. Serial No. 431,590. 14 Claims. (Cl. 123—171.)

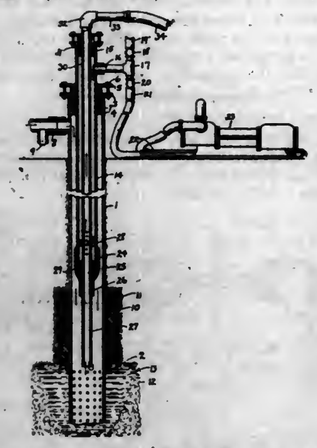


1. The combination with an engine, of a centrifugal fan comprising a fan wheel, and an annular peripheral discharge nozzle therefor, a part of the engine being constructed and arranged to constitute part of said discharge nozzle.

1,484,598. FABRIC CUTTER. FRANK S. WENIGER, Binghamton, N. Y., assignor to Peters Bros. Rubber Co., New York, N. Y., a Corporation of New York. Filed July 22, 1922. Serial No. 576,718. 7 Claims. (Cl. 164—41.)

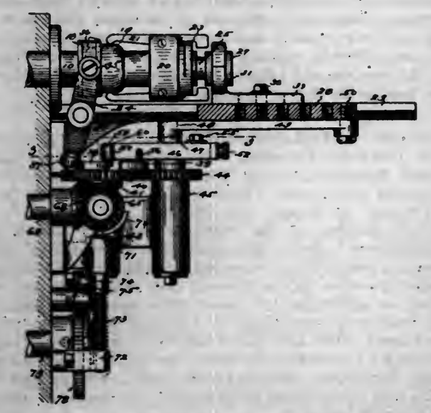
1. In a fabric cutting machine, a table, a stationary cutting blade supported thereby, a frame pivoted to one end of said table, a cutting blade carried by said frame and cooperating with said stationary blade to cut the fabric when said frame is moved about its pivot in one direction, a guard pivoted to said frame and movable therewith, and means carried by said table and with which said guard is engageable when said frame is moving in said direction for effecting a relative movement between said frame and guard during the cutting operation.

1,484,599. SELF-AGITATING HOPPER. WILLIAM H. WHITAKER, Shelbyville, Ill. Filed July 11, 1923. Serial No. 650,970. 4 Claims. (Cl. 259—38.)



1. In a hopper, a plate arranged therein, means for movably mounting said plate to permit it to provide a loosely mounted perpendicular wall extending entirely across the hopper, whereby said wall divides the hopper into separate passages and is given the additional function of an automatic agitator.

1,484,600. RADIATOR-FIN-FORMING MACHINE. MEINHARD WITTE, Minneapolis, Minn. Filed Apr. 24, 1922. Serial No. 556,284. 14 Claims. (Cl. 153—2.)

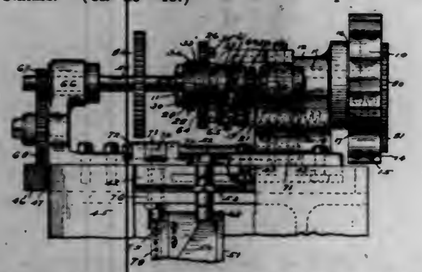


1. In a strip-puncturing mechanism, a group of punches and a co-operating die plate, said punches having beveled ends arranged to puncture the strip by turning laterally therefrom partially severed tube-engaging lips, said die plate having a corrugated strip-engaging surface, and a yieldingly supported corrugated clamping plate having perforations through which said punches work freely.

1,484,601. WELL CLEANER. ROBERT E. CARMICHAEL, Houston, Tex. Filed Nov. 6, 1922. Serial No. 599,274. 9 Claims. (Cl. 166—20.)

1. In a device for cleaning wells, an outer casing perforated at the lower end, a stuffing box at the upper end, an air-conducting pipe slidable through said stuffing box and extending downwardly in said casing, an outlet pipe fitting fluid-tight through the upper end of said air pipe and connected with said air pipe adjacent the lower end of said air pipe, said outlet pipe being perforated above said connection with said air pipe, means to circulate liquid downwardly in said casing, means to force air downwardly in said air pipe whereby the flow of fluid in said outlet pipe is accomplished.

1,484,602. STOCK-FEEDING MECHANISM. CLARENCE M. CHAPMAN, Terryville, Conn., assignor to The Chapman Machine Company, Plymouth, Conn., a Corporation of Connecticut. Filed Aug. 19, 1920. Serial No. 404,628. 25 Claims. (Cl. 29—67.)

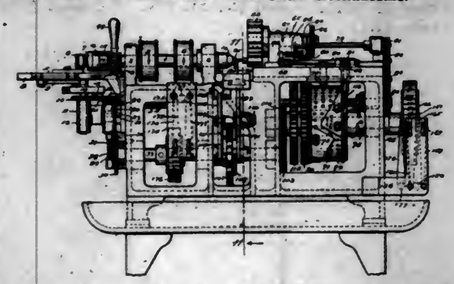


1. A stock feeding mechanism comprising a spindle containing a holding chuck and feed chuck, means for opening and closing the holding chuck, a slide, means adjustably attached to the slide for transmitting the movements of the slide to the feed chuck, a crank, a connection between the crank and slide, mechanism for actuating said holding-

chuck closing-means, and intermeshing gears for intermittently rotating the crank, driven by the mechanism which actuates said chuck-closing means, whereby the actions of the chuck are co-ordinated.

10. A stock feeding mechanism comprising a spindle containing a holding chuck and feed chuck, means for opening and closing the holding chuck, means for reciprocating the feed chuck, and intermeshing driving and driven gears, one of which is connected with said feed chuck reciprocating means and the other has a few teeth omitted and bears cams for actuating said holding chuck means and a pin for rotating the gears into mesh after disengagement.

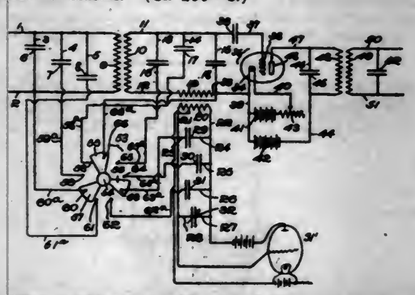
1,484,603. TURRET MECHANISM. CLARENCE M. CHAPMAN, Terryville, Conn., assignor to The Chapman Machine Company, Plymouth, Conn., a Corporation of Connecticut. Filed Sept. 13, 1920. Serial No. 409,820. 32 Claims. (Cl. 29—43.)



1. A tool holding and feeding mechanism comprising a slide, mechanism for reciprocating the slide, a carriage adjustably secured on the slide, a turret with tool openings and locking sockets rotatably supported by the carriage, means for locking and releasing the turret mounted on and movable with the carriage, means for intermittently rotating the turret mounted on and movable with the carriage, and a connection between said means whereby the action of the locking and releasing means controls the action of the rotating means.

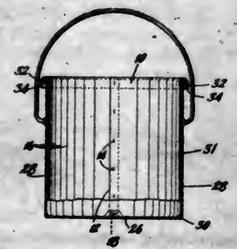
15. A tool holding and feeding mechanism comprising a carriage with a circular thrust surface projecting from its forward end, a turret with radial projections, rotatably supported by the carriage, said projections having tool openings parallel with the axis of the turret and slots in their outer edges with clamp screws passing through the slotted sections of said projections, an annular plate with locking sockets set in the back of the turret and bearing against the circular thrust surface of the carriage, means for intermittently rotating the turret, and means mounted on the carriage and adapted to engage said annular plate for locking the turret between its movements.

1,484,604. AUTOMATIC SCREW MACHINE. CLARENCE M. CHAPMAN, Plymouth, Conn., assignor to The Chapman Machine Company, Plymouth, Conn., a Corporation of Connecticut. Filed Jan. 31, 1921. Serial No. 441,144. 45 Claims. (Cl. 29—43.)



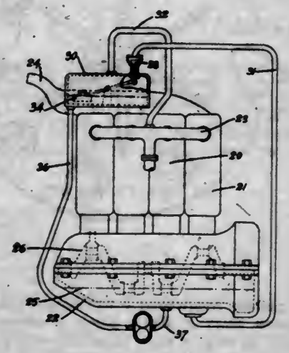
1. A machine of the character described having a reciprocatory turret, mechanism for reciprocating the turret, a reciprocatory cross slide, mechanism for reciprocating the cross slide, a constant high speed drive mechanism, an adjustable low speed drive mechanism, means for alternately connecting the high and low speed drive mechanism with said turret operating mechanism, and means for alternately connecting the high and low speed drive mechanisms with said cross slide operating mechanism, said latter means being operable independently from said former means.

36. A machine of the character described having a turret and cross slide, mechanisms for actuating the turret and cross slide, a high speed drive with means for connecting the high speed drive with the turret and cross slide mechanisms and a low speed drive which includes a differential gearing and change gears for altering the relation of the speed of the drive to the rotation of the spindle, with means for connecting said low speed drive with the turret and cross slide mechanisms.



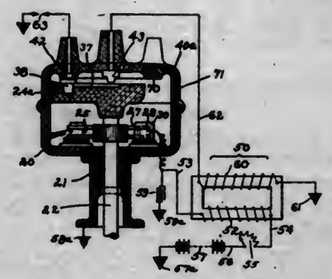
43. A machine of the character described having a turret operating mechanism comprising a shaft and attached gear, cam drums and control disc, cross slides operating mechanism comprising a shaft and attached gear, cam disc and control disc, and a pair of connected gears turning loose on the cam drum shaft, one of said gears being adjacent to the gear on the drum shaft and the other meshing with the gear on the cross slides cam shaft.

1,484,605. RADIODYNAMIC RECEIVING SYSTEM. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 20, 1917. Serial No. 187,062. Renewed July 7, 1923. 7 Claims. (Cl. 250—8.)



1. The combination with an oscillatory circuit, of means arranged to simultaneously impress upon said circuit two series of periodic impulses having different frequencies respectively to produce periodic electrical beats in said circuit, means to change the tuning of said circuit, and means controlled by said second-mentioned means for varying the frequency of one of said series of impulses and maintaining the frequency of said beats constant.

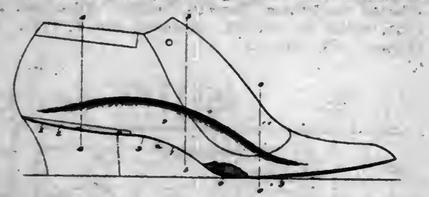
1,484,606. RECEPTACLE AND LINING THEREFOR. GEORGE B. HANFORD, Bloomfield, N. J. Filed Sept. 27, 1922. Serial No. 590,799. 5 Claims. (Cl. 226—65.)



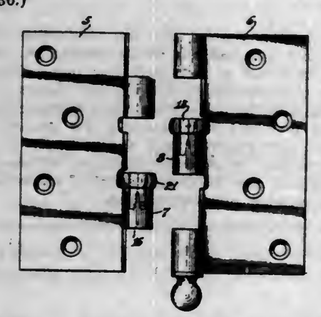
1. A device of the kind described which comprises a receptacle lining having pleated walls of flexible material substantially nonpermeable to water, the pleats extending longitudinally when folded, adapted to closely fit the inner surfaces of the bottom and side walls of receptacles of different dimensions and when expanded converging at one end to a substantially moisture proof closure.

1,484,607. LUBRICATING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Mar. 18, 1918. Serial No. 223,085. 33 Claims. (Cl. 123—196.)

1. The herein described process which includes operating an engine; supplying lubricant to moving parts thereof; and distilling the said lubricant during operation of the engine.



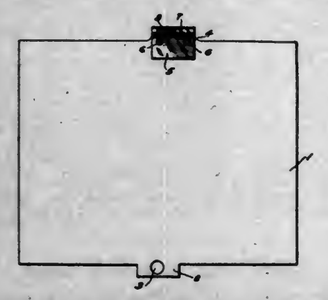
1,484,608. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 14, 1919. Serial No. 310,646. 20 Claims. (Cl. 123—148.)



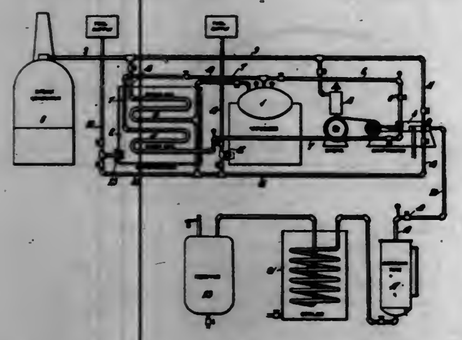
3. In an ignition system, the combination with an engine having a spark plug; of a current source at relatively high voltage; of an ignition timer having cooperating contacts; an ignition coil connected with said current source and timer and arranged to provide sparking at the plug at the instant of make; and means for providing a short-circuit around the plug at the time of break of said timer.

1,484,609. SHOE LAST. JACOB F. JONAS, Bellevue, Ky., assignor to The Krippendorf-Dittmann Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 23, 1921. Serial No. 463,863. 1 Claim. (Cl. 12—133.)

A shoe last having a shank with a base surface substantially plane horizontally and arcuate longitudinally merging in a curved smooth surface with the base surface of the fore part of the last, said shank base surface having an inner side outline of an irregular curved outline corresponding to the outline of the treading surface of the foot when depressed, and an instep part arcuate inwardly in longitudinal and arcuate outwardly in transverse directions and terminating with the irregular inner side outline of said shank surface in a sharp line.

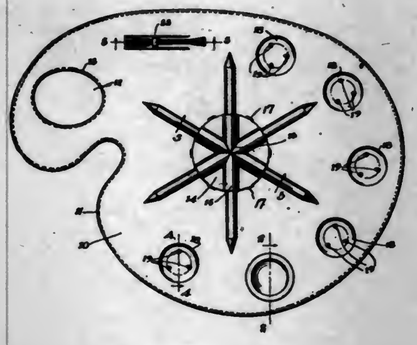


1,484,610. BUTT HINGE. FRANK A. MYERS, Plainville, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Original application filed Dec. 12, 1919, Serial No. 344,276. Patent No. 1,409,461. Divided and this application filed Feb. 17, 1923. Serial No. 619,606. 15 Claims. (Cl. 16—136.)



1. A hinge comprising leaves having interfitting knuckles and an anti-friction device consisting of bearing washers with interposed anti-friction members and spring means for detachably securing said device to one leaf.

1,484,611. INDEX TAB. JOHN E. BLAINE, Jr., Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Norwood, Ohio, a Corporation of Ohio. Filed Nov. 21, 1921. Serial No. 516,634. 2 Claims. (Cl. 129—16.8.)



1. An index card having a flexible strip of transparency folded over one margin and secured upon opposite surfaces of the card reinforcing the same, the medial or fold portion of the transparency forming a receptacle open at opposite ends and approximately triangular in cross section to constitute a display panel at a proper angle of vision, an index strip placed within the said receptacle between the panel and the margin of the index card and held in place by them.

1,484,612. PROCESS FOR TREATING HYDROCARBONS. STEPHEN LOUIS GAETLAN, Toronto, Ontario, Canada, assignor of fifty-five one-hundredths to Albert Edward Goodeham, Toronto, Canada. Filed Oct. 28, 1921, Serial No. 511,041. Renewed Jan. 8, 1923. 39 Claims. (Cl. 196—25.)

8. A cracking process for the production of lower boiling liquid hydrocarbons which consists of vaporizing liquid hydrocarbon at relatively low temperatures, continuously transferring all the evolved vapors from the vaporizing zone to a pressure zone separate from the vaporizing zone and maintaining a low pressure in the latter, and then altering these vapors into a lower boiling hydrocarbon by suddenly applying intense pressure on the vapors and suddenly releasing the compression after the pressure has been applied.

1,484,613. TOY PALETTE. JOSEPH CARMEL, New York, N. Y., assignor to Harry Alfred Benkeser, New York, N. Y. Filed May 1, 1923. Serial No. 635,948. 3 Claims. (Cl. 41—5.)

1. A toy palette comprising a flat palette shaped main portion formed from a single piece of sheet material, said material having a pair of substantially U-shaped slits formed therein in alinement, the closed ends of the U's being arranged opposite each other in spaced relation whereby to form a bridge piece between the slit portions, the portions defined by said slits constituting tongues and being bent downward to form rests for the ends of a brush held beneath the bridge piece.

Patents Nos. 1,484,614 to 1,485,355.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 319—No. 4. TUESDAY, FEBRUARY 26, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Feb. 9, 1924.*

Hoffheimer Soap Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Theo. B. Robertson Products Company, 700–4 West Division Street, Chicago, Ill., for registration of a trade-mark and trade-marks registered February 13, 1906, and February 6, 1906, No. 49,655 and No. 49,376, respectively, to Hoffheimer Soap Co., 169 Jackson Boulevard, Chicago, Ill., and a notice of such declaration sent by registered mail to said Hoffheimer Soap Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Hoffheimer Soap Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Pa.) The Doughty patent, No. 730,887, for a pneumatic-hammer handle, claims 1, 2, and 3 *Held* invalid; the Meissner patent, No. 822,146, for a pneumatic hammer, claims 21, 37, and 38 *Held* not infringed; the Boyer patent, No. 866,573, for a pneumatic hammer, claims 2, 8, 5, and 9 *Held* invalid, and the Boyer patent, No. 917,242, for a pneumatic hammer, claims 21 and 22 *Held* not infringed and claims 24, 25, 26, and 27 *Held* invalid. *Chicago Pneumatic Tool Co.* v. *Keller Pneumatic Tool Co.*, 293 Fed. Rep. 945.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,406,649, W. Jaeger, Snap shade holder for electric sockets, decided January 17, 1924, claims 1 and 2.

Pat. 1,424,065, E. H. Armstrong, Signaling system, decided January 3, 1924, claims 1, 3, 5, 7, 9, and 11.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Access to Pending Applications.

No person except the applicant, the assignee whose assignment is of record, or the attorney of record will be permitted to have access to the file of any application, except as provided for under the interference rules, unless written authority from the applicant, assignee, or attorney, identifying the application to be inspected, is filed in the case to become a part of the record thereof, or upon the written order of the Commissioner, which will also become a part of the record of the case.

Condition of Applications Under Examination at Close of Business February 15, 1924.

(Total number of applications awaiting action, excluding Trade-Mark Division, 63,300; Trade-Mark Division, 1,704. Oldest new case, May 10, 1923; oldest amended, May 23, 1923. The dates given are 1923, except where * indicates 1924).

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	June 23	June 27	1,120

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE HILL.

Decided February 8, 1924.

CLAIMS—FORM OF—DEPENDENT CLAIMS.

A dependent claim should depend from and cover the combination of only a single other claim. (*Ex parte Brown*, 235 O. G. 1355, modified.)

ON PETITION.

ROLLER BEARING.

Mr. Myron F. Hill pro se.

ROBERTSON, *Commissioner:*

Petition is taken that the Examiner be instructed to withdraw his objection to the form of the claims presented and to pass upon their merits.

The Examiner has made final his objection to a series of claims which are drawn in form as dependent claims, each covering a combination set forth in another claim plus a certain limitation, said other claim in turn covering a combination of a third claim plus a limitation. Many of these claims held objectionable by the Examiner cover in this way the subject matter of several claims. The Examiner points out as an example claim 24, which refers back to claim 23, 23 to 22, 22 to 21, 21 to 17, 17 to 9, 9 to 8, and 8 to 1.

It is urged in an argument in the record that this form of drawing claims avoids repetition, saves time, study, clerical work, printing, cost, etc.

The practice of permitting claims drawn in dependent form was approved to an extent in *ex parte Brown*, 235 O. G. 1355. In this case three claims were considered, claim 1 covering a certain combination of elements which were recited in usual form. Claim 2 covered "a structure as specified in claim 1 in combination" with an additional element. Claim 3 covered "a structure as specified in claim 2" in which limitations of the included structure were set forth. These claims were held to "particularly point out and distinctly claim" the invention, so as to meet the requirement of section 4888 of the Revised Statutes.

In the decision *ex parte Holst and Leers*, 253 O. G. 953, claims were held objectionable for alternativeness. For example, where claims 1 and 2 were for combinations in the usual form and claim 3 was for "the combinations above set forth, each having the parts," etc., this language was held to import into claim 3 an alternative meaning, depending on whether the additional element is to be combined with the features of claim 1 or claim 2. The Commissioner in that decision stated he was unwilling to extend the practice outlined in *ex parte Brown*, supra, beyond what was indicated therein—namely, that a subsequent claim can only refer back to a single combination for additional matter.

The petition in this case was denied, however, on the ground that the claims considered therein were alternative.

While it is true one claim may differentiate from another by including the combination in the second merely by naming it and then including an additional element or limitation, the practice of hinging several claims together this way does not tend to clearness of disclosure enjoined by the statute. Especially where the connected claims do not follow each other in sequence, as in the instant case, confusion is more than likely to follow. The essential substance of a claim dependent upon more than one other would often make it difficult to discern and carry in the mind. This objection would be very apparent and real in searching to determine its patentability, to say nothing of investigating and adjudicating its validity.

Another serious objection to this practice is the confusion which seemingly must inevitably result in the record of the prosecution of an application containing such dependent claims. If a claim from which another depended was canceled, the dependent claim must be amended to relieve it of any connection with the canceled claim. The work of amending would therefore be increased; the entry of such amendment would open another door for mistakes, and opportunity for errors in the record would seemingly be multiplied.

There seems abundant reason for drawing a line where the approval of dependent claims must stop. On due consideration it is considered proper and accordingly held that a dependent claim should depend from and cover the combination of only a single other claim.

To the above extent the decision in *ex parte Brown*, supra, is modified.

The petition is denied.

Court of Appeals of the District of Columbia.

IN RE PARKER.

No. 1,566. Decided May 7, 1923.

1. APPEAL TO COURT—PROPOSED AMENDMENT TO CLAIMS AFTER DECISION BY THE COMMISSIONER.

Where an applicant moves to amend his claims so as to give a new definition to certain terms thereof after the Commissioner has decided the case against him and the motion is overruled, the claims as altered by the proposed amendment will not be considered by the court.

2. CLAIMS SHOULD BE PRESENTED WHILE APPLICATION IS BEFORE EXAMINER.

As a general rule an applicant should present his claims while his application is pending before the Examiner, so that the appellate tribunals of the Patent Office may have the benefit of the views of the Examiner, who is an expert in the particular art involved.

3. INVENTION—PRACTICE OF OLD METHOD IN ANALOGOUS SITUATION.

The fact that soft-iron pole pieces had been welded to electromagnets, thus producing as close a joint as possible and eliminating air gaps, would suggest to one skilled in the art that an identical result might be obtained by resorting to the same process in dealing with permanent magnets, and therefore the discovery of the latter was not patentable, notwithstanding an alleged additional advantage in the case of the permanent magnet.

4. INVENTION—APPLICATION OF PROCESS TO SPECIAL USE BY P. IN ADVANCE OF OTHERS NOT NECESSARILY INVENTION.

Where the record does not show that there was a problem to be solved upon which many worked without avail before the successful one appeared, the mere fact that P. was the first to apply the welding process to permanent magnets does not sustain the correctness of his position that such application of the process involved invention.

Mr. Frederick R. Parker pro se.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

SMYTH, *C. J.*:

The Commissioner of Patents rejected as unpatentable claims 8 to 21, inclusive, embodied in an application of Parker's for a patent on an assumed invention relating to a magnetic field structure, in which soft pole pieces are attached to permanent magnets by welding. Counts 8 and 10 are typical of all. They read:

8. A magnetic field structure constructed of a plurality of permanent magnets held apart from each other throughout their extent, and soft-iron pole-pieces for the respective magnets welded to the ends thereof and held in separated relation.

10. A permanent magnet having pole-pieces of impermanent magnetizable material welded to the ends thereof.

[1, 2] After the Commissioner had decided the case against Parker he moved for leave to amend the claims so as to give a new definition to certain terms thereof. The motion was overruled, and he now asks us to consider the claims as amended, in accordance with the motion. If the new definition changes the meaning of the claims it should not be allowed, because if it were we would then have for consideration a different case from that submitted to the Patent Office, and this is not permissible on appeal. If, on the other hand, it does not change the meaning, Parker has suffered nothing by the denial of his motion. It is true, as said in *Rajah Auto Supply Co.* v. *Belvidere Screw & Machine Co.*, 275 Fed. 761; 294 O. G. 993, that a patentee may define his own terms provided he does it at the right time—not after the case has been disposed of by the Patent Office. We think with the Commissioner that, as a general rule, an applicant should present his claims while his application is pending before the Examiner so that the appellate tribunals of the Patent Office may have the benefit of the views of the Examiner who is an expert in the particular art involved. The practice of waiting until an applicant has been defeated before the Commissioner and then moving for leave to amend the claims is not to be approved.

Parker's application was in interference with Craft and Reynolds in August, 1917. The latter moved to dissolve the interference on the ground that the subject matter was unpatentable to Parker. The motion was sustained. This action was upheld by the Examiners in Chief on appeal, and their decision was affirmed by the Commissioner. An appeal to this court from the Commissioner was dismissed on the ground that his decision was not final, and therefore that we had no right to review it. Parker's application then went back to the Primary Examiner, who rejected the appealed claims. His action was affirmed by the Examiners in Chief, who on appeal were sustained by the Commissioner. It is true that both the Primary Examiner and the Examiners in Chief felt bound by the decision of the Commissioner in the interference proceeding. That decision, however, was in accord with their views so far as the unpatentability of the claims was concerned. With the judgment of six tribunals against him, Parker's position is not an easy one to maintain.

As we have just stated, the invention involved relates to the welding of soft-iron pole pieces to an electromagnet. The purpose is to do away with the air spaces that exist where the connection is made by some other means. Welding is old in the art. It was also known that where welding was done air spaces did not exist, and that the existence of air spaces caused loss in the electric current.

The references upon which the rejection was predicated are, a patent to Bunnell April 13, 1880; to Stevens April 4, 1903, and to Heinze February 16, 1909, and Bulletin No. 1098 of the General Electric Co. of Fort Wayne.

In the Heinze patent is disclosed a plurality of U-shaped permanent steel magnets, having secured thereto on the inner side of their ends iron pole pieces. The specifications, however, do not state how those pieces are attached to the magnets. The Bunnell patent shows a permanent magnet of hardened steel, and pole pieces, preferably of soft iron, firmly secured to the respective poles of the permanent magnet, which virtually form continuations thereof. In this patent, as in the one to Heinze, the specifications do not state how the pole pieces are secured, but a man skilled in the iron-working art would, in our opinion, after having read what we have just said, attach the parts by welding. The Stevens patent connects the parts by screws, and in the General Electric Bulletin we find this:

The reluctance of the magnetic circuit is made the lowest possible by cast welding the pole-pieces to the field frame. By this construction the only air gap in the magnetic circuit is the one between the pole-pieces and the armature.

[3] From these disclosures we think it may be said that, beyond the welding of the one to the other, there is no novelty in the permanent magnetic structure or the pole pieces. Is that novelty a patentable one? Parker says that there is no instance where soft-iron pole pieces were welded to permanent magnets, although pole pieces of soft iron have been welded to electromagnets of soft iron. But air gaps are a disadvantage in the case of electromagnets as well as in that of permanent magnets, and if welding would remove them in the one instance, it should in the other. This seems reasonable. Applicant points to a distinction between a magnetic generator and a permanent magnetic structure, saying that where the last-named structure stands idle for a time the welding is of much advantage, whereas it is not, under like circumstances, with respect to the other kind of magnet. This may be conceded, but it does not establish that the fact that the pole pieces were welded to electromagnets, thus producing as close a joint as possible, would not suggest to one skilled in the art that an identical result might be obtained by resorting to the same process in dealing with permanent magnets. On the contrary, we think it would have the effect of inspiring such a suggestion, and therefore that Parker's discovery is not a patentable one.

[4] The mere fact that he was the first to apply the welding process to permanent magnets does not prove the correctness of his position. In cases where a problem was to be solved and many worked upon it without avail before the successful one appeared, the one who solved the difficulty is in a strong position to claim recognition as an inventor. *In re Rowell*, 48 App. D. C. 238; 259 O. G. 778. But the record does not show that Parker's case is one of those.

We have considered a letter from the chief engineer of the Fort Wayne Electric Works, which we find in Parker's brief, but see nothing in it that conflicts with what we have just said.

For the reasons given we think the Commissioner was right, and affirm his decision.

Affirmed.

Court of Appeals of the District of Columbia.

HORLICK'S MALTED MILK CO. *v.* THE BORDEN CO.

No. 1,581. Decided January 7, 1924.

1. TRADE-MARKS—CANCELLATION—DESCRIPTIVE WORDS—"MALTED MILK"—COMPOSITE MARKS.

The fact that a mark contains descriptive words is not enough to warrant a refusal to register it if it does not consist of descriptive words only. It may be a composite mark.

2. SAME—SAME—SAME—SAME—SAME.

Where all the words used are descriptive and the registrant in the statement filed by it in the Patent Office says that, while the words and other parts comprising the mark are generally arranged as shown in the accompanying facsimile, certain words may be omitted and the various accessories of printing may be varied at pleasure, *Held* that the mark is not necessarily a composite one.

3. SAME—SAME—SAME—SAME—INITIALS OR DESCRIPTIVE WORDS.

Where the registrant admits that all the words used are descriptive, but claims that the mark is saved by the use of the letters "M M.," *Held* that the letters stand for "Malted Milk" and are therefore descriptive.

4. SAME—SAME—SAME—SAME—SAME.

Even if initials were required to be regarded as ordinary signs they would not be sufficient to save the mark, since a party could then make up his mark of descriptive words with the exception of some negligible sign or character, and thus evade the law.

Decision of Assistant Commissioner Fenning.

5. SAME—SAME—INJURY WHICH SUPPORTS PETITION FOR CANCELLATION.

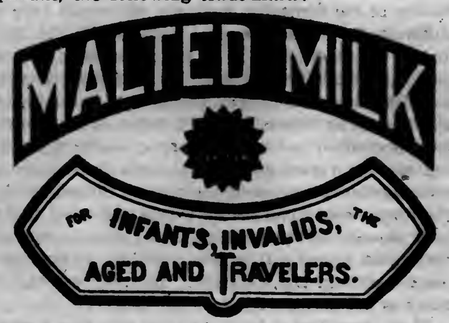
Use of the essential features of registrant's trade-mark by petitioner for cancellation, with consequent injury, is sufficient to support the petition for cancellation.

6. SAME—SAME—SAME.

The law does not require an overt act in order to warrant cancellation. "Injury will be presumed to follow registration of any descriptive word."

7. SAME—DISCLAIMERS AFTER REGISTRATION—NOT STATUTORY.

The trade-mark statute has not provided for disclaimers after registration.



Mr. E. S. Rogers for Horlick's Malted Milk Co.

Mr. W. D. Edmonds for The Borden Co.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

The Commissioner of Patents in 1887 registered for Horlick's Food Company, predecessor of the appellant, the following trade-mark:

It is said in the statement filed by the company that the mark consists of a representation of the letters "M. M." and the words "Malted Milk"; that these have generally been arranged as shown in the accompanying facsimile, in which the letters "M. M." are represented in the color of the paper on a blue background having the form of a seal; that above the letters "M. M.", and arranged in a curved form, are the words "Malted Milk" in plain capital letters on a blue background, and below are the words "For Infants, Invalids, the Aged and Travelers," in plain type, inclosed by a double border; but that these words may be omitted and the various accessories of printing may be varied at pleasure without materially changing the character of the trade-mark, the essential features of which are the words "Malted Milk" and the letters "M. M." Upon the expiration of the registration the appellant renewed it. Application for cancellation of the mark was made by The Borden Company on the ground that the words "Malted Milk" were descriptive, that because of this the appellant had no right to their exclusive use, that it, the Borden Company, was using the same words on malted milk put out by it, and that it would be damaged unless the mark was cancelled. The Horlick Company disclaimed the exclusive right to the words "Malted

Milk." No testimony was taken. The Examiner of Interferences dismissed the application for cancellation, but was reversed by the Assistant Commissioner, who said that the mark was composed of descriptive words, and that the disclaimer, having been filed after registration, was ineffective.

[1, 2] The decision of the Supreme Court in *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, 274 O. G. 613; throws light upon the question before us. According to it the fact that a mark contains descriptive words is not enough to warrant a refusal to register it. Unless it consists only of such words, it may not be refused a place on the registry of the Patent Office. (P. 544.) In that case the mark contained words which were, and words which were not, descriptive, arranged in a circle and surrounded by a wreath of oak leaves. The Court said it was a composite mark, and, since it did not consist of descriptive words merely, it was registrable. If the registrant in the case before us committed itself to the outline of the mark and the arrangement of the words therein, as shown in the foregoing specimen, we would have a different proposition to deal with, but it did not. In the statement filed by it in the Patent Office it said that, while the words and other parts comprising the mark are generally arranged as shown in the accompanying facsimile and so forth, certain words may be omitted and the various accessories of printing may be varied at pleasure without materially altering the character of the mark. Consequently, the owner may arrange the words and other parts as it pleases, and print them in any size or color it may think proper. It is not bound by the arrangement shown in the specimen. In other words, its mark is not necessarily a composite one.

[3, 4] Appellant admits that all the words used are descriptive, but claims that the mark is saved by use of the letters "M.M." We do not think so. Clearly, the letters "M.M." stand for "Malted Milk", and therefore are descriptive of the product to which they are attached. But even if we were not permitted to so interpret them, but were required to regard them as arbitrary signs, still we would hold that they were not sufficient to save the mark from condemnation. If they were, then a party could make up his mark of descriptive words, with the exception of some negligible sign or character which would not be descriptive, and thus evade the law. This is not permissible. *Nairn Linoleum Co.* v. *Ringwalt Linoleum Works*, 46 App. D. C. 64; 237 O. G. 919; and *E. McIlhenny's Son* v. *B. F. Trappey & Sons*, 51 App. D. C. 273; 278 Fed. 582, 299 O. G. 461. The nondescriptive part must be a substantial thing, else it will not save the mark.

For these reasons the decision of the Patent Office cancelling appellant's mark is sustained.

Affirmed.

The decision of Assistant Commissioner Fenning, rendered in this case August 4, 1922, is as follows:

This is an appeal from the action of the Examiner of Interferences dismissing a petition brought by the Borden Company for the cancellation of Trade-Mark No. 14,856, owned by Horlick's Food Co. The mark was originally registered October 25, 1887, under the act of 1881, and on its expiration in 1917 was renewed under section 12 of the act of 1905.

The certificate of registration shows a portion of the Horlick Co.'s label and is accompanied by a verified statement to the effect that the trade-mark consists of a representation of the letters "M. M." and the words "Malted Milk." It continues:

> The various accessories of printing may be varied at pleasure without materially altering the character of said trade-mark, the essential features of which are "Malted Milk" and the letters "M. M."

The words "Malted Milk" are descriptive of a material covered by an expired patent and in themselves are not capable of exclusive trade-mark use. *Ex parte Horlick's Food Company*, C. D. 1898 626; 84 O. G. 1870.

[5] The Borden Company pleads use of the words "Malted Milk" on their labels, and consequent injury under section 13 of the act of 1905. This is sufficient to support the petition for cancellation under *Macy* v. *Macey*, 1922 C. D. 2; 295 O. G. 463; and *McIlhenny's Son* v. *Trappey & Sons*, 1922 C. D. 98; 299 O. G. 461; 51 App. D. C. 273.

[6] The Examiner of Interferences seems to have felt that there must be some overt act by the owner of the registration in order to warrant cancellation; but that does not seem to be the law.

> Injury will be presumed to follow the improper registration of any descriptive word. *Blisheweitz* v. *Leyser, Green Co.*, 247 O. G. 479; C. D. 1918 139; 47 App. D. C. 193.

It seems to require no argument to indicate that *McIlhenny* v. *Trappey*, supra, controls the present case and that the certificate of registration must be canceled, unless the condition is materially changed by a disclaimer now offered.

The claim of "Malted Milk" as essential to its trade-mark was apparently insisted on by the Horlick's Food Co. from 1887, when the present certificate was first issued, to the period when the certificate was renewed and until after the present cancellation proceedings were instituted.

Neither party has taken any testimony; but after final hearing the Horlick's Food Company filed a so-called disclaimer reading:

> With respect to the trade-mark illustrated in the accompanying certificate, No. 14,856, October 25, 1887, renewed May 15, 1917, the exclusive right to the words "Malted Milk" is disclaimed.
>
> The renewed certificate of registration is tendered herewith for appropriate indorsement.

[7] Admittedly there is no warrant in law, nor is there any precedent in practice, for entering such a disclaimer. The attorney for the Horlick Co. vigorously urges the desirability of such procedure, and argues that the Office would be justified in establishing it, since the Supreme Court has apparently approved a disclaimer prior to registration, not specifically provided for by statute, in *Beckwith* v. *Commissioner*, 252 U. S. 538; 274 O. G. 613. The procedure contemplated by the registrant here apparently provides that after a mark has once been registered the Commissioner must lie supine and accept and enter any paper which registrant files under the name of a disclaimer, and this without fee. This is quite distinct from the procedure approved in the Beckwith case, since any activity prior to registration is under the supervision of the Office and may be approved or objected to by the Commissioner. Moreover, the trade-mark statute has not provided for disclaimers after registration. Such disclaimers have been provided for by statute with respect to patents, and the omission of such provision in the trade-mark statutes may have been intentional on the part of the legislature. In any event, the legislature has provided for cancellation procedures, and for many years the Office has availed itself of this section of the statute to remove from registration an improper mark at the request of the registrant, so that he might subsequently obtain a proper registration of his proper mark. The registrant here objects to the procedure, since he suggests that it is circuitous and deprives registrant of its record date. I am not satisfied, however, that this objection is sufficient to outweigh the obvious advantages of the procedure, which seems to have been provided intentionally by Congress.

Much has been said in the brief for appellant with respect to applications for registration of the trade-marks of Horlick in foreign countries; but in the view I take of the case it is unnecessary to consider that phase here, even assuming that this Office should ever take into consideration activities without the United States with respect to a mark properly registered here.

The Examiner of Interferences endeavored to weigh the equities between the parties and decided that the mark should not be canceled because its cancellation would be worse for Horlick than its retention would be for Borden; but this is aside from the issue.

The Examiner of Interferences is reversed and the mark will be canceled.

Court of Appeals of the District of Columbia.

SWAIN *v.* BOOTH.

No. 1,597. Decided January 7, 1924.

INTERFERENCE—CERTIORARI TO BRING UP PARTS OF RECORD FROM BELOW—COSTS.

Where the count of the interference was taken from an application which did not appear in the record and a writ of certiorari was issued at the instance of B. to bring up it and other parts from the record below, the specification and claims of the application being necessary to enable the court to properly interpret the count of the issue, but more than was needed was called for by the writ and returned, each party was taxed with one-half of the costs on the writ.

Mr. C. L. Sturtevant, *Mr. E. G. Mason*, and *Mr. A. L. Ely* for Swain.

Messrs. Milans & Milans for Booth.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

Swain appeals from a decision of the Commissioner of Patents awarding priority to Booth in an interference proceeding relative to an invention which concerns an improved vehicle wheel. The invention is described in one count, which reads as follows:

> The new article of manufacture comprising a semi-wood wheel for motor vehicles and composed of a body of wooden spokes radiating from a common center and each having an integral shaped outer end, in combination with a wrought metal endless fixed rim which presents a demountable-rim-supporting raised back flange, said fixed rim having at points below said back flange as many pressed out, closed, concave sockets as there are spoke ends, said sockets fitting the shaped ends of respective wooden spokes and sealing the end grain thereof, and said rim being circumferentially tensioned upon and holding under compression, the body of spokes, as a whole.

In harmony with the Commissioner's decision is that of the Examiners in Chief and of the Examiner of Interferences, and consequently Swain has a heavy burden to overcome if he would succeed in his appeal. *Nicoll* v. *Hoey*, 48 App. D. C. 245; 259 O. G. 185, and cases cited.

The issue count was taken from the application of one Baker, who for a time was a party to the interference, and must be read in the light of his specification. *Funk* v. *Whitely*, 25 App. D. C. 313; 117 O. G. 280; *Bourn* v. *Hill*, 27 App. D. C. 291, 294; 123 O. G. 1284; *Sobey* v. *Holsclaw*, 28 App. D. C. 65; 126 O. G. 3041; and *White* v. *Cottrell*, 270 Fed. 877; 286 O. G. 645.

For conception and disclosure Booth relies on a drawing marked Exhibit 1, which was made March 24, 1917. It is claimed by Swain that this drawing does not disclose the invention. The drawing shows that the bottom section of the felly has pressed outward therefrom shallow recesses or sockets for the reception of the spoke ends. These recesses are in a broad sense concave or hollow, in that the metal is pressed out of its original plane. While the bottom of the socket is a plane, the side or edge wall surrounding it is curved, due to the method of forming it. The count merely calls for "closed, concave sockets". The degree of concavity is not defined in the Baker application, which shows the bottom of the socket varying very slightly from a plane, the edge wall curvature being the same as in Booth's exhibit.

It is said in behalf of Swain that the exhibit does not show the structure of sockets called for, and dictionary definitions of the word "concave" are resorted to for the purpose of supporting this assumption. One of the definitions given by the Standard Dictionary for the word "concave" is "hollow", and Century Dictionary defines it as "presenting a hollow or incurvature". The depression shown by Booth in the exhibit we are discussing is a hollow, and this satisfies the definitions of the dictionaries. Perhaps the word would admit of a narrower construction which would be in accord with Swain's contention, but we are not permitted to adopt it. On the contrary, a broad interpretation of the claim in issue is what the law requires. *Speed* v. *Kirby*, 270 Fed. 699, 700; 286 O. G. 415; and *Brenzinger* v. *Thornburgh*, 52 App. D. C. 298; 286 Fed. 637; 313 O. G. 664. Booth is sufficiently corroborated as to the preparation of the exhibit and the date. His exhibit, we believe, discloses the invention. Therefore he is entitled

to March 24, 1917, for conception and disclosure. He filed his application on April 30, 1917, and thus obtained a constructive reduction to practice. There is no claim that he was lacking in diligence. Swain did not conceive until April 17, 1917, and consequently must be held to have entered the field after Booth.

There is much in the record in support of Swain's claim that he was not negligent in failing to reduce to practice before June, 1919, but, in view of what we have just said with respect to the dates to which Booth is entitled, it is not necessary for us to consider this.

As we have said, the count of the interference was taken from the application of one Baker. This application did not appear in the record here, and a writ of certiorari was issued at the instance of Booth to bring up it and other parts from the record below. The specification and claims of the Baker application were necessary to enable the court to properly interpret the count of the issue, but more than was needed was called for by the writ and returned. In view of this we think that each party should be taxed with one-half of the costs on the writ, and it is so ordered.

Believing that the Commissioner was right in awarding priority to Booth, we affirm his decision.

Affirmed.

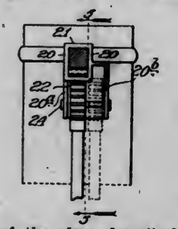
REISSUES

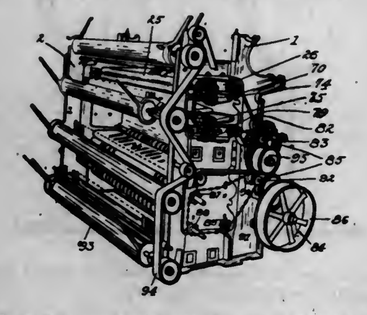
FEBRUARY 26, 1924.

15,775. METHOD OF CONSTRUCTING FIBER SHIPPING CASES. HERBERT R. BLISS, Niagara Falls, N. Y. Filed Jan. 2, 1924. Serial No. 684,099. Original No. 1,430,151, dated Sept. 26, 1922, Serial No. 502,967, filed Sept. 24, 1921. 10 Claims. (Cl. 93—42.)



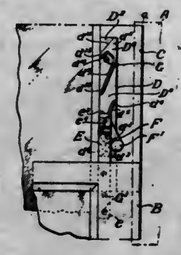
1. The method of constructing a fiber shipping case out of a scored body blank and end blanks with flaps, which consists in holding the end blanks so that each end blank has one flap overlapping the opposite end of the same wall of the body blank, simultaneously stitching such flaps to the wall of the body blank, second, folding the body blank and end blanks to bring another pair of flaps of the end blanks in overlapped relation at the opposite ends of the succeeding wall of the scored body blank and simultaneously stitching said two flaps to such wall, and third, folding the body blank and the end blanks to bring a third pair of flaps of the end walls in overlapped relation to the third succeeding wall of the body blank and simultaneously stitching the said pair of flaps to such third wall of the body blank.

15,776. PROCESS OF CLARIFYING FRUIT JUICES. AAGE GUSMER, West End, N. J. Filed Jan. 18, 1924. Serial No. 687,155. Original application filed Nov. 17, 1920, Serial No. 424,616. Renewed Dec. 24, 1921. Serial No. 524,742. Original No. 1,406,554, dated Feb. 14, 1922. 10 Claims. (Cl. 99—11.)



1. A process of clarifying starch containing liquors which consists in adding a non-malt diastatic enzyme to the liquor to establish the process of starch inversion and destroying the enzyme and interrupting the process of starch inversion when the starch has been inverted into dextrin.

15,777. BOTTLE-CAPPING MACHINE. CLAUDE B. MELCHIOR, Wilmington, Del., assignor to Liquid Malted Milk Company, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Mar. 11, 1922. Serial No. 543,075. Original No. 1,365,182, dated Jan. 11, 1921, Serial No. 319,839, filed Aug. 25, 1919. 4 Claims. (Cl. 226—84.)



1. In a device of the class described, a base, a rack bar secured thereto and extending upwardly therefrom, a sliding member mounted on said rack bar comprising guides adapted to engage the rack bar, a bottle sealing head, and an offset portion adapted to form a pocket, and a lever pivotally mounted in said sliding member having a segmental gear formed at its inner end adapted to engage the teeth of the rack bar, said segmental gear and pocket being in alinement whereby the segmental gear may be moved laterally into said pocket and out of engagement with the teeth of the rack bar.

15,778. CONDENSING APPARATUS FOR CARDING MACHINES. JOHN H. KOVAR and JOSEPH F. SCHIMEK, Holden, Mass., and ALEXANDER CAVEDON, Woonsocket, R. I., assignors to Cashiko Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1923. Serial No. 679,504. Original No. 1,469,005, dated Sept. 25, 1923, Serial No. 389,409, filed June 16, 1920. 17 Claims. (Cl. 19—153.)

5. In a tape condensing machine, end brackets, apron rolls, a pair of rubbing aprons each carried by a set of rolls rotatably mounted in horizontally alined end brackets, means for securing vertically alined brackets together, in pairs, with said aprons a predetermined distance apart, and further means for vertically adjusting the brackets to regulate the distance between said aprons.

15,779. AUTOMATIC INTERLOCKING ATTACHMENT FOR WINDOW SASHES. HENRY C. TROST, El Paso, Tex. Filed Apr. 25, 1923. Serial No. 634,632. Original No. 1,439,585, dated Dec. 19, 1922, Serial No. 553,711, filed Apr. 17, 1922. 9 Claims. (Cl. 292—230.)

1. An interlocking attachment for window sashes comprising two coacting parts, a trip plate fastened to one sash and a pendulum lock connected to the other sash, the said trip plate being provided with raised portions separated by an inclined channel, said raised portions being provided with wedge faces, and pockets, and said pendulum lock being provided with a laterally projecting lug adapted to engage said wedge faces, and to project into said pockets and to pass through said inclined passage, substantially as described.

DESIGNS

FEBRUARY 26, 1924.

64,040. GOBLET OR SIMILAR ARTICLE. JOSEPH O. BALDA, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, N. J. Filed Dec. 16, 1922. Serial No. 4,625. Term of patent 14 years.

The ornamental design for a goblet or similar article substantially as shown and described.

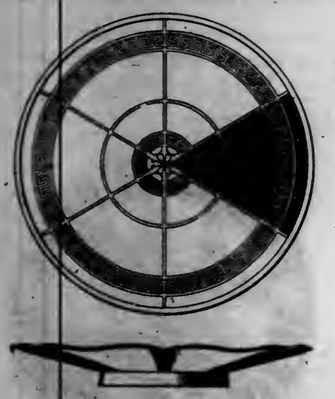
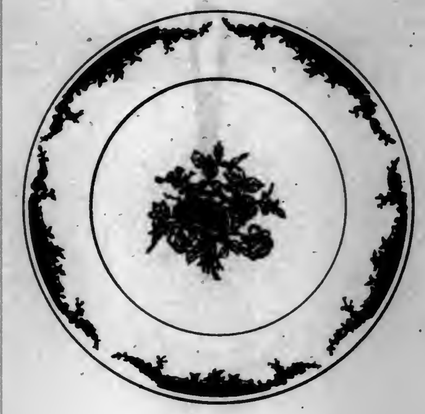
The ornamental design for a pitcher, as shown.

64,049. BADGE OR SIMILAR ARTICLE. JAMES R. COOK and WALTER P. MIESEN, Narberth, Pa. Filed June 15, 1923. Serial No. 6,501. Term of patent 7 years.



The ornamental design for a badge, or similar article, substantially as shown.

64,050. SAND PAIL. LOUIS N. EMMETS, Brooklyn, N. Y., assignor to Kiddies Metal Toys, Inc., a Corporation of New York. Filed Nov. 28, 1923. Serial No. 7,900. Term of patent 7 years.

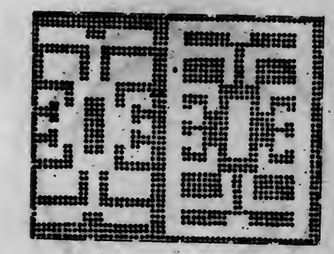


The ornamental design for a sand pail, as shown.

64,051. SANDWICH PLATE OR SIMILAR ARTICLE. JAMES W. FARRELL, Cincinnati, Ohio, assignor to The Homan Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 29, 1923. Serial No. 7,615. Term of patent 3½ years.

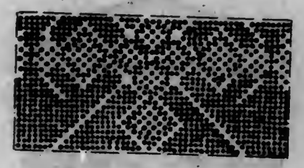
The ornamental design for a sandwich plate or similar article, as shown.

64,052. PLATE OR SIMILAR ARTICLE. WALTER H. FISK, New York, N. Y., assignor to The Rosenthal China Corporation, a Corporation of China. Filed Apr. 14, 1922. Serial No. 1,756. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

64,053. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,274. Term of patent 3½ years.

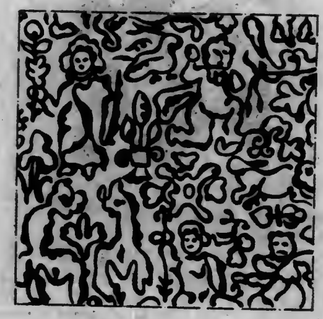


The ornamental design for a textile fabric or similar article as shown.

64,054. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,275. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

64,055. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,276. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown.

64,056. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,278. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

64,057. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,279. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

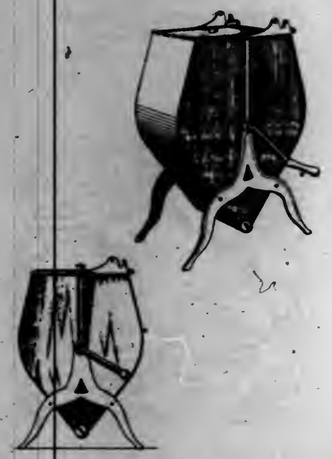
64,058. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,280. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

64,059. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,281. Term of patent 3½ years.

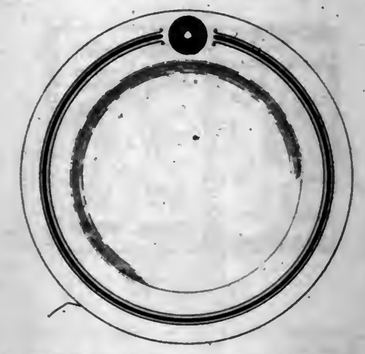
The ornamental design for a textile fabric or similar article as shown.

64,060. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Nov. 13, 1922. Serial No. 4,282. Term of patent 3½ years.



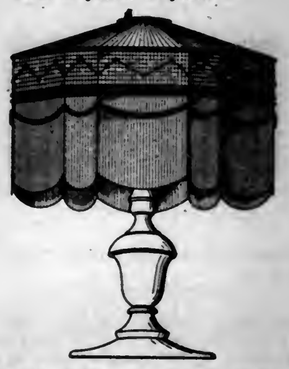
The ornamental design for a textile fabric or similar article as shown.

64,061. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,457. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown.

64,062. WASHING-MACHINE CASING. ZENO C. HABERMAN, Watertown, S. Dak. Filed Jan. 28, 1922. Serial No. 418. Term of patent 3½ years.



The ornamental design for a washing machine casing as shown.

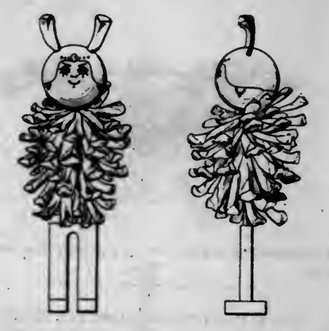
64,063. PLATE OR SIMILAR ARTICLE. DORA BRANDT HANCOCK, St. Paul, Minn., assignor to The Tri-State Telephone and Telegraph Company, St. Paul, Minn., a Corporation of Maine. Filed Jan. 25, 1923. Serial No. 4,987. Term of patent 3½ years.

The ornamental design for a plate or similar article, as shown.

64,064. LAMP. HENRY A. HANSEN and ROY W. HANSEN, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,574. Term of patent 14 years.

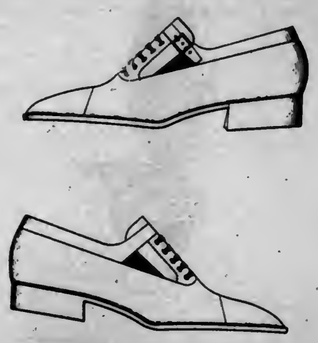
The ornamental design for a lamp as shown.

64,065. COMBINATION LAMP AND PHONOGRAPH STAND. HENRY A. HANSEN and ROY W. HANSEN, Chicago, Ill. Filed Sept. 22, 1921. Serial No. 502,565. Term of patent 14 years.



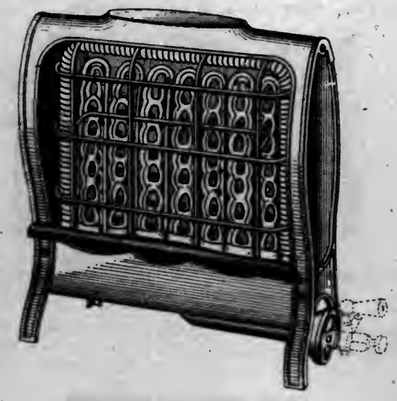
The ornamental design for combination lamp and phonograph stand, as shown.

64,066. LAMP PHONOGRAPH. HENRY A. HANSEN and ROY W. HANSEN, Chicago, Ill. Filed Feb. 13, 1922. Serial No. 681. Term of patent 7 years.



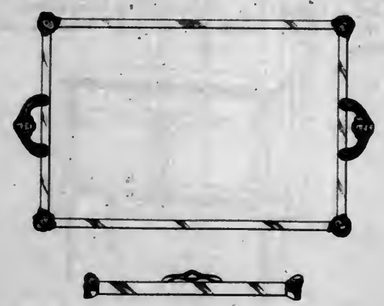
The ornamental design for a lamp phonograph as shown.

64,067. DOLL. FERN S. HEGGELUND, Deadwood, S. Dak. Filed July 25, 1923. Serial No. 6,864. Term of patent 7 years.



The ornamental design for a doll, as shown.

64,068. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,291. Term of patent 7 years.

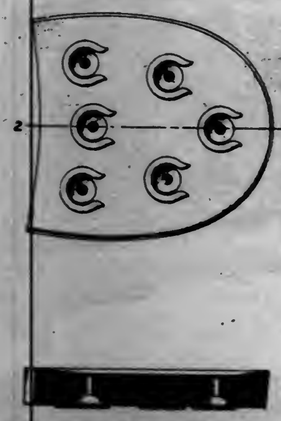


The ornamental design for a shoe, as shown.

64,069. GAS STOVE. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed May 9, 1922. Serial No. 2,151. Term of patent 3½ years.

The ornamental design for a gas stove, as shown.

64,070. TRAY. MAX LEVINE, New York, N. Y. Filed Sept. 18, 1923. Serial No. 7,259. Term of patent 7 years.



The ornamental design for a tray as shown.

64,071. SAFETY PAPER FOR TICKETS OR CARDS. CHARLES MANSHEL, Newark, N. J. Filed June 28, 1922. Serial No. 2,855. Term of patent 14 years.

The ornamental design for a safety paper for tickets or cards, as shown.

The ornamental design for a rubber heel for a boot or shoe, as shown.

64,073. CABINET FOR PHONOGRAPHS. WILLIAM MILLINGTON, Grand Rapids, Mich., assignor to The Aeolian Company, a Corporation of Connecticut. Filed July 15, 1921. Serial No. 485,089. Term of patent 7 years.

The ornamental design for a cabinet for phonographs, substantially as shown.

64,074. CABINET FOR PHONOGRAPHS. WILLIAM MILLINGTON, Grand Rapids, Mich., assignor to The Aeolian Company, a Corporation of Connecticut. Filed July 15, 1921. Serial No. 485,090. Term of patent 7 years.

The ornamental design for a cabinet for phonographs substantially as shown.

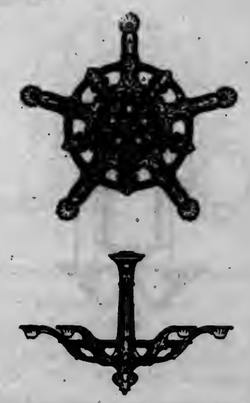
64,075. RING BODY FOR LAMP FIXTURES. ALBERT J. D. OHM, Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 7,559. Term of patent 3½ years.

The ornamental design for a ring body for lamp fixtures as shown.

64,076. RING BODY FOR LAMP FIXTURES. ALBERT J. D. OHM, Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 7,560. Term of patent 3½ years.

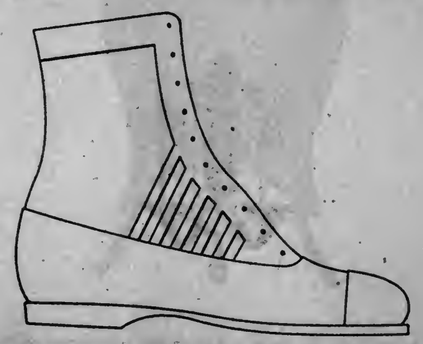
The ornamental design for a ring body for lamp fixtures as shown.

64,077. BACK PLATE FOR LAMP FIXTURES. ALBERT J. D. OHM, Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 7,561. Term of patent 3½ years.



The ornamental design for a back plate for lamp fixtures as shown.

64,078. BACK PLATE FOR LAMP FIXTURES. ALBERT J. D. OHM, Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 7,562. Term of patent 3½ years.

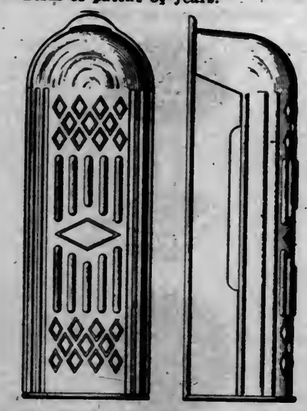


The ornamental design for a back plate for lamp fixtures as shown.

64,079. CHANDELIER BODY. FREDERICK MAX POSITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1923. Serial No. 7,476. Term of patent 3½ years.

The ornamental design for a chandelier body, as shown.

64,080. SHOE. JACOB D. POSNER, New York, N. Y. Filed June 15, 1923. Serial No. 6,506. Term of patent 3½ years.

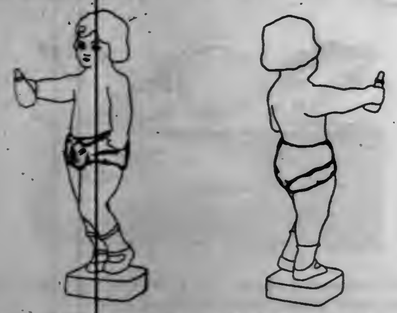


The ornamental design for a shoe, as shown.

64,081. COMBINATION SIGNAL AND LICENSE PLATE HOLDER. JACOB RUBINOFF, New York, N. Y. Filed July 25, 1923. Serial No. 6,855. Term of patent 3½ years.

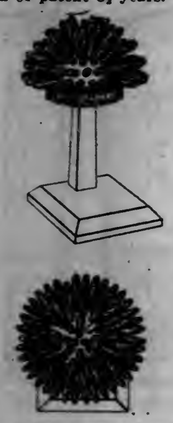
The ornamental design for a combination signal and license plate holder substantially as shown.

64,082. CASING FOR DISINFECTOR. JOSEPH SILVERSTEIN, Brooklyn, N. Y. Filed Nov. 13, 1923. Serial No. 7,755. Term of patent 3½ years.



The ornamental design for a casing for disinfector, as shown.

64,083. SMOKER'S ASH TRAY. PATRICK H. SPILLANE, Washington, D. C. Filed Mar. 18, 1921. Serial No. 453,403. Term of patent 14 years.

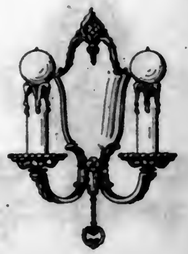


The ornamental design for a smoker's ash tray, as shown.

64,084. DOLL. MARGUERITE L. STONE, San Francisco, Calif. Filed Nov. 15, 1921. Serial No. 515,418. Term of patent 3½ years.

The ornamental design for a doll, as shown.

64,085. MERCHANDISE-DISPLAY STAND. HENRY SWADBA, Boston, Mass. Filed Aug. 30, 1922. Serial No. 3,595. Term of patent 3½ years.



The ornamental design for merchandise display stand as shown and described.

64,086. DISH OR SIMILAR ARTICLE. JULES H. VENON, New York, N. Y. Filed Nov. 10, 1923. Serial No. 7,739. Term of patent 7 years.

The ornamental design for a dish or similar article, as shown.

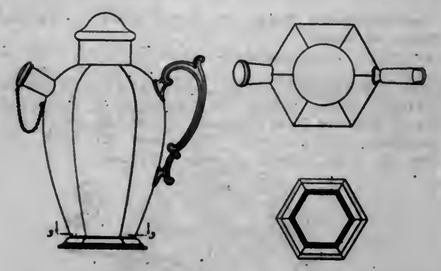
64,087. LIGHTING FIXTURE. EDGAR A. WANGERSHEIM, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 7,408. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

64,088. LIGHTING FIXTURE. EDGAR A. WANGERSHEIM, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 7,409. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

64,089. LIGHTING FIXTURE. EDGAR A. WANGERSHEIM, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 7,410. Term of patent 3½ years.

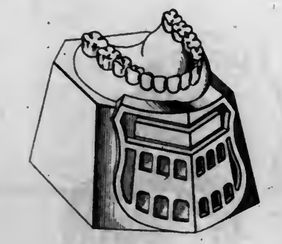


The ornamental design for a lighting fixture, as shown.

64,090. LIGHTING FIXTURE. EDGAR A. WANGERSHEIM, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 7,411. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

64,091. DRINK-MIXING RECEPTACLE. MORRIS WEINTRAUB, New York, N. Y. Filed Mar. 17, 1923. Serial No. 5,496. Term of patent 3½ years.



The ornamental design for a drink mixing receptacle as shown.

64,092. CHAIR OR SIMILAR ARTICLE. EDWIN BIRD WILSON, Forest Hills, N. Y. Filed July 24, 1923. Serial No. 6,844. Term of patent 14 years.

The ornamental design for a chair or similar article as shown.

64,093. ADVERTISING DISPLAY STAND. JOHN M. WILSON and GRANT W. SHERMAN, San Diego, Calif. Filed Nov. 10, 1923. Serial No. 7,742. Term of patent 3½ years.

The ornamental design for an advertising display stand as shown.

64,094. PENDANT. ANNA LYLE WHITCOMB, Los Angeles, Calif. Filed Apr. 16, 1923. Serial No. 5,826. Term of patent 7 years.

The ornamental design for a pendant, as shown.

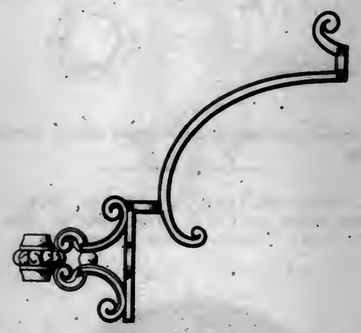
64,095. HANDLE FOR MOTOR-VEHICLE DOORS. JOSEPH M. YATES, Charlotte, Mich., assignor to Hancock Manufacturing Company, Charlotte, Mich., a Corporation of Michigan. Filed Dec. 16, 1922. Serial No. 4,613. Term of patent 3½ years.

The ornamental design for a handle for motor vehicle doors substantially as shown.

64,096. WALL PLATE FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,312. Term of patent 7 years.

The ornamental design for a wall plate for lighting fixtures, as shown.

64,097. WALL PLATE FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,313. Term of patent 7 years.



The ornamental design for a wall plate for lighting fixtures, as shown.

64,098. WALL PLATE FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,314. Term of patent 7 years.

The ornamental design for a wall plate for lighting fixtures, as shown.

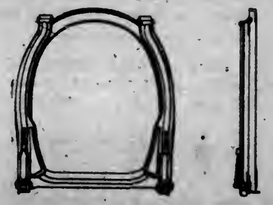
64,099. BRACKET FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,315. Term of patent 7 years.

The ornamental design for a bracket for lighting fixtures, as shown.

64,100. BRACKET FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,316. Term of patent 7 years.

The ornamental design for a bracket for lighting fixtures, as shown.

64,101. HANGER FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,317. Term of patent 7 years.



The ornamental design for a hanger for lighting fixtures, as shown.

64,102. PLATE FOR CHANDELIER FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,318. Term of patent 7 years.

The ornamental design for a plate for chandelier fixtures, as shown.

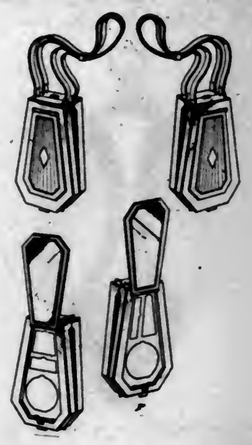
64,103. TENNIS-RACKET PRESS. ALEXANDER FORBES, London, England. Filed Mar. 26, 1923. Serial No. 5,588. Term of patent 14 years.

The ornamental design for a tennis-racket press as shown.

64,104. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,287. Term of patent 7 years.

The ornamental design for a shoe, as shown.

64,105. DRESS. EDWIN E. WOLF, New York, N. Y. Filed Jan. 26, 1924. Serial No. 8,424. Term of patent 3½ years.

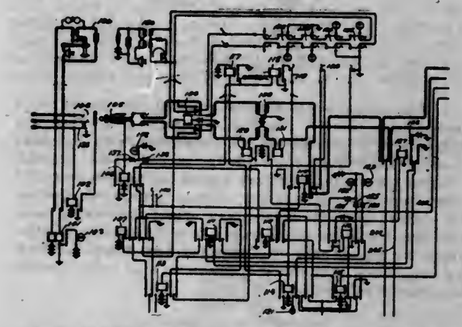


The ornamental design for a dress, substantially as shown and described.

64,106. DRESS. EDWIN E. WOLF, New York, N. Y. Filed Jan. 26, 1924. Serial No. 8,425. Term of patent 3½ years.

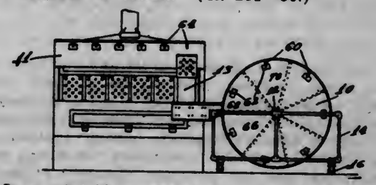
The ornamental design for a dress, substantially as shown and described.

64,107. VANITY CASE. BENJAMIN B. DOWELL, Washington, D. C. Filed Mar. 28, 1923. Serial No. 5,625. Term of patent 14 years.



The ornamental design for a vanity case substantially as shown.

PATENTS

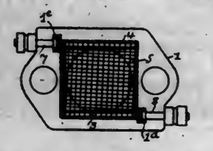


GRANTED FEBRUARY 26, 1924.

1,484,614. TELEPHONE SYSTEM. WALTER P. ALBERT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,198. 5 Claims. (Cl. 179—27.)

1. In a telephone system, subscribers' lines, an operator's position having connecting circuits thereat, a telephone set, selective switches for extending said lines, a register sender for controlling said switches, a relay individual to each connecting circuit for connecting said circuits to the telephone set, means controlled by the register sender for rendering said relays effective to disconnect the connecting circuits from said telephone set, a common relay having its winding in circuit with said individual relays, and means controlled by said common relay for rendering said individual relays effective to disconnect the connecting circuits from the telephone set.

1,484,615. ROTATABLE CONVEYING TRUCK. VICTOR E. ADLAND, Chicago, Ill. Filed May 12, 1921. Serial No. 468,852. 5 Claims. (Cl. 281—50.)

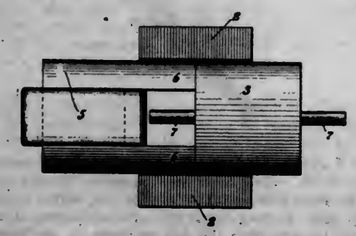


5. In a rotatable conveying truck for laundry articles or the like, the combination of a shelf for convenient loading and unloading of the truck, said shelf being of a triangular form and having provided thereon means adapted for the convenient positioning of the mouth of a laundry bag for the reception of articles.

1,484,616. ELECTRIC LIQUID AND GAS HEATER. IRVING E. ASKE, Duluth, Minn. Filed Dec. 2, 1920. Serial No. 427,806. 2 Claims. (Cl. 219—34.)

1. The combination of a frame, said frame being thicker at its opposite ends than at its opposite sides, of a wire screen comprising a wire wound from end to end upon said frame to produce a double wall screen, a second screen comprising a wire wound from side to side upon said frame to produce a double wall screen, both walls of said second screen extending between the walls of said first screen.

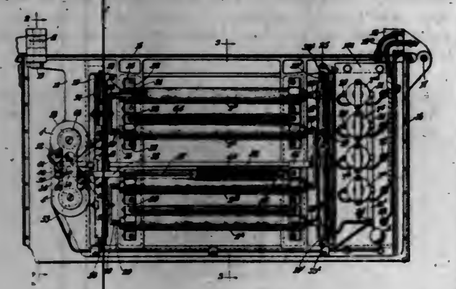
1,484,617. ELECTRIC LIQUID AND GAS HEATER. IRVING E. ASKE, Duluth, Minn. Filed Dec. 21, 1920. Serial No. 432,345. 4 Claims. (Cl. 219—38.)



1. The combination of a frame having an aperture extending therethrough, of a screen comprising a wire wound from end to end upon said frame, a second screen comprising a wire wound from side to side upon said frame, said screens extending across said aperture, said wires being adapted to be connected in parallel to a source of electricity, and cement filling in the spaces around those portions of the screens and screen-wires between the periphery of said aperture and the periphery of said screen.

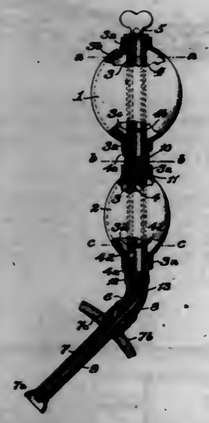
1,484,618. SKINNING KNIFE. ROBERT BLADES, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 551,926. 8 Claims. (Cl. 17—21.)

1. A knife, a casing surrounding said knife and having a slot through which the cutting edge of the knife projects, and a connection through which fluid may be supplied to said casing.



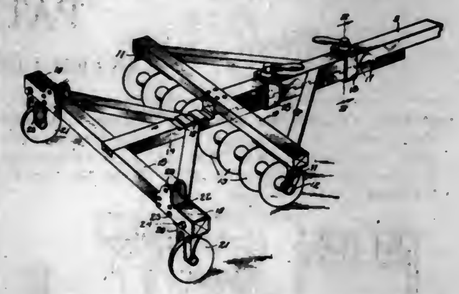
1,484,619. METHOD OF CHARGING PERMANENT MAGNETS. ELI J. BLAKE, Buffalo, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed May 22, 1919. Serial No. 298,848. 7 Claims. (Cl. 175—21.)

1. The method of magnetizing the permanent field magnets of a magneto-generator, which consists in substituting an electromagnetic core for the rotor core,



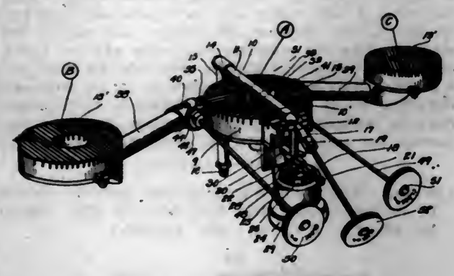
impressing a magneto-motive force on the field circuit through said electro-magnetic core and displacing the electromagnetic core by the rotor core, in such a manner as to maintain the continuity of the magnetic circuit of the magneto-generator.

1,484,620. ELECTRIC REGULATION. ELI J. BLAKE, Buffalo, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,852. 33 Claims. (Cl. 171—229.)



1. An electrical system having in combination a source of variable voltage, electric translating means connected to be supplied by said source, means for regulating the energy supplied by the source to the translating means comprising a variable resistance composed of a plurality of contacting electrodes and a fixed resistance in parallel therewith, both being in series with the translating means, a coil responsive to certain electrical variations in the system for controlling said regulating means and a resistance in shunt to said coil, said last mentioned resistance having a constant current characteristic.

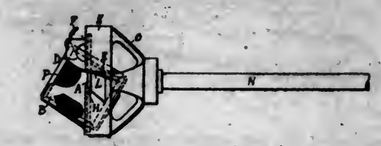
1,484,621. VAGINAL SYRINGE. ROBERT I. BOND and FRANCIS W. JOHNSTONE, Fort Smith, Ark. Filed Oct. 15, 1921. Serial No. 507,842. 4 Claims. (Cl. 128—241.)



1. In a syringe, the combination of a liquid reservoir; an ejector; a valve controlled passage, communicating with the reservoir and the ejector; a valve controlled delivery pipe leading from the ejector; a liquid return flow pipe, leading from the delivery pipe to the reservoir, and passing through said ejector without communicating therewith, and a check valve between said reservoir and said ejector.

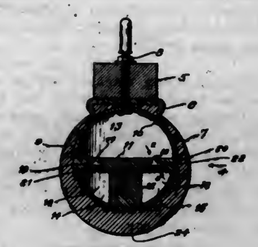
1,484,622. TRANSPORTING DEVICE FOR DISK CULTIVATORS. JOHN C. CLAUS, St. Louis, Mo., assignor to Simon Jankowsky, Tulsa, Okla. Filed May 24, 1920. Serial No. 383,710. 5 Claims. (Cl. 280—61.)

1. The combination with a wheeled implement of a transporting device therefor, comprising a T frame adapted to be secured to the implement with its cross member extending transversely at the rear thereof, wheeled supporting members hinged at the ends of said cross members and having wheels journalled thereon for contact with the ground, said wheel supporting members being adapted to be swung into inoperative position along the top of said cross member and means for locking said wheel supporting members to said cross member in inoperative position.



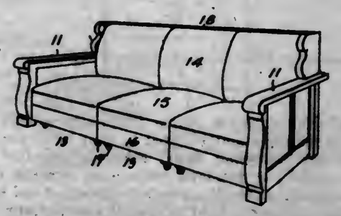
1,484,623. OIL BURNER. WILLIAM C. COLEMAN, Wichita, Kans. Filed Mar. 24, 1922. Serial No. 546,299. 1 Claim. (Cl. 158—59.)

In combination, a primary burner and auxiliary burners, a single gasifying chamber, and a single mixing chamber for supplying all of the burners, the primary burner having a burner chamber underlying the gasifying chamber and overlying the mixing chamber, and having conduits leading laterally from the mixing chamber upwardly into the gasifying chamber, a manifold opening to the outer end of the mixing chamber, conduits leading from the manifold to the auxiliary burners, and separate means controlling flow through the respective auxiliary burner conduits, flow from the mixing chamber to the primary burner chamber being unobstructed, whereby the primary burner may be operated alone and the auxiliary burners operated selectively but only in conjunction with the primary burner.



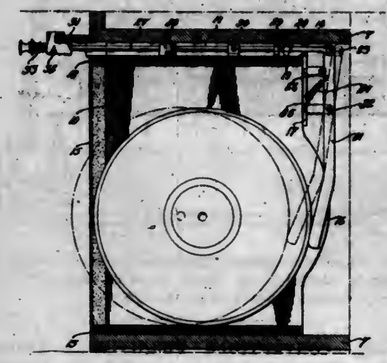
1,484,624. LOCK-STITCH MECHANISM FOR SEWING MACHINES. JOSEPH COOPER, Ashton-under-Lyne, England. Filed Nov. 27, 1920. Serial No. 426,682. 1 Claim. (Cl. 112—228.)

In a lock stitch mechanism for sewing machines, the combination of a ring having formed therein a hook adapted to engage the needle thread loop and pass it around the bobbin of the underthread, a race plate carrying a bobbin casing in a position inclined to the vertical, said race plate forming a bearing for said ring, and having a portion of its periphery cut away to form a recess between it and the ring, and a spreading device comprising a plate secured to said bobbin casing and having its



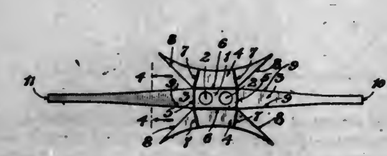
upper surface curved, said spreading plate being provided with a pair of integral ribs extending to the rear of the bobbin casing and a curved tongue adapted to engage a fixed part of the machine, said spreading device being so disposed with relation to the bobbin casing that the needle thread loop will be held clear of the bobbin.

1,484,625. TIRE TUBE. THOMAS J. COOPER, Paterson, N. J. Filed Feb. 28, 1921. Serial No. 448,871. 1 Claim. (Cl. 152—22.)



In a tire formed as a ring shaped tube, a continuous cylindrical septum within said tube, the ends of said septum having air tight unions with said tube, and a single continuous annular septum within said tube, one edge of said annular septum having an air tight union with said cylindrical septum and the other edge of said annular septum having an air tight union with said tube around the interior surface thereof having the longer radius of curvature, said septa being so disposed that stresses upon the tread of said tire are transmitted by said annular septum to said cylindrical septum and are partly resisted by the transverse resistance of said cylindrical septum.

1,484,626. DIVAN, COUCH, AND THE LIKE. RUDOLPH COOPERSMITH, Montreal, Quebec, Canada, assignor of one-half to Abraham Ruche, Philadelphia, Pa. Filed Nov. 8, 1920. Serial No. 422,704. 8 Claims. (Cl. 5—12.)

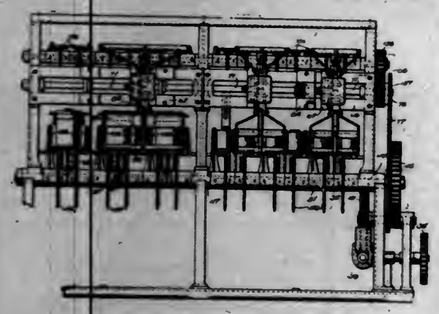


1. An article of furniture comprising a plurality of chairs, a framework adapted to enclose said chairs and hold the same in alignment side by side to form a couch or the like, and a folding bed normally housed in a framework and concealed by the chairs.

1,484,627. RECORD-EJECTING DEVICE. DONATO DI CARLO, Philadelphia, Pa. Filed Aug. 14, 1922. Serial No. 581,580. 8 Claims. (Cl. 211—16.)

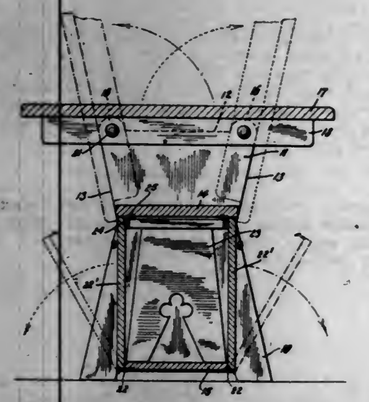
1. A compartment having a series of cells adapted to receive records; a series of levers mounted in the rear of the cells, one end of each lever being adapted to engage a record, the other end having a contact member whereby the lever may be actuated, and a push-rod adapted to be swung into position for direct engagement with any selected contact member.

1,484,628. PROCESS AND BLANK FOR MAKING FINGER RINGS. HARRY DINHOFER, New York, N. Y. Filed May 1, 1923. Serial No. 635,906. 4 Claims. (Cl. 29—160.6.)



4. The process of forming a finger ring consisting of producing a flat strip of metal having shank portions, a top and side wings integrally connected, of folding said shank portions and side wings away from the top to bring the side edges of said side wings into contact with the edges of the shank portions and uniting the meeting edges of the wings and shank portions together.

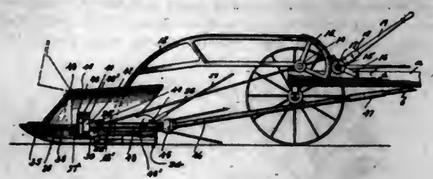
1,484,629. CAN-DRYING APPARATUS. FELIX EBERHART, Newark, and PAUL W. FLEISCHER, Weehawken Heights, N. J.; and CHARLES H. BUHMAN, New York, N. Y., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1920. Serial No. 353,807. 25 Claims. (Cl. 34—12).



1. An apparatus for operating upon cans comprising, in combination, an enclosed heating chamber, a plurality of pairs of separate conveyors moving lengthwise of said chamber side by side and around horizontal axes, a shaft for driving said conveyors extending transversely through

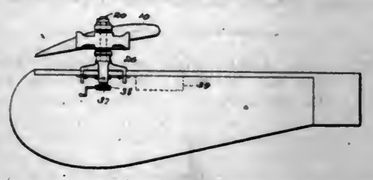
the units of said pairs, means rotating on vertical axes for transferring cans from one conveyor to the other of

its pair whereby to permit the cans to pass through the chamber a plurality of times on said conveyors, and burners arranged beneath said conveyors.



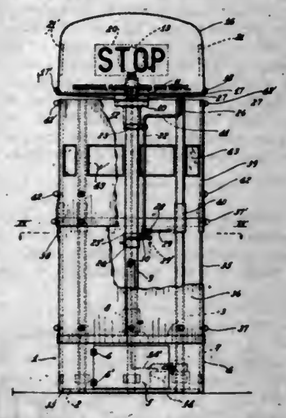
1,484,630. CONVERTIBLE FURNITURE. CHARLES ECKENWALDER, New York, N. Y. Filed Nov. 10, 1921. Serial No. 514,310. 2 Claims. (Cl. 155—43.)

1. An article of furniture comprising a support having two uprights, the upper portion of each upright being trapeziform and the longer one of the two parallel sides of the trapezium forming the upper edge of the upright, a horizontal plate spacing and securing together said uprights, said plate joining the trapeziform portions of said uprights, a table top resting on said uprights and projecting longitudinally beyond the same on each side a distance which is somewhat greater than the length of one of the non-parallel sides of said trapeziform portions, two sets of pivot pins extending through said uprights and said table top, each set being disposed close to the respective non-parallel sides of the said trapeziform portions, said table top being adapted to be swung around either set of said pins when the other set is disengaged from said top and said uprights into abutment with those non-parallel sides of said trapeziform sections adjacent which the pivot pins are left in said uprights, thereby forming a back for the seat constituted by said plate.



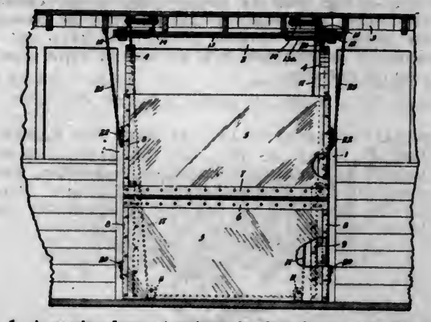
1,484,631. MOWER. WILLIAM FAETHE, Raven Rock, N. J. Filed Oct. 12, 1921. Serial No. 507,189. 10 Claims. (Cl. 56—25.)

1. A mower having a cutter frame and cutter bar, said frame and cutter bar having end sections and a central section, the sections of said cutter frame being pivotally connected together and the sections of the cutter bar being separated and linked together to enable the raising



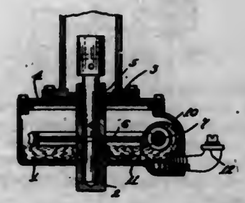
and lowering of the end sections and means for raising and lowering the central section of said cutter frame.

1,484,632. HELICOPTER FLYING MACHINE. ELISHA N. FALES, Dayton, Ohio. Filed May 11, 1921. Serial No. 468,740. 3 Claims. (Cl. 244—15.)



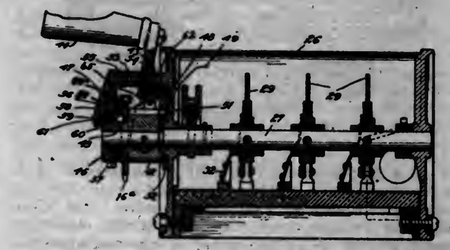
1. In a helicopter flying machine, wings extending in opposite direction from the center of the machine and having their leading edges disposed reversely to each other, propelling means for said wings, a car suspended from the center of the machine and having a swiveled connection with the superposed wing structure, means for disconnecting the car from the wing structure while in flight, and a releasable parachute attached to and normally housed within the car.

1,484,633. TRAFFIC SIGNAL. JAMES J. FLANNERY, Jr., Pittsburgh, Pa. Filed May 11, 1923. Serial No. 638,202. 5 Claims. (Cl. 116—63.)



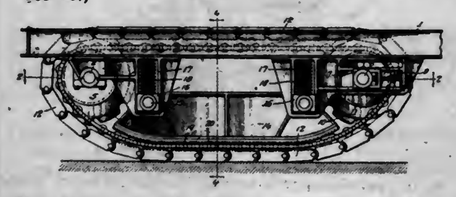
3. A traffic signaling device comprising a base, an upright supporting standard fixed to said base, a combined canopy and indicating signal rotatably mounted at the upper end of the standard, means for rotating the said canopy-signal, a handle pivotally attached to the said means and normally urged to assume substantially vertical position under the influence of gravity, and a notched retaining element disposed below the handle and in the path of movement thereof, whereby upon release of the handle by the operative, the same will swing downwardly and engage one of the said notches to prevent movement of the said signal.

1,484,634. GRAIN-DOOR STRUCTURE. CLARENCE H. FOSS, Minot, N. Dak. Filed Mar. 11, 1922. Serial No. 542,857. 9 Claims. (Cl. 20—32.)



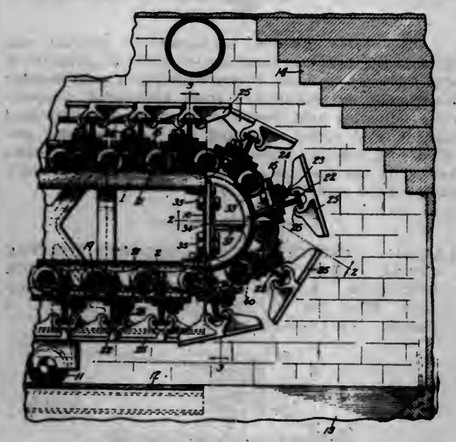
1. A grain door structure having in combination a door comprising hinged sections, a guideway for guiding said door in its opening movement, a flexible member attached to said door and a rotatable differentially operating means comprising a shaft of different diameters to which the ends of said flexible member are secured for moving said flexible means to raise said door, said flexible member, when the door is closed, being wound about the smaller end of said shaft.

1,484,635. LUBRICATING SYSTEM FOR GEARING. CHARLES W. FRANCIS, Paterson, N. J., assignor, by mesne assignments, to Eden Washer Corporation, a Corporation of Delaware. Filed Feb. 18, 1922. Serial No. 537,473. 2 Claims. (Cl. 74—36.)



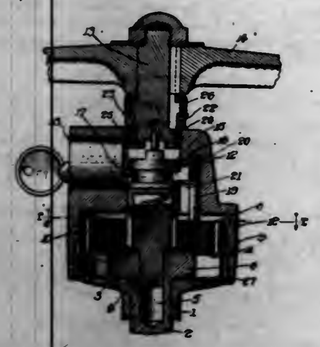
3. In a lubricating system for intermeshing gears, a stationary curved deflector for guiding the lubricant over the intermeshing teeth, and means for deflecting the lubricant against said stationary deflector.

1,484,636. RAISING AND LOWERING MACHINE. GEORGE M. FRENCH, Chicago, Ill., assignor to Economy Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1921. Serial No. 436,084. 13 Claims. (Cl. 187—35.)



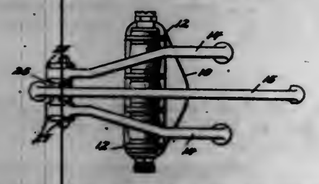
5. A controller for an electric motor comprising, in combination, switch mechanism operable to open and close the motor circuit, an operating member for said mechanism, actuating means for said operating member, and means operatively associated with said operating member adapted normally to lock it with reference to said actuating means and operable in the movement of the operating member by said actuating means to lock the operating member against movement while permitting the actuating means to continue its movement.

1,484,637. TRACTOR. JAMES C. FRENCH, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Feb. 5, 1918. Serial No. 215,433. 6 Claims. (Cl. 305—9.)



1. In a tractor, a body frame, a rear axle supported in bearings on said frame, a belt-wheel on said axle, a front axle, a belt-wheel on said front axle, an endless traction belt on said belt-wheels, a shoe to communicate the weight of said body frame to the lower portion of said belt, a spring to support the body frame on the front end of said shoe, a spring to support the body frame on the rear end of said shoe, so that the entire load weight is communicated through said springs to the shoe, permitting the shoe and body frame to move bodily toward each other, and whereby either end of said shoe may tilt upward and vertical guides for the front and rear ends of said shoe.

1,484,638. STOKER. JOHN S. S. FULTON, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,934. 5 Claims. (Cl. 110—40.)

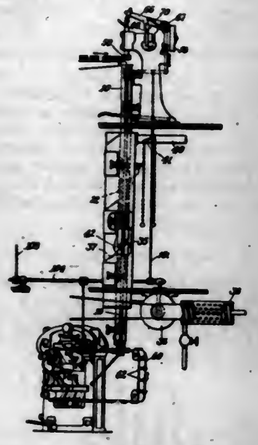


1. In an automatic stoker, a frame, upper and lower guide tracks carried by said frame, endless chains made up of a plurality of links, fuel supporting mechanism mounted thereon, two sets of supporting rollers carried by each of said chains, one set of rollers operating on the upper guide tracks and the other set of rollers operating on the lower guide tracks, and means mounted on said frame arranged to cooperate with the first mentioned rollers and the second mentioned rollers for carrying links and rollers from the upper to the lower guide tacks.

1,484,639. ARMORING MEANS. HARRY F. GEORGE, Chicago, Ill. Filed Dec. 15, 1921. Serial No. 522,458. 11 Claims. (Cl. 70—129.)

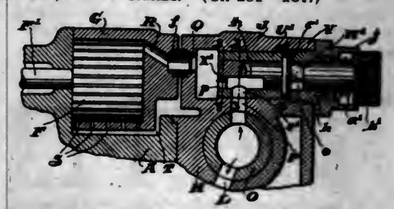
8. In combination, the housing for the planetary gearing of an automobile steering gear, a housing cover adapted to fit over and cover said housing on the side thereof, and protecting means, non-removable except when said cover is removed, for protecting said housing from attack from below.

1,484,640. VALVE-ADJUSTING MEANS. ROBERT M. GETCHELL, Dayton, Ohio. Filed Dec. 15, 1921. Serial No. 522,600. 4 Claims. (Cl. 123—90.)



3. In a valve operating mechanism for internal combustion engines, the combination with a plurality of synchronously operated rocker arms, of a yoke member interconnecting said rocker arms, means for independently adjusting said rocker arms with relation to said member, said rocker arms and yoke member being provided with coacting curved surfaces having their centers located in the fulcrum axis of said rocker arms, and a push rod for actuating said yoke.

1,484,641. LUBRICATING ARRANGEMENT FOR THE CRANK CASES OR OIL CHAMBERS OF MOTOR VEHICLES. WALTER ERNEST GOODWIN, Sale, England. Filed Oct. 27, 1922. Serial No. 597,247. 4 Claims. (Cl. 184—103.)

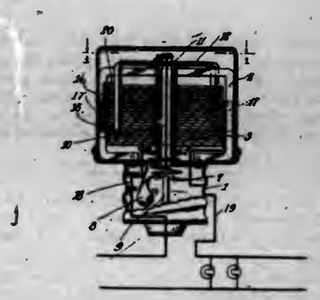


1. Means for supplying lubricant to a crank case, sumph or other chamber adapted to receive lubricant, comprising an oil reservoir, a hand-actuated forcing device drawing from the reservoir, a float chamber, a passageway between the float chamber and the receiving chamber, a float in the float chamber, a control valve operated by the said float, a casing for the control valve, a pipe leading from the forcing device to the control valve casing, a passageway leading from the control valve casing to the chamber receiving lubricant, and a passageway leading back from the control valve casing to the oil reservoir.

1,484,642. METHOD OF AND MACHINE FOR MAKING HEELS. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1918, Serial No. 258,722. Renewed Nov. 24, 1923. 46 Claims. (Cl. 12—42.)

1. That improvement in methods of pressing wedge heels, which consists in superimposing the base face of one heel upon the base face of another heel having the same wedge or taper and which is turned 180 degrees to present its breast face under the rear end of the superposed heel, and applying pressure through the top lift ends of the heels.

1,484,643. HAND REGULATING VALVE FOR ROTATION MOTORS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Mar. 23, 1922, Serial No. 545,991. Patent No. 1,456,234. Divided and this application filed Apr. 13, 1923. Serial No. 631,757. 2 Claims. (Cl. 251—137.)

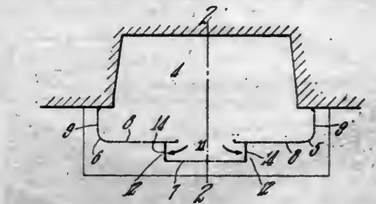


1. In a fluid actuated rock drill of the hammer type, the combination of a rotation motor and a valve for controlling the supply of fluid to said motor, said valve comprising a casing, a cylindrical valve cage removably secured in said casing and affording communication between the fluid supply and the motor, a rotatable and longitudinally movable valve stem in said cage having a head and a reduced portion rearwardly of the head, a spring for normally retracting the stem and a stop limiting the movement of the stem, the valve head normally permitting a continuous flow of motive fluid to the motor through the cage, and the supply to the motor being increased by moving the stem and valve head inwardly towards the motor.

1,484,644. SIGN. JOHN L. HEWITT, Philadelphia, Pa. Filed May 10, 1923. Serial No. 638,001. 10 Claims. (Cl. 40—134.)

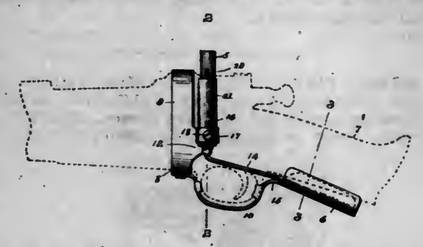
1. A device of the character described, comprising a back member having edges affording a yieldable outset angled perimeter, a superposed transparent face member having an inwardly scalloped peripheral edge and bearing advertising matter, said outset perimeter being adapted for compression into frictional engagement with the inwardly scalloped peripheral edge of said face member, and supporting portions integral with the back member but independent of the face member.

1,484,645. CIRCUIT BREAKER. CHARLES F. HOLMES, Chicago, Ill. Filed Apr. 15, 1922. Serial No. 552,964. 7 Claims. (Cl. 200—106.)



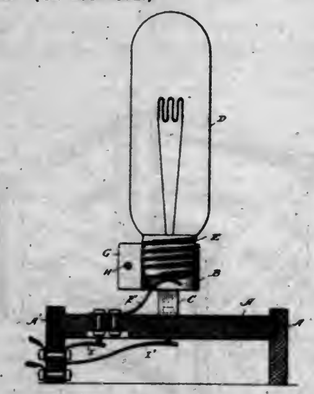
6. A device of the character described comprising a yoke having a magnetic core mounted thereon; contacts mounted at opposite sides of said yoke; a U-shaped member rotatably mounted upon said yoke; trigger mechanism for holding the legs of said member in engagement with said contacts; and armature for actuating said trigger mechanism to release said member.

7. A device of the character described comprising a yoke having a magnetic core mounted thereon; contacts mounted at opposite sides of said yoke; a U-shaped member rotatably mounted upon said yoke; resilient contact fingers mounted upon the legs of said U-shaped member and adapted to engage said contacts; trigger mechanism for holding said U-shaped member in engagement with said contacts; and an armature adapted to be operated by said magnetic core for actuating said trigger mechanism to release said U-shaped member.



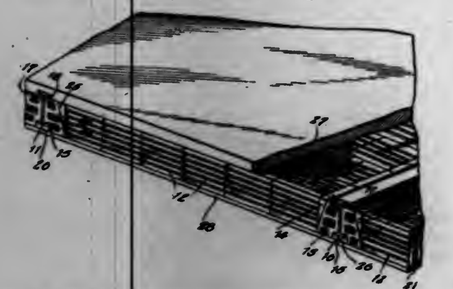
1,484,646. FIRE SCREEN. HARRY B. HOPSON, Springfield, Mass. Filed Nov. 6, 1922. Serial No. 599,452. 5 Claims. (Cl. 126—202.)

1. A fire screen comprising right and left screen sections arranged in the same plane and spaced edgewise from one another to provide an unobstructed outlet opening for heat, and a third screen section extending in front of said outlet opening and spaced from the plane of said



right and left sections to arrest sparks thrown through said opening and to divert in opposite directions the heat which passes through said opening.

1,484,647. FLINCH INDICATOR FOR FIREARMS. DUDLEY B. HOWARD, Washington, D. C. Filed June 8, 1921. Serial No. 474,871. 11 Claims. (Cl. 42—1.)

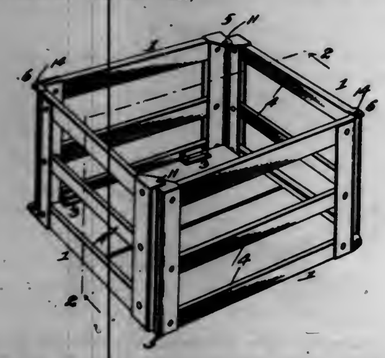


1. In a firearm accessory, a changeable indicating element, means responsive to the trigger-actuating operation of a firer for transmitting motion to the indicating element, and means adapted to cause a relatively permanent change in the indicating element upon the transmission of motion of predetermined velocity to the said element.

1,484,648. MOUNTING FOR PICTURE-PROJECTING LIGHTS. CHARLES FRANCIS JENKINS, Washington, D. C. Filed July 18, 1918. Serial No. 245,484. 2 Claims. (Cl. 173—342.)

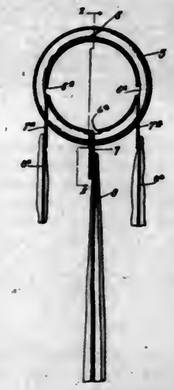
1. The combination with supporting members provided with ways, of an insulating plate sliding in said ways, a compressing lamp socket having an internally smooth cylindrical surface, supported from the plate and provided with a terminal through which circuit may be made through the socket as the plate slides and broken by opposite sliding.

1,484,649. FLAT-ARCH FLOOR CONSTRUCTION. ERNEST V. JOHNSON, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,017. 3 Claims. (Cl. 72—66.)



1. A flat arch floor construction, comprising supports, a substantially flat tile body therebetween and comprising blocks of duplicated rectangular hexahedron form and arranged in courses, and wedge blocks between course ends and the supports.

1,484,650. PISTOL AND MECHANISM WHICH CAN BE CONCEALED IN ANY PORTABLE OBJECT. CAMILLE JORIOT, Lac-on-Villers, France. Filed Nov. 6, 1922. Serial No. 599,389. 1 Claim. (Cl. 42—52.)



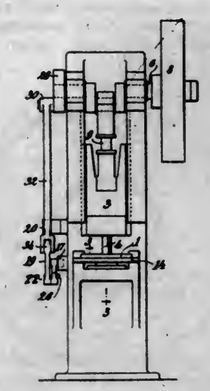
A pistol mechanism, adapted to be concealed in a portable object, comprising the combination with a plurality of striking or firing pins, of a revoluble plate having at its edge a series of teeth, said plate being provided with a plurality of holes for the passage of said pins when said holes are brought into register with said pins, said plate normally serving to hold said pins in "cocked" position, and means for rotating said plate step by step to permit the passage of said pins through said plate in successively firing the cartridges placed in barrels in the pistol.

1,484,651. FOLDING CRATE. EMANUEL A. KAMERER, Cedar, Iowa. Filed Jan. 26, 1923. Serial No. 615,117. 5 Claims. (Cl. 217—48.)

1. In a device of the class described, the combination of a plurality of side sections, a pair of primary hinge devices connecting some of said side sections together, a pair of auxiliary hinge devices connecting some of said side sections together, each of said primary hinge devices comprising sections, each section of the primary hinge device comprising a U-shaped body provided at its ends with overhanging, apertured lips, means connecting the lips of the sections of the primary hinge devices together, and hinged bottom sections secured to some of said side sections.

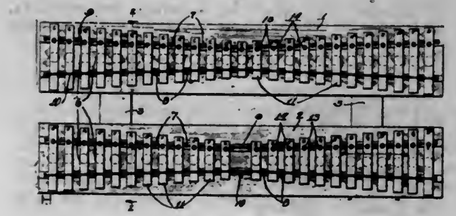
1,484,652. CURTAIN RING. ANTON KELLER, Birmingham, Ala. Filed May 20, 1922. Serial No. 562,380. 8 Claims. (Cl. 156—21.)

5. A circular curtain ring of the class described in combination, having a diagonal split at the top, a dovetailed notch cut at the bottom in the inner periphery, and two dovetailed notches cut in the inner periphery opposite each other and at right angles to the bottom dovetailed notch, all of the said notches being symmetrical.



1,484,653. APPARATUS FOR ELECTROGALVANIZING. FELIX KIRSCHNER, Vienna, Austria. Filed Jan. 31, 1923. Serial No. 616,041. 5 Claims. (Cl. 204—5.)

1. An apparatus for electrogalvanizing, comprising a trough for the electrolyte and through which the articles to be galvanized are adapted to travel, a conduit having its opposite ends connected to the trough adjacent the opposite ends of the latter, and means in said conduit for effecting forced circulation of the electrolyte through the trough in a direction opposite that in which the articles to be galvanized travel.



1,484,654. MECHANICAL MOVEMENT. WILLIAM KLOCKE and JOHN E. DOBSON, New York, N. Y., assignors to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Dec. 6, 1921. Serial No. 520,308. 12 Claims. (Cl. 74—14.)

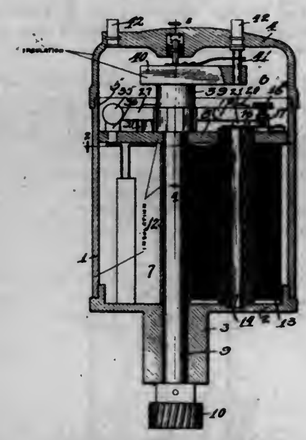
1. A mechanical movement comprising a rocking part, a toggle connected at one end thereto and adapted at its opposite end to swing around said rocking part, a guide attached to the swinging end of said toggle, and means

for swinging said toggle whereby said rocking part is turned.

1,484,655. CHIMES. JOHN B. KOHLER, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,887. 8 Claims. (Cl. 84—403.)

3. A musical instrument comprising a plurality of apertured sound boxes, a plurality of tone bars of different lengths, and means for supporting the tone bars on the sound boxes in graduated relation with the longest tone bars at the ends and with the shortest tone bars at the middle of the sound boxes, said tone bars being of different pitch and arranged to give a succession of major thirds so that adjacent bars are four semitones apart to eliminate tonal interferences.

1,484,656. PLANT PRODUCT. LEOPOLD KOROPP and VICTOR F. BERGMAN, Chicago, Ill. Filed Aug. 2, 1919. Serial No. 314,812. 1 Claim. (Cl. 41—18.)

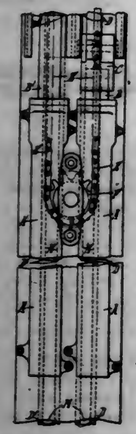


A decorative product comprising a natural plant part having a varnish-like coating with particles of pigment severally more or less dissolved and spread therein and with the remainder set firmly in the coating.

1,484,657. RAZOR-BLADE-STROPPING HANDLE. CHARLES F. LARZELERE, Flint, Mich., assignor of one-half to Ezariah D. Gardner, Flint, Mich. Filed July 2, 1921. Serial No. 482,091. 5 Claims. (Cl. 30—25.)

1. A razor blade stropping handle comprising a tubular member slitted to receive the edge of a razor blade having projections at opposite ends thereof, one of said projections being adapted to underlap the portion of said tube at one end of said slit, a tubular member telescoping over said first-mentioned member and overlapping the projection at the opposite end of said blade, and resilient yieldable means for relatively moving said members into collapsed position.

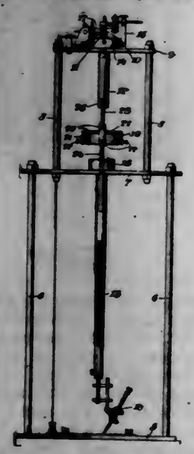
1,484,658. IGNITION SYSTEM. JOHN W. LAUREN, Chicago, Ill., assignor to Simplex Ignition Corporation, a Corporation of Delaware. Filed Feb. 7, 1921. Serial No. 442,907. 5 Claims. (Cl. 123—148.)



1. An ignition unit comprising a casing, a wall dividing the casing into separate chambers, an induction coil in one chamber, a core in the induction coil having one end extending through the dividing wall into the other chamber, a vibrator in said other chamber associated with the extending end of the core, and timing and distributor mechanisms mounted in said other chamber and co-acting with said coil and a source of electrical energy to produce a properly timed and distributed ignition spark.

1,484,659. HOIST ESPECIALLY SUITABLE FOR RAISING PROJECTILES ON BOARD SHIP. HUGH WARREN LEE and JOHN WINDLOW SWINDALE, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Apr. 26, 1923. Serial No. 634,714. 7 Claims. (Cl. 89—46.)

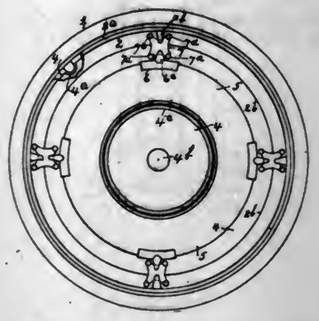
1. In a hoist, the combination of a pair of bars, lifting arms pivoted to each bar, a pair of hydraulic rams one connected to each bar, two fixed sprocket wheels, a chain passing round the wheels and connected to the two bars and means for turning the arms on their pivots.



7. In a hoist, the combination of a pair of bars, means for moving them up and down alternately, lifting arms pivoted to each bar, a rod connecting the arms of

each bar, fingers pivoted to each bar and connected to the rod thereof, a cam plate adapted to turn the fingers of each bar near the end of the travel thereof and so to

move the rod of that bar relatively to that bar and means whereby the normal movements of each rod relative to its bar can be reversed.



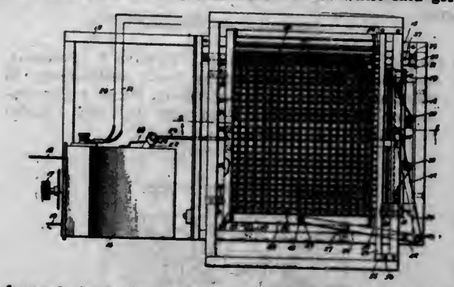
1,484,660. UNIVERSAL LEVER COUPLING. ALFRED MCEWEN, Tarrytown, N. Y. Filed July 13, 1923. Serial No. 651,761. 4 Claims. (Cl. 74—5.)

1. The combination with primary and secondary levers having spaced apart fulcra, of a universal coupling for said levers, said coupling comprising a universal joint element having two independently movable members, and adjustable connections between said members and the respective levers, whereby the joint element can be positioned with its axes above or below the fulcrum of the primary lever.

1,484,661. SHOCK-ABSORBING WHEEL FOR VEHICLES. AUSTIN A. MENDENHALL, Duluth, Minn. Filed May 12, 1922. Serial No. 560,456. 6 Claims. (Cl. 152—46.)

1. In a shock absorbing wheel, the combination with a felloe of a hub member within said felloe, said hub member being adapted to play in a vertical plane with respect to said felloe, a resilient tire within said felloe and mounted upon said hub member at one side thereof, plates positioned at intervals around said resilient tire and adapted to bear against the tread or crest thereof, said plates having transversely extending saddles positioned upon their outer faces, rocker spokes loosely

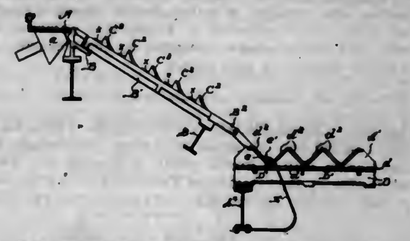
mounted upon said saddles, stationary pillows interposed between said spokes and said felloe, said spokes being adapted to rock at one end upon said pillows and at the opposite end upon said saddles, and means for preventing the disengagement of said spokes from said saddles and pillows.



1,484,662. CHUCKING ATTACHMENT FOR THREADING MACHINES. HACKLEY MORRISON, Richmond, Va. Filed May 25, 1921. Serial No. 472,457. 17 Claims. (Cl. 10—1.)

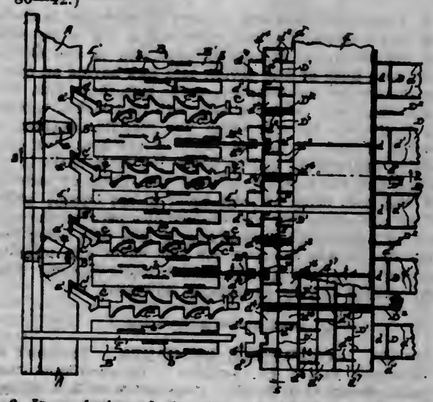
1. The combination with a machine for threading relatively short blanks, said machine having a rotary die head and a work holding chuck reciprocable toward and from said die head, of means independent of said chuck for supporting a blank in axial alinement with said die head and in position to enter the chuck as the latter is moved toward said die head.

1,484,663. X-RAY FILTER. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed Sept. 16, 1921. Serial No. 501,091. 13 Claims. (Cl. 250—34.)



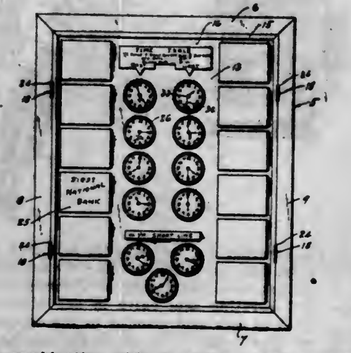
1. In an X-ray filter the combination, with a framework and a grid frame carried by said framework and movable relatively thereto back and forth in a predetermined plane, of a plurality of slats mounted upon said grid frame and made of material opaque to X-rays, said slats being

inclined to different angles relatively to said grid frame, and means for causing said slats to rock while said grid



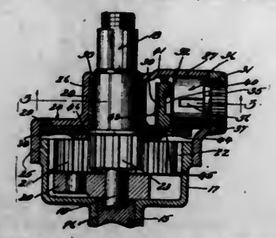
frame is in motion, in order to facilitate the passage between said slats of primary X-rays proceeding directly from said X-ray tube.

1,484,664. COOLING BED. WILLIAM BERGER NELSON, Chicago, Ill., assignor to Interstate Iron and Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1922. Serial No. 546,574. 3 Claims. (Cl. 198—219.)



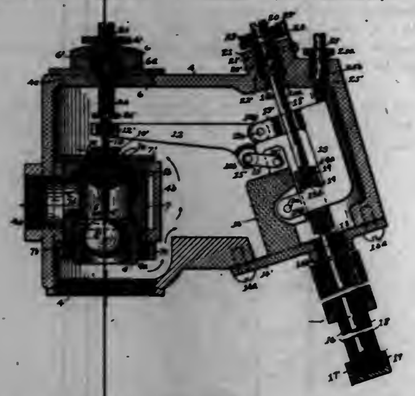
1. In a cooling bed, an inclined skid-section, a horizontal rack-section having a series of pockets arranged in horizontal rows along its length, and a guide mounted below the initial pocket of each of a plurality of the racks and constructed to restrain the stock from turning as it passes from the skid-section to the rack-section.

1,484,665. COOLING BED. WILLIAM B. NELSON, Chicago, Ill., assignor to Interstate Iron and Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1922. Serial No. 553,258. 7 Claims. (Cl. 80—42.)



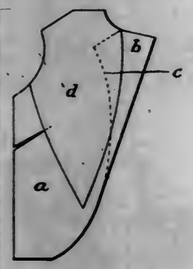
6. In a device of the class described, a rack-section composed of a series of racks constructed with flat bases and vertical spaced webs inside the margins of the bases and having a series of pockets, plates on the racks constructed to form an open-top trough closing the front and rear of the initial pocket therein and extending across the passages between the webs of adjacent racks, a cover extending lengthwise of the section and covering a plurality of the pockets of each rack, and spring-arms constructed to movably suspend the plate in its normal position.

1,484,666. ADVERTISING DEVICE. CHARLES F. NOLL, Sistersville, W. Va. Filed Dec. 12, 1921. Serial No. 521,918. 2 Claims. (Cl. 40—125.)



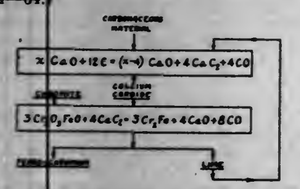
2. The combination with an article to be displayed, of means for supporting the article comprising a strip of fabric having a perforation at one end, a pin inserted through said perforation and having a portion on the back of the fabric strip larger than the perforation, the fabric strip being folded over the head of said enlarged portion of the pin and caused to adhere to the back of the article to be displayed and whereby to provide a prong by which the article may be supported.

1,484,667. LOCKING DEVICE FOR STEERING GEARS. WILLIAM H. ODLUM, Chicago, Ill. Filed Aug. 18, 1921. Serial No. 493,225. 6 Claims. (Cl. 70—129).



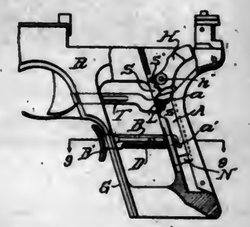
6. In a locking structure for steering wheels, a cap for the box like structure of a locking device of the steering gear, said cap having an integral upwardly extending central collar for the accommodation of a vertical steering spindle, and having a horizontally extending locking cylinder chamber in communication with said collar, a locking cylinder non-rotatably seated within the locking cylinder chamber, means preventing the removal of the locking cylinder endwise from the locking cylinder chamber, a bushing seated within the collar aforesaid, a partition separating the locking cylinder chamber from the lower portion of the cap, a locking plate immediately beneath said partition, there being a bolt hole in the partition aforesaid for the accommodation of a vertically removable locking bolt, there being a bolt hole in the locking plate adapted to register with the bolt hole of the partition when the locking plate is turned into the proper position, a vertically movable locking bolt above the partition and adapted to work through the bolt holes aforesaid, and an operative connection from the cylinder chamber to said bolt, substantially as described.

1,484,668. HIGH-PRESSURE GAS GOVERNOR. HOWARD WEBSTER PARTLOW, Utica, N. Y. Filed Jan. 19, 1923. Serial No. 613,642. 6 Claims. (Cl. 236—19.)



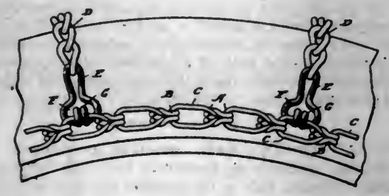
1. A gas governor for melting-pots including a casing adapted to be filled with gas, a valve for controlling the flow of the gas from the casing to a burner, a rocking member for operating said valve in one direction, said valve adapted to rock said member in the opposite direction by its gravitation, a thermostatic element in two parts, one of said parts comprising two sections adjustable relatively to each other and to said rocking member for varying the movements of the valve.

1,484,669. HAIRCLOTH FABRIC. VINCENT PASTORE, Norwich, Conn. Filed July 20, 1920. Serial No. 397,696. 3 Claims. (Cl. 91—68.)



2. As a new article of manufacture, hair cloth impregnated with commercial white lead as a binder.

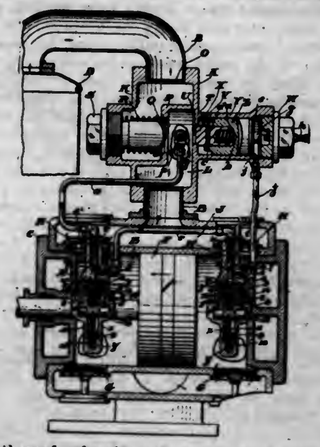
1,484,670. PROCESS FOR MANUFACTURING LOW-CARBON ALLOY STEELS. NAPOLEON PETINOT, New York, N. Y., assignor to United States Ferro-Alloys Corporation, New York, N. Y., a Corporation of New York. Filed June 3, 1922. Serial No. 565,649. 7 Claims. (Cl. 204—64.)



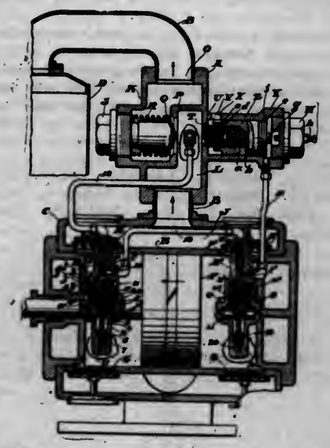
1. A process of producing low carbon alloy steels which consists in electrically heating a lime slag containing a calcium carbide and a refractory oxide or compound in contact with the bath of molten iron, and regenerating the calcium carbide by the addition of a carbonaceous material.

1,484,671. SAFETY FIREARM. EDWARD S. POMEROY, Springfield, Mass., assignor, by mesne assignments, to Smith and Wesson, Inc., Springfield, Mass., a Corporation of Massachusetts. Filed July 18, 1922. Serial No. 575,770. 11 Claims. (Cl. 42—7.)

1. In a firearm of the type having a detachable magazine, a firing member, trigger-controlled mechanism for actuating said member, a safety device, means for actuating said device including a finger-piece adjacent the trigger, and safety means controlled by the magazine for preventing release of said device.



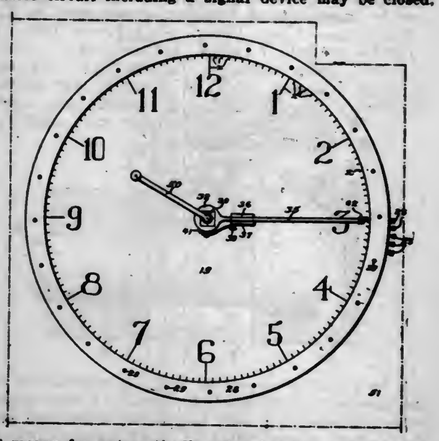
1,484,672. CROSS-CHAIN CONNECTER FOR ANTI-SKID DEVICES. CHARLES M. POWER, Pittsburgh, Pa., assignor to United States Chain & Forging Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 3, 1921. Serial No. 519,645. 3 Claims. (Cl. 24—237.)



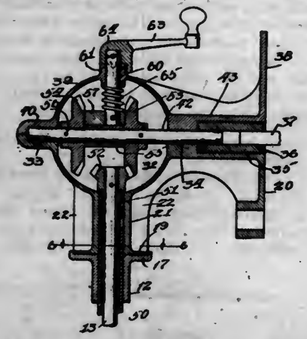
1. A one piece hook link adapted to have a cross chain link of an anti-skid device connected to one of its ends and adapted to be detachably connected to one of the side chain links of said device, said link having an opening therein for the insertion of the side chain link, and a side chain link retaining hook with its terminal extending freely into the side chain link receiving opening, a portion of each of the side bars of the hook link converging towards the end to which the cross chain is attached and the distance between the divergent ends of the side bars being at least equal to the outside width of the side chain link and the distance between the constricted portions of the converging side bars being less than the outside width of the side chain link whereby the side chain link is insertable in and removable from said opening only by an endwise movement.

1,484,673. COMPRESSOR UNLOADER. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 16, 1923. Serial No. 639,259. 12 Claims. (Cl. 230—24.)

1. The combination with an unloader adapted to be connected to the discharge line of a compressor, of a plurality of pilot valves connected in series with the unloader and connected to the compressor cylinder adjacent each end thereof, whereby pressure on both sides of the compressor piston is relieved on stopping.



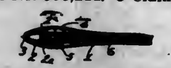
1,484,674. PILOT VALVE FOR COMPRESSORS. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 16, 1923. Serial No. 639,261. 8 Claims. (Cl. 230—24.)



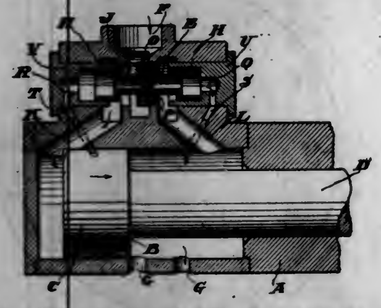
1. A pilot valve for compressor regulators comprising a casing adapted to be connected to the compressor cylinder, a valve for controlling the admission of pressure fluid to the casing, a valve spaced from the admission controlling valve for controlling an atmospheric vent in the casing, a single means for actuating the said valves in one direction controlled by the pressure in the compressor cylinder, means for moving the valves in the opposite direction, and means for varying the volume of pressure fluid admitted to the casing from the compressor cylinder.

1,484,675. ANNUNCIATOR. HENRY SCHURA, Philadelphia, Pa. Filed Feb. 24, 1921. Serial No. 447,405. 9 Claims. (Cl. 200—37.)

1. An annunciator including a time operated arm having a terminal piece; contact members selectively movable into the path of travel of the terminal piece whereby an electric circuit including a signal device may be closed, and means for automatically returning the contact members to their inoperative position.

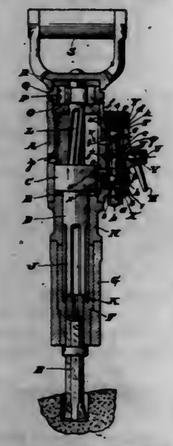


1,484,676. CONTROL MECHANISM FOR WASH WRINGERS. JOHN G. SEELIG, Ripon, Wis., assignor to Barlow & Seelig Mfg. Co., a Corporation of Wisconsin. Filed Sept. 23, 1922. Serial No. 590,138. 2 Claims. (Cl. 74—101.)



2. In a device of the class described, a hollow spherical casing having a horizontal bearing extension provided with an enlarged bore, a bearing sleeve slidable in said enlarged bore, a shaft slidably supported in said casing and extending into said sleeve, means for securing said shaft and sleeve for conjoint rotation, a pair of gears secured upon said shaft, means for engaging and shifting said shaft and gears and driving mechanism for rotating said gears and shaft.

1,484,677. FLEXIBLE FOLDER. HORACE W. SEVERANCE, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, a Corporation of Illinois. Filed Apr. 24, 1922. Serial No. 556,144. 3 Claims. (Cl. 129—19.)

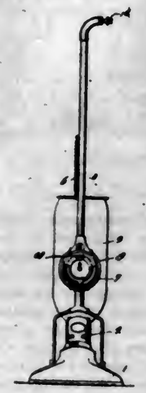


1. In a folder, a flexible cover, a flexible strip substantially co-extensive with the length of the cover secured interiorly of said cover along substantially the center line of said strip whereby side flaps are provided and adjustable means extending through said flaps adapted for retaining the margins of sheets therebetween.

1,484,678. FLUID-ACTUATED INLET VALVE FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 6, 1921. Serial No. 520,344. 7 Claims. (Cl. 121—18.)

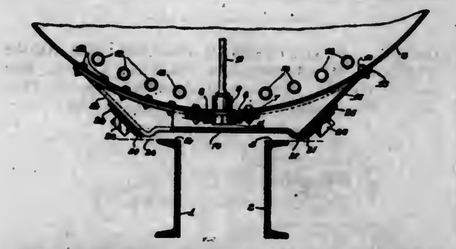
1. In a fluid actuated rock drill, the combination with the cylinder and reciprocating piston, of a fluid actuated valve controlling the inlet supply and having end heads and a single central flange of larger diameter than the heads, the central flange controlling the passage of motive fluid from the inlet to both ends of the cylinder, small ports connecting the inlet directly with the spaces at the ends of the valve, connecting passages joining the spaces at each end of the valve with the cylinder at points between the middle and the ends of the cylinder, and a free exhaust port controlled by the piston, whereby the valve is thrown by the live motive fluid passing to the ends of the valve through said small ports and building up pressure at one of said ends of the valve when the piston closes one of said connection passages, the other of said connecting passages being open to atmosphere through the cylinder, and the valve being held by the pressure of live motive fluid on one face of the central flange of larger diameter than the heads of the valve.

1,484,679. FLUID-ACTUATED INLET VALVE FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 21, 1922. Serial No. 595,885. 2 Claims. (Cl. 121—28.)



1. In a fluid actuated rock drill, the combination with a cylinder and reciprocating piston, of a valve chest, a fluid actuated valve controlling the inlet supply and having end heads and a single central flange of larger diameter than the heads, which flange controls the passage of motive fluid from the inlet to both ends of the cylinder, a central annular inlet port in said valve chest into which the central flange of the valve extends and seats and in which the said flange reciprocates, the edges of said annular port also forming stops for limiting the movement of the valve, small ports connecting the inlet directly with the spaces at the ends of the valve, connecting passages joining the spaces at each end of the valve with the cylinder at points between the middle and the ends of the cylinder, and a free exhaust port controlled by the piston, whereby the valve is thrown by the live motive fluid passing to the ends of the valve through said small ports and building up pressure at one of the said ends of the valve when the piston crosses one of said connecting passages, the other of said connecting passages being open to atmosphere through the cylinder, and the valve being held by the pressure of live motive fluid on one face of the central flange of larger diameter than the heads of the valve.

1,484,680. SANITARY BELT BUCKLE. KATHERINE F. STODDARD and RUDOLPH A. KRAUTWALD, Chicago, Ill. Filed Mar. 16, 1922. Serial No. 544,089. 2 Claims. (Cl. 24—193.)

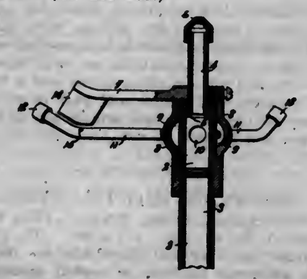


1. Fastening means of the character described comprising a pivotally mounted looped member; and a second looped member extending to one side of the axis of said first looped member, projecting through said first looped member, and movable toward but not past said first looped member.

1,484,681. VACUUM-CLEANER ELECTRIC-CORD TAKE-UP. BERNARD JACQUES TAMARIN, Philadelphia, Pa. Filed Nov. 17, 1919. Serial No. 338,749. 3 Claims. (Cl. 173—367.)

3. An electrically operated vacuum cleaner including a handle, a casing interposed in the length of the handle, the handle having a longitudinally extending way therethrough through which the electric cord of the cleaner passes, the way communicating with the casing, and an automatic takeup reel disposed in the casing for the electric cord for taking up slack therein.

1,484,682. TANK-CAR CONSTRUCTION. WILLIAM J. TANGERMAN, Hammond, Ind. Filed May 28, 1921. Serial No. 473,238. 11 Claims. (Cl. 137—21.)

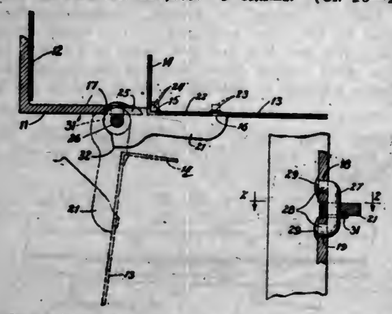


1. In a tank car, a sill, a tank having a lading egress opening therein, a pan secured to the tank, surrounding said tank lading egress opening and extending over said sill, said pan having a lading egress opening which is above the top of the sill and beyond the outer side thereof.

1,484,683. SELF-FILLING FOUNTAIN PEN. LEWIS M. TERBEL, Spokane, Wash., assignor to The Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1921, Serial No. 504,630. Renewed Apr. 6, 1923. 20 Claims. (Cl. 120—46.)

1. A fountain pen comprising a barrel having a pen section in one end and an opening in its opposite end, a collapsible ink sack, a presser bar interposed between the barrel and the sack, resilient means rigidly secured at one end to said barrel and attached to said presser bar to longitudinally position said presser bar within said barrel, a guide member secured to said barrel, an unanchored operating lever non-fixedly fulcrumed within said barrel and adjacent the open end thereof to force said presser bar in a direction to collapse said sack, said lever comprising a main body portion interposed between said presser bar and the barrel and an end portion bent in offset relation with respect to said main body portion, said end portion extending through said guide member and the open end of said barrel, and coacting means on said guide member and said end portion whereby the lateral and longitudinal movement of said operating lever is limited.

1,484,684. WATER SPRINKLER. WILLIAM C. TODD and JAMES WILLIAM POMEROY, Victoria, British Columbia, Canada. Filed Sept. 18, 1922. Serial No. 588,936. 9 Claims. (Cl. 299—69.)

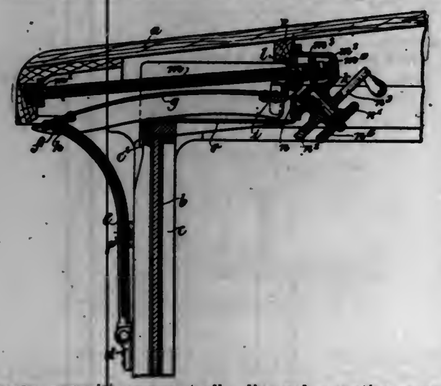


1. A water sprinkler, comprising the combination with a freely rotatable reaction sprinkler, of a second sprinkler head independently rotatable about the same axis, said second sprinkler head having a projection adapted to be acted on by a jet from the reaction sprinkler each time that jet passes under the projection, whereby a progressive intermittent rotational movement is imparted to the second sprinkler head from the first.

1,484,685. AUTOMATIC INTERLOCKING ATTACHMENT FOR WINDOW SASHES. HENRY C. TROST, El Paso, Tex. Filed Apr. 6, 1923. Serial No. 630,853. 3 Claims. (Cl. 292—288.)

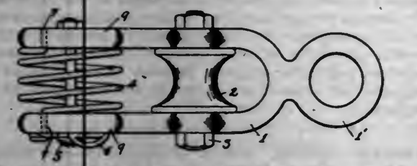
1. An automatic interlocking attachment for window sashes of the type set forth embodying a tripping member adapted to be attached to one of the sashes and a locking member adapted to be attached to the other sash, the locking device consisting of a supporting plate adapted for attachment to the sash and a pendulum locking member pivotally mounted thereon, said locking member consisting of a lug-carrying member on one side of the support and a pendant weight on the other side of the support.

1,484,686. HINGE. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1920. Serial No. 419,160. 6 Claims. (Cl. 16—128.)



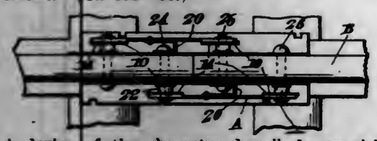
1. In a sheet metal locker and the like, a jamb member, a door, a hinge member fast to the door and having a part extending out into a slot of said jamb, and a staple passing through said hinge member and into the jamb at opposite sides of said slot, said hinge member having a protruding shoulder for engaging the outer side of said jamb to limit the door opening movement.

1,484,687. VISOR FOR AUTOMOBILES. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 5, 1923. Serial No. 622,714. 3 Claims. (Cl. 296—95.)



1. In a visor for automobiles, etc., the combination with an automobile top, a liner forming a pocket under the top, pivoted supporting arms, and a light shade piv-

otally mounted at its forward edge upon the supporting arms and arranged to move in said pocket, of means to support movably the rear edge of the light shade, such

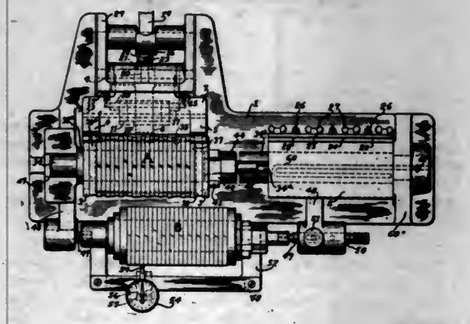


means comprising a centrally disposed operating screw mounted in bearings under the top and a traveling nut engaged therewith and pivotally connected to the light shade at its rear edge.

1,484,688. FODDER TIE. ROBERT B. VINCENT, Keota, Iowa. Filed Sept. 17, 1923. Serial No. 663,074. 1 Claim. (Cl. 24—18.)

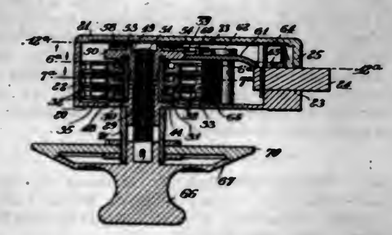
The combination of a rope pulley and tie, comprising a cast frame having an eye portion on one extremity thereof; a rope sheave mounted for rotation in a central position thereof; a helical compression spring mounted at the other extremity of the frame adapted to coact with the rope and hold same in a locked position; a twine holding device mounted on the outside of the frame adapted to yieldingly hold a cord in position.

1,484,689. NUT LOCK. JOHN WALKER, Barrie, Ontario, Canada. Filed Apr. 14, 1923. Serial No. 632,116. 5 Claims. (Cl. 151—33.)



1. A device of the character described comprising a supporting member having a head formed with a socket, a ratchet member adapted to fit the socket having an aperture to receive the head of a nut and being formed with a ratchet wheel, a removable cover plate retaining the ratchet member in the socket, and a spring pawl in the head designed to engage the ratchet wheel.

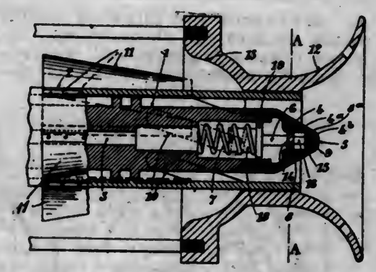
1,484,690. MATERIAL FOR AND METHOD OF CLEANING METAL SURFACES. PERCY H. WALKER and JOHN H. BOWER, Washington, D. C. Filed Feb. 27, 1919. Serial No. 280,671. 14 Claims. (Cl. 148—8.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. As a new composition of matter useful in cleaning gun barrels and other metal surfaces, a substantially dry mixture comprising ammonium persulfate and ammonium sulfate, in proper proportions to give a suitable metal-cleaning solution upon treatment with water and a fixed alkaline reagent.

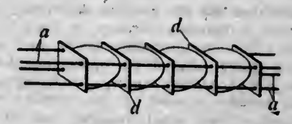
1,484,691. APPARATUS AND PROCESS FOR REGISTERING AND ASSEMBLING PACKING RINGS. ROBERT B. WASSON, Cranford, N. J. Filed Aug. 13, 1921. Serial No. 492,012. 37 Claims. (Cl. 29—89.)

2. In an apparatus for registering piston rings to be finished, the combination of a band of flexible metal, one or more sizing rings with which said band is adapted to engage and means for flexing said band around said sizing rings, thereby curving the interior of the band into hollow cylindrical form of standard size, adapted to receive the piston rings, said flexing means including means carried by the ends of the band for preventing buckling of the ends.



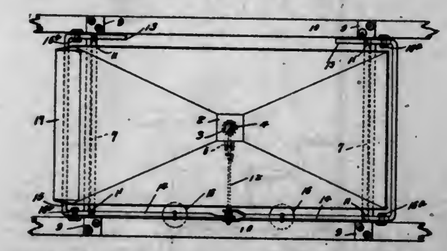
1,484,692. LOCK. EUGENE R. WEBER, Rochester, N. Y., assignor to Sargent and Greenleaf Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 9, 1921. Serial No. 450,917. 10 Claims. (Cl. 70—53.)

1. A combination lock comprising selectively adjustable recessed wheels, a bolt, a fence movable with the latter, a spindle for adjusting said wheels and provided with bolt actuating means, a part rotatable on said spindle and connected with said bolt actuating means, and a frictional connection between said spindle and part to actuate the latter when the recesses in said wheels are adjusted to register with said fence.



1,484,693. BURNER FOR FUEL OIL. FERNAND ALOYS EMILE WEGSCHEIDER, Rouen, France. Filed Sept. 19, 1921. Serial No. 501,556. 5 Claims. (Cl. 158—76.)

2. A burner for fuel oil comprising an inner tube adapted to discharge the fuel, a conical atomising cap on the end of said tube having an outlet orifice for the fuel, a removable plunger having a pointed end adjacent the said outlet orifice, said plunger being provided with helical grooves for the passage of the fuel, means for guiding said plunger in said atomising cap, an outer tube for discharging air around the atomising cap said outer tube having helical apertures for the passage of air, said apertures being turned in a direction which is

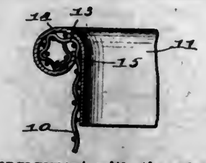


the reverse to that of the said helical grooves and outer wings arranged on said outer tube for guiding the air into said helical apertures.

1,484,694. EGG TURNER. THOMAS HENRY WEST, Lymm, England. Filed May 18, 1923. Serial No. 639,950. 1 Claim. (Cl. 119—44.)

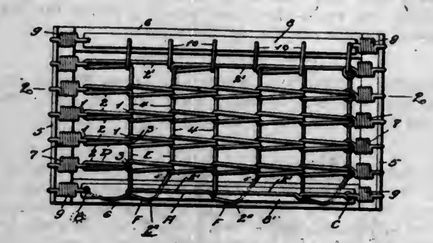
In incubators, the combination comprising a frame, strings extending between the sides of said frame, and abutments slidable on said strings, the said strings and abutments forming a plurality of cells each providing accommodation for one egg, as set forth.

1,484,695. SAND SEPARATOR. CHARLES E. WOOD, Baxter Springs, Kans. Filed Dec. 5, 1921. Serial No. 519,987. 5 Claims. (Cl. 83—82.)



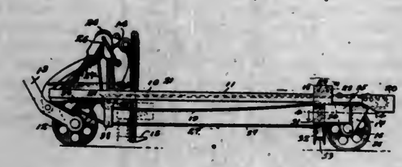
1. A sand separator comprising a hopper, a valve to control its outlet, arms at one side of the hopper pivotally supporting the same, two of the arms at one side of the hopper overlapping, and means pivotally connecting the arms together and with said valve, and said arms having counterbalancing means associated therewith.

1,484,696. METAL BINDING. JOHN A. WULFTANGE, Hamilton, Ohio. Filed Aug. 27, 1921. Serial No. 495,968. 3 Claims. (Cl. 220—19.)



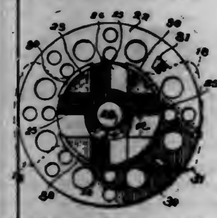
1. A metallic receptacle having a wire cloth body portion, an edge portion comprising in addition to the edge of the wire cloth, a metal strip, the metal strip and the wire of the wire cloth edge being bent together and on

themselves substantially 360° to form a stiffening edge for the receptacle, the edge of the bent portion of the



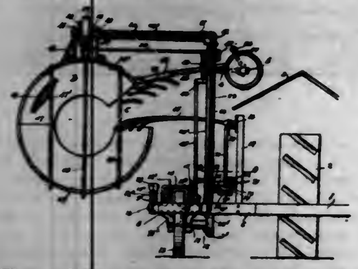
strip being in engagement with the wire cloth, whereby a tendency of the cloth to withdraw causes a binding of the same between two portions of the strip.

1,484,697. WIRE FABRIC. HARRY M. YOUNG, St. Louis, Mo., assignor to Western Wire Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 26, 1921. Serial No. 503,209. 2 Claims. (Cl. 5—186.)



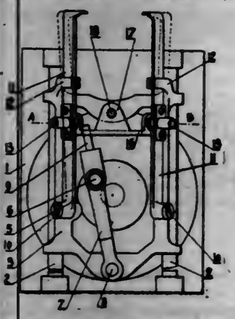
1. A substantially square-mesh knitted fabric constructed of a single metallic wire and integrally including a plurality of longitudinal rows of loops and a plurality of laterals for spacing the longitudinal rows of loops, each inside loop of the fabric including a bight, a pair of substantially parallel legs extending in approximately straight lines from the bight, and oppositely disposed bends at the end of each leg opposite the bight, and each lateral consisting of a single length extending in approximately a straight line between pairs of the bends of the loops, each intermediate loop of a row extending at its bight under the legs and over the bends of the next adjacent loop in such row and each outside loop at the lateral sides of the fabric having one leg of a length double the length of the other leg thereof, each inside mesh of the fabric comprising a pair of loops and a pair of the loop-spacing laterals, some of the laterals at one lateral side of the fabric being obliquely disposed to the remaining laterals and providing open sag-rail accommodating edge loops at said lateral side of the fabric.

1,484,698. HOISTING TRUCK. VICTOR E. BEAGLE, Alexandria, Va. Filed Dec. 27, 1922. Serial No. 609,282. 5 Claims. (Cl. 254—2.)



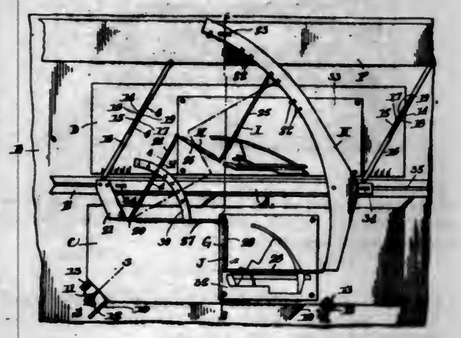
1. In a truck of the character described, a truck frame proper, a load supporting member movable thereon, said frame having wheel mountings thereon at opposite sides, said load supporting member and wheel mountings having parts operative to interlock when the load supporting member is in load supporting position.

1,484,699. CURB-BOX SUPPORT. VICTOR E. BRAGLE, Alexandria, Va. Filed Jan. 20, 1923. Serial No. 613,961. 9 Claims. (Cl. 137—13.)



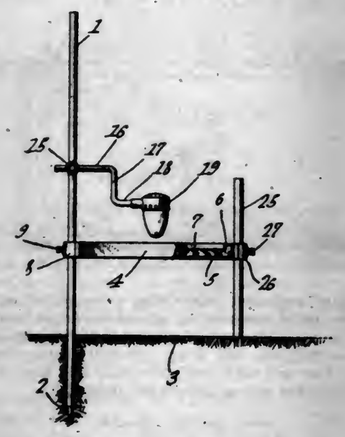
1. As an improved article of manufacture a cock and box support comprising a foot plate adapted to afford a base for curb boxes, a central circular projection thereon adapted to extend within a curb box set upon the plate for centering thereof, said projection being centrally recessed and laterally slotted to receive and support a cock, and lugs formed on the article to engage between leg parts of a curb box to position the box against relative rotation on the support.

1,484,700. SHOCKING MACHINE. JOHN BIRNIE, Jr., Birnie, Manitoba, Canada. Filed Apr. 26, 1920. Serial No. 376,648. 12 Claims. (Cl. 56—423.)



1. The combination with a shocker frame, of a basket arm having one end pivotally mounted on the shocker frame, and the other end elevated and located at the side of the frame, a horizontally disposed sheaf receiving and shock forming basket permanently suspended from the elevated end of the arm and means for swinging the arm forwardly and backwardly at predetermined instants to dump the basket and return it to the initial sheaf receiving position.

1,484,701. FILM-ACTUATING DEVICE FOR POSITIVE-FILM-PRINTING MACHINES. ANDRE LEON VICTOR CLEMENT DEBRIE, Paris, France. Filed June 16, 1922. Serial No. 568,828. 4 Claims. (Cl. 95—75.)

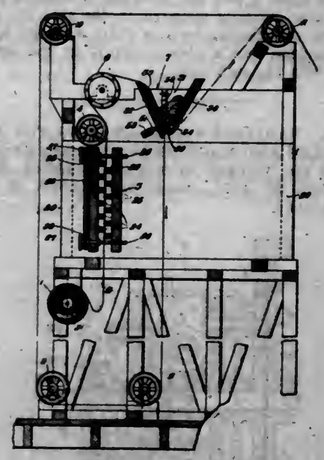


1. A film actuating device comprising vertically reciprocable claws, horizontal axles, disposed obliquely with respect to the surface of the films, and also vertically reciprocable, said claws being pivoted on said axles, said claws being positioned to seize the films immediately adjacent the image.

1,484,702. APPARATUS FOR DRAWING ISOMETRIC OR OTHER MECHANICAL PROJECTIONS. DONALDSON BOGART DOWLING, Ottawa, Canada. Filed Feb. 16, 1922. Serial No. 536,952. 10 Claims. (Cl. 33—26.)

1. An apparatus for the purpose specified, comprising in combination, a movable carriage, a track supporting the same, an adjustable projection board, and an adjustable drawing board located on opposite sides of the track, a projecting bracket on the carriage, an adjustable arcuate member carried by the carriage concentric with the bracket, two equal straight line link motion members hinged at one end to a common centre on the bracket, and at the other separately to points on the arcuate member, a tracing point carried by one member, and a drawing point carried by the opposite member.

1,484,703. BUG DESTROYER. JOSEPH B. ESHMAN and WILLIAM G. JOHNSON, Eureka Springs, Ark. Filed Sept. 1, 1923. Serial No. 660,534. 1 Claim. (Cl. 43—113.)

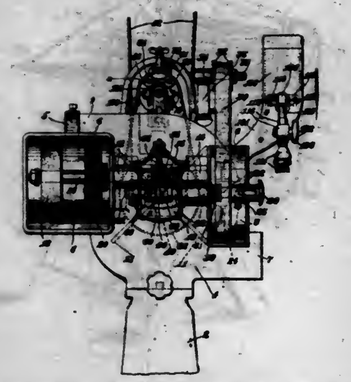


In a device of the class described, a support, a pan on the support, means for mounting the pan on the support for raising and lowering, a lamp located above the pan, and means for mounting the lamp for vertical adjustment on the support and for movement to a position at one side of the pan.

1,484,704. APPARATUS FOR THE PRESERVATION OF FOOD AND THE LIKE. GUSTAV FRERICHS, Duisburg, Germany, assignor to Wilbur E. Frerichs, Brooklyn, N. Y. Filed Aug. 1, 1921. Serial No. 489,074. 2 Claims. (Cl. 215—46.)

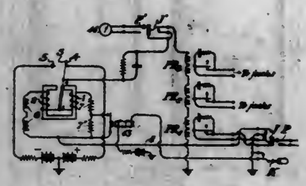
1. The combination with a vessel for preserving or storing food or other articles under a vacuum, of a receptacle, a cover for said receptacle, a resilient packing ring between said receptacle and said cover, and means disposed upon said packing ring and adapted to hold said cover raised above said ring until a sufficiently high vacuum has been set up within said receptacle, and, on the admission of atmospheric pressure, to be depressed into the ring and thereby allow the cover to bear upon the packing ring and to form a permanent air-tight seal, substantially as described.

1,484,705. MACHINE FOR AND METHOD OF COATING FABRICS. DANIEL D. FROTHINGHAM, Salem, and RALPH U. SAWYER, Winchester, Mass. Filed Oct. 27, 1921. Serial No. 510,722. 6 Claims. (Cl. 91—32.)



2. A machine for coating fabrics having, in combination, a tension, a draw roll, and a coating trough having a fixed side and a movable side, the latter being pressed toward the former by spring pressure permitting it to yield when a seam passes through the trough.

3. A machine for coating fabrics having, in combination, a tension, a draw roll cooperating with the fabric to maintain the tension thereon, cloth coating devices located between the draw roll and the tension, having provision for applying a coating of a certain determined thickness, and a fixed bearing surface of material length in the direction of travel of the fabric around and against which a material portion of the fabric is normally wrapped and held by the tension of the fabric.

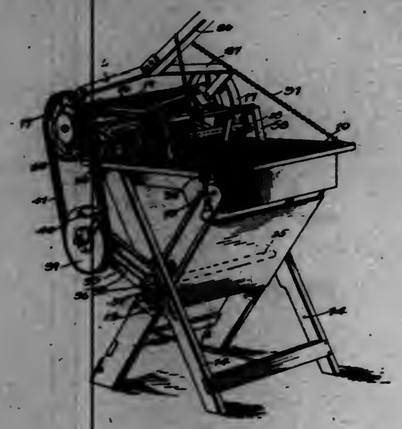


5. The method of coating fabrics which consists in applying a coating material of the nature described in a stiff, viscous condition to the fabric to be coated, of a determined thickness, and thereafter applying long continued rubbing pressure between the coating material and the fabric.

1,484,706. MACHINE FOR USE IN REPAIRING ENAMELED LEATHER. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1919. Serial No. 291,235. 25 Claims. (Cl. 51—273.)

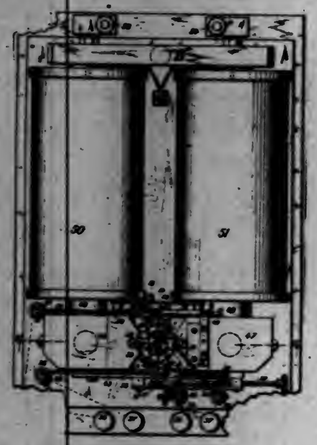
1. In a machine of the class described, the combination of a power driven shaft, two tool carrying shafts, rubbing tools secured to said shafts, operating connections from said power driven shaft to one of said tool shafts constructed and arranged to rotate said tool shaft and connections including an eccentric on the power shaft for oscillating the other of said tool shafts about its axis.

1,484,707. RELAY AND CIRCUITS THEREFOR. DANFORTH K. GANNETT, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 18, 1922. Serial No. 607,675. 8 Claims. (Cl. 175—320.)



2. A vibrating relay system including a polar relay having an operating winding, a holding winding and an armature adapted to rest upon either of two contacts connected to opposite potentials, means whereby when said armature rests against either of the contacts a current flows through the holding winding in such a direction as to tend to hold the armature against the contact and an inductance in circuit with the operating winding whereby a gradually increasing operating current is built up through the operating winding to shift the armature against the other contact.

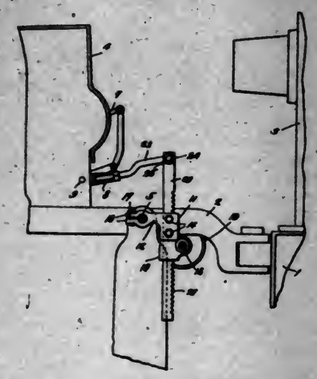
1,484,708. LAWN-MOWER SHARPENER. JOHN ADAM GRASSMAN, Palmyra, Pa.; John Adam Grassman administrator of said John Adam Grassman, deceased. Filed Oct. 10, 1921. Serial No. 506,787. 7 Claims. (Cl. 51—26.)



1. In a sharpening device for lawn mowers, a table, means for supporting the lawn mower on the table, driv-

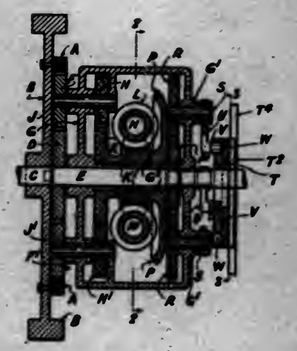
ing mechanism for the cutters of the lawn mower, and an inclined feed board supported on the table and

arranged to feed an abrasive to the cutters under the action of the vibration set up by the moving parts of the device.



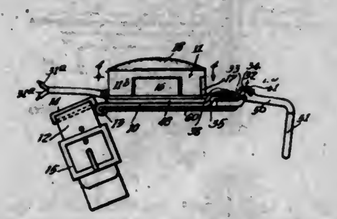
1,484,709. SENSITIVE RELAY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 27, 1913, Serial No. 750,982. Renewed July 13, 1923. 6 Claims. (Cl. 200—112.)

2. A relay comprising an electro-magnet, a loop rotatably positioned in the field of said magnet, a pair of carriers adjustable in predetermined paths perpendicular to the fixed axis of said loop, a pair of liquid contacts in alinement with said paths and supported by said carriers respectively, a connecting link operatively connected to but insulated from said loop, and a pair of solid contacts carried by said link and arranged to be rotated about the fixed axis of said loop to engage said liquid contacts respectively.



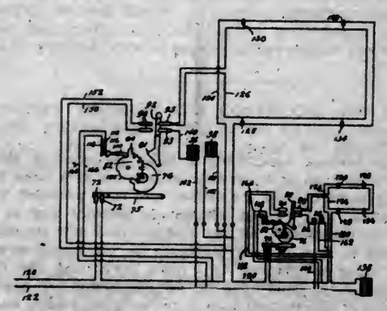
6. A relay comprising an electro-magnet, a loop rotatably positioned in the field of said magnet a pair of carriers adjustable in predetermined paths in a plane perpendicular to the fixed axis of said loop, a pair of liquid contacts in alinement with said paths and supported by said carriers respectively, a connecting link operatively connected to but insulated from said loop, and a pair of solid contacts carried by said link and arranged to be rotated about the fixed axis of said loop to engage said liquid contacts respectively.

1,484,710. FRAMER. GUS HOLUB, Ravenna, Nebr. Filed May 18, 1923. Serial No. 639,863. 2 Claims. (Cl. 88—17.)



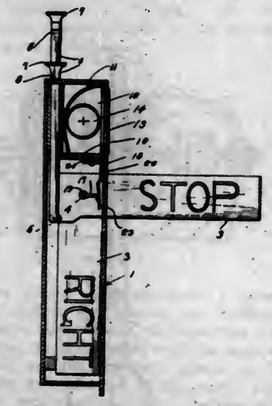
1. A motion picture machine comprising a support and a framing lever, a rack bar mounted to slide on the support, an arm pivotally mounted on the rack bar and engaged with the framing lever, a shaft mounted to rotate on the support, and a pinion carried by the shaft and meshing with the rack bar.

1,484,711. VARIABLE-SPEED GEARING FOR MOTOR VEHICLES AND MACHINERY. RICHARD HENRY HOPKINSON and VINCENT HOPKINSON, Bradford, England. Filed Oct. 29, 1923. Serial No. 671,378. 3 Claims. (Cl. 74—14.)



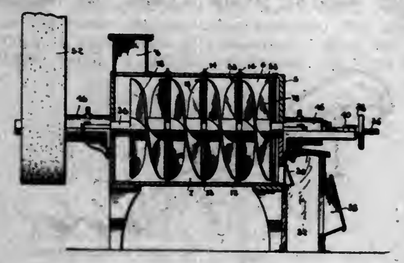
1. A variable speed gearing for a driving shaft and a driven shaft, comprising an epicyclic gear train the planetary pinions of which are operatively connected with one of the said shafts, and the sun wheel of which is secured on the other shaft, toothed pinions arranged concentric with and revolving with the planetary pinions, a toothed wheel journaled concentric with the said sun wheel and meshing with the said toothed pinions, a toothed worm pinion arranged concentric with and revolving with the said toothed wheel, worm drums meshing with the said worm pinion, driving devices for rotating the worm drums, a rotary support arranged concentric with the said sun wheel, levers having spindles mounted in the said support and arranged around its axis, means for actuating the said driving devices from the said spindles, and a non-revoluble cam engaging with the said levers and operating to rock their spindles when the cam is arranged eccentric of the rotary support.

1,484,712. SAFETY SIGNAL. ALBERT S. JOHNSON, Oakland, Calif., assignor to The Flash-Way Corporation, a Corporation of California. Filed May 26, 1920. Serial No. 384,304. 3 Claims. (Cl. 177—329).



3. In a hand signal of the character described, a base, a wrist encircling member connected to the base at one end thereof, a member movably connected to the other end of the base and having means for attachment and mounting on the finger, so that the base is supported on the hand jointly by the said encircling member and by said attachment and mounting means, a lamp carried by the base, a switch operated by relative movement of the base and said member, and a circuit including the lamp and switch; and means to prevent the switch actuating movement of the said finger mounted member.

1,484,713. SIGNAL SYSTEM. JOHN M. JOHNSON, Kansas City, Mo., assignor to The United States Automatic Fire Alarm Company, a Corporation of Missouri. Filed June 7, 1919. Serial No. 302,463. 9 Claims. (Cl. 177—361.)



1. In a device of the character described, a code-wheel, a switch to coact with said code-wheel in transmitting messages, a train of gearing associated with the code-wheel, a spring to drive said train and which on winding or unwinding drives the code wheel, a vibratory governor to normally lock the train from rotation and also regulate the speed of such rotation, an electrically-controlled device normally in the path of said governor to hold the same stationary, an element to hold the device out of the path of the governor after said device has been energized, and means to restore said element to normal position and also hold the switch in closed position during winding of the spring.

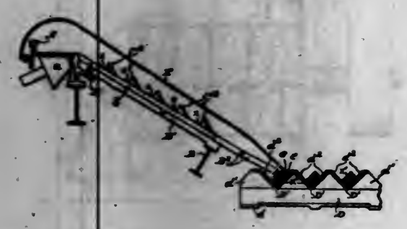
1,484,714. VEHICLE SIGNAL. JOHN H. KALBY, Schenectady, N. Y. Original application filed June 6, 1919, Serial No. 302,280. Divided and this application filed Aug. 6, 1920. Serial No. 401,633. 2 Claims. (Cl. 200—159.)

1. A switch mechanism including a movable arm, a conductor and a contact for disposition in an electric circuit, said arm being journaled on the conductor, a contact extending rigidly in offset relation from and movable with the arm, the latter contact being journaled on the conductor as a bearing for the arm and being adapted to bridge said conductor and said first contact to close the circuit.

1,484,715. MIDDLINGS MILL. GEORGE MILLIARD KEMP, Williamsport, Md. Filed May 9, 1923. Serial No. 637,736. 2 Claims. (Cl. 83—8.)

1. A middlings mill comprising a cylindrical casing having its inner side formed with continuous grooves, a plurality of annular detachable spaced stators having their peripheral portions received in said grooves whereby the passage of material between the stators and the casing is prevented, a plurality of rotors arranged within the casing between the stators and having their ends engaged with the stators, said stotors being provided with radial depressions and with centrally arranged openings of a substantial size communicating with the radial depressions, whereby the middlings may move inwardly and through the openings, and means supporting the rotors.

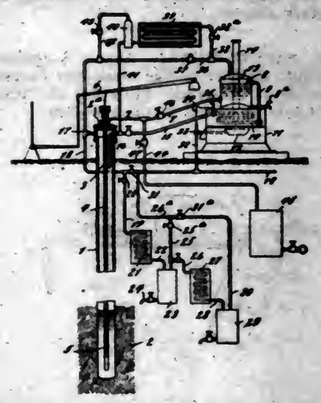
1,484,716. ICE-CREAM SCOOP. FREDERICK C. KIRCHHOFF, San Francisco, Calif. Filed Jan. 9, 1923. Serial No. 611,600. 6 Claims. (Cl. 107—48.)



1. A scooping device comprising a tubular body portion, a semi-shaped scoop member carried on one end of the body portion, segment scoop members normally housed within and pivoted to the semi-spherical scoop

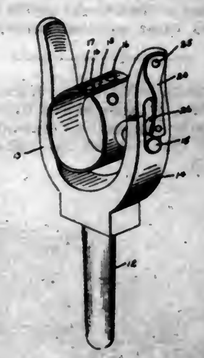
member and arranged with the latter so as to provide a hollow spherical container when extended, means movable in the direction of the longitudinal axis of said body portion for extending the segment scoop member, spring

means for returning said members to normal position and a handle member carried by and projecting substantially at right angles to the body portion intermediate the ends of the latter.



1,484,717. COOLING BED. JOSEPH R. KLUMP, Chicago, Ill., assignor to Interstate Iron and Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1922. Serial No. 545,944. 5 Claims. (Cl. 198—219.)

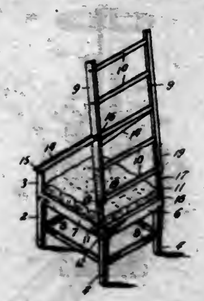
1. In a cooling bed, an inclined skid-section, a horizontal rack-section having a series of pockets arranged in rows along its length, and a guide located at the initial pocket of each of a plurality of the racks and constructed to restrain the stock from turning as it passes from the skid-section to the rack-section.



1,484,718. APPARATUS FOR THE RECOVERY AND REFINING OF LIGHT HYDROCARBON OILS AND GASES FROM OIL WELLS. WILLIAM JOHN KNOX, New York, N. Y., assignor of one-half to Arthur Robins Speer, Brooklyn, N. Y. Original application filed May 15, 1919, Serial No. 297,214. Divided and this application filed Oct. 30, 1922. Serial No. 597,727. 9 Claims. (Cl. 166—17.)

1. In an oil well apparatus of the character described, means for withdrawing liquid hydrocarbon from the well, a heater located externally of the well, a conduit for passing the liquid hydrocarbon from the well to the heater; a conduit for delivering the heated hydrocarbon

from the heater to the well, and a conduit for withdrawing volatilized products produced in the well and condensing means connected to said conduit last mentioned.

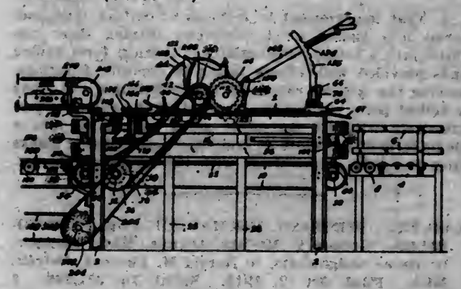


1,484,719. ROWLOCK. WILLIAM L. C. KOCH, Scranton, Pa. Filed Apr. 18, 1922. Serial No. 554,960. 4 Claims. (Cl. 9—26.)

1. A rowlock comprising a body including a shank adapted to turn in a gunwale socket, and fork arms projecting upward from the shank, and each provided with a bearing, and a band adapted to embrace and be secured to the shaft of an oar, and provided with trunnions adapted to turn in said bearings, the continuity of said band being interrupted by a slot, permitting the compression of the band upon the oar shaft, and arranged at one side of the vertical axis of the body to provide means whereby, during the operation of attaching the blade to an oar shaft, the operator is enabled to so adjust the oar blade as to impart a suitable feathering inclination thereto.

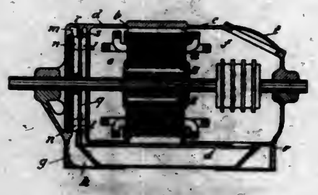
1,484,720. COMBINED CHAIR AND STEPLADDER. PETER KOSYLANSKI, Hamilton, Ontario, Canada. Filed July 5, 1923. Serial No. 649,646. 1 Claim. (Cl. 155—42.)

In a device of the class described, a structure comprising seat rails and chair legs, and chair arms supports forming part of the forward legs, links pivotally connected to the ends of the rear seat rail, a back structure comprising lateral uprights connected by spaced combined back supports and ladder rungs, said uprights having pivotal connection with the free ends of said links, combined chair arms and back supporting struts pivotally connected to said chair arm supports and to said lateral uprights, and folding arms hingedly secured



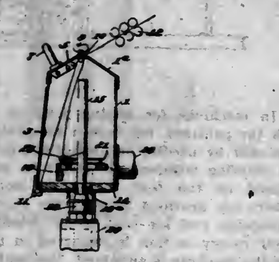
to the top of the rear seat rail adapted to lie parallel therewith when the back structure is in normal position, and to be swung vertically to engage flanges on the said uprights when the back structure is in elevated position.

1,484,721. BOLT-HOLE CLEANER. EMIL E. KOMOUTEK, Omaha, Nebr. Filed Apr. 30, 1923. Serial No. 635,760. 2 Claims. (Cl. 15—104.01.)



1. In a bolt-hole cleaner, a disc provided with a segmental recess and having a blade at one of the sides of said recess, a handle having a rectilinear part disposed with its axis in line with the axis of the disc and removably secured thereto, said blade extending inwardly from the circular edge of the disc to lie below and at the longitudinal axis of the rectilinear part of the handle.

1,484,722. MACHINE FOR CONVEYING AND SEALING CONTAINERS. PHILIP H. LAWSON, Portland, Oreg. Filed Apr. 30, 1921. Serial No. 465,632. 10 Claims. (Cl. 93—2.)

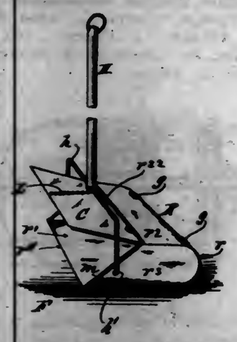


1. In a machine of the character described, a conveyer for containers having flaps, means actuated by a number of said flaps for properly directing the containers into said conveyer, and means for applying an adhesive substance to a number of the flaps of each container as it is carried forwardly by the conveyer.

1,484,723. COOLING MEANS FOR ELECTRIC MACHINERY. GUSTAV LENHARDT, Berlin-Charlottenburg, and WILHELM GSCHWENDLER, Berlin-Schmargendorf, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Nov. 20, 1920. Serial No. 425,398. 4 Claims. (Cl. 171—252.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

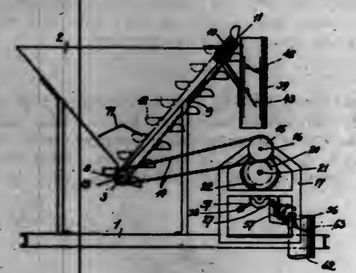
1. A dynamo electric machine having a closed casing, a stator supported in said casing and dividing it into two lateral inner chambers, a rotor having axially extending channels communicating at their ends with said inner chambers, an annular duct formed by the outer stator periphery and portions of the casing and having communication with the outer air, a bottom chamber in said casing located between the feet thereof and having communication with the outer air and with said annular duct, tubular elements located in said bottom chamber in parallel to the machine axis for establishing a second communication between said inner casing chambers and ventilating means for causing air inside of the casing to circulate between the inner chambers, the rotor, and the tubular elements, and also causing outside air to circulate through said bottom chamber past said tubular elements and through said annular duct.

1,484,724. PROCESS OF AND APPARATUS FOR SPINNING. WILMAR F. LENT, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 28, 1920. Serial No. 420,121. 12 Claims. (Cl. 118—69.)



1. That improvement in the art of spinning which consists in enclosing the traveler, yarn and spindle of a spinning frame in a suitable casing, and reducing below normal the pressure of the air surrounding said parts to thereby reduce the air friction of said parts during the spinning operation.

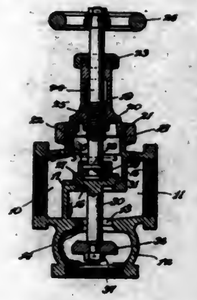
1,484,725. DUSTPAN. SAMUEL LEWIS, New York, N. Y. Filed Sept. 1, 1923. Serial No. 660,518. 2 Claims. (Cl. 65—20.)



1. As an article of manufacture, a dust pan of the character designated, comprising a receptacle formed with a semi-cylindrical posterior portion, and a handle pivotally attached to said receptacle by means of a bifurcated ball-trunnion extension of said handle, the axial

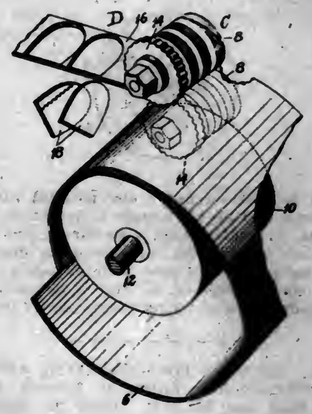
line of said pivotal attachment being forward of the centre of gravity of said receptacle, and a closure member hinged to the forward part of said receptacle to the

rear of the pivotal connection of the handle with the sides of the receptacle and connected with the handle thereof by a flexible ligature, substantially in the manner and for the purpose set forth.



1,484,726. MACHINE FOR SETTING POTATOES. JANNE FREDRIK LJUNGDAHL, Stockholm, Sweden. Filed Sept. 6, 1923. Serial No. 661,285. 10 Claims. (Cl. 221—127.)

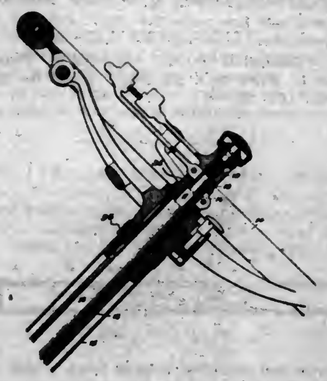
1. In machines for setting potatoes of that type, in which the potatoes, fed from a receptacle, fall down and are caught by needles or projections provided on one or more rotating members or wheels an arrangement characterised by the fact that such motion transmitting members are provided between the supporting wheels of the machine and the said needle wheels, that an intermittent rotary motion is imparted to the needle-wheels, while the machine is advanced, the angle of rotation and the length of the periods of rest being unvariable and the needle-wheels automatitcally secured in their positions of rest by members combined with the said motion transmitting members.



1,484,727. COMBINED STOPCOCK AND DRAIN VALVE. DANA W. LOVE, Johnson City, Tenn. Filed Dec. 20, 1912. Serial No. 668,046. 1 Claim. (Cl. 251—46.)

A valve including a shell containing a port, a spindle extending into the shell axially of said port and provided at its lower end with spaced annular flanges, and a valve head controlling the flow through said port, said valve head being provided with a recess opening through its edge and with a boss on its upper side, the recess accommodating the lower flange on the spindle and the upper flange on the spindle resting on the boss, a cap having threaded engagement with said boss and surrounding the same, and an annular collar on said cap

engaging the top face of said upper flange, thereby retaining the valve head upon said spindle and centering the same.

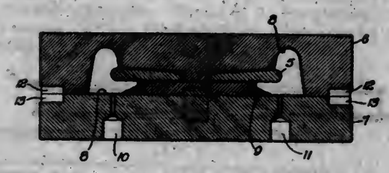


1,484,728. METHOD OF CUTTING SHEET MATERIAL. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 6, 1919. Serial No. 269,815. 8 Claims. (Cl. 164—17.)

1. That improvement in methods of cutting sheet material into blanks which comprises shaping sheet material into a hollow substantially cylindrical form having ends provided with offsets facing in opposite directions, moving the cylinder rotatively in one direction and along a helical path, cutting the material of the cylinder, progressively with its movement along said path, into a single strip of the width of said offsets, and cutting blanks from the strip progressively with the formation thereof.

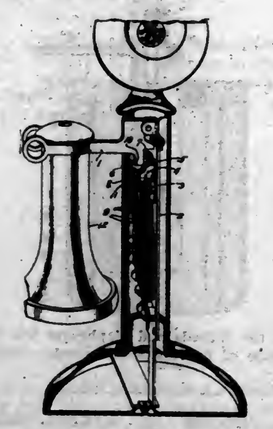
1,484,729. STEERING MECHANISM FOR AUTOMOBILES. GEORGE L. MCCAIN, Detroit, Mich., assignor, by mesne assignments, to Harold H. Emmons, Detroit, Mich. Filed Oct. 2, 1919. Serial No. 327,836. 3 Claims. (Cl. 74—39.)

1. In a steering mechanism for automobiles, in combination, a casing, a worm rotatably mounted in the casing, a steering shaft engaging the worm in such manner that the worm is rotatable with the shaft and the shaft may be freely withdrawn in the direction of its length from engagement with the worm, and a stationary shaft concentric with the rotatable shaft and detachably secured at its lower end to the said casing, said stationary shaft having means thereon constituting an abutment



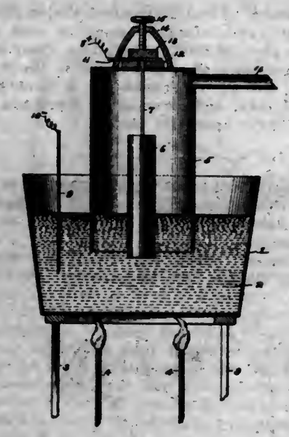
preventing the steering shaft from moving out of engagement with the worm until the stationary shaft is disengaged from the casing.

1,484,730. FOUNTAIN PEN. WILLIAM J. MCDONALD, Sioux City, Iowa. Filed Apr. 26, 1920. Serial No. 376,712. 5 Claims. (Cl. 120—46.)



1. A fountain pen including a barrel having a slot, an interior ink sack and a presser bar therefor, a depressing lever arranged in said slot and having a central pivot axis whereby the lever may be moved to permit either end thereof to engage the presser bar to collapse the ink sack.

1,484,731. MANUFACTURE OF SPONGE-RUBBER ARTICLES. FRANK S. MALM, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 25, 1919. Serial No. 279,171. 8 Claims. (Cl. 18—53.)

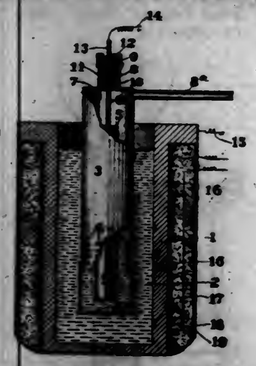


1. The method of producing smooth surfaced sponge rubber bodies, which consists in locating a body material and a surfacing material in separated relation in a mold and bringing them together in intimate relation by vulcanisation.

1,484,732. SWITCHING DEVICE. GEORGE E. MATHER, Morsemere, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1920. Serial No. 430,404. 8 Claims. (Cl. 179—164.)

1. In a switching device, a switch lever, switching springs operated by said lever traveling in one direction, and means independent of said lever for locking said springs in operative relation, said lever after a predetermined movement in the opposite direction cooperating with said means to release said springs.

1,484,733. METHOD OF MAKING FLUORINE. FRANK C. MATHERS, Bloomington, Ind. Filed June 30, 1919. Serial No. 307,674. 10 Claims. (Cl. 204—19.)

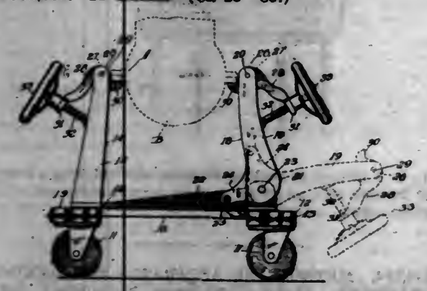


1. In a method of making fluorine, electrolysing a fused acid fluoride with an anode of hard carbonaceous material and collecting the evolved fluorine.

1,484,734. METHOD AND APPARATUS FOR MAKING FLUORINE. FRANK C. MATHERS, Bloomington, Ind., and BURR HUMISTON, Wilmington, Del. Filed July 7, 1919. Serial No. 309,254. 17 Claims. (Cl. 204—19.)

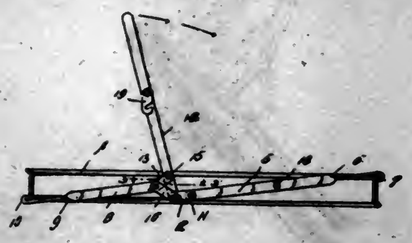
1. In an electrolytic apparatus for making fluorine, a graphite vessel for holding a bath of electrolyte and constituting the cathode, an anode of hard carbonaceous ma-

terial projecting into said vessel, means for collecting the fluorine evolved at the anode comprising a diaphragm surrounding said anode, and means for insulating the



anode from the cathode and diaphragm and for preventing the escape of fluorine where anode enters said diaphragm.

1,484,735. PROCESS OF MAKING REFRACTORY SHAPES. CHARLES LADD NORTON, Boston, Mass., assignor to Refractories Machinery Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed May 5, 1922, Serial No. 558,686. Divided and this application filed Oct. 5, 1922. Serial No. 592,644. 14 Claims. (Cl. 25—155.)



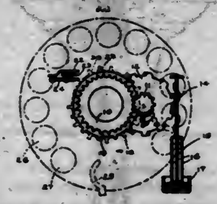
1. That process of making moulded shapes from granular material which comprises moulding such a shape upon a pallet plate by forcibly projecting, as by dropping, an unrestrained mass of such material in the form of a dense swarm of discrete particles into a mould-box resting upon such plate, and removing the mould-box to leave the moulded shape upon said plate.

1,484,736. PORTABLE ENGINE STAND. HARRY E. PATRICK, Evanston, and ANDREW J. PETERSON and JOHN W. BROOKS, Chicago, Ill., assignors to Service Station Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1919. Serial No. 333,681. 11 Claims. (Cl. 29—89.)

1. A portable stand of the character described comprising a base, and opposite uprights, one of the latter being rigidly mounted upon the base and the other movably mounted thereon so as to raise and lower, whereby the stand can be moved under the engine of a tractor until its rigid upright is against the side thereof and the movable upright can then be raised against the other side of the engine; and the two uprights being equipped for the seating between them of the object to be supported such as said engine, and provisions being made for securing the movable upright in its raised position.

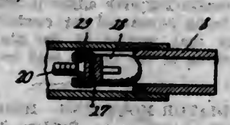
1,484,737. TIRE-RIM TOOL. CHARLES H. PEER, Denville, N. J. Filed Mar. 28, 1923. Serial No. 628,165. 1 Claim. (Cl. 157—1.)

A tire rim tool including a hand lever, a link pivoted at one side of and at one end of said hand lever, an arm pivotally connected to the end of a link at one end, at the same side as the hand lever, and formed with a rim engaging hook at the other end for engaging the flange at one side of the rim, a link member connected to the hand lever in spaced relation with the end pivotally connected with said link, a pair of links connected at one end to the handle at the pivot with the first mentioned link and at the other end to the end of the link member beyond the lever, a co-operating arm having one end pivotally connected with the pair of links and link member at their point of connection, said pivot being spaced from the hand lever, and said co-operating arm having a rim engaging hook at its other end for engaging the opposite flange at the opposite side of the rim, whereby in the movement of the hand lever to contract a rim, it will move about its pivot on the link through the first portion of its movement and in the remaining portion of its movement the edge of the lever will engage the end of the first mentioned arm and rock on said arm until the edges of the lever and arm contact, the first mentioned link permitting the last mentioned movement of the lever and the pair of links and link members separating the pivots of the respective arms laterally with respect to the line of pull of the arms, and means for securing the lever in edge contact with the edge of the arms.



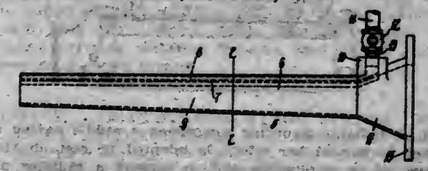
1,484,738. TIRE-RIM TOOL. CHARLES H. PEER, Denville, N. J. Filed Jan. 17, 1923. Serial No. 613,121. 2 Claims. (Cl. 157—1.)

1. A tire rim tool including a pair of arm members formed with rim engaging hooks at normally opposite ends, a hand lever having one end pivoted to the end of one of the arm members opposite the hooked end, a link pivotally connected to the last mentioned arm member at the pivot with the hand member, the other end of said link having a pivotal connection with the end of the



other arm member, and an adjustable link having a pivotal connection with the last mentioned arm member at the connection thereof with the first mentioned link, said adjustable link having an adjustable connection with the hand lever at any one of a plurality of points spaced from the pivot, whereby the links separate the pivots of the arm members from each other and the lever, to provide a means to adjust the leverage of the members in such relation for changing the size of the tool to fit different sized rims, and to hold the pivot separated in contracted relation of the parts in contracting a rim for twisting opposite sides of said rim in relatively opposite relation.

1,484,739. IMPULSE TRANSMITTER. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 17, 1919. Serial No. 297,742. 12 Claims. (Cl. 179—90.)

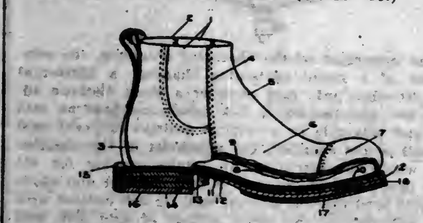


1. In an impulse transmitting device, a number or character plate, a member movable with respect to said plate, and means automatically and variably controlled only by said member for transmitting a variable number of impulses on a decimal and non-decimal basis.

1,484,740. FAUCET. THOMAS RUBINO, Hazleton, Pa. Filed Oct. 16, 1922. Serial No. 594,858. 1 Claim. (Cl. 251—46.)

In a faucet the combination with a pipe section, a nipple secured in one end thereof and providing a seat and a plug secured in the other end thereof and having a stem, there being a groove within said pipe section and an outlet in said section between the nipple and plug, of a screw extending through the plug and stem, a one piece valve between the screw and seat, wings thereon slidably seated in the grooves, a collar on the screw, and a pin extended diametrically through the valve and having inturned ends embracing the collar.

1,484,741. PROCESS FOR FLUSHING AND STUFFING SAUSAGE CASINGS. WILLIAM F. SCHÖNLAND, Jr., Manchester, N. H. Filed Sept. 28, 1923. Serial No. 665,282. 1 Claim. (Cl. 17—45.)

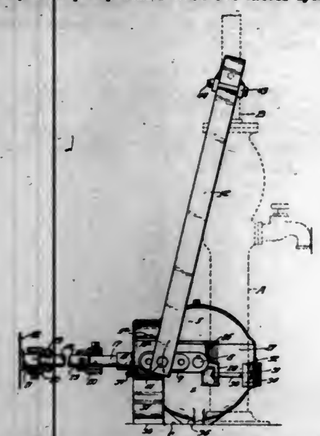


The process of flushing and stuffing sausage casings which consists in pulling a sausage casing on to a tube with a water passage and a meat passage therein, and causing water to flow through said water passage and casing while so doing, then stopping the flow of water through said water passage and closing the outer end of the casing, then forcing meat through said meat passage and into the casing, whereby the casing is filled with meat and pushed off the tube.

1,484,742. LUMINOUS LOCATOR OR MARKER. JEROME M. SHERWIN, Newark, N. J., assignor to The Luminite Corporation, Newark, N. J., a Corporation of New Jersey. Filed Feb. 8, 1922. Serial No. 534,885. 4 Claims. (Cl. 240—1.)

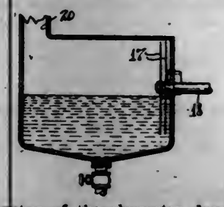
1. A locator or marker comprising a transparent body formed in its rear face with a plurality of adjacent depressions, one a central depression being of great depth, depressions adjacent thereto of less depth, and other depressions of still less depth adjacent to said last-mentioned depressions, a luminous material of a strong degree of luminosity in said central depression, and a luminous material of another degree of luminosity in the depressions adjacent to said central depression, the bounding depressions of the least depth being free from luminous material to cause a diffusion of the light rays from the luminous materials in the respective depressions.

1,484,743. CONGRESS SHOE. JOHN THOMAS TEBBUTT, Three Rivers, Quebec, Canada. Filed Jan. 15, 1923. Serial No. 612,682. 4 Claims. (Cl. 36—30.)



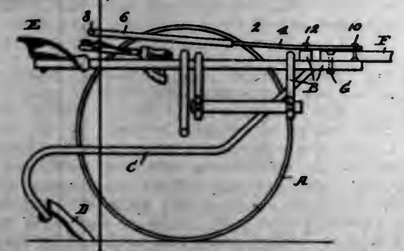
4. In a shoe, a leather front upper in one piece from a vertical seam between itself and counter portion and elastic sides, an insole secured to the upper, an outsole extending through and beyond the heel portion and counter and forming a toe hold extension in removing the shoe, a heel secured to said extending outsole, a half sole secured to the front portion of said outsole, a sheet asbestos insertion between said half sole and said outsole, an asbestos filler between said insole and outsole, and an asbestos sheath lining under said front upper.

1,484,744. PUMP JACK. LEE L. TURNEY, Muskegon, Mich., assignor to The Maximotor Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed Nov. 10, 1922. Serial No. 600,026. 7 Claims. (Cl. 74—14.)



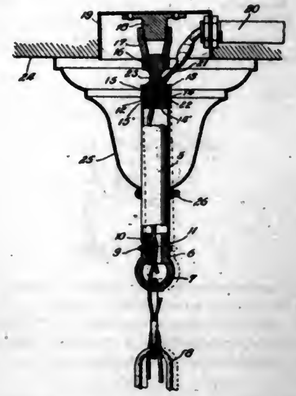
1. A pump jack comprising a closed housing, a reducing train within said housing, said train comprising a crank shaft which extends through the housing, said housing comprising a pair of side walls which are disposed substantially at right angles to each other and which form an external angle, that portion of the crank shaft which is contained within the housing lying immediately adjacent to one of said walls, means associ-

ated with the housing for clamping said walls closely and fixedly to a pump stand with the latter lying in said



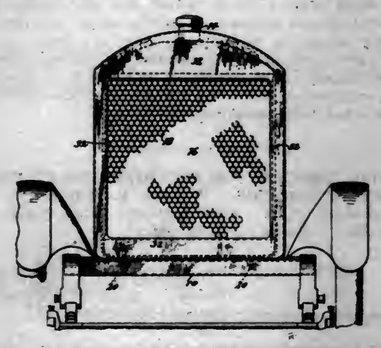
angle, cranks upon the outer ends of said crank shaft, and means for transmitting motion from said cranks to a pump rod.

1,484,745. APPARATUS FOR PURIFYING GASES. HOWARD L. WADSWORTH, Cleveland, Ohio. Filed Mar. 24, 1917. Serial No. 157,286. 1 Claim. (Cl. 261—92.)



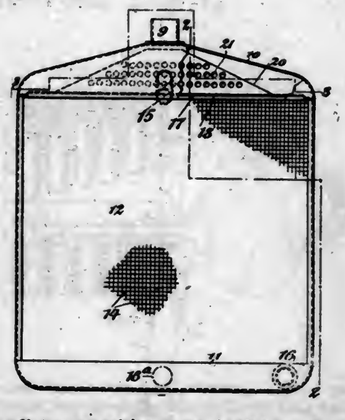
In an apparatus of the character described, the combination of a liquid containing chamber, a horizontal shaft extending into said chamber a short distance adjacent one end thereof, a disk screen mounted on said shaft and rotatable in a vertical position adjacent said end wall of the chamber, the remainder of the chamber being wholly unobstructed, an intake opening for air in the upper half of said end of said chamber and above the liquid level thereof, whereby said air will contact with liquid adhering to the upper portion of said disk, and means for discharging the liquid impregnated air after it has traversed the full unobstructed portion of said chamber.

1,484,746. MANUALLY-CONTROLLED GUIDE FOR CULTIVATORS. HUGH G. WHITE, Malta Bend, Mo. Filed Mar. 10, 1921. Serial No. 451,258. 1 Claim. (Cl. 280—87.)



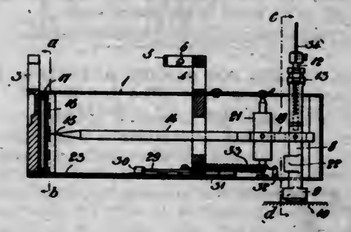
In combination with a wheeled cultivator having a pivoted tongue and a driver's seat, a steering lever fulcrumed on the cultivator frame and consisting of a member fulcrumed on the cultivator frame and pivoted at its forward end to the tongue, a tubular member operably mounted upon the rear portion of the first-mentioned member, means for securing said tubular member at any point of its adjustment, and a handle connected to the rear portion of the tubular member within convenient reach of the driver's seat and projecting in opposite directions from said tubular member.

1,484,747. LIGHTING-FIXTURE STEM. JAMES WILLIAMSON, Chicago, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1922. Serial No. 578,076. 2 Claims. (Cl. 240—85.)



1. A lighting fixture stem comprising a tubular supporting conduit, a plug secured in one end of the conduit and having a contracted neck adjacent said end of the conduit, there being a channel for conductor wires extending through that portion of the plug within the conduit and opening at one end in said neck.

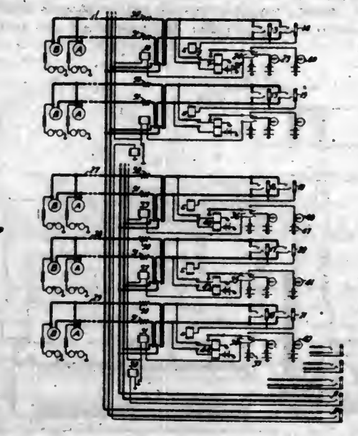
1,484,748. RADIATOR MOUNTING. HENRY M. YEAGER, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,996. 10 Claims. (Cl. 180—68.)



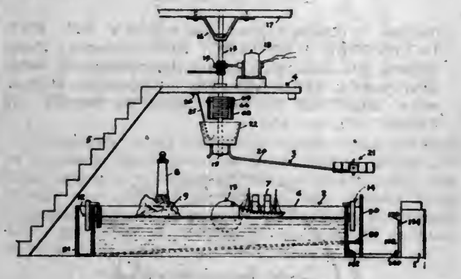
1. A radiator mounting comprising a saddle having a lower horizontal bar which is adapted to rest on the frame of an automobile and to support a radiator at its lower end, and two arms projecting upwardly from opposite ends of the horizontal bar and adapted to be connected with the radiator at the upright edge portions of the same and an independent casing surrounding said saddle and radiator and connected therewith.

1,484,749. RADIATOR. HENRY M. YEAGER, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 6, 1923. Serial No. 630,350. 2 Claims. (Cl. 257—125.)

1. A radiator comprising a core having water passages and air tubes, water supply and delivery tanks communicating with opposite ends of said water passages and having a water inlet and a water outlet, respectively, and means for spreading the water and preventing splashing of the same as it enters said supply tank through the inlet thereof, said means comprising an upright plate arranged in said supply tank in front of said inlet and having its greatest height opposite said inlet and of gradually less height away from said inlet.



1,484,750. APPARATUS FOR TARGET PRACTICE WITH RIFLES AND OTHER FIREARMS. FINAR ERIK ALM, Stockholm, Sweden. Filed Feb. 1, 1921. Serial No. 441,705. 5 Claims. (Cl. 124—15.5.)

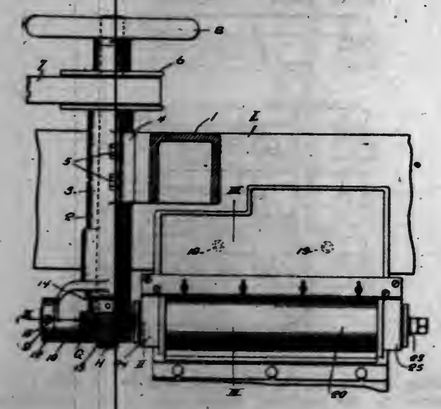


1. An apparatus for target practice with fire arms including a casing attachable to a fire arm, an armature supported in the casing so as to be movable relative to the fire arm in all directions, a target element carried by the armature, a recording device, and means connecting the armature with the recording device so as to transmit the movements of the fire arm to the recording device when aiming the fire arm, the latter being held in aiming position with the armature bearing against a fixed point with respect to the fire arm whereby the target carrying armature remains fixed during aiming movement of the firearm.

1,484,751. TELEPHONE-EXCHANGE SYSTEM. WALLACE P. ANDRICK, Hohokus, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 8, 1922. Serial No. 566,739. 4 Claims. (Cl. 179—58.)

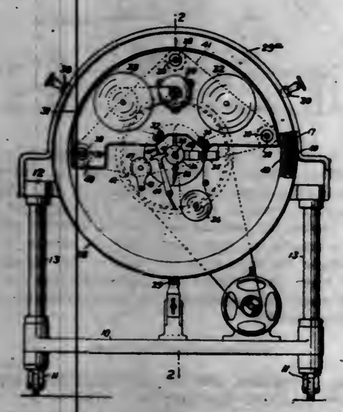
1. In a telephone system, a plurality of lines, each of said lines terminating at a grouping position and at an answering position, a signaling device for each of said lines at each of said positions, means for signaling all of said lines as a group, and means for actuating the signaling devices at the grouping position to denote response to the grouping signal and at the answering position to denote a call from the station.

1,484,752. AMUSEMENT DEVICE. ALVIN G. APPERSON and MATHEW WOLFLE, San Francisco, Calif. Filed May 9, 1922. Serial No. 559,661. 12 Claims. (Cl. 46—56.)



12. A plurality of target elements constructed to simulate buildings, ships, or other structures, a counter behind which said elements are arranged so that they are visible from in front of the counter, a plurality of aerial vehicles, means for moving said aerial vehicles over the targets, a missile in each aerial vehicle, means in each aerial vehicle for releasing the missile and means controllable from the counter for actuating one or more releasing means independently or simultaneously at the will of the operator.

1,484,753. GUM-BOX DRIVE MECHANISM FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1919. Serial No. 315,396. 1 Claim. (Cl. 91—51.)

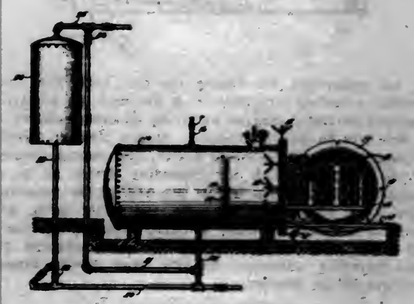


In a machine requiring gumming mechanism, the combination with a gum box having a roller therein, said roller having its bearing shaft projecting exteriorly of the box, of a drive mechanism for said roller, said drive mechanism comprising a bearing, a shaft rotatably mounted in said bearing, a gear carried by said shaft beyond said bearing, an extension part formed upon said bearing, a second shaft rotatably mounted in said

extension upon an axis at an angle to said first shaft, a gear carried by the second shaft constantly meshing with the gear of the first shaft, said second shaft having a socket therein adapted to removably receive the projecting portion of said roller shaft in a manner to drive

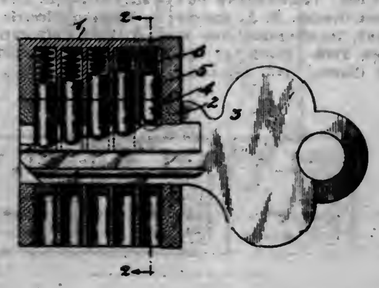
said roller, a support, and means whereby said bearing member and said mentioned shafts and gears are supported as an entity upon said support, a second support, and means whereby said gum box and said roller are supported as a separate entity upon said second support.

1,484,754. FILM-FEEDING MECHANISM FOR MOVING-PICTURE MACHINES. SAMUEL BARDY, Philadelphia, Pa., assignor, by mesne assignments, to Bardy Projector Co., Philadelphia, Pa., a Corporation of Delaware. Filed July 20, 1921. Serial No. 486,078. 10 Claims. (Cl. 88—16.8.)



1. A moving picture machine for continuously moving films comprising film feeding mechanism and a compensating system rotatable about a common axis, means for rotating said system in a continuous manner, driving connections between said compensating system and the film feeding mechanism to connect them to each other in a predetermined relation to each other to cause the film and compensating system to register with each other, and actuating mechanism for throwing said driving connections into and out of engagement.

1,484,755. LAWN TRIMMER. WILLIAM M. BLACK, Hanford, Calif. Filed June 27, 1922. Serial No. 571,228. 1 Claim. (Cl. 97—227.)



A lawn trimmer comprising a handle provided in one end with a longitudinal slot, a blade having a serrated cutting edge and having a shank beveled along one edge, said shank being inserted in the slot and the blade being aslant rearwardly with its cutting edge extending at an angle to the longitudinal axis of the handle, and rivets passing through the handle and shank substantially in the longitudinal axis of the handle, the back edge of the blade being substantially parallel with the cutting edge throughout all but the tip position of the blade, and the back edge of the blade near the tip thereof approaching the cutting edge at an angle of approximately 45° to the plane of the cutting edge.

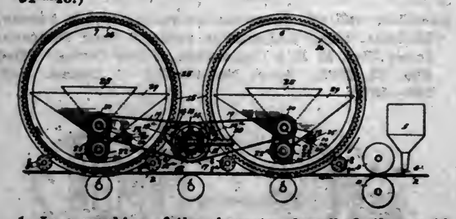
1,484,756. COOKER FOR CANNED MATERIAL. FRANK D. CHAPMAN, Berlin, Wis. Filed Aug. 3, 1923. Serial No. 655,532. 5 Claims. (Cl. 126—272.)

1. The combination with a vat, of a tank, means for supplying a heating medium to said vat, means for supplying cooling water to said vat, means connecting said water supply means to said tank for compressing air therein and means for supplying said compressed air to said vat.

1,484,757. PIN-CYLINDER LOCK. WILLIAM T. CONEY, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed June 27, 1922. Serial No. 571,312. 1 Claim. (Cl. 70—7.)

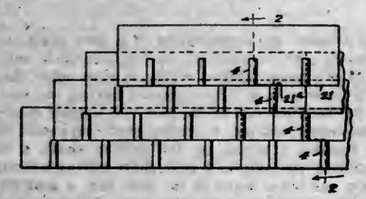
In a pin tumbler lock, a cylinder, a plug rotatable therein, said plug having a key slot, said plug and cylinder having pin passages arranged to hold a plurality of pins, one of the pin passages in said plug being shorter than the others, and a guard pin of hard metal movable in the said shorter passage for the purposes described.

1,484,758. AIRSHIP. MANUEL PARDO Y COSIO, Madrid, Spain. Filed Dec. 24, 1920. Serial No. 432,975. 9 Claims. (Cl. 244—12.)



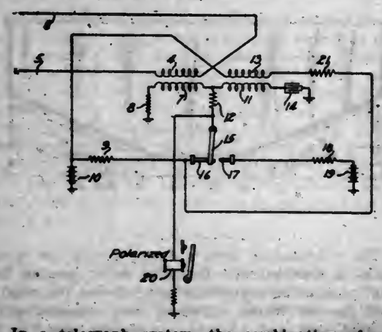
1. In an airship, a plane having symmetrical openings at opposite sides of and parallel with its transverse axis and extending substantially the entire width or fore-and-aft distance of the plane, and movable sections corresponding in size and shape to said openings for covering or uncovering the same to increase or decrease the surface area of the plane, said sections being disposed slightly above the plane; and means for moving the sections in unison in either direction at will independently of the movements of the plane.

1,484,759. METHOD OF MAKING A WATERPROOF, FLEXIBLE, ABRASIVE-HOLDING COMPOSITION AND PRODUCT. FRANK JOSEPH CRUPI, Brooklyn, N. Y., assignor to Herman Behr & Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,941. 8 Claims. (Cl. 87—17.)



1. The method of producing a waterproof, flexible composition for holding abrasive material in place on abrasive articles of manufacture, and for other purposes consisting in dissolving rosin in phenol and thereby forming an acidulated solution capable of absorbing water to a limited extent and the acid in which serves to reduce the surface tension between the rosin and the hereinafter mentioned glue; and in mixing with such rosin-phenol solution an aqueous solution of glue having an acetic acid content which acts to minimize coagulation of the glue and to keep the mixture from jellying.

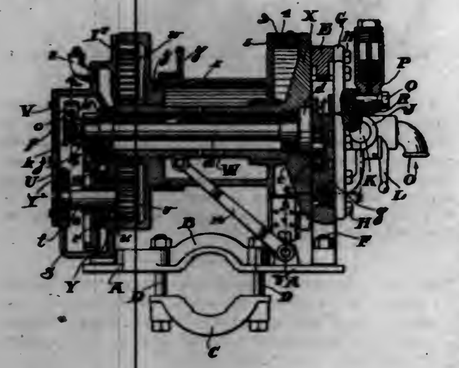
1,484,760. ROOFING MACHINE. HARRY A. CUMFER, Chicago, Ill., assignor, by mesne assignments, of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1919. Serial No. 316,373. Renewed Aug. 17, 1923. 10 Claims. (Cl. 91—43.)



1. In a machine of the character described, the combination with means for feeding a roofing sheet having an adhesive bituminous coated surface, of revolving drums provided with spaced openings of predetermined configuration, means for feeding grit through said openings whereby mineral grit can be applied to spaced areas of said adhesive coating, of a mechanism for returning excese material to be redistributed.

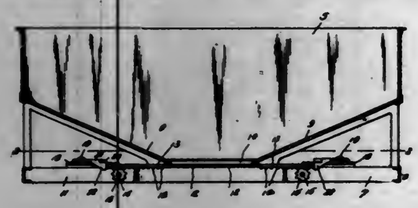
1,484,761. ROOFING PRODUCT. HARRY A. CUMFER, Chicago, Ill., assignor, by mesne assignments, of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1919. Serial No. 316,374. 3 Claims. (Cl. 108—7.)

1. Prepared roofing comprising shingle elements adapted to overlie when placed on a roof, having bossed portions formed in the sheet extending from the lower edge thereof the embossed portions of one element being staggered relative to the embossed portions of the element above and below, the indentures beneath said embossed portions being filled with filler substance.



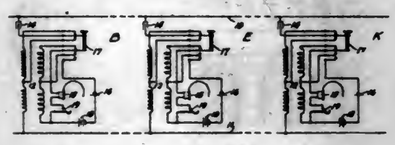
1,484,762. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1920. Serial No. 410,904. 11 Claims. (Cl. 178—88.)

1. In a telegraph system, the combination of an incoming telegraph line, a relay comprising a line winding, an armature, a local circuit winding arranged to exert an influence thereon sufficient to set said armature in mo-



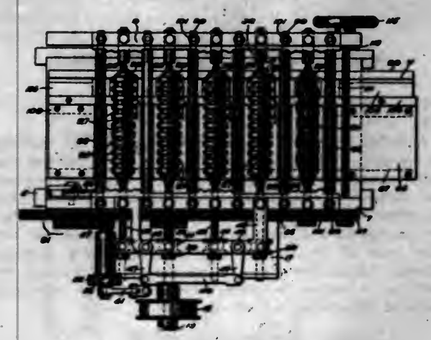
tion, and a further local circuit winding adapted to produce an effect opposing the influence of said first local circuit winding when said line winding is not traversed by signal current impulses.

1,484,763. HOIST. JESSE DITSON and ARTHUR E. PETERS, Littleton, Colo., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 12, 1921. Serial No. 491,712. 3 Claims. (Cl. 254—187.)



1. In a hoist, the combination of a base plate, a gear box forming a frame mounted on the base plate and having inner and outer integral walls, an open outer side and a closed inner side, a center bearing having one end supported in the inner wall of the gear box, a drum concentric with the center bearing, a driving shaft supported in the center bearing, a pinion on the driving shaft, a clutch for actuating the pinion, a gear shaft having bearings in the inner and outer walls of the gear box, a gear on said gear shaft adapted to mesh with said pinion, an internal gear on the drum, a second gear on the gear shaft meshing with said internal gear, a cover for said gear box whereby the gears, pinion and clutch are entirely enclosed, and a guard flange on the body of the gear box extending in close proximity to the open face of the drum and forming a closure for the internal gear.

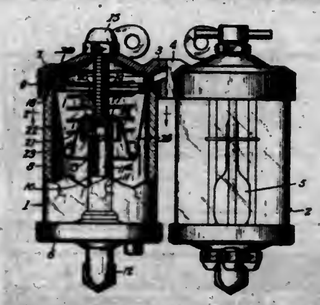
1,484,764. ACTUATING MECHANISM FOR COAL DUMP CARS. JONATHAN B. DODD, Cumberland, Md. Filed June 1, 1923. Serial No. 642,869. 2 Claims. (Cl. 105—282.)



1. The combination with a dumping coal car wherein the same is provided with the usual outlet opening, longitudinally extending supporting bars between the usual end bars of the car frame, a pair of door elements slidable upon said bars and adapted for closing said car door opening, extensions formed upon opposite transverse edges of said doors, rack teeth formed upon the under side of said extensions, spur gears journaled between said longitudinal supporting bars in mesh with the teeth of said door extensions, means for rotating said spur gears, and means for engaging the ends of said extensions when the doors are closed for maintaining the same in a closed position.

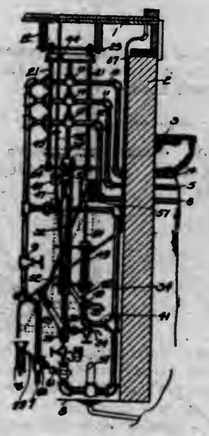
1,484,765. TELEPHONE SYSTEM. GEORGE D. EDWARDS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1919. Serial No. 289,667. 30 Claims. (Cl. 179—28.)

1. A telephone system comprising a plurality of stations, a pair of conductors common to the stations, a bridge circuit at each of the stations individual thereto and extending between the conductors, and receiving apparatus individual to each of the stations and included in the bridge circuit thereof; the resultant impedance of each of the bridge circuits lying between five thousand and twenty thousand ohms at 800 cycles per second, and the resultant impedance angle thereof lying between fifty-five and eighty-eight degrees at the same frequency.



1,484,766. MACHINE FOR CLEANING BOOK COVERS AND THE LIKE. HJALMAR ERICKSON, Cambridge, Mass. Filed Apr. 22, 1921. Serial No. 463,624. 11 Claims. (Cl. 41—7.)

1. A machine for cleaning surplus leaf from stamped book covers and the like comprising a work support, means for advancing the work over the support and a plurality of rubbing devices operating on the work as it advances, each contacting with the work along a narrow transverse zone, and means to give said devices rolling rubbing motions in opposite directions to bend, break and lift the surplus leaf.

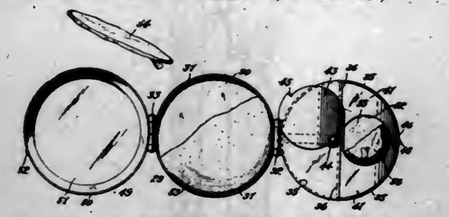


1,484,767. GASOLINE FILTER. WILLIAM FELL, Chicago, Ill., assignor to Visible Gasoline Filter Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1920. Serial No. 363,544. 16 Claims. (Cl. 210—165.)

1. In a filter the combination of a receptacle, a filtering medium of relatively pliable material mounted within said receptacle with its inner and outer portion secured in fixed position, and a member mounted in said receptacle

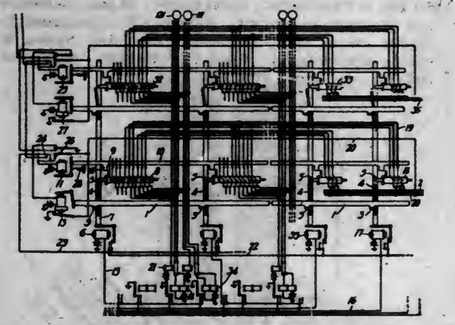
and bearing concentrically upon said filtering medium intermediate its inner and outer portions, to retain the same in a predetermined form.

1,484,768. WATER-SPRINKLING SYSTEM. LANE M. FOUTS, Spokane, Wash. Filed June 7, 1921. Serial No. 475,825. 5 Claims. (Cl. 137—144.)



1. The combination in a water distributing system including distributing pipes each having a control valve, of means for successively opening said control valves, and independent means for subsequently closing them, hydraulic means for operating said valve opening means, and means under pressure for governing said hydraulic means.

1,484,769. LOCKING WASHER FOR NUTS AND THE LIKE. ARTHUR GRAHAM FRANCE, London, England. Filed July 20, 1922. Serial No. 576,314. 5 Claims. (Cl. 151—30.)

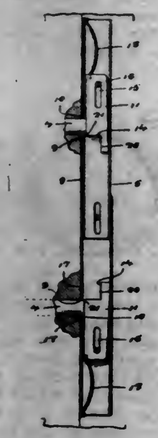


1. In a locking washer the combination of two flat angular members spaced apart and connected along one edge, and coaxial screw-threaded apertures in the said members to receive a bolt, the axis of the apertures being at a small inclination from the vertical to the flat face of one angular member and the members being inclined from the same side of a perpendicular to the axis of the bolt to which the washer is applied.

1,484,770. VANITY BOX. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., Newark, N. J., a Corporation of New Jersey. Filed Jan. 29, 1923. Serial No. 615,717. 9 Claims. (Cl. 132—83.)

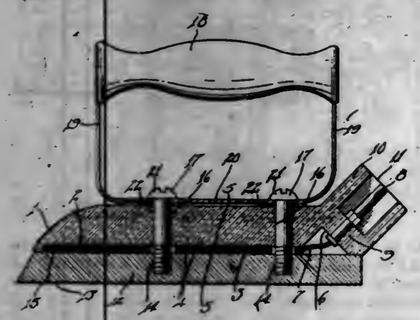
1. A vanity box comprising a main chambered body provided with a marginal side-wall, an auxiliary chambered body hinged to said side-wall, so as to be moved into a nested relation into said main body, said auxiliary body being provided with a receiving opening, a closing plate slidably connected with said auxiliary body for closing said opening, and a lid or cover hinged to said side-wall, said lid or cover being adapted to be moved over and serving as a closure for both of said bodies.

1,484,771. TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to The Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 340,566, filed Nov. 25, 1919. This application filed Dec. 5, 1921. Serial No. 519,857. 35 Claims. (Cl. 179—18.)



1. In a telephone system, a group of calling lines, a group of transfer circuits, a trunk line, a switching mechanism to connect said lines to said transfer circuits, a switching mechanism individual to each transfer circuit to connect said transfer circuits to said trunk line, an actuating bar for rendering said switching mechanisms operative, a magnet common to said calling lines to actuate said first switching mechanism when made operative by said actuating bar, and a magnet individual to each of said lines to actuate a particular one of said individual switching mechanisms when made operative by said actuating bar.

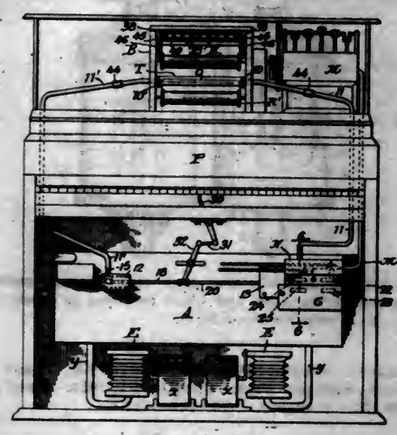
1,484,772. SAFETY DEVICE FOR BANK VAULTS. BENJAMIN F. GRAY and ANDREW J. MORRISSON, Valera, Tex. Filed Dec. 6, 1921. Serial No. 520,328. 3 Claims. (Cl. 109—3.)



1. In combination with a bank vault, of means for preventing the accidental throwing of the bolts on the door in locking position in the casing for the door, com-

prising a housing constructed of adjustable sections secured on the casing and having openings to receive the bolts therethrough, spring influenced notched members in the housing susceptible of a longitudinal and tilting movement and normally covering the bolt receiving openings.

means for moving the members out of such position to bring the notched ends thereof opposite the openings in the housing, means sustaining the members in such position, and the notched portions of the members designed to be contacted by the thrown bolts to swing the said members away from the sustaining means therefor.



1,484,773. ELECTRIC FLATIRON. AAGE GROULEFF and HAROLD A. HOLMES, Chicago, Ill., assignors to Walter De L. Carr, Hammond, Ind., and Nelson S. Moore, Riverside, Ill. Filed Dec. 7, 1922. Serial No 605,405. 1 Claim. (Cl. 219—25.)

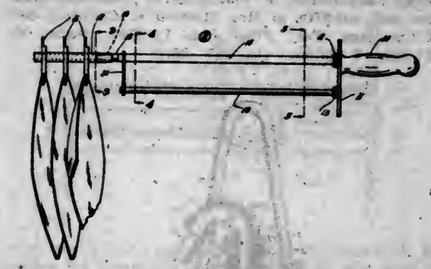
An electric flatiron of the character described having a molded non-metallic body portion fashioned to provide a plug receptacle, an electric heating element disposed in said body portion and having its terminals supported within the receptacle formed in said body mmber, and a metal work engaging member mounted on said body portion and contacting the bottom wall thereof.

1,484,774. DEVICE FOR CLEANING PLAYER PIANOS. ALFRED PHILIP GROVES, Charleston, S. C. Filed Oct. 17, 1922. Serial No. 595,081. 15 Claims. (Cl. 283—64.)

1. A cleaner for pneumatic player musical instruments, comprising a hood mounted on the instrument and movable over the tracker-bar to cover all the usual openings therein, means for connecting said hood with the pneu-

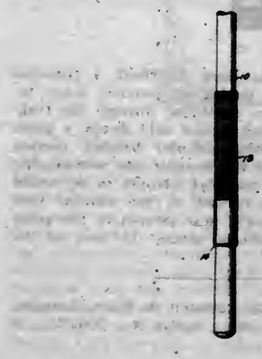
matic pumps of the player, whereby when the hood is on the tracker-bar in operative position, air suction may be established in said hood.

1,484,775. TOY. GALEN A. HAIGHT, Detroit, Mich. Filed Jan. 4, 1923. Serial No. 610,724. 3 Claims. (Cl. 244—24.)



1. A toy of the class described comprising a main body portion; flanges mounted on and integral with said body portion; tongues punched from said body portion and integral therewith, said tongues being provided with openings formed therein; a keeper slideably mounted on said body and projected through said tongues one end of said keeper being formed U-shaped, the free end thereof being sharpened and projected through a plurality of said tongues; means mounted on said keeper for preventing its removal from said tongues; standards carried by and integral with said flanges; wheels mounted on said standards and provided with channels for the reception of a cord; and guide members integral with said body portion for preventing the removal of said cord from said channels.

1,484,776. TAG HOLDER. ANGUS F. HANNEY and ALEXANDER GAMMELL, Chicago, Ill., assignors to Eureka Rough Dry Pin System Co., Chicago, Ill. Filed Feb. 7, 1923. Serial No. 617,539. 10 Claims. (Cl. 294—1.)

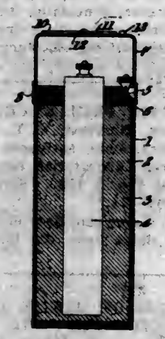


1. A device of the class described including in combination with a laundry tag carrying member, of a supporting member, and an elongated member extending

laterally from said supporting member and having means facilitating the positioning of said member in end regis-

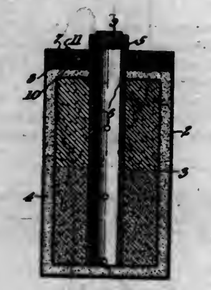
tration with a tag carrying member whereby the tags can be transferred from the tag carrying member onto the elongated member.

1,484,777. DRUMSTICK. WILLIAM J. HASSENPFLUG, Chicago, Ill. Filed Jan. 12, 1922. Serial No. 528,600. 2 Claims. (Cl. 84—422.)



1. As a new article of manufacture, a drum stick having a butt, a point, a balance between the butt and the point where the stick should be held for proper execution, and a cord winding on the balance of the stick and terminating at or about the ends thereof.

1,484,778. ART OF AERONAUTICS. HERBERT E. HAWES, Brooklyn, N. Y., assignor of thirty one-hundredths to Walter D. Edmonds, Boonville, N. Y. Filed Mar. 29, 1920. Serial No. 369,512. 54 Claims. (Cl. 244—21.)



1. In an organized aircraft comprising a thereby detachably carried member projecting outwardly from the fairing of the empennage; means liberatably carried by said aircraft to separate therefrom and suspend independently thereof an occupant of the aircraft; means operable from within the aircraft to liberate therefrom said separating and supporting means; and means similarly operable to simultaneously detach from the aircraft said projecting member to prevent it from colliding with said occupant.

1,484,779. DRY CELL AND PROCESS OF REDUCING GASEOUS PRESSURE THEREIN. GEORGE W. HEISE, Elmhurst, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed June 30, 1921. Serial No. 481,716. 12 Claims. (Cl. 204—38.)

12. The process of preparing a dry cell of the deferred action type for rapid activation by addition of liquid, and activating the same when desired for use, comprising producing sub-atmospheric pressure therein, hermetically sealing the cell, immersing in liquid, and breaking the seal to permit the liquid to enter and permeate throughout the cell.

1,484,780. PERMEABLE DEPOLARIZING MASS AND PROCESS OF MAKING THE SAME. GEORGE W. HEISE, Elmhurst, N. Y., and CLARENCE W. BROKATE, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Nov. 15, 1921. Serial No. 515,366. 16 Claims. (Cl. 204—38.)

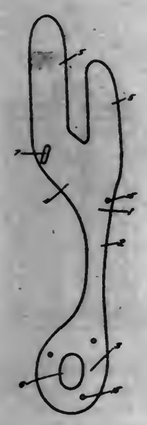
2. A process of preparing a depolarizer, comprising forming a mixture of a finely divided reducible compound, a conductive material, and an electrolyte salt and making said mixture plastic by incorporating therewith a liquid adapted to be removed without rendering said mixture difficultly permeable, and removing said liquid therefrom.

1,484,781. PRIMARY ELECTRIC CELL AND PROCESS OF PREPARING DEPOLARIZER THEREFOR GEORGE W. HEISE, Elmhurst, N. Y., and CLARENCE W. BROKATE, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Dec. 14, 1921. Serial No. 522,387. 12 Claims. (Cl. 204—38.)

1. A process of making galvanic cells, which comprises disposing in operative relation to a sulfured copper oxid depolarizer a nitrogenous material capable of improving the service characteristics of the cell.

1,484,782. DEPOLARIZING MIXTURE AND METHOD OF PREPARING THE SAME. GEORGE W. HEISE, Elmhurst, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Jan. 30, 1922. Serial No. 532,919. 7 Claims. (Cl. 204—36.)

1. Method of preparing a battery depolarizer, comprising subjecting a mixture containing indurated manganese dioxide and conductive carbon to a dry milling operation until the desired depolarizing efficiency is attained.



1,484,783. COATED PRIMARY-CELL ELECTRODE. GEORGE W. HEISE, Elmhurst, N. Y., and CLARENCE W. BROKATE, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,551. 5 Claims. (Cl. 204—34.)

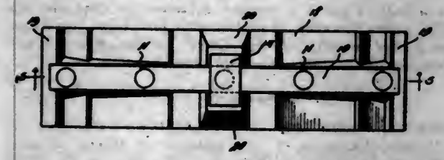
5. In a dry cell, a zinc container electrode, and a coating of aluminum oleate upon the inner surface of the container.

1,484,784. PROCESS OF MAKING GELATINOUS ALKALINE ELECTROLYTE AND COMPOSITIONS THEREFOR. GEORGE W. HEISE, Bayside, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,526. 5 Claims. (Cl. 204—38.)

3. A composition for use in preparing electrolyte, comprising dry sodium hydroxid and starch in intimate admixture therewith.

1,484,785. APPARATUS FOR SUPPORTING ARCHES. JOHN M. HESS, Columbus, Ohio. Filed May 14, 1923. Serial No. 639,838. 4 Claims. (Cl. 36—76.)

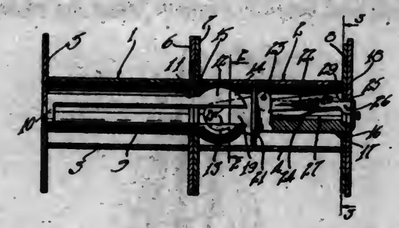
1. In combination with a shoe, a reinforcing element comprising a shank portion mounted to extend only beneath the longitudinal outer arch of the foot and avoiding support of the inner longitudinal arch, a portion thereof extending back over the heel of the shoe, and a transverse portion thereof extending across the forward end of the shank.



4. In combination with a shoe, a reinforcing element comprising a shank portion mounted to extend only beneath the longitudinal outer arch of the foot and avoiding support of the inner longitudinal arch, a portion thereof extending back over the heel of the shoe, and means for fixing the inner portion of the shank of the shoe in different adjusted positions.

1,484,786. HYDRAULIC SWIVEL. HORACE GRESLEY JOHNSTON, Corsicana, Tex., assignor, by direct and mesne assignments, of four-fifths to Genevieve Johnston and one-fifth to Mrs. Howard E. Caldwell, both of Corsicana, Tex. Filed June 1, 1921. Serial No. 474,246. 4 Claims. (Cl. 285—25.)

1. In mechanism of the class described, a trunnion block, a housing thereon having an internal flange below its top, a swivel stem extending through the trunnion block into the housing beyond said flange, a goose neck having a counterbored annular bearing portion fitted in the upper end of the housing and surrounding the swivel stem, packing material adapted to be seated in the annular chamber formed by the counter bore about the swivel stem, and a pipe secured to the goose neck and extending therefrom within the bore of the swivel stem.

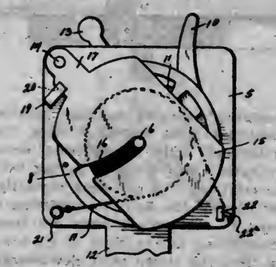


1,484,787. BRAKE SHOE. JOSEPH J. KARR, Linnton, Oreg. Filed Dec. 6, 1921. Serial No. 520,372. 1 Claim. (Cl. 188—258.)

A brake shoe comprising a cast metal body, a transversely bowed plate extending throughout the length of the body and the intermediate portion of the same, substantially flush with the intermediate portion of the back of the body, a lug formed on the back of the body and a substantially rectangular loop molded in the body with its upper surface flush with the upper face of the lug and having its ends engaged with the bowed plate.

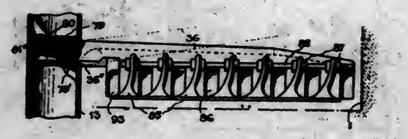
1,484,788. CUFF LINK. FRANK KELLER, Chicago, Ill. Filed Oct. 23, 1922. Serial No. 596,262. 3 Claims. (Cl. 24—110.)

1. A device of the character described comprising a pair of separable link members adapted to be held in the opposite fastening portions of a garment cuff, a tongue disposed in one of said links and extending exteriorly thereof, said tongue having a contractible enlarged head portion, the opposite link being provided with a restricted opening through which said head portion may be projected when in its contracted condition, and a bolt disposed within the last named link arranged



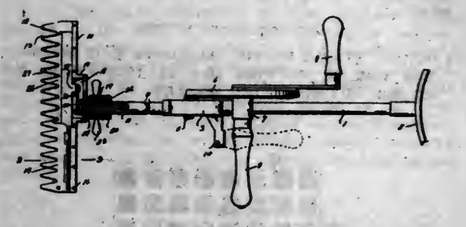
to be moved into engagement with said contractible head portion for preventing the contraction of said head portion and thereby locking said links one to another.

1,484,789. SHIPPING OR PACKING BOX. ABRAHAM LACKEY, Rialto, Calif. Filed Apr. 22, 1922. Serial No. 556,060. 2 Claims. (Cl. 220—6.)



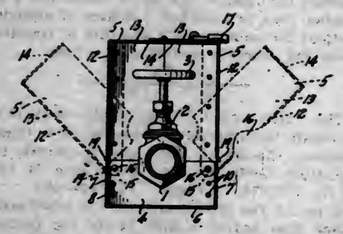
1. A shipping box comprising a bottom, sides, ends and a cover adapted to have interlocking engagement with each other when the box is set up, the bottom having inturned guide flanges and the cover having beads, and members extending across the bottom and then extending upward and being formed at the junction of the transversely extending portion with the upwardly extending portions with beads adapted to receive and interlock with the inwardly turned flanges, the upper ends of the upwardly extending portions being formed to engage in and interlock with the beads of the cover to thereby hold the parts in their knocked down condition.

1,484,790. SPRING-WINDING DEVICE. HENRY F. LAFORTUNE, Biddeford, Me. Filed Jan. 10, 1923. Serial No. 611,744. 4 Claims. (Cl. 81—7.5.)



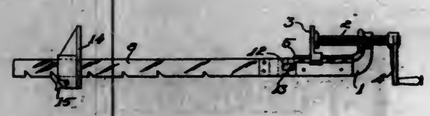
1. A spring winding device comprising a support provided with means for engagement within a vise to effect holding, a shaft journaled through said support and having a crank handle, a disk on the shaft spaced from the support and defining a compartment, a ratched on said shaft within said compartment, a pawl within said compartment co-operating with said ratchet and having an end projecting beyond the support to facilitate manipulation, a guard plate rotatably mounted on said support and having a slot for the reception of said shaft, and means on the support for holding the guard plate in an adjusted position.

1,484,791. ROASTING FURNACE. ARTHUR VICTOR LEGGO, Melbourne, Victoria, Australia. Original application filed Dec. 22, 1921, Serial No. 524,301. Divided and this application filed July 3, 1923. Serial No. 649,382. 10 Claims. (Cl. 259—144.)



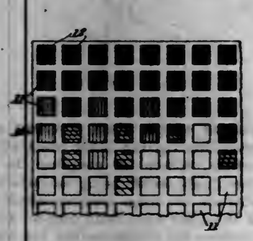
1. In roasting furnaces, a rabble arm, a row of stirring teeth on the front and a row of furrow forming teeth on the back of the rabble arm, and downwardly, forwardly and inwardly inclined shanks on the stirring teeth having broad feet set at an angle to the front of the rabble arm.

1,484,792. HEDGE TRIMMER. EUGENE G. LOVELACE, High Point, N. C., assignor of one-fourth to Tom Gianoulis and one-fourth to R. J. Wagger, both of High Point, N. C. Filed Apr. 18, 1923. Serial No. 632,899. 3 Claims. (Cl. 30—11.)



1. An implement of the class described comprising a head, a reciprocating cutting blade associated therewith, a tubular member, means for coupling the head to the tubular member, said head being adjustable about the tubular member as an axis, said coupling means operating to hold the head fixed with respect to the tubular member, and means for reciprocating the blade.

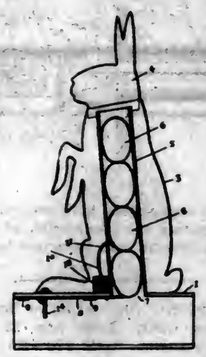
1,484,793. LOCKED HOUSING FOR VALVES. JAMES W. MOORE, Moultrieville, S. C. Filed Sept. 9, 1922. Serial No. 587,161. 7 Claims. (Cl. 70—123.)



1. A locked housing for pipe line valves comprising a base section which is adapted to engage under the valve, and two opposed hingedly supported sections mounted upon the base section and adapted to move in engagement with each other and assume positions over the pipe line valve, said hingedly supported sections adapted to move to positions laterally and upwardly, and means for locking the two hingedly supported sections together.

1,484,794. EXTENSIBLE CLAMP. MAX H. MOSES, San Francisco, Calif. Filed Sept. 13, 1922. Serial No. 587,954. 1 Claim. (Cl. 144—299.)

A clamp comprising a short beam, a leg at one end of same, a screw threaded through said leg, a clamp jaw swivelly engaged by said screw and slidably mounted on said beam, the opposite end of said beam having a groove and a flange extending entirely across one side face, a detachable beam member having a complemental flange and groove extending entirely across one side face at one end thereof, whereby to permit rapid lateral interlocking coupling and uncoupling of the first named beam and the detachable beam, cooperating means carried by the first beam and the detachable beam for preventing relative transverse sliding movement of the respective beams, a lock pivotally mounted on one of said beams to prevent lateral separation thereof at their interlocked ends, and a clamp jaw movable along the detachable beam.



1,484,795. COLOR PIANO. ALEXANDER E. O. MUNNELL, New York, N. Y. Filed Mar. 24, 1923. Serial No. 627,506. 8 Claims. (Cl. 88—14.)

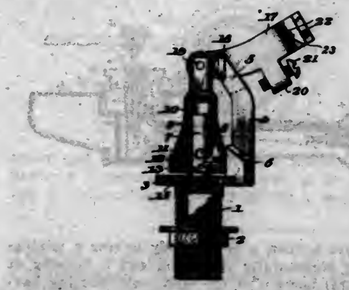
1. The combination of a color board containing color samples graduated according to hue, value and chroma, electric light bulbs for individually illuminating the color samples and means for controlling the illumination, said means including a key board containing a plurality of parallel rows of switches, a source of electricity and connections for establishing a plurality of circuits including each the source, a switch and a bulb.

1,484,796. EGG-LAYING TOY. RUDOLPH H. SCHNIERER, Cincinnati, Ohio, assignor of one-fourth to Cora M. McClanahan, Cincinnati, Ohio, and one-fourth to Nancy D. Shelton, Covington, Ky. Filed June 16, 1922. Serial No. 568,674. 1 Claim. (Cl. 46—40.)

In a toy of the type described, the combination with a hollow base having a hole in its top portion, of a hollow object representing an animal, mounted upon said base over said hole, an outwardly movable drawer in said base beneath said hole, a number of superimposed eggs within said hollow object, a slide movable beneath said hole for preventing said eggs from dropping through the hole in the top portion of said base when the drawer is in its closed position, means operable by said drawer when pulled outwardly, to withdraw said movable slide from said hole, to permit the lowermost egg to descend into said drawer, and a spring element pivotally secured within said hollow object, the lower end of said element being connected to the slide and the upper end of said element being curved to resiliently engage the egg next

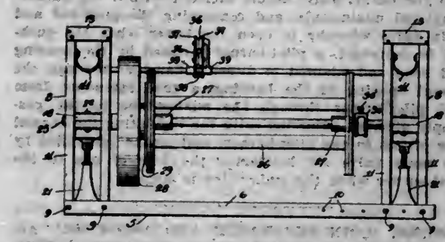
above the one to be released, to prevent it and the eggs above from falling into said drawer when the slide is drawn outwardly by the latter.

1,484,797. PHOTOGRAPHIC-PRINTING MACHINE. CLEVELAND SIMPSON, Winston-Salem, N. C., assignor of one-half to John L. Berrier, Winston-Salem, N. C. Filed Mar. 9, 1920. Serial No. 364,566. 11 Claims. (Cl. 95—73.)



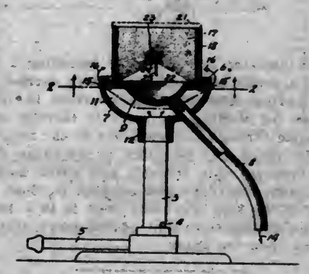
1. A photographic printing machine provided with a rearwardly slanting front having a light transmitting opening therethrough, light transmitting means at said opening, a rockable clamp member having two wings in acute angular relation, with one wing normally underriding the lower edge of the light transmitting means and the other wing in engagement with the front face of the light transmitting means close to its lower edge, a chute leading from the clamp plate downwardly, a rockable shelf below the clamp plate and normally engaging the latter, and means connected to the shelf and accessible from the front of the machine for rocking the shelf.

1,484,798. SEATLESS VALVE. JAMES ROBERT SMITH, Mechanicsville, N. Y. Filed Apr. 17, 1922. Serial No. 553,901. 2 Claims. (Cl. 137—104.)



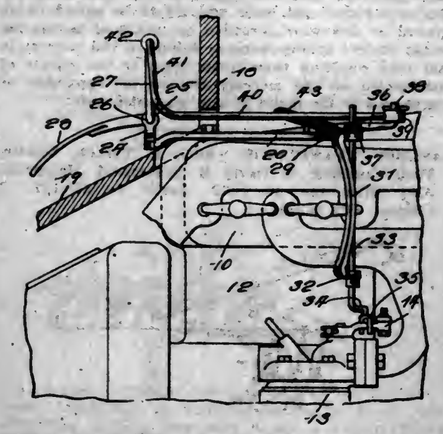
1. In a valve, the combination with a coupling, of a hollow nipple attached thereto which is provided with discharge ports, an arm connected to the coupling, a lever having a detachable pivotal connection to the arm

and provided with a set screw adapted to engage the arm when the lever is moved, and a valve pivoted to the lever and telescoping over the nipple, said valve being provided with packing bearing on the nipple and arranged



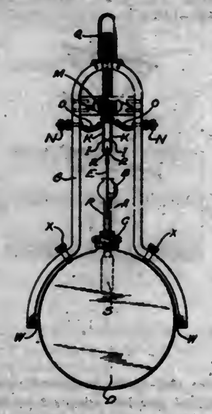
and adapted to cover and uncover the ports of the nipple, the extent of the uncovering of the ports by the valve being regulated by the engagement of the set screw with the arm.

1,484,799. WIRE-LINE SPOOLER. FRED SQUIRE, Wellington, Kans. Filed Dec. 20, 1922. Serial No. 607,972. 4 Claims. (Cl. 242—85.)



1. In a device of the character described, a support comprising a pair of standards, each standard being composed of a pair of spaced open frames, cross bars slidably mounted within the frames, bearing blocks carried by said cross bars, a shaft revolvably mounted in said bearing blocks, aid means for elevating said cross bars.

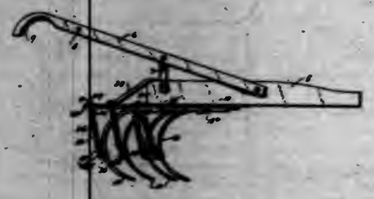
1,484,800. DENTAL APPLIANCE. JACOB J. STARK, Brooklyn, N. Y. Filed Dec. 5, 1922. Serial No. 605,133. 4 Claims. (Cl. 22—73.)



1. In an appliance for drying out a dental mold and fusing and flowing out the cavity-form, the combination of a structure including a plate for supporting the mold, drainage means carried by the structure for the fluid from the fused cavity-form, fuel-discharging means carried by the structure along a circumferential line surrounding the upper portion of the drainage means and constituting a burner for heating the mold and simultaneously heating the draining means.

1,484,801. ACCELERATOR. GEORGE STEWART, Brownsville, Pa. Filed July 25, 1923. Serial No. 653,699. 5 Claims. (Cl. 74—39.)

1. A throttle control for engines having a carburetor provided with a throttle shaft and a throttle arm carried by the shaft, comprising a frame adapted to be secured to the head of the engine having an angular extension overlying the carburetor, the angular extension being provided with a depending arm, the arm and extension having vertically aligned bearings, a shaft directed through said bearings and having at its lower end an offset fork portion the arms of which embrace the throttle arm, and foot operated means for rotating said shaft in one direction and a spring for rotating the shaft in the opposite direction.

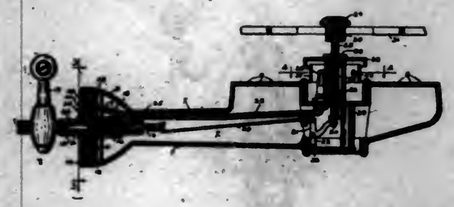


1,484,802. THERMOSTAT. GEORGE F. TAYLOR, Washington, D. C., dedicated, by mesne assignments, to the citizens of the United States of America. Filed Dec. 13, 1923. Serial No. 680,473. 1 Claim. (Cl. 297—3.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A thermostat consisting of a frame, a tube and an expansion bulb supported by said frame, said tube having an enlargement at its upper end and a rubber sack at its lower end, a spherical piston fitting loosely into said tube, a stem attached to said piston at its lower end and extending upwardly through said tube, said expansion bulb adapted to enclose said sack, said lower portion of said tube containing mercury, a small air space pro-

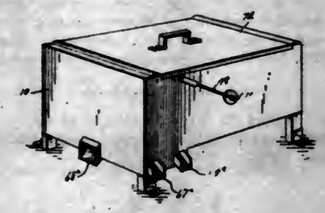
vided in said tube around said piston, said sack and lower end of said tube being hermetically sealed into said expansion bulb, said expansion bulb containing liquid, said piston and stem adapted to be moved in an upward or downward direction by means of motion imparted thereto by the rising or falling of the mercury in said tube resulting from compression or the release of compression on the mercury due to the expansion or contraction of the liquid in said expansion bulb.

1,484,803. CULTIVATOR. SILAS P. TAYLOR, Loretto, Tenn., assignor to David E. Sutherland, Haleyville, Ala. Filed Jan. 18, 1922. Serial No. 530,117. 3 Claims. (Cl. 97—175.)



1. A cultivator of the character described comprising a beam, a supporting member carried by the beam, auxiliary supporting members carried by said first mentioned supporting member, holding members carried by the first mentioned supporting member in spaced relation to the auxiliary supporting members, cultivating implements carried by the auxiliary supporting members, means carried by said implements and engaged with the auxiliary supporting members for holding said implements in various adjusted positions, a rod connected to each of the implements remote from the portion of the implements connected to the auxiliary supporting members, said rod being movable through openings provided in the holding members, springs surrounding said rods and engaged with the lower face of the holding members, said holding members being adjustably connected to the first mentioned supporting member.

1,484,804. SIGNPOST. CURT LINDSEY TERRY, El Paso, Tex. Filed July 27, 1923. Serial No. 654,235. 1 Claim. (Cl. 40—145.)



A device of the character described comprising a post having a cylindrical portion adapted to be set in a concrete base and a flat portion projecting above the circular portion provided with a rib at its rear face, transverse bars secured to the flat face of the post in spaced relation, triangular panels removably connected to the transverse bars, said bars having their ends sheared off coincident to the inclination of the sides of the panels, and a bar secured transversely to the flat portion of the post and below the panels providing means for displaying directional indicia.

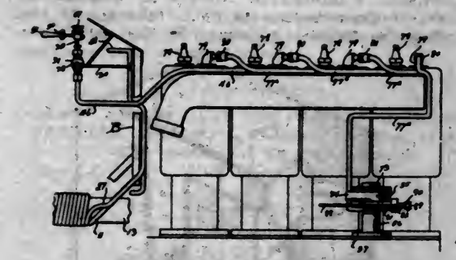
1,484,805. AUTOMATIC-LIGHTING GAS-STOVE BURNER. JAMES WHALEN, Omaha, Nebr., assignor to Oscar L. Ford, Omaha, Nebr. Filed Oct. 1, 1921. Serial No. 504,655. 1 Claim. (Cl. 126—52.)

In a gas stove burner, a burner-body having a mixing-tube extending horizontally therefrom and a housing at the upper central portion of the body, said housing having a lateral opening, a hood disposed over the housing in spaced relation thereto and having a depending marginal flange extending below the upper edges of the housing, a gas-supply pipe connected with the mixing-tube, a main valve controlling admission of gas from said supply pipe to the mixing-tube, a spring normally holding said main valve in closed position, a vertically movable push-rod extending through the hood and housing into the burner-body, means inclosed within the burner-body and mixing-tube and connecting the push-rod and main valve whereby to open the latter when the push-rod is depressed, a pilot-burner inclosed by the housing and hood and adapted to direct a flame-jet through the lateral opening of the housing, a tube extending from said pilot-burner through the mixing-tube to the gas-supply pipe, an adjusting-valve for regulating the normal flow of gas to the pilot-burner, and means controlled by the main valve for increasing the flow of gas to the pilot-burner when the main-valve is opened.

1,484,806. COIN SEPARATOR AND ASSORTER. ADDEN H. YOUNG, Nashville, Tenn. Filed Apr. 14, 1923. Serial No. 632,069. 14 Claims. (Cl. 133—3.)

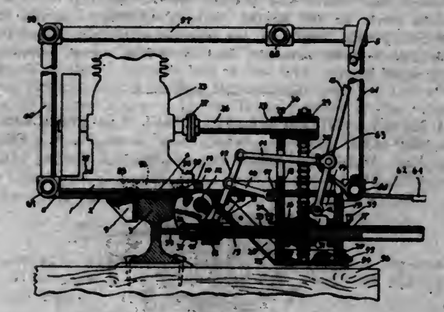
1. A coin assorter and separator including a supporting frame, a series of superposed trays carried therein, the trays having differential perforations in their bottoms, means for shaking the trays to thereby cause the coins to joggle through the apertures in the trays, means whereby the trays may be tilted to discharge the coins from the forward ends thereof, and gates mounted in connection with the trays and adapted to close the forward ends of the tray when the tray is in a horizontal position, the tilting movement of the trays acting automatically to open the gates.

1,484,807. CUFF BUTTON. DANIEL N. BAKER and JOSEPH PARISEAU, North Attleboro, Mass., assignors to W. G. Clark & Co., Inc., North Attleboro, Mass., a Corporation of Massachusetts. Filed July 2, 1923. Serial No. 648,966. 3 Claims. (Cl. 24—110.)



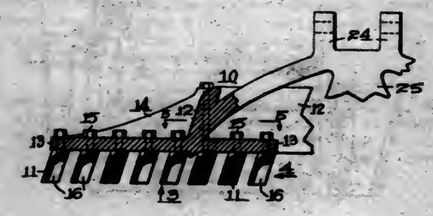
1. The separable button above described, comprising a lock member, made up of a plate; an upstanding standard carrying a box having a bolt opening in its cover; a socket member fitting the interior of the box; a pair

of spring-pressed locking jaws having extensions to fit movably within the sockets of the socket member; a wedge member actuated through the wall of the box, its



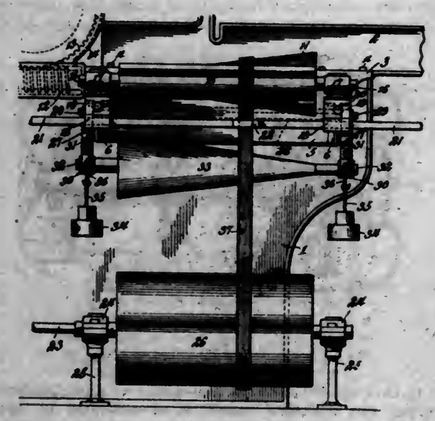
inner end adapted when pressed inward to spread the jaws; a cooperating bolt member made up of a plate and an upstanding standard having a wedging head.

1,484,808. CHARGE FORMING AND CONTROLLING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. GEORGE WILTON BARTLETT, Tacoma, Wash., assignor of one-half to Herman C. Cronkrite, Tacoma, Wash. Filed Jan. 15, 1921. Serial No. 437,515. 6 Claims. (Cl. 123—25.)



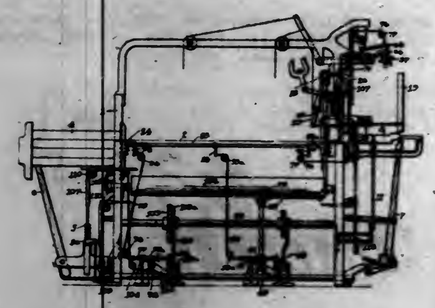
1. The combination with an internal combustion engine, of a mixing chamber connected to separate sources of water, air and fuel all under pressure, a distributer having means for intimately mixing the components of the charge and having pipes connected to the individual cylinders of the engine and discharging a charge successively into the several cylinders, the distributer being operatively connected to the mixing chamber.

1,484,809. DRILLING MACHINE. CHESLEY B. CARGILL, St. Paul, Minn. Filed July 7, 1921. Serial No. 482,931. 1 Claim. (Cl. 77—9.)



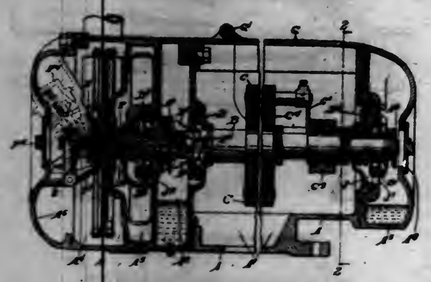
A track drill of the character described comprising a carriage arranged to normally rest upon a track rail, means for clamping said carriage against movement relative to said rail at will, a power driven drill mechanism having a drill spindle arranged for longitudinal movement to and away from said rail, a protecting guide sleeve for receiving said drill spindle when not extending toward said rail, an adjustable horizontal auxiliary support for said carriage arranged to rest upon the ties or ground adjacent to said rail, and rollers rotatably mounted on said carriage out of normal engagement with said rail and arranged to engage said rail when said carriage is tilted in the direction of the longitudinal axis of said rail.

1,484,810. STONE-SURFACING WHEEL. ELROY A. CHASE, Northfield, Vt. Filed Feb. 14, 1922. Serial No. 536,533. 5 Claims. (Cl. 51—209.)



1. A stone surfacing wheel having, in combination, a frame comprising an upwardly extending flange, arms projecting radially from said flange, a driving attachment, arms connecting said attachment to said flange, and a plurality of grinding rings secured to the under side of said radial arms, each connecting arm being progressively and substantially thickened from its leading edge to the rear edge and having its lower face downwardly inclined rearwardly.

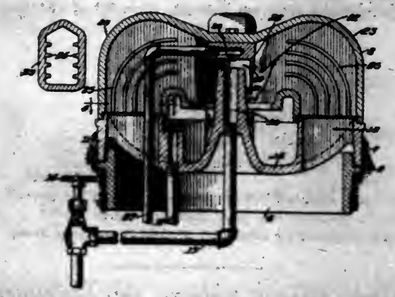
1,484,811. BELT TIGHTENER FOR VARIABLE-SPEED MECHANISM. JAMES OSCAR CORN, Columbia, S. C. Filed June 23, 1922. Serial No. 570,378. 4 Claims. (Cl. 64—5.)



1. In variable speed mechanism, the combination with a pair of spaced horizontal pulleys having parallel axes on the same horizontal plane, one of said pulleys constituting an idler, the other pulley being cone-shaped and having connections for imparting motion, a drive pulley located below the pair of pulleys, a belt automatically shiftable longitudinally of the pulleys and passing beneath the drive pulley and upwardly on the outside of and over the said pair of pulleys, of a gravity-actuated, cone-shaped pulley, reversely arranged to the first-named conical pulley and located beneath the space between the pair of pulleys and engaging a downwardly extended loop portion of the belt to automatically take up slack in the belt.

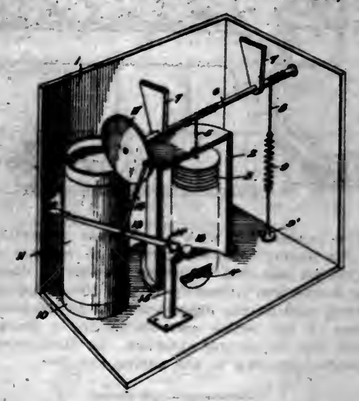
1,484,812. WEFT-REPLENISHING LOOM. RANDOLPH CROMPTON and GEORGE CROMPTON, Jr., Worcester, Mass. Filed July 7, 1922. Serial No. 573,357. 16 Claims. (Cl. 139—232.)

1. In a loom, a lay provided with sets of shiftable shuttle boxes at opposite ends thereof, one set of boxes being movable on the lay in substantially the same direction that the lay moves, and automatic means to cause replenishment of filling in a shuttle in substantially a vertical plane in any one cell of the last named set of boxes.



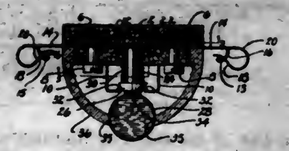
1,484,813. TURBOGENERATOR. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 9, 1920. Serial No. 402,252. 10 Claims. (Cl. 290—52.)

1. In a turbo generator assembly, a multichambered casing, the chambers thereof being separated by apertured walls, a shaft mounted in said casing and adapted to pass through the apertures of said walls, a plurality of rotating and non-rotating parts mounted on said shaft, the apertures of said walls being adapted by their size to permit the axial removal of said shaft and parts as a unit through the end of said casing.



1,484,814. OIL AND GAS BURNER. LEE G. DANIELS, Rockford, Ill. Filed Jan. 17, 1922. Serial No. 529,824. 14 Claims. (Cl. 158—91.)

1. In a liquid fuel burner, the combination of a cone burner, a central fuel supply passage therein, whereby the fuel flows over the top and down over the periphery of the cone burner, a gas supply hood embracing the top of the cone burner and leaving a peripheral opening about the same, and a gas supply pipe entering said



hood from one side thereof, whereby a gas flame will be delivered downwardly peripherally about the cone burner.

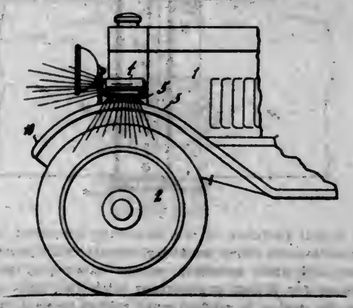
1,484,815. BAROGRAPH. GEORGE DE BOTHEZAT and IVAN I. EREMEEFF, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,198. 5 Claims. (Cl. 234—20.)

1. In a barograph, an air tight casing, a flexible bellows therein in constant open communication with the atmosphere, a rotatable shaft, a flexible connection between said shaft and flexible bellows serving to rotate said shaft as the flexible bellows contracts, means for rotating said shaft in the reverse direction when the flexible bellows expands, and recording means operable by said shaft.

1,484,816. THERMOSTATIC CIRCUIT-CONTROLLING DEVICE. JOHN H. DERBY, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,291. 1 Claim. (Cl. 200—142.)

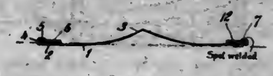
A thermostatic electric circuit controlling device comprising a quartz cell substantially filled with carbon tetrachloride, electric circuit terminals, a circuit closing member spring-pressed toward circuit closing relation to said terminals, and a support for said cell arranged to cause said cell to maintain said circuit closing member out of circuit closing relation to said terminal.

1,484,817. ANCHORING DEVICE. AUGUST DINKLAGE, East Orange, N. J. Filed Aug. 16, 1922. Serial No. 582,276. 12 Claims. (Cl. 238—330.)



12. A creep check device comprising a movable flap, the swinging end of the flap having a recess shaped to conform to the rail base edge.

1,484,818. PROCESS OF MAKING SODIUM SULPHITES. VIGGO DREWSEN, Larchmont, N. Y., assignor to West Virginia Pulp and Paper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,367. 14 Claims. (Cl. 23—18.)

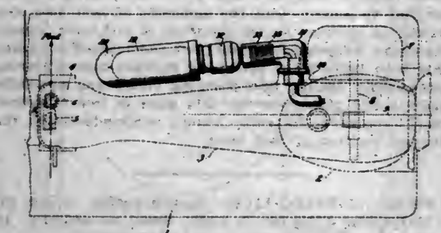


12. The process of making sodium bisulphite which comprises reacting on magnesium bisulphite with sodium chloride to form sodium bisulphite.

1,484,819. SAFETY LAMP FOR FENDERS OF MOTOR VEHICLES. WINFIELD L. DUBLIN, Tyler, Tex. Filed Oct. 17, 1922. Serial No. 595,093. 1 Claim. (Cl. 240—7.)

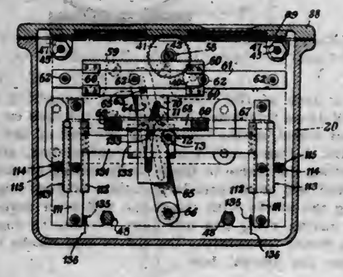
A motor vehicle lamp, including a relatively long cylindrical body, means connected to the bottom of the body and formed for connection to the front fender of an automobile to support the body in a substantially horizontal plane, a circular lens in the front end of the body, an elongated lens having substantially parallel top and bottom sides disposed in the lower portion of the outer side of the body and arranged at an incline so as to throw the light rays onto the outer side of the fender, and a lamp extending into the body from the inner side thereof and arranged at an incline and in a plane substantially parallel to the plane of the elongated lens.

1,484,820. ACOUSTIC DIAPHRAGM. HARRY L. DUNCAN, Mahwah, N. J. Filed Mar. 31, 1919. Serial No. 286,351. 10 Claims. (Cl. 181—32.)



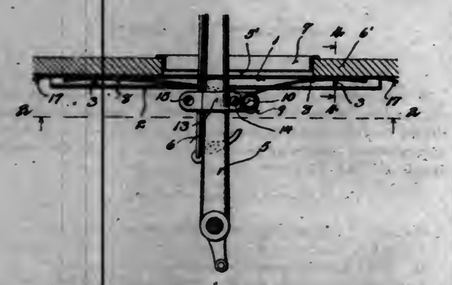
9. The acoustic diaphragm comprising outer portions which have been distorted from a substantially definite wavy form to impart radial tension to inner portions of the diaphragm.

1,484,821. DIAPHRAGM. HARRY L. DUNCAN, Mahwah, N. J. Filed Apr. 2, 1919. Serial No. 286,958. 6 Claims. (Cl. 181—32.)



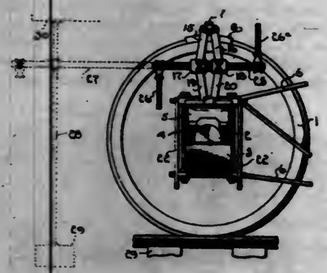
6. The acoustic diaphragm, the edge portions of said diaphragm being adapted to exert a radial tensioning action on the central portions and a transversely extending intermediate stiffening member formed in said diaphragm inside of and adjacent its edge portion.

1,484,822. LIGHTING DEVICE FOR SEWING MACHINES. BERNARD ELSHOFF, Elizabeth, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 23, 1922. Serial No. 531,026. 7 Claims. (Cl. 240—2.)



1. A lighting device comprising a support adapted for attachment to the gooseneck of a sewing machine, a spring connected to said support, a lamp-socket and bulb connected to said spring and disposed horizontally, and a fulcrum support for said lamp-socket adjacent said spring.

1,484,823. CALCULATING INSTRUMENT. HANNIBAL C. FORD, Jamaica, N. Y. Filed Feb. 24, 1921. Serial No. 447,452. 22 Claims. (Cl. 235—61.5.)

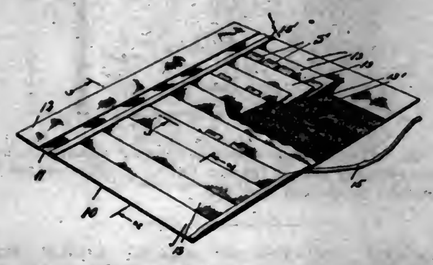


3. In a calculating instrument, the combination of a cam member having the general curvature of a curve of a chart plotted with respect to mutually perpendicular coordinate axes, a slidable member, a connection between the cam member and the slidable member, a guide for the slidable member, means for displacing the cam member in accordance with one coordinate of a point on the chart, means for moving the guide to displace the slidabe member in accordance with another cordinate of a point on the chart to shift the cam member accordingy, and means for indicating the resultant displacement of the cam member.

1,484,824. SLOT GUARD FOR AUTOMOBILE LEVERS. CHARLES H. GAULKE, Milwaukee, Wis. Filed Dec. 23, 1922. Serial No. 608,779. 3 Claims. (Cl. 74—81.)

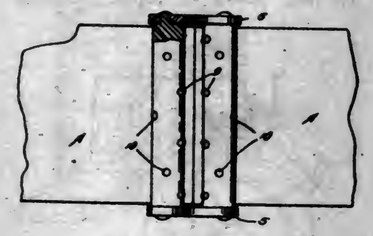
1. A slot guard adapted for attachment to an automobile lever beneath the floor, said guard comprising a plate adapted to contact with the underside of said floor and having an aperture for the reception of said lever, clamping means independent of said plate and adapted to engage said lever beneath the plate, and resilient means bearing downwardly against said clamping means and upwardly against said plate, whereby said plate is free to adjust itself throughout its entire extent independently of the angular position of said lever.

1,484,825. LIFTING JACK. JOSEPH JOSEPH GLATT, St. Marys, Pa. Filed Dec. 9, 1922. Serial No. 605,919. 15 Claims. (Cl. 254—34.)



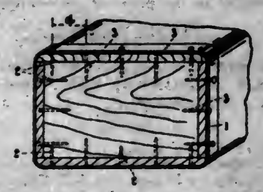
15. A jack of the class described comprising a lever adapted to be fulcrumed intermediate its ends on the rim of a car wheel, means connecting one end of the lever to the axle, a frame embracing the journal box, means for connecting the frame to the lever including blocks having right and left hand threads, and links of fixed length connecting the blocks with the frame and lever respectively, a rod having right and left hand threads to engage the blocks, means for rotating the rod in said blocks to thereby raise the journal box.

1,484,826. PROCESS OF PRODUCING POLYFATTY-ACID ESTERS. ERNST ZOLLINGER, Zurich, Switzerland, and ADOLF GRÜN, Aussig, Czechoslovakia. Filed Mar. 25, 1921. Serial No. 455,516. 7 Claims. (Cl. 87—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The process of producing esters of the so-called oxy-fatty acids, which consists in polymerizing oxy-fatty acids and then heating the polymerized acids with ricinoleic acid esters to a temperature over 200° C., but insufficient to decompose the bodies, thereby converting oxy-fatty acids into esters.

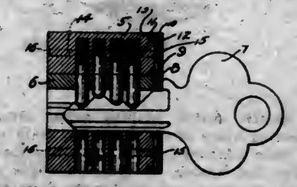
1,484,827. STOCK SHEET FOR POSTAGE STAMPS OR THE LIKE. ORAH HEEND, Brooklyn, N. Y., assignor to Elbe File & Binder Co. Inc., a Corporation of New York. Filed Dec. 10, 1921. Serial No. 521,480. 1 Claim. (Cl. 129—20.)



A stock sheet for postage stamps or the like having a plurality of pockets made of parallel strips overlapping one another and attached to said sheet so that the upper edge of the unattached portion of each strip does not extend beyond the upper edge of the attached portion of the underlying strip, for the purpose specified.

1,484,828. BELT FASTENER. DAVID HUGHES, Butte, Mont. Filed Sept. 1, 1923. Serial No. 660,498. 1 Claim. (Cl. 24—31.)

In a belt fastener of the character described, a pair of plate elements, roller members eccentrically journaled between said plate members, means carried by said roller members for biting engagement with the ends of a belt when the device is applied, said rollers being formed with sockets for the reception of a tool whereby the same may be rotated to a position for engaging said pins within the ends of said belt.

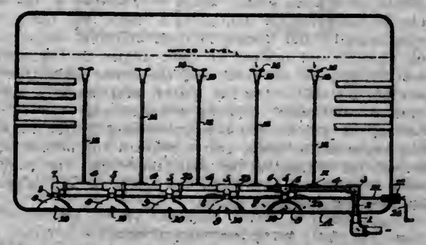


1,484,829. BOX OR CONTAINER FOR USE IN THE CONVEYANCE OR TRANSPORT OF GOODS OR MERCHANDISE. GUSTAV HUGUENIN, Cham, Switzerland, assignor to Nestle and Anglo-Swiss Condensed Milk Company, Cham, Switzerland, a Corporation of Switzerland. Filed Oct. 19, 1922. Serial No. 595,691. 5 Claims. (Cl. 217—69.)

1. In securing metal fittings, binding bands or strips to boxes or containers for the conveyance or transport of goods or merchandise, the herein described method which consists in welding together the said fittings and the heads

of their securing pins or nails which comprise thick and spreadable coniform heads and depending tapering shanks whereby an integral union is effected and a flat, smooth and uninterrupted surface presented with no projection of any kind.

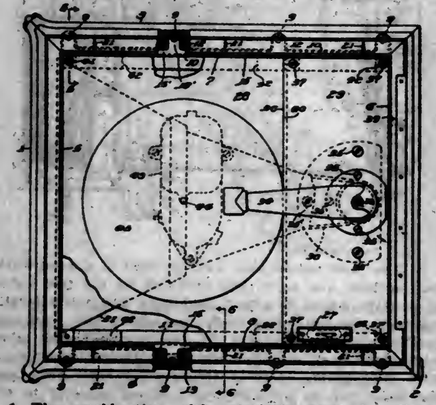
1,484,830. DRILLPROOF CYLINDER LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 19, 1923. Serial No. 626,051. 5 Claims. (Cl. 70—47.)



1. In a cylinder lock, a cylinder, a plug rotatable therein, a hardened steel face plate for said cylinder and plug and rotatably secured to said cylinder and rotatable with said plug, said plug and said face plate having registering key slots therein, and means to hold said face plate and plug against independent rotation relatively to each other to insure continuous registration of the key slots in said members.

1,484,831. DRILLPROOF CYLINDER LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 19, 1923. Serial No. 626,052. 6 Claims. (Cl. 70—47.)

1. In a cylinder lock, a cylinder, a plug rotatably mounted therein, an armor face plate on the front of said cylinder, a ferrule fitting over said armor face plate and secured to said cylinder for securing said face plate to the cylinder but permitting relative rotation thereof on the cylinder, said face plate and said plug having registering key slots therein.



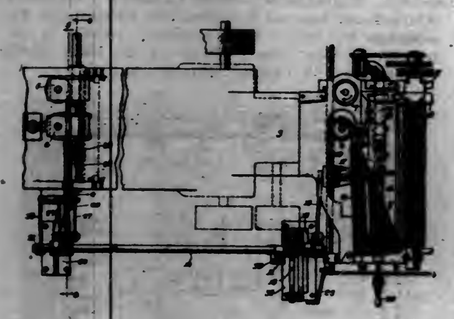
1,484,832. BOILER CLEANER. PERCIVAL H. KAUFFMAN, New Orleans, La. Filed Nov. 14, 1921. Serial No. 514,987. 5 Claims. (Cl. 122—381.)

1. In a boiler cleaning device, the combination of a series of inverted cup members adapted to rest on the bottom of the boiler, and having angular flanged openings near their edges, a blow-off pipe, connections between the blow-off pipe and the cup members, a valve associated with each cup member, an operating arm for each valve, and a rotatable rod lying adjacent said cup members and having cam projections to engage said operating arms and open said valves in sequence.

3. In a boiler cleaning device, the combination of a blow-off pipe, a vertical pipe communicating therewith, a skimmer cup carried by the upper end of said pipe, and a spiral member formed of flat material supported within said cup by wings resting upon the edge of the cup, and having a flat tail within said pipe, whereby the rotation of the spiral member keeps the pipe clear.

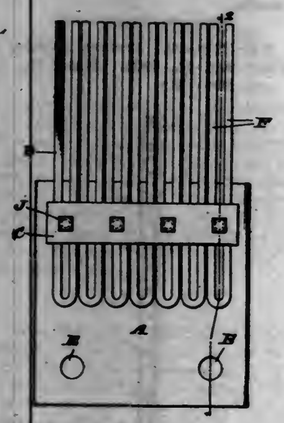
1,484,833. TALKING-MACHINE CABINET. EUGENE T. KIEFFER and WILLIAM B. STEVENSON, Philadelphia, Pa., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 23, 1922. Serial No. 596,201. 17 Claims. (Cl. 45—52.)

1. The combination with relatively vertical walls of a talking machine cabinet, the inner faces of an opposite pair of the said walls being provided each with a relatively horizontal groove therein, of a pair of bars, substantially Z-shape in transverse cross-section, for each side wall, each bar having one of its flanges fitting into the groove in a wall, its web fitting against the inner face of said wall, and its other flange extending outwardly from said face of said wall, and a horn-board and a motor-board supported on said outwardly extending flanges.



1,484,834. FENCEPOST. EDWARD LABENS, Humphrey, Nebr. Filed Mar. 13, 1923. Serial No. 624,720. 2 Claims. (Cl. 256—58.)

1. In a fence post of substantially T-shape in cross section, guide flanges formed upon the sides of the front face of the post, a strip freely slidable between said

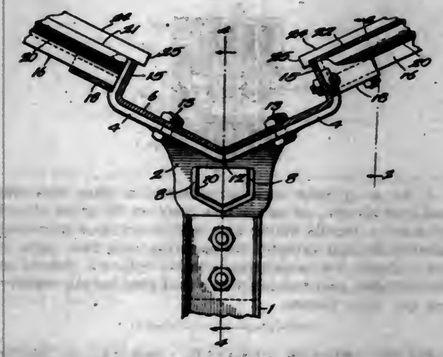


guide flanges and having its central portion bulged outwardly, said strip adapted to have secured thereto, the panels or wire strands, and means for limiting the downward sliding movement of said strip between the guide flanges.

1,484,835. ADJUSTMENT FOR WOODWORKING MACHINES. FRANKLIN L. LANE, Beloit, Wis., assignor to P. B. Yates Machine Company, Beloit, Wis., a Corporation of Wisconsin. Filed Sept. 18, 1920. Serial No. 411,252. 13 Claims. (Cl. 144—14.)

1. The combination with a cutter head of a wood working machine and a vertical feed roll of the feed table, of positive means to adjust said head and roll laterally together through equal distances across the work-supporting surface presented by the machine and table, whereby the roll may be moved into lateral engagement with successively entering boards of various sizes and the head will, as a consequence, be set properly to cut each board.

1,484,836. MEANS FOR REMOVING HAIR AND SCURF FROM HOG CARCASSES. ROBERT B. LEEPER, Denver, Colo., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed July 13, 1923. Serial No. 651,417. 1 Claim. (Cl. 17—18.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

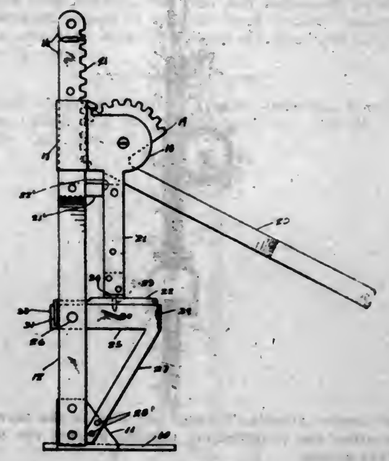


An attachment for a hog cleaning machine, comprising a section of rubber belting, sections of steel wire cables, a metal plate, bolts passing through said plate, between the sections of steel wire cables and the rubber belting for holding said cables in fixed position on said rubber belting, the ends of said cables extending beyond the outer end of said belting, and means for fastening said belting to the rotatable arms of the hog cleaning machine.

1,484,837. AUTOMOBILE SIGNAL CONTROL. JOSEPH LUSTIG, North Milwaukee, Wis. Filed June 3, 1922. Serial No. 565,525. 2 Claims. (Cl. 200—168.)

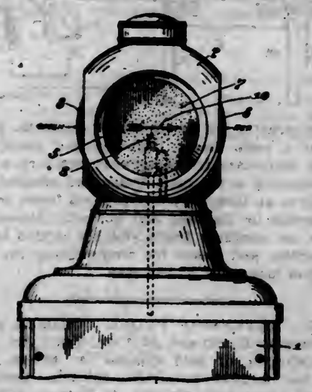
1. An electric switch adapted to be attached to a spoked steering wheel of an automobile, said switch comprising a plate adapted to span the space between adjacent spokes and having down-turned edges adapted to overhang such spokes, switch elements carried upon the upper side of said plate, a housing carried upon the under side of said plate, a pair of plungers projecting in opposite directions through said housing, a cam member positioned within said housing and adapted to be controlled by a key to force said plungers outwardly into engagement with the under side of said spokes, and yieldable means for urging said cam member into plunger projecting position.

1,484,838. GREENHOUSE GUTTER. PHILIP L. MCKEE, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 500,256. 1 Claim. (Cl. 108—25.)



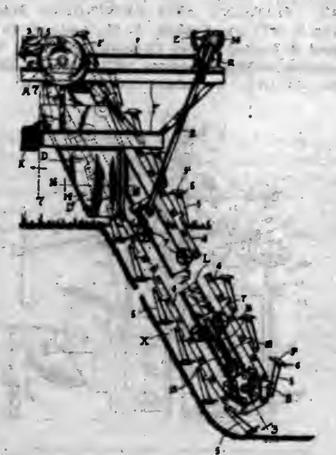
In a greenhouse the combination, with the sloping rafters, of a main gutter which is V-shaped at the bottom for collecting the drip along a single line, the gutter being metallic and having integral marginal flange sloping upward and inward at right angles to the rafters and forming an abutment for the lower ends thereof, brackets for supporting the gutter, said brackets having branches extending obliquely outward and upward for seating the gutter, and a supplemental gutter running lengthwise of the main gutter beneath the bottom apex thereof for collecting the drip therefrom, the bracket being transversely apertured for receiving and supporting said supplemental gutter.

1,484,839. DEVICE FOR CUTTING VEGETABLES. JAMES MACQUILLAN, Chicago, Ill. Filed June 20, 1923. Serial No. 646,591. 7 Claims. (Cl. 146—169.)



1. A slicing device including a support provided with a rack, a member mounted for movement along the rack,

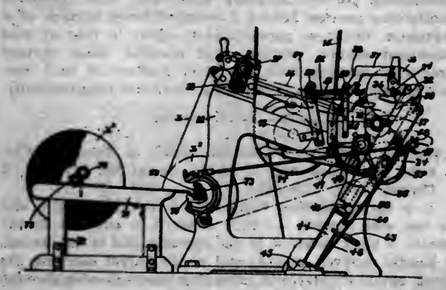
a member having an operating handle and toothed portions for engagement with the rack carried by the member,



cutting means carried by the support, and a member carried by and movable with the first named member adapted to co-operate with said cutting means.

1,484,840. ONE-WAY-STREET TRAFFIC SIGNAL. ELOY H. MEDEN, Short Hills, N. J., assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 17, 1922. Serial No. 568,977. 1 Claim. (Cl. 240—22.)

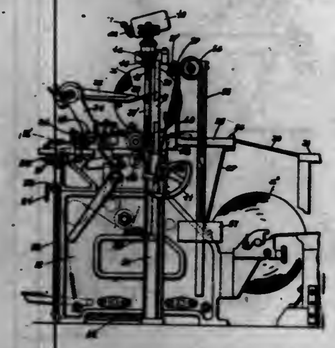
In a one-way street traffic signal, the combination of a hollow head portion having openings therethrough arranged in ninety degree relation with respect to each other, light transmitting means in and closing two of the said openings which are situated in opposed relation to each other, one of the said light transmitting means being of a color to arrest traffic moving toward the same and the other being of a color to permit the forward movement of traffic moving toward the same, sheets of light transmitting material situated in and closing the other two openings, said sheets having means thereon to indicate the direction in which vehicular traffic may move, the outer peripheral edges of said lenses and said sheets being situated inwardly of the walls of the said head, and lighting means within the said head, substantially as and for the purpose described.



1,484,841. TRENCH EXCAVATOR. FRANK J. MONAHAN, Joliet, Ill., and WALTER FERRIS, Milwaukee, and WERNER LEHMAN, South Milwaukee, Wis., assignors to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 21, 1918. Serial No. 267,763. 16 Claims. (Cl. 37—86.)

2. In a digging mechanism, a polygonal tumbler and excavating chain thereover, the chain links being arranged to rest upon and fit corresponding tumbler faces, said tumbler faces being adjustable, and means for adjusting them to compensate for wear in the working parts.

8. In an excavating machine, a chain having projecting buckets, the elements of whose inner surfaces are circular arcs, upper and lower tumblers about which the chain travels, and a scraper associated with the upper one, the diameter of the upper tumbler being such that as each successive bucket passes around it, the curved inner surface of the bucket is coaxial with said upper tumbler, the diameter of the lower tumbler being such that as successive buckets pass around it, their curved surfaces are inwardly and rearwardly inclined from the circle described by their cutting edges.



1,484,842. SLITTING AND REWINDING MACHINE. HAROLD E. NICHOLS, EDWARD J. O'CLAIR, and WINTHROP L. PERRY, Nashua, N. H., assignors to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed May 7, 1923. Serial No. 637,054. 18 Claims. (Cl. 242—65.)

7. In a machine of the character described, a carriage having bearings for a winding arbor, a pneumatic motor for elevating the carriage from a lower to a higher position, means for starting winding of sheet material on the

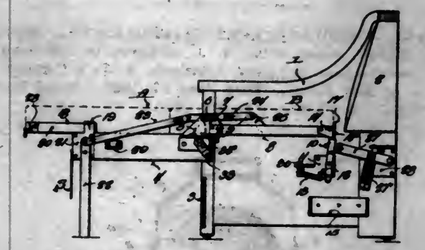
arbor while the carriage is in a lower position, an upper cradle comprising a pair of smooth parallel bars provided with means for relatively adjusting them, and a track for directing a completed set of coils from the carriage to the cradle.

1,484,843. SLITTING AND REWINDING MACHINE. EDWARD J. O'CLAIR, Nashua, N. H., assignor to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed May 7, 1923. Serial No. 637,041. 6 Claims. (Cl. 242—66.)

4. In a slitting and re-winding machine having a vertically movable frame provided with a pressure roll to bear on the coils, rack bars connected with the frame, a rack at one side of the frame, a cylinder having a piston from which the last mentioned rack extends, connections for supplying the cylinder with compressed air, and a shaft having pinions meshing with said rack bars and with the rack which extends from the cylinder.

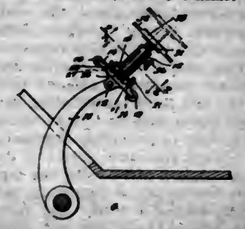
1,484,844. METAL BICYCLE-WHEEL RIM. WILLIAM B. OLLE, Racine, Wis. Filed July 2, 1923. Serial No. 649,102. 1 Claim. (Cl. 301—97.)

A cast metal bicycle wheel rim comprising a body portion having a uniform peripheral channel upon its outer side for the reception of a tire and having a substantially triangular cross section the base of which is concave and with its apex directed inwardly of the rim and with a thickened central portion, said body portion having a hole for the reception of the tire nipple and having a thickened reinforcing portion adjacent said hole, said thickened reinforcing portion having a rounded inner surface of a maximum thickness approximately equal to that of said thickened central portion, said rounded inner surface gradually merging into the inner surface of said rim, and having a gradually changing curvature longitudinally.



1,484,845. SPRING HAMMER. JOHN H. PHILLIPS, Chicago, Ill. Filed Aug. 1, 1918. Serial No. 247,855. 2 Claims. (Cl. 125—33.)

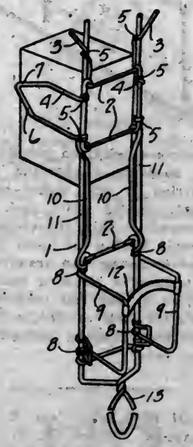
1. A spring hammer comprising a barrel having a slot in one side thereof, a chuck received in one end of the barrel, a block received in the opposite end of the barrel, a handle received on that end of the barrel carrying the block, single transversely extending means passing through the handle, barrel and block for securing the handle and block to the barrel, a reciprocating member mounted in the barrel between the chuck and block, a coiled spring received in the barrel for normally holding the reciprocating member in engagement with the chuck, one end of the spring engaging the end of the reciprocating member and the opposite end engaging the block,



and means extending through the slot in the barrel for operating the reciprocating member against the tension of the spring.

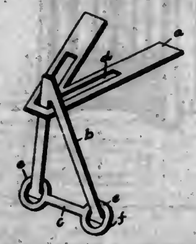
1,484,846. DAVENPORT. JOHN M. RICHARDSON, Milwaukee, Wis. Filed Feb. 27, 1923. Serial No. 621,562. 8 Claims. (Cl. 5—31.)

1. In a structure of the character set forth, the combination of a main frame including end standards connected by stationary front and rear members, a seat pivotally connected to the main frame and adapted to swing outwardly to an inverted position, a bed frame section pivotally carried by the seat and normally housed beneath the same, an auxiliary frame slidably carried by the bed frame section, and means for reciprocating the auxiliary frame upon movement of the seat.



1,484,847. EXTENSION PEDAL. CHARLES A. RIVERS and FRANCIS B. STUART, El Paso, Tex.; Ara M. Rivers administratrix of said Charles A. Rivers, deceased. Filed Jan. 3, 1919, Serial No. 269,488. Renewed Jan. 30, 1922. Serial No. 532,900. 6 Claims. (Cl. 74—81.)

4. In combination with an automobile pedal having an oscillating movement about a transverse shaft, a plate lying flat against the upper face of the pedal and having



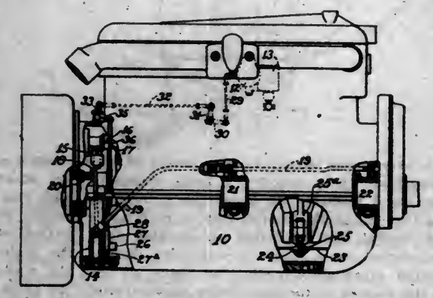
means to removably secure the same in place thereon, a tubular post interiorly threaded and reinforced at its base rising from the plate at a central portion of the pedal, a threaded stem entering the post and adjustable axially therethrough, means to lock the stem against rotation, and an extension pedal carried by the stem but non-rotatable therewith.

1,484,848. SHELF TOOL. SAMUEL SHIELDS, Denoya, Okla. Filed Dec. 26, 1922. Serial No. 609,001. 1 Claim. (Cl. 294—23.)

A shelf tool comprising an elongated rectangular frame having a handle at one end and hooks at the other end; loop-like jaws pivoted below the hooks; operating loops pivoted above the handle; and connecting rods rigidly joining the pivotal points of the jaws and operating loops.

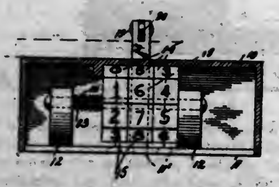
1,484,849. PUZZLE. ERNEST A. STOPPEL, Brooklyn, N. Y., assignor to Valentine & Company, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1922. Serial No. 544,715. 2 Claims. (Cl. 46—41.)

1. A puzzle consisting of a V-shaped member with an interior V-shaped slot and another V-shaped member having horizontal projections or crossbars in the extremities of its legs and a crossbar having looped or ringed ends through which the legs of the said second mentioned member extend, which said crossbar links said V-shaped members.



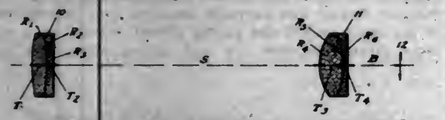
1,484,850. SHOT-HOLE-CLEARING TOOL. IVAN SVETKOFF, Clinton, Ind. Filed Aug. 11, 1923. Serial No. 656,772. 1 Claim. (Cl. 86—21.)

A shot hole clearing tool comprising rod sections which are semi-circular in transverse section and having flat diametrical surfaces, the sections overlapping each other with the flat diametrical surfaces in intermittent contact with each other, the band mounted upon one of the rod sections and completely circumscribing both of these sections at their overlapping portions, a band applied to the other rod section and extending around the exterior thereof and partially disposed over the exterior of the other section and having spaced extremities, a cam lever pivoted between the said spaced extremities and



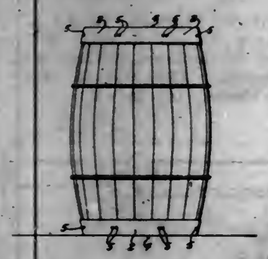
engageable with the last mentioned rod section to hold the sections in fixed relation and adjusted position with respect to each other, one of the rod sections being provided at its ends with an angularly disposed extremity and the other rod section being provided at its end with a transversely curved blade portion which may serve as a handle for the tool.

1,484,851. OILING SYSTEM. JOSEPH A. TARKINGTON and HERMAN D. PALMER, Hartford, Wis., assignors to Kissel Motor Car Company, Hartford, Wis., a Corporation of Wisconsin. Filed May 14, 1919. Serial No. 297,079. 3 Claims. (Cl. 184—6.)



1. A power plant having, in combination, a reservoir of lubricant, a pump supplying lubricant from said reservoir, a conduit carrying oil from said pump to the parts to be lubricated, a tube separate from said conduit and mounted on and connected to said pump and having an open end and a plurality of lateral apertures, and a rod entering the open end of said tube and adapted to slide therein.

1,484,852. REGISTER FOR COAL CARS OR THE LIKE. PAUL TRIEBEL, Jersey City, N. J. Filed Oct. 3, 1922. Serial No. 592,002. 4 Claims. (Cl. 40—68.)

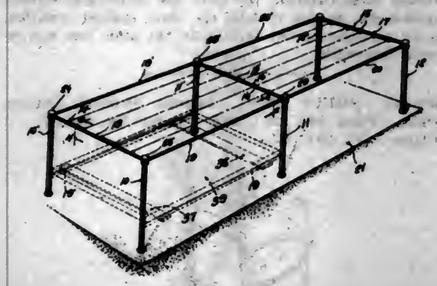


1. The combination with a receptacle, of a marking or numbering device, comprising a casing adapted to be fixed to said receptacle and having a removable wall, adjustable dial members supported in said casing and means pivoted to said wall and adapted to be acted upon by the contents of the receptacle to prevent access to said dial members.

1,484,853. PROJECTION LENS. ARTHUR WARMISHAM, Leicester, England. Filed Aug. 30, 1922. Serial No. 585,160. 5 Claims. (Cl. 88—57.)

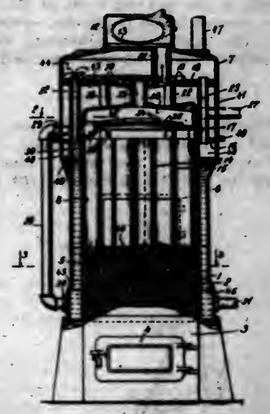
1. A projection lens of the Petzval type, comprising two convergent components so formed and positioned that the ratio of the back focal length of the lens to the equivalent focal length thereof is less than 35%.

1,484,854. COMBINED BARREL END AND HOOP. JOHN O. WILLSON, St. Joe, Ark., assignor to Helena Unit Hoop-Head Co., Helena, Ark., a Corporation of Arkansas. Filed Nov. 25, 1921. Serial No. 517,526. 1 Claim. (Cl. 217—76.)



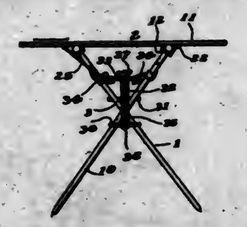
A barrel, comprising wooden staves of equal thickness throughout their length; a head stamped from sheet metal and formed with a central circular flat wall closing the end of the barrel body, a marginal extension of the central wall including an annular arch portion of the curved type, said arch portion having the walls thereof tapering inwardly, the space between the walls at the bottom of the arch being approximately the thickness of the barrel staves and the outer wall of the arch being extended to form a hoop; said arch and hoop being arranged to fit over the untapered ends of the staves and to be pressed thereon, thereby compressing the ends of the staves to form a seal between the staves and the arch portion of said extension; and retaining means formed in connection with the hoop for securing the head in position after it has been pressed to its seat on the ends of the barrel staves.

1,484,855. MOLD. BYRON A. WINN, Barber, Idaho. Filed Mar. 2, 1922. Serial No. 540,445. 7 Claims. (Cl. 25—41.)



4. A block mold comprising a face plate, a frame conforming substantially to the shape of the face plate, side and end members carried by the frame to mold the edges of a block, said side and end members being retractably mounted on the frame to be withdrawn from the edges of a block when molded, means to clamp a pallet on the top of a block mounted on the face plate, bearings by which the structure is mounted to be turned completely over when a block has been molded, and bearings by which the face plate is mounted to be removed to permit access to retract the side and end mold members.

1,484,856. CLOTHESLINE SUPPORT. BERNHARD F. ZILISCH, Watertown, Wis. Filed Feb. 9, 1923. Serial No. 617,907. 1 Claim. (Cl. 68—3.)



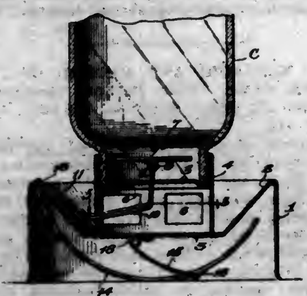
A device of the class described comprising a plurality of spaced socket members, a plurality of vertical supports slidably carried by said socket members and arranged in laterally spaced pairs and comprising end pairs and an intermediate pair, transverse and longitudinal braces detachably joining the upper portions of adjacent supports and including end transverse braces and an intermediate transverse brace, a plurality of attaching members carried by the end transverse braces and adapted to receive the ends of clothes lines, and a plurality of line guiding members carried by said intermediate transverse brace.

1,484,857. STEAM BOILER. CARL Z. ALEXANDER and EARL S. ALEXANDER, Newark, N. J. Filed Aug. 11, 1921. Serial No. 491,645. 14 Claims. (Cl. 122—40.)

1. A boiler comprising a substantially vertical corrugated cast metal fire pot water jacket having adjacent its inner surface a series of integral substantially vertical geyser tubes of restricted area extending to the outer wall of said water jacket, an enlarged geyser chamber communicating with the lower end of each of said geyser tubes and opening into said water jacket, a series of substantially horizontal steam chambers arranged above said fire pot water jacket, and having heating surfaces communicating with each other and with said water jacket, geyser tube connections connecting the upper ends of said geyser tubes with the upper steam chamber adjacent its periphery, a steam connection extending around said water jacket adjacent its upper end, connections between said steam connection and an upper steam chamber, and flue passages adjacent said steam chambers for the passage of gases from said fire pot.

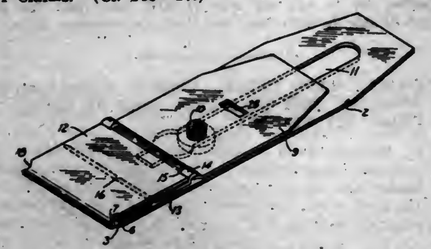
1,484,858. PORTABLE TABLE. EDWARD ALEXANDER, Seattle, Wash. Filed Jan. 6, 1923. Serial No. 611,005. 5 Claims. (Cl. 45—116.)

1. A collapsible table comprising a top and a support therefor, said top including a plurality of sections relatively foldable one upon another, a flexible member connecting said sections and permitting limited separation thereof, and means for taking up the slack in said flexible member to bring the top sections together and to clamp them upon the support.



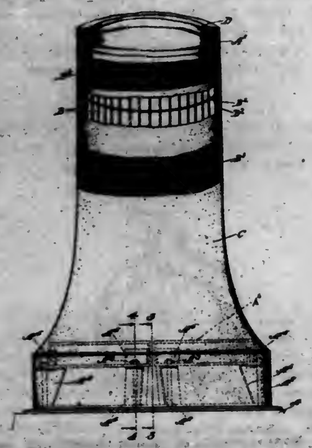
1,484,859. SHOCK ABSORBER. EVENDER S. AKER, Goshen, N. Y. Filed Nov. 17, 1922. Serial No. 601,450. 4 Claims. (Cl. 267—64.)

1. A shock-absorber comprising a fixed cylinder adapted to contain a fluid, a movable piston therein, a piston stem projecting exteriorly from the upper end of said cylinder, said piston having a valve port, a movable valve-disc having a port normally alined with said piston valve-port, means cooperating with said valve-disc for moving the same to close said piston valve-port as the piston makes its operative descent in said cylinder, a movable air cylinder fixed to the exterior end of said piston stem, the lower open end of which is arranged telescopically over the upper end of said fixed cylinder, and a fixed piston member connected with the upper end of said fixed cylinder to fit and cooperate with said movable cylinder.



1,484,860. CHICKEN WATERER AND FEEDER. TOLLEF O. BAKKEN, Bode, Iowa. Filed June 29, 1923. Serial No. 648,512. 8 Claims. (Cl. 119—77.)

7. In a poultry feeder, a trough formed to seat on a supporting surface in a normally vertical position thereon, means to supply material to the trough fixedly connected to the latter, and means to control the supply engageable wih the supporting surface to maintain the supply open throughout the time the trough remains in its said normal vertical position, and being automatically



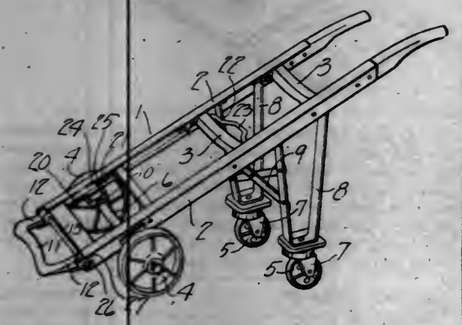
movable to close the supply upon the trough being moved out of its said normal vertical position.

1,484,861. PLANE BIT. PIERRE BASMAISON, San Francisco, Calif. Filed Aug. 15, 1922. Serial No. 581,984. 4 Claims. (Cl. 145—17.)

1. A plane bit comprising a cutter blade formed with a socket adjacent the lower edge thereof, a cutter having a portion complementary to said socket, a clamp plate overlying the blade and cutter, a second clamp plate overlying the blade and cutter, and means for drawing both clamp plates and the cutter blade together, said clamp plates bearing on said cutter on each side of the end of the said cutter blade.

1,484,862. CHIMNEY. FRANK F. BEEBY, Chicago, Ill., assignor to Cement Gun Construction Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1921. Serial No. 491,907. 2 Claims. (Cl. 72—93.)

1. A chimney consisting of an inner chimney tube, a compressible coating thereabout and an outer reinforced



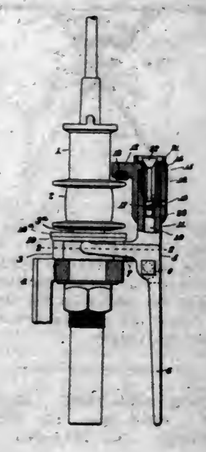
concrete chimney shell surrounding the inner tube and in contact with the compressible coating throughout substantially the entire area of said coating.

1,484,863. MACARONI AND METHOD OF PREPARING THE SAME. FRED BECKER, Cleveland, Ohio. Filed Apr. 21, 1920. Serial No. 375,620. 5 Claims. (Cl. 99—11.)

2. A method of preparing macaroni and like paste products, consisting in mixing a preponderating amount of wheat flour and a relatively small percentage of powdered eggs, powdered milk, cheese and spices together; adding water and working the mixture into a batch of separated pieces of moist dough; subjecting said pieces of dough to heat until dried and in a fluffy condition; grinding the fluffy material and adding water until pliable; passing the pliable material through a macaroni press, cutting the pressed material into given lengths; and drying the cut material until hard and brittle.

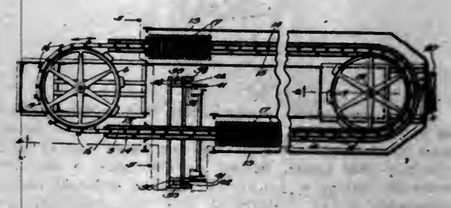
5. The product of the method herein described, comprising a hard and brittle macaroni containing approximately four per cent of eggs, one to two per cent of cheese, one to two per cent of milk, less than one per cent of spicing materials, and the balance wheat flour.

1,484,864. HAND TRUCK. CHARLES F. BOMPART, St. Louis, Mo. Filed Oct. 5, 1922. Serial No. 592,531. 1 Claim. (Cl. 280—57.)



A hand truck comprising a frame, a front axle mounted on the frame and provided with wheels, rear standards secured to the frame at the rear portion thereof, pivoted caster wheels carried by the said standards and an apron having arms pivoted to the frame.

1,484,865. FORM FOR CONCRETE CONSTRUCTION. GEORGE A. BONELLI, Kingman, Ariz. Filed Apr. 20, 1923. Serial No. 633,425. 4 Claims. (Cl. 25—127.)

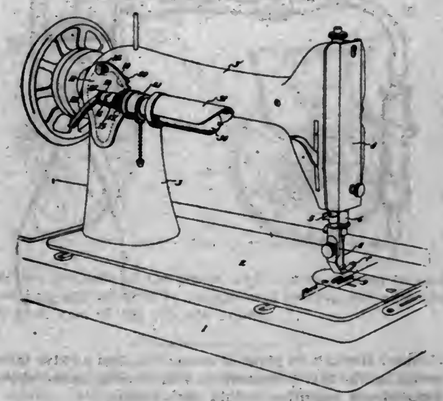


1. The improvement in molds comprising inner and outer forms and a combined spacing and reinforcing member arranged spirally between said inner and outer forms.

1,484,866. KNEE BRAKE. SAMUEL BOROVOY, Lowell, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1921. Serial No. 511,066. 3 Claims. (Cl. 118—8.)

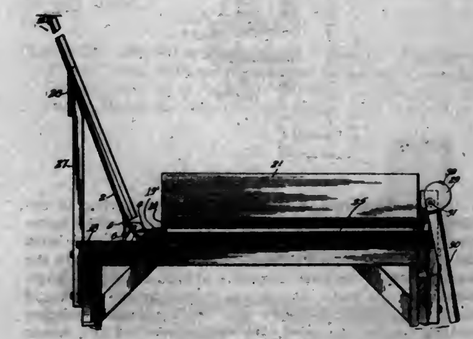
1. In a device of the character described, a spindle having a whirl, a friction disk beneath said whirl, a metallic disk beneath said friction disk, a knee brake lever having a pair of arms adapted to engage said metallic disk at points substantially opposite diametrically with relation to the spindle axis, and a friction element located above said whirl in position to engage the upper surface of said whirl when the knee brake lever is operated.

1,484,867. APPARATUS FOR COATING OBJECTS. FRANKLIN F. BRADLEY, Chicago, Ill., assignor to Bradley & Vrooman Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1921. Serial No. 504,906. 15 Claims. (Cl. 91—45.)



2. The combination with an object carrier; of a discharge nozzle; a carrier for the discharge nozzle that positions such nozzle to discharge upon an object borne by the carrier; and mechanism for causing said carriers to travel in angular directions and for maintaining the nozzle in position to discharge upon an object, upon the object carrier, while the two carriers are in travel.

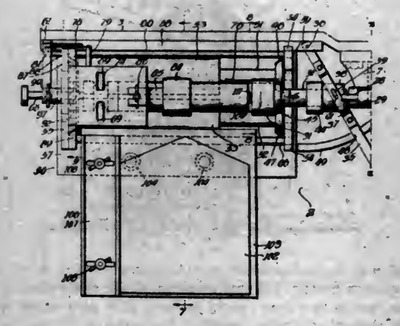
5. The combination with an object carrier; of a discharge nozzle; mechanism for causing the travel of the object carrier; and mechanism for causing the travel of the nozzle in a direction inclined toward the direction of travel of the object carrier.



13. Apparatus of the class described including a conduit of U-form opening at its ends; conveying mechanism passing through said conduit; and means for heating the air that is within the conduit.

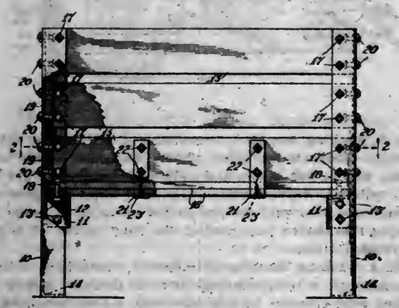
1,484,868. LIGHTING DEVICE FOR SEWING MACHINES. WILLIAM H. BRADY, Roselle, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 23, 1922. Serial No. 531,027. 8 Claims. (Cl. 240—2.)

1. A lighting device comprising a support adapted for attachment to a sewing machine gooseneck adjacent the bend of the latter and having an apertured portion, a sleeve entering the aperture in said portion, a lamp-socket and bulb sustained horizontally by said sleeve, and a cushioning bushing between said sleeve and said aperture portion.



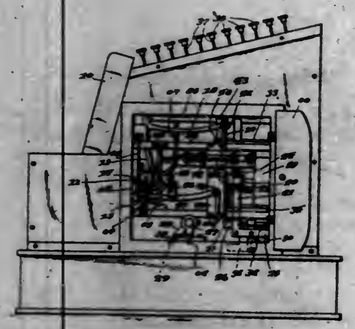
1,484,869. APPARATUS FOR FILLING MATTRESSES. HENRY G. BRANDWEIN, Chicago, Ill. Filed June 29, 1922. Serial No. 571,657. 24 Claims. (Cl. 226—44.)

1. A mold for mattress filling, comprising a plurality of sections permanently interconnected and forming a container, means for locking said sections together as desired, and means for moving said sections longitudinally relatively of one another to unlock said mold.



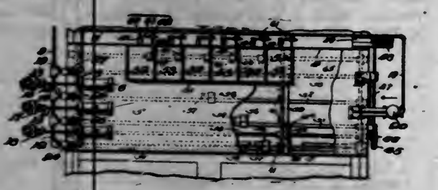
19. In combination, a mold for filling mattresses, and a stiffener stick therefor, comprising a bar to be inserted within said mold and having means to engage the filling material therein when moved in one direction and collapsible when retracted from said mold.

1,484,870. COIN COUNTING AND PACKETING MACHINE. CHARLES LAURENCE BURDICK, London, England. Filed June 21, 1920. Serial No. 390,597. 26 Claims. (Cl. 93—2.)



1. In a machine of the class described, the combination of carton forming and sealing mechanism, coin counting mechanism, power means for driving both of said mechanisms, said mechanisms being adapted to function under manual control in predetermined sequence for forming, filling and sealing the cartons, and means for automatically transferring the power drive from one of said mechanisms to the other at one point in the cycle of operation of said machine.

1,484,871. TOTE BOX. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Tructractor Company, Buchanan, Mich., a Corporation of Michigan. Filed Jan. 8, 1923. Serial No. 611,452. 8 Claims. (Cl. 217—5.)

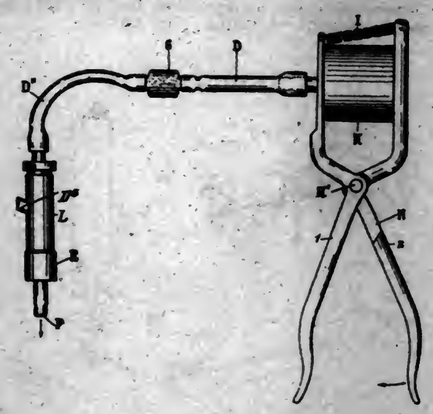


1. A device adapted to be lifted bodily from a floor by a lift-truck for transporting it and articles carried thereon, comprising in combination a member for receiving and supporting such articles, legs at the corners of such member for maintaining it at a distance above the floor that such legs rest upon, and means below said member and adjacent to two opposite margins thereof for providing for operative engagement of a lift-truck with said device in a lower plane than at the other margins of said member.

1,484,872. COIN-DELIVERY MACHINE. ROBERT CAIRNS and JOSEPH W. CAIRNS, Watertown, Wis. Filed Apr. 22, 1922. Serial No. 556,028. 17 Claims. (Cl. 133—4.)

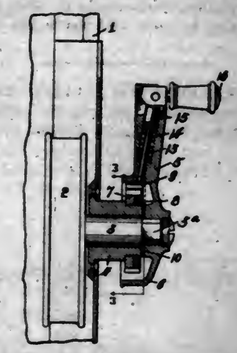
1. In a coin-delivery machine, coin-ejectors, means for operating the ejectors, a power-driven shaft, slidable means for selectively establishing an actuating connection between the shaft and the ejector-operating means, keys controlling said selective connecting means, and means actuated by the keys for controlling the shaft.

1,484,873. WASHING MACHINE. WILLIAM G. CARSON, Baltimore, Md., assignor, by direct and mesne assignments, to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 16, 1916, Serial No. 115,312. Renewed June 1, 1921. Serial No. 474,296. 21 Claims. (Cl. 137—7.)



1. A washing machine comprising a cylinder, a frame mounted upon the cylinder, shafts mounted in the said frame, steam, hot water and cold water supply pipes for said cylinder, valves controlling said supply pipes and connected to the said shafts, and a movable carriage for rocking the shafts for opening the said valves at a predetermined time.

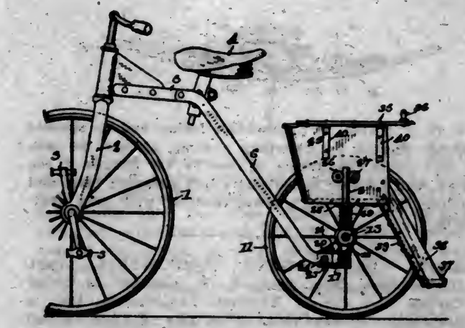
20. A washing machine attachment, comprising a suitable support, a reciprocating traveler thereon, means for moving said traveler in one direction, means arranged as said traveler approaches the end of said movement to indicate the conclusion of the washing operation, and means for releasing said traveler from its operating means whereby it may be freely moved manually in the opposite direction.



1,484,874. PNEUMATIC MILK EXTRACTOR. MIGUEL R. DEL CASTILLO, San Sebastian, Spain. Filed Sept. 23, 1921. Serial No. 502,654. 1 Claim. (Cl. 128—281.)

In a milk extractor, a milk-receiving chamber having a pump connection, a nipple-receiver connection and an outlet or drain opening, a valve for the drain opening closing on sub-atmospheric condition within the chamber, a pump connecting with the respective connection of the chamber, a nipple-receiver having connection with the

chamber through its point of connection, and a valve interposed in the latter connection and closing under above-atmospheric condition within the chamber.

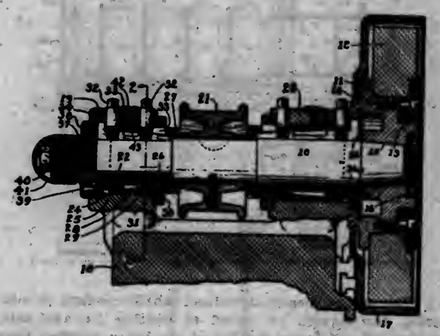


1,484,875. CRANK-ARM LOCK. ANGELO ROBERT CLAS, Toledo, Ohio. Filed Nov. 13, 1922. Serial No. 600,784. 4 Claims. (Cl. 74—33.)

1. In combination, a stationary member having an annular toothed portion, a crank mounted for turning movements relative to the member, a spring pawl movable with the crank and adapted to be placed in engagement with the member teeth, the pawl normally standing out of engagement with the teeth, and means carried by the crank and operable to move the pawl into tooth engaging position and to release the pawl, the engagement of the means with the pawl being in rearwardly spaced relation to the tooth engaging portion of the pawl to permit the pawl to spring out of engagement with the teeth when held in tooth engaging position by the means.

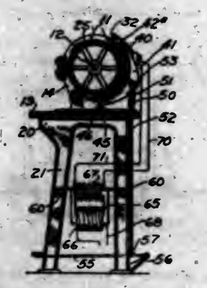
1,484,876. COMBINATION TRICYCLE AND GOCART. ALFONS DOMOWOLSKI, Racine, Wis. Filed July 26, 1920. Serial No. 398,949. 8 Claims. (Cl. 208—113.)

1. The combination in a tricycle having a frame provided with divergent supporting arms spaced apart at their outer ends by a bracing rod, of a pair of rear wheels, an axle therefor, a seat resiliently supported from said axle, and means for detachably securing to said axle the rear portion of a tricycle frame, said means comprising two brackets carried by the axle, recesses therein adapted to



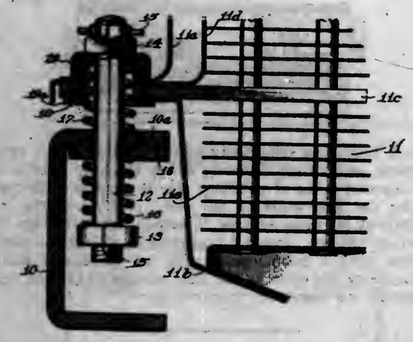
receive the ends of the frame, and a latch pivoted to said brackets and adapted to engage said bracing rod adjacent to each arm of the tricycle frame.

1,484,877. STEP PLATE. CHARLES F. ECKLER, Indianapolis, Ind. Filed July 1, 1922. Serial No. 572,243. 1 Claim. (Cl. 280—164.)



In a step plate, a frame, a scraper plate at one edge of said frame and spaced therefrom to provide an opening, said scraper plate having notches in the upper edge thereof forming vertical shoulders for engagement with the edges of the soles of shoes when moved over the scraper plate, the top edge of said plate and the top end of said shoulders terminating flush with the top face of said frame.

1,484,878. GRINDING MACHINE. JOHN F. FLAHERTY, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,540. 8 Claims. (Cl. 64—55.)

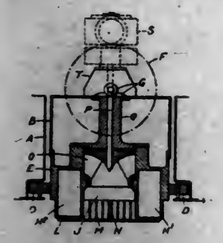


1. In apparatus of the class described, the combination of a shaft, a split bearing therefor, and means for adjusting said bearing comprising an axially adjustable conical sleeve on the exterior of the bearing to contract the latter, and an adjustable wedge member in the split of the bearing to variably limit the contraction of the split.

1,484,879. IRONING MACHINE. HARRISON H. FOGWELL and CHARLES J. HEISER, Los Angeles, Calif., assignors of two-thirds to John N. Van Patten, Los Angeles, Calif., and one-third to said Heiser. Filed Mar. 5, 1921. Serial No. 449,668. 4 Claims. (Cl. 68—9.)

2. In an ironing machine, the combination of: a roller; an ironing plate cooperating with said roller; a backing plate supporting said ironing plate; and means for passing an electric current, of sufficient strength to heat said plate, through said ironing plate.

1,484,880. MOTOR VEHICLE. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Michigan. Filed Oct. 13, 1919. Serial No. 330,324. 5 Claims. (Cl. 180—68.)

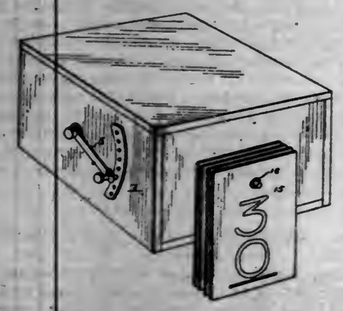


1. The combination with chassis frame members having laterally-extending flanges, of means for supporting a radiator thereon, said means including a rod-like element extending vertically through a member flange and headed at its opposite ends, a yieldable element between the lower head and the flange, individual members mounted on the rod-like element below the upper head and adapted to engage opposite sides of a projecting assembly of the radiator, and a yieldable element between said members and the flange and forming a supporting element for the assembly adapted to space it from the flange, one of said engaging members being cup-shaped and having its cup of a depth sufficient to extend beyond the opposite planes of the assembly projection.

1,484,881. PROPULSION AND MANEUVERING OF VESSELS. JAMES HERBERT WAINWAIGHT GILL, Heacham, England, assignor to Gill Propeller Company Limited, King's Lynn, Norfolk, England, a Company of Great Britain. Filed Oct. 25, 1920. Serial No. 419,260. 13 Claims. (Cl. 115—12.)

1. In apparatus for the propulsion, steering or maneuvering of vessels by the reaction effect of water jets, the combination with the hull of a vessel having a well

therein opening to the exterior of the vessel through a port in its wall, of a water pump positioned entirely within said well, conduits for leading water to and from said pump through said port, the discharge conduit being

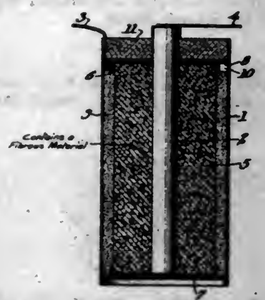


so formed as to direct the stream of issuing water at all times in a direction substantially parallel to the ship's wall, and means for rotating the discharge conduit about an axis substantially normal to the ship's wall for the purpose set forth.

1,484,882. LUNCH BOX. EDWARD E. GRAY, Plano, Ill., assignor to Linsley S. Gray and Edward E. Gray, Jr., both of Plano, Ill., Copartners doing business as Gray Brothers. Filed Mar. 19, 1923. Serial No. 625,982. 11 Claims. (Cl. 206—4.)

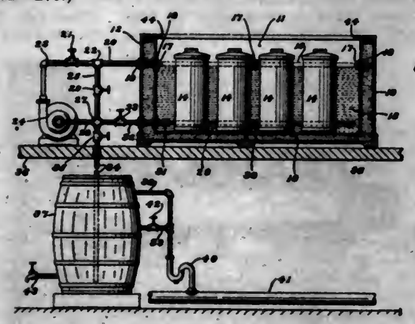
1. A lunch box comprising a body portion and a cover therefor, said cover extending above the body portion of the box and being of sufficient size to contain a thermos bottle, the end walls of the body portion of the box comprising portions adapted to extend upwardly into the cover of the box, means for supporting a thermos bottle on the upward extensions of said end walls, and means for securing the cover to the body portion of the box, substantially as described.

1,484,883. EDUCATIONAL DEVICE. MICHAEL M. GUHIN, Pierre, S. Dak. Filed May 26, 1922. Serial No. 563,783. 10 Claims. (Cl. 35—2.)



1. An educational appliance having a card-rod to loosely receive a series of cards, and means to force said cards successively and at regular time intervals from said rod.

1,484,884. BELT BUCKLE. WILLIAM T. HAHN, Minneapolis, Minn. Filed Sept. 24, 1923. Serial No. 664,566. 5 Claims. (Cl. 24—194.)

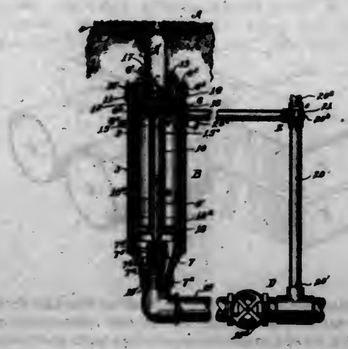


4. In a buckle, a channel-like frame and a member slidable therein for clamping a strap against the web of said frame, abutments carried by the flanges of the frame, said member comprising a belt engaging plate and yielding cam portions thereon coacting with said abutments.

1,484,885. DEPOLARIZING COMPOSITION. CARL HAMBUECHEN, New York, N. Y., assignor to Union Carbide and Carbon Research Laboratories, Inc., a Corporation of New York. Filed July 28, 1921. Serial No. 488,180. 9 Claims. (Cl. 204—38.)

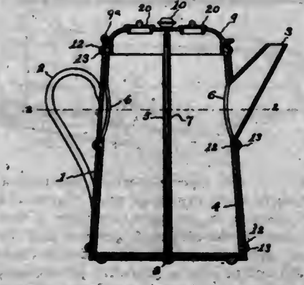
6. A dry cell comprising a metal container electrode, a carbon electrode and associated depolarizing mass therein, said mass comprising a fibrous binding ingredient.

1,484,886. BRINE-CIRCULATING SYSTEM. FRANK M. HILL, Camden, N. J. Filed June 6, 1921, Serial No. 475,411. Renewed Oct. 27, 1923. 2 Claims. (Cl. 62—170.)



1. The process herein described, which consists in subjecting material to be cooled to melting ice and salt, drawing off the upper portion of the briny solution thus formed, said upper portion being warmer and less dense than the lower portion, permitting the solution thus drawn off to settle, and mixing the lower, cool and dense portion of the solution drawn off with that portion of the solution not disturbed, the remainder of the solution drawn off being conveyed to a point of discharge.

1,484,887. IDENTIFICATION DEVICE. GLENN HYATT, Midvale, Utah. Filed Nov. 27, 1922. Serial No. 603,563. 3 Claims. (Cl. 40—22.)

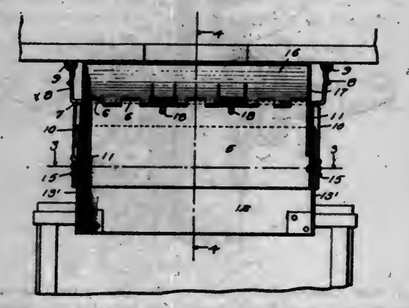


2. An identification device of the character described comprising a headed shank, an indicia carrying member including connected disk like portions adapted to be folded one upon the other, and said portions having openings coinciding when said portions are folded to receive the shank of said element for the purpose specified.

1,484,888. DISAPPEARING LAWN SPRINKLER. FREDERICK H. JOHNSON, South Pasadena, Calif. Filed Jan. 10, 1922. Serial No. 528,222. 12 Claims. (Cl. 299—61.)

2. In an underground sprinkling system for lawns, athletic fields, golf greens, and the like, a sprinkler embedded in the ground so as to be entirely concealed beneath an overlying stratum of soil, said sprinkler including a spraying device and means for forcing the spraying device through the said overlying stratum of soil and to a working zone above the surface thereof.

1,484,889. COMBINATION TEA AND COFFEE POT. JOHN A. KAYE, Sault Ste. Marie, Ontario, Canada. Filed Oct. 13, 1923. Serial No. 668,257. 12 Claims. (Cl. 53—3.)

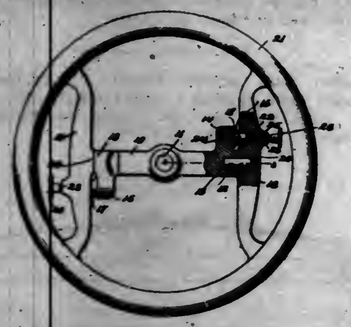


1. A multiple compartment cooking utensil including spout, an inner receptacle rotatable within the outer shell and subdivided into a plurality of compartments, the side walls of each compartment being provided with an opening adapted to be rotated into registry with the pouring spout, means to rotate the inner receptacle, and means to prevent the flow of liquids between the walls of the outer shell and inner receptacle.

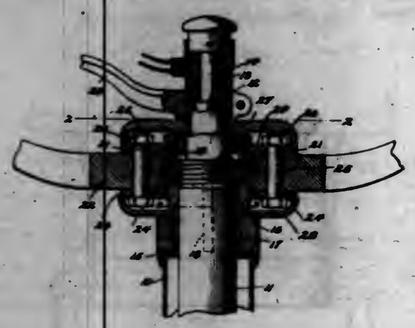
1,484,890. CAR ROOF. DANIEL P. KELLOGG, Los Angeles, Calif., assignor to James J. McCarthy, Chicago, Ill. Filed Apr. 16, 1919. Serial No. 290,468. 28 Claims. (Cl. 108—5.)

1. In a car roof, the combination of a fixed frame comprising a ridge pole, and a floating frame which is horizontally movable relative to said fixed frame and having means slidably engageable under said ridge pole.

1,484,891. GRAIN SAVER. PETER KLEIN, Roseland, Nebr. Filed Oct. 30, 1922. Serial No. 597,897. 4 Claims. (Cl. 193—6.)



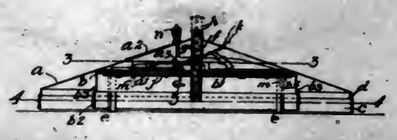
1. In a device of the character described a plurality of plate sections provided with side walls, one of the plate sections being hinged to an adjacent plate section and adapted to lie against a structure upon which the device is supported, longitudinal guides in the intermediate plate sections and receiving the lowermost plate section, and means for holding the latter plate section in adjusted position.



1,484,892. SHIFTING STEERING WHEEL. EDWARD J. LOBDELL, Onaway, Mich. Filed Apr. 29, 1920. Serial No. 377,643. 10 Claims. (Cl. 74—33.)

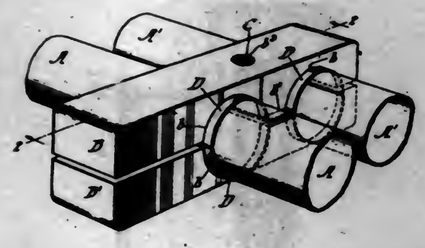
1. A tilting steering wheel for motor vehicles comprising a rim, a fixed member adapted to be secured at its center to a steering post and projecting therefrom on opposite sides towards the rim, transverse members secured to said rim and extending across the ends of said fixed member, pivotal connection between said fixed member and transverse members in line with the steering post permitting free turning of said transverse members

and rim in either direction on said fixed member, and releasable means locking said fixed member and transverse members against relative turning at points materially removed from the line of said pivot connections transversely and on opposite sides of said line.



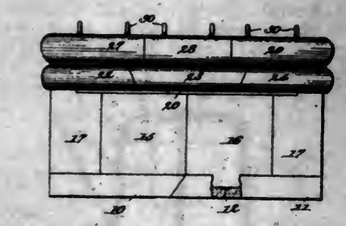
1,484,893. STEERING-WHEEL-ATTACHING DEVICE. EDWARD J. LOSDELL, Onaway, Mich., assignor to The American Wood Rim Company, Onaway, Mich., a Corporation of West Virginia. Filed Feb. 12, 1921. Serial No. 444,478. 8 Claims. (Cl. 74—33.)

1. The combination with a steering wheel having a wooden hub portion, of means for securing the same to a steering rod comprising a sleeve adapted to fit over the steering rod and to be fastened thereto and having an exterior annular flange lying on one side of the wooden hub, an annular ring member concentric with the sleeve and lying on the opposite side of the wooden hub, and a plurality of bolts extending through said ring and annular flange for moving the ring to clamp the hub between the ring and flange and to hold the hub clamped in such position, said flange and ring having their facing surfaces deeply grooved in a direction substantially perpendicular to the length of a spoke of the wheel.



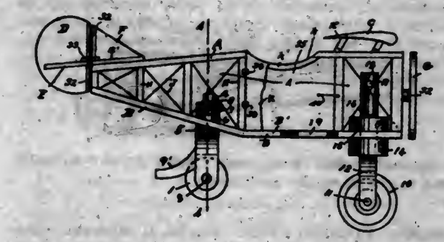
1,484,894. CHICKEN BROODER. WILLIAM ERNEST LYON, San Diego, Calif. Filed Sept. 25, 1922. Serial No. 590,365. 2 Claims. (Cl. 119—33.)

1. A chicken brooder comprising a primary hover, a roof member mounted over said primary hover and extending beyond said primary hover and provided with a curtain to form a secondary hover around said primary hover, a curved heating element mounted in said primary hover near the perimeter thereof, means for connecting said heating element with a heat supply source, an automatic means for controlling the amount of heat in said brooder mounted therein, a double transparent window mounted in the ceiling of said primary hover, a door



hinged on said roof member immediately over said window, and an adjustable ventilator means mounted in the center of said primary hover.

1,484,895. PROTECTIVE PACKING MEANS FOR ARTICLES HAVING FINISHED SURFACES. EARLE W. MCMULLEN, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 553,860. 7 Claims. (Cl. 45—22.)

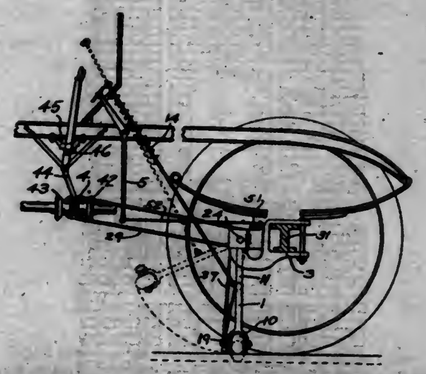


1. A protective packing for an article finished with a siccative coating comprising means for positioning said article and a lining arranged to contact with the finished surface of the article and interposed between the article and the positioning means, said lining comprising a film of lacquer-forming solid material.

1,484,896. CONCRETE CASKET VAULT. JOSEPH MANNIX, Saranac Lake, N. Y. Filed Apr. 4, 1922, Serial No. 549,484. Renewed Dec. 14, 1923. 2 Claims. (Cl. 72—7.)

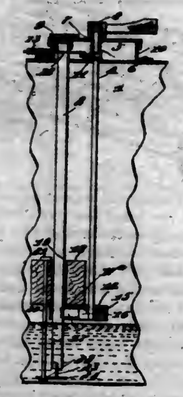
1. A vault of the class described comprising a pair of base members each provided with a groove and with a plurality of eyes on its upper surface, a body structure constructed to fit into said grooves and including a plurality of sections joined by rounded tenons and grooves, a lid comprising a plurality of overlapping sections having ribs each having apertures therein, and a cover comprising sections which overlap the joints in said lid, and which include counter sinks for receiving said ribs.

1,484,897. CHILD'S VEHICLE. FRANK EDWARD MEYER, Salt Lake City, Utah. Filed Oct. 25, 1922. Serial No. 596,803. 3 Claims. (Cl. 208—165.)



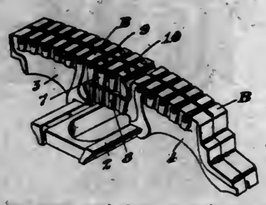
1. A child's vehicle of the character described having an aeroplane body, said body having doors thereon, a stock attached to said body back of said doors, said stock having a wheel pivotally journaled therein and a lug thereon, said lug to represent the landing skid of the aeroplane.

1,484,898. GROCERY ADVERTISING DEVICE. JOSEPH F. MILLER, Storm Lake, Iowa. Filed Apr. 25, 1923. Serial No. 634,610. 8 Claims. (Cl. 40—63.)



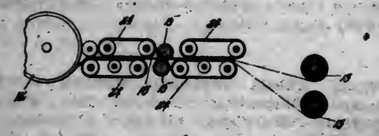
1. A device of the class described, comprising a frame, a rack, means for tiltably mounting the rack on a horizontal axis in the frame, resilient means for holding the rack in an upright position, and means for dividing the rack into compartments for the reception of advertising matter.

1,484,899. JACK WHEEL FOR AUTOMOBILES. JOSEPH MOSLEY, San Francisco, Calif., assignor to Henrietta Sittenfeld (feme sole), San Francisco, Calif. Filed Dec. 1, 1919, Serial No. 341,752. Renewed Nov. 15, 1921. Serial No. 515,432. 4 Claims. (Cl. 180—1.)



1. The combination with a vehicle of a frame therebeneath movable towards and from the pavement, a lateral-transfer jack wheel journaled in the lowermost portion of said frame, and adapted to contact with the pavement when said frame is lowered, means for vertically lifting the vehicle upon said frame, means for rotating said jack wheel, a clutch controlling the application of power to either of said vertical lift means or said wheel, and a second clutch controlling the direction of rotation of said first clutch.

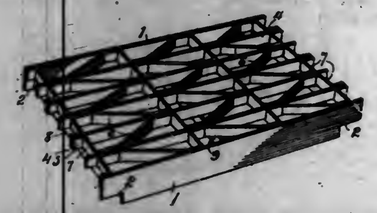
1,484,900. RESERVE-FUEL DEVICE FOR AUTOMOBILES. WILLIAM H. MUZZY, Chicago, Ill. Filed Apr. 7, 1920. Serial No. 371,982. 11 Claims. (Cl. 158—46.5.)



11. In an automobile, the combination with a fuel tank, of a float controlled reserve fuel device, and an inverted shell having a small air escape port and co-acting with the float to prevent sudden movements of the latter by the surge of the fuel due to the movements of the automobile.

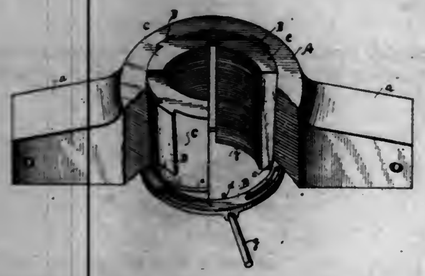
1,484,901. GRATE BAR. CHARLES P. OAKMAN, Cambridge, Mass. Filed Nov. 28, 1919. Serial No. 340,973. 3 Claims. (Cl. 110—40.)

1. A grate bar for repair purposes comprising two sections notched to engage the opposite edges of a dovetail grate bar support and having parts that overlap when so mounted on said support, and means for securing said sections together.



1,484,902. CARDING-MACHINE CONDENSER. GEORGE R. PAIGE, Canton, Mass. Filed June 28, 1923. Serial No. 648,202. 1 Claim. (Cl. 19—150.)

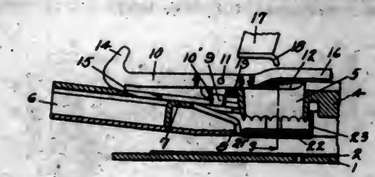
In a carding-machine condenser which includes a ring doffer, roping spools spaced therefrom, to wind ropings coming from the ring doffer; means for trimming opposite sides of the said ropings, said means comprising a pair



of shearing rolls arranged in the path of the ropings between the ring doffer and the roping spools, and means for rotating said rolls simultaneously in opposite directions, each roll including spaced apart annular shearing knives entering annular spaces between the knives of the other roll.

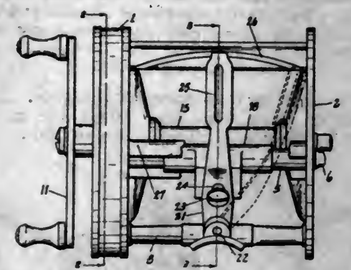
1,484,903. GRATING. WILLIAM L. PATTISON, Rosedale, Kans. Filed May 28, 1923. Serial No. 641,804. 5 Claims. (Cl. 94—30.)

1. A grating of the kind described comprising two side bars disposed edge up each having at one end and lower edge a notch adapted to receive a supporting beam, intermediate longitudinal bars disposed edge up and attached to each other and to the side bars, and a cross bar attached at its ends to the side bars respectively and having its lower edge flush with the upper edges of said notches and having its upper edge contacting with and adapted to support said intermediate bars, substantially as set forth.



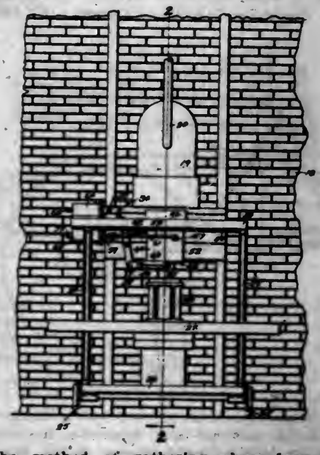
1,484,904. DRIVE-PIPE HOLDER. SAMUEL P. POWERS, Wooster, Ohio. Filed May 14, 1923. Serial No. 638,930. 2 Claims. (Cl. 24—263.)

1. In a device of the character described, the combination with a metal block having a beveled bore therein and a plurality of dovetail grooves in the sides of the bore, of a series of slips or gripping members adapted to reciprocate vertically within the bore of the block, said slips having a dove-tail tongue adapted to reciprocate within the dovetail groove of the block adjacent thereto, a spiral groove cut into the outer surface of each slip, and a circular plate surrounding said assembled slips, and provided with studs projecting inwardly and adapted to travel in said spiral grooves respectively, when said plate is rotated in either rotary direction, substantially as set forth.



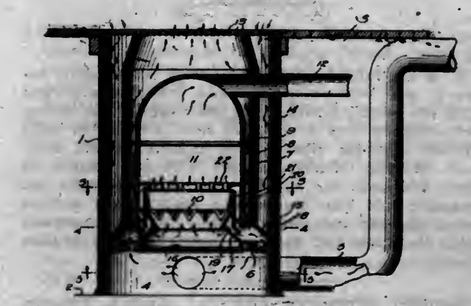
1,484,905. LABEL-AFFIXING SEWING MACHINE. MORRIS G. ROSENTHAL, Cincinnati, Ohio. Filed July 9, 1921. Serial No. 483,553. 8 Claims. (Cl. 112—104.)

8. In a machine for stitching labels, the combination of a work holder plate with an aperture therein corresponding to the label to be affixed, a main work clamp with an opening corresponding to the aperture in said work holder plate disposed to clamp the label to the work holder at the edge of said aperture, deflectable label supports disposed at the bottom and within the opening



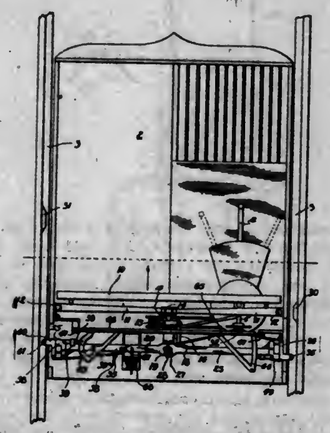
in the main work clamp, and a label presser foot disposed to act upon the said label.

1,484,906. FISHING REEL. SAMUEL G. RUSSELL, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Mar. 6, 1923. Serial No. 623,109. 17 Claims. (Cl. 242—84.4.)



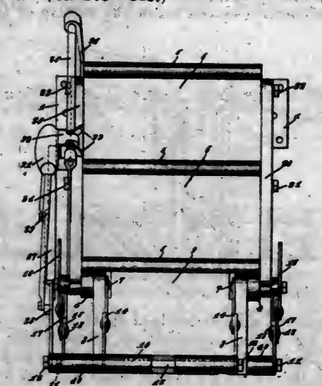
15. In a fishing reel, the combination of a frame, a spool provided with conical flanges, a traversing shaft, a reciprocating carriage, an angled line traversing lever pivotally mounted on said frame at a central point thereof and operatively connected to said carriage, the angle of said lever exceeding that of a right angle and being such that at the end of its stroke the swinging end of the lever lies at an angle to the axis of the spool approximating that of the angle of the flanges relative thereto.

1,484,907. METHOD OF AND APPARATUS FOR FEEDING MOLTEN GLASS INTO MOLDS. ALEXANDER L. SCHRAM, Hillsboro, Ill., assignor to Schram Glass Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 10, 1921. Serial No. 443,814. 9 Claims. (Cl. 49—5.)



8. The method of gathering glass from a flowing stream, which consists in establishing a regulated flowing stream of glass, simultaneously severing and enlarging the stream below the outlet at intervals, utilizing the enlarged severed end of the stream as a moving plastic support for the on-coming stream of glass and a portion of the gathered mass, bodily arresting the downward movement of the accumulated mass until a sufficient quantity to make the desired article has been accumulated, simultaneously releasing the accumulated mass on its bottom and shearing the stream above the accumulated mass, and lastly releasing the accumulated mass on its sides.

1,484,908. FURNACE. TRUMAN C. SHERWOOD, Danville, Ill., assignor of forty-nine one-hundredths to Hubert R. Van Nordstrand, Danville, Ill. Filed Oct. 1, 1923. Serial No. 665,914. 4 Claims. (Cl. 126—99.)



1. In a pipeless furnace, an outer casing, an air chamber arranged beneath said casing, an inner casing, a furnace cylinder arranged within said inner casing and spaced therefrom to form a heating chamber, means for feeding air from said air chamber to said heating chamber, and means for returning air from the room heated to the fire box of the furnace.

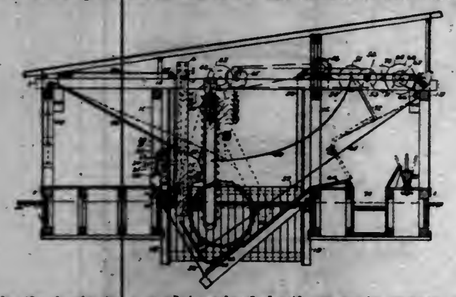
1,484,909. ELEVATOR STOP. JOHN B. SMITH, Los Angeles, Calif. Filed Feb. 15, 1923. Serial No. 619,098. 19 Claims. (Cl. 187—29.)

5. An elevator car having a platform and a frame, a scale beam balancing said platform freely in the frame, power controlling means on the car, cams arranged along the shaft in which the elevator car runs, and means engageable with said cams and controlled by said beam to actuate the said power controlling means.

1,484,910. FOLDING COACH STEP. GEORGE E. SMITH, Oil City, La. Filed Aug. 27, 1923. Serial No. 659,588. 3 Claims. (Cl. 105—448.)

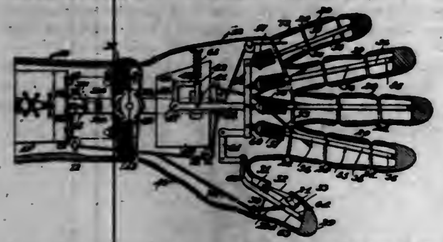
2. In a device of the class described, a fixed stairway, a track on the stairway, a guide on the stairway, a slide mounted for reciprocation on the guide, a frame carried by the slide, a handle on the frame and mounted for reciprocation on the track, means carried by the handle for gripping the track, a foldable step pivoted to the stairway, and means for connecting the step with the slide.

1,484,911. COMBINATION SHAVING BRUSH AND SOAP HOLDER. ANTHONY SNIEGOCKI, Oakland, Calif. Filed Oct. 11, 1922. Serial No. 593,856. 4 Claims. (Cl. 15—122.)



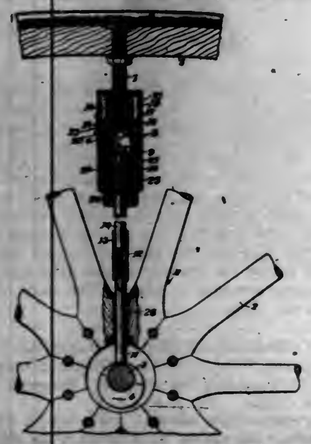
1. A device of the character described comprising a head member, bristles secured to the head member and arranged in circular formation to produce a central opening, a tube slidably mounted in the head member and adapted to be extended downwardly through the bristles, a soap stick carried by the tubular member and projecting through the lower end thereof, said tube frictionally fitting the head member, and permitting vertical adjustment of the tube and the soap carried thereby with relation to the head member and the bristles, and means frictionally fitting the interior of said tube and adapted to be manually actuated to advance the soap stick with relation to the tube.

1,484,912. LOG-BARK-PEELING MACHINE. EMMET G. STACK and JOHN E. STACK, Marshfield, Oreg. Filed Dec. 10, 1921, Serial No. 521,405. Renewed July 19, 1923. 9 Claims. (Cl. 144—207.)



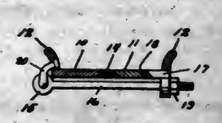
1. A log bark-peeling machine comprising a foundation parts of which are spaced to form such an intervening basin as will fill when the foundations are immersed or surrounded by a body of water, to the level of said body,

and will permit a log to be floated into or out of said basin; a superstructure supported on said foundations; peeling means so suspended from the superstructure that the lower portions extend below the surface of the water



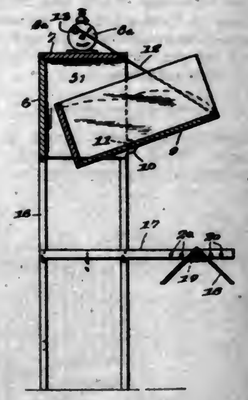
in the basin to a predetermined depth so as to engage a floating log of any diameter on diametrically opposite sides at or near its horizontal center line, and operable to rotate the log on its axis of floatation and scrape the same.

1,484,913. ARTIFICIAL BODY MEMBER. CYRIL MEREDITH SURRY, Halleyville, Okla. Filed Oct. 26, 1922. Serial No. 597,127. 5 Claims. (Cl. 3—12.)



3. In an artificial body member, a hand member having movable finger members and means for moving said finger members to closed position including a cross head, closing rods connected to the finger members and spring connections between the closing rods and the cross head.

1,484,914. AUTOMATIC TIRE PUMP. WALTER J. THOMAS, Modesto, Calif., assignor of one-fourth to John A. Wenger, Modesto, Calif. Filed Oct. 12, 1922. Serial No. 594,177. 4 Claims. (Cl. 152—11.)



1. In a device of the character described a cylinder, a piston reciprocally mounted therein, a head member forming a closure for one end of the cylinder, a threaded discharge opening in said head member, a perforation in the head member having a seat formed at one end thereof, a ball valve engageable with the seat, a washer engageable with the ball valve, a cap carried by the cylinder and vertically adjustable with relation to the washer, and a spring interposed between the washer and the cap, said spring, washer and ball valve being enclosed by the cap.

1,484,915. SEPARABLE RIM. SIDNEY P. THORINGTON, Bishop, Calif. Filed May 20, 1922. Serial No. 562,407. 3 Claims. (Cl. 301—35.)

2. A rim formed of similar sections telescopically engaged, said sections having their outer edges formed with tire retaining flanges, the outer edge of one section being formed with a series of slots, a series of bolts pivoted upon the other section opposite to said slots, hook like lugs slidable on said bolts and adapted to enter said slots, and nuts threaded upon said bolts and engaging said lugs, the meeting edges of the sections being partially cut away to have interfitting relation with the outer and inner peripheries of both sections flush.

1,484,916. AUTOMATIC FEEDER. JAMES R. VINCENT, Wheaton, Ill. Filed Feb. 9, 1922. Serial No. 535,331. 5 Claims. (Cl. 161—10.)

1. An automatic feeder comprising a shelf, an eccentrically pivoted feed receptacle below said shelf, a time-controlled mechanism for actuating said feed receptacle, supporting legs carrying said shelf, forwardly directed brackets secured to said legs, a spreader member removably carried by said brackets and positioned beneath the discharge end of said feed receptacle, and said spreader member being adjustable with reference to the vertical plane of said discharge end.

1,484,917. KITCHEN UTENSIL. HARRY H. VREELAND, Springfield, Mass. Filed June 27, 1922. Serial No. 571,170. 1 Claim. (Cl. 294—7.)

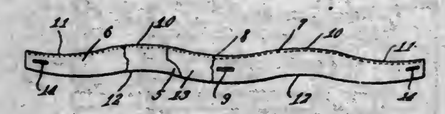
A kitchen utensil of integral form, having a forward beveled edge adapted to be slid or forced under a cooking receptacle in order to lift and remove the same, two elongated apertures near the rear edge of the utensil forming a hand grip and being disposed longitudinally with respect to the utensils and relatively close to each other, a wedge shaped aperture situated between the said elongated apertures and the forward beveled edge of said utensil, said wedge shaped aperture having its wide part

disposed toward the rear of said utensils and converging towards the forward beveled edge thereof, substantially as described.

1,484,918. ELECTRIC BATTERY. ARTHUR V. WILKES, Berea, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 9, 1919. Serial No. 295,979. 6 Claims. (Cl. 204—38.)

5. Method of preparing a mix for use in dry batteries which comprises mixing together solid depolarizing material, carbon, and electrolyte solution, substantially drying the mixture, and comminuting the dry material.

1,484,919. METHOD OF MANUFACTURING COLORED RUBBER ARTICLES. ARTHUR P. WITTEN, Akron, Ohio. Filed Apr. 23, 1923. Serial No. 634,174. 11 Claims. (Cl. 18—58.)



1. That process of manufacturing a toy balloon or like article which consists in first taking a quantity of crude rubber, mixing therewith powdered aluminum, reducing the mixture to solution by adding a suitable solvent, providing a form, dipping the form in solution to build up a balloon thereon, then dyeing the article and subjecting the same to vulcanization.

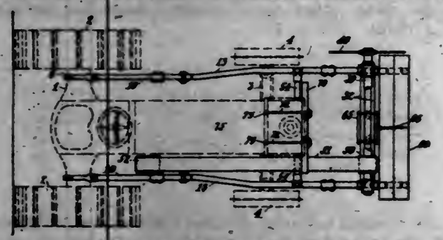
1,484,920. REVERSIBLE PUMP OIL CAN. EDWIN C. WOLFE, Corral, Idaho. Filed Mar. 16, 1923. Serial No. 625,523. 2 Claims. (Cl. 221—51.)

1. In an oil can, comprising an oil receiving chamber, a cover for said chamber, a neck portion adapted to extend through said cover and being provided with an extension extending downwardly within the oil chamber and being bent at right angles, pipes secured to the right angle bend and extending in opposite directions and terminating adjacent the top and bottom of the chamber and near the side wall thereof, a ball valve positioned in each of the pipes, neck valves positioned in the neck portion, and a piston operable in the cylinder on one side of the neck portion for operating the ball valves and neck valves for discharging the oil from the can.

1,484,921. NECKBAND. FRED M. WOODS, Muskogee, Okla., assignor of one-half to Jesse B. Hettick, Muskogee, Okla. Filed June 11, 1920. Serial No. 388,801. 1 Claim. (Cl. 2—41.)

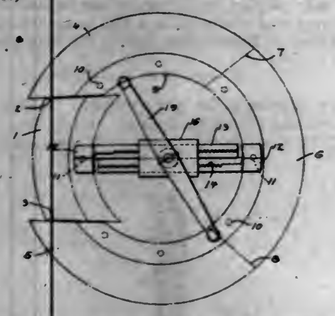
In a neckband, strips of cloth material sewed together at the edges thereof, to provide a body portion, said body portion having button-holes at the ends thereof and having a button-hole disposed intermediate the ends of the body portion, the upper edge of the body portion being curved upwardly at points between the central button-hole and the button-holes at the ends of the body portion, the central portion of the upper edge lying in a line connecting the upper edge of the body portion at the ends of the body portion, the lower edge of the body portion being curved downwardly from the ends thereof, and continued in a line in substantially parallel relation with the upper edge of the neck band.

1,484,922. METHOD OF RECOVERING GASOLINE. LA VAN WARREN, Okmulgee, Okla. Filed Oct. 6, 1919. Serial No. 328,790. 1 Claim. (Cl. 196—25.)



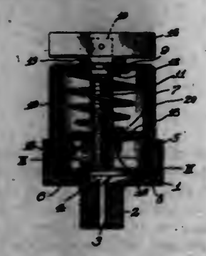
The method of recovering gasoline consisting of collecting a pool of heated oil in a closed container, introducing field gas into the pool of oil to pass through into the condenser space above the oil, spraying heated oil into said space to meet the gas, retarding the upward passage of the gas and the downward passage of the oil throughout the entire transverse area of the container so as to subject all parts of both elements to retardation and conducting the gas into a condenser.

1,484,923. PORTABLE TOOL DEVICE. KARL A. ZANDER, Stow, Mass. Filed June 27, 1922. Serial No. 571,271. 19 Claims. (Cl. 180—53.)



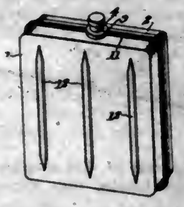
1. An attachment for a vehicle comprising, in combination, a pair of arms pivoted at one end to a part of the vehicle, a frame pivoted at one end to said arms

and having ground-engaging members at its opposite end, a transverse shaft at said opposite end, a tool on



said shaft, and means for supporting said opposite end from said vehicle with said ground-engaging members out of ground-engaging position.

1,484,924. SECTIONAL-CORE-COLLAPSING DEVICE. SPENCER QUIGLE ZIMMERMAN, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Sept. 22, 1920. Serial No. 411,922. 1 Claim. (Cl. 154—9.)

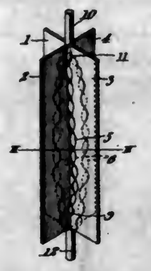


A device for collapsing sectional tire cores including in combination, members readily engageable with and disengageable from core sections, racks fixed to said members, a pinion cooperating with said racks, and means constraining said racks to move in parallelism, said pinion and crank being bodily and quickly removable for convenience in effecting an adjustment of the distance between the members engageable with the core sections.

1,484,925. GREASE CUP. OLIVER E. BARTHEL, Detroit, Mich. Filed Dec. 27, 1919. Serial No. 347,745. 1 Claim. (Cl. 184—45.)

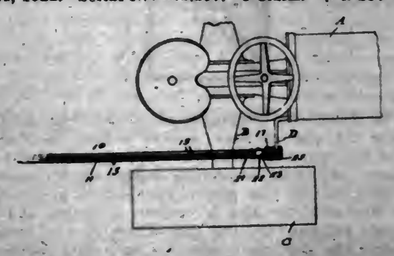
A grease cup comprising a base adapted to have grease ejected therefrom, an inverted cup shaped receptacle having its open end detachably connected to said base, a rotatable screw axially of said receptacle supported by the closed end of said receptacle, a one piece metallic piston adapted to be reciprocated in said receptacle by said screw, means at one side of said piston to prevent rotation thereof relative to said screw, and means carried by said base adapted to be engaged by the central portion of said piston to prevent said piston from contacting with said base.

1,484,926. DRY CELL. RAYMOND C. BENNER, Fremont, Ohio, assignor to National Carbon Co. Inc., a Corporation of New York. Filed May 18, 1921. Serial No. 470,492. 7 Claims. (Cl. 204—38.)



1. In a dry cell, a cathode element, and an anode about said element, said anode having a recessed portion adapted to receive excitant paste displaced during operation of the cell.

1,484,927. STORAGE-BATTERY SEPARATOR AND PROCESS OF MAKING THE SAME. RAYMOND C. BENNER, Bayside, and GEORGE W. HEISE, Elmhurst, N. Y., assignors to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Feb. 25, 1922. Serial No. 539,074. 5 Claims. (Cl. 204—29.)

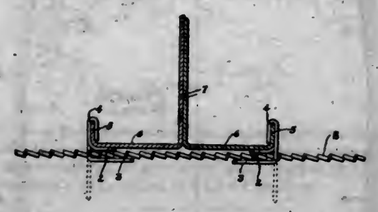


1. A storage battery separator comprising a porous material having a single insulating, acid resistant coating directly adherent thereto.

1,484,928. STORAGE-CELL ELECTRODE AND SUPPORT FOR ACTIVE MATERIALS. RAYMOND C. BENNER, Bayside, N. Y. assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed Oct. 12, 1922. Serial No. 594,058. 6 Claims. (Cl. 204—29.)

1. An active material support comprising non-conductive members arranged radially about a common axis and forming compartments for the active material.

1,484,929. CLUTCH RELEASE FOR TRACTORS. SALVADOR G. BEZAURY, Muskegon Heights, Mich. Filed May 24, 1922. Serial No. 563,357. 1 Claim. (Cl. 180—82.)

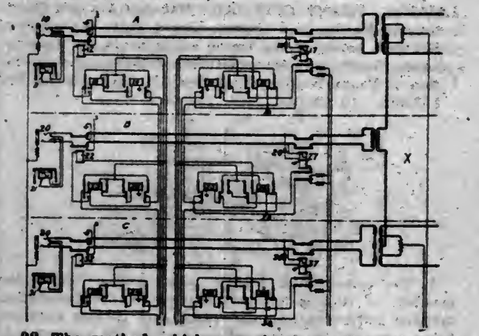


A clutch release device for tractors comprising a lever formed of sections embracingly engaged upon the rear axle housing of a tractor and capable of pivotal movement thereon, the rear end of the lever being extended angularly, the forward end of the lever being flexibly connected with the clutch lever of the tractor, a counterbalancing weight on said forward end, a hinge joint in the lever between the rear axle housing and the forward end, means normally holding said hinge joint rigid and a lever for releasing said holding means.

1,484,930. TOY PISTOL. CLAUDE L. BUNTEN, Rawlins, Wyo. Filed Jan. 8, 1923. Serial No. 611,269. 8 Claims. (Cl. 124—14.)

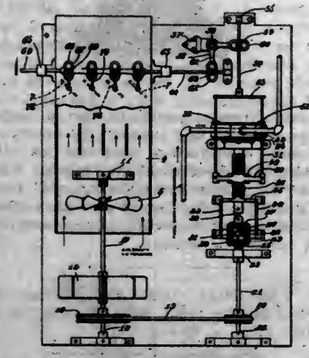
1. A toy comprising a barrel having a pair of vertically spaced guides, a reciprocable carrier movably mounted between said guides and provided with an open pocket, means for impelling said carrier forwardly in said guides, a shot magazine formed longitudinally in the upper guide, means for releasing shot, one at a time from said magazine whereby said shot gravitate, to the pocket in said carrier, a latch engageable with said carrier at the rearward limit of its movement, and means for releasing said latch from said carrier whereby the latter is moved forwardly by said impelling means for discharging the shot from the pocket in said carrier.

1,484,931. METAL-LATH-ATTACHING CLIP. WILLIAM L. CALDWELL, Canton, Ohio, assignor to United Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1921. Serial No. 494,463. 6 Claims. (Cl. 72—118.)



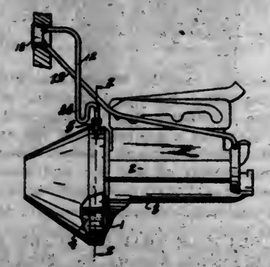
1. A metal clip for fastening expanded straight metal lath and the like to a support, having one end bent to form a hook for engaging the support, a grip tongue on the other end for engaging the face of the support and a prong tongue alongside the grip tongue on the same end insertable through an opening in the lath for clamping the same against the support.

1,484,932. PROCESS OF SIMULTANEOUSLY PREPARING AMMONIUM CHLORIDE AND SODIUM CARBONATE EMPLOYING SYNTHETIC AMMONIA. GEORGES CLAUDE, Paris, France, assignor to L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Filed Mar. 14, 1918. Serial No. 222,506. 5 Claims. (Cl. 23—13.)



1. A process of producing ammonium chloride, consisting in preparing a gas containing hydrogen and carbon dioxide, separating the carbon dioxide from the hydrogen, combining the hydrogen with nitrogen to form ammonia, causing this ammonia and the separated carbon dioxide to react with sodium chloride, and withdrawing as a product of the operation the ammonium chloride formed.

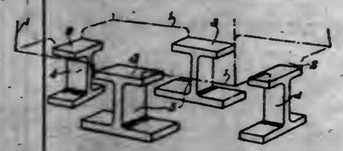
1,484,933. TELEPHONE SYSTEM. ROY D. CONWAY, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1919. Serial No. 348,123. 23 Claims. (Cl. 179—43.)



22. The method which comprises operating telephone repeaters by a series of impulses when a transmission line is taken for use, and transmitting another series of impulses to identify said line.

1,484,934. REGULATOR. PHILIP W. DALRYMPLE, Baltimore, Md. Filed Dec. 7, 1921. Serial No. 520,543. 9 Claims. (Cl. 110—72.)

1. The method of draft regulation for furnaces which consists in varying the area of the draft passage in direct proportion to the increase of the ratio of the fuel feed to the speed of the draft.

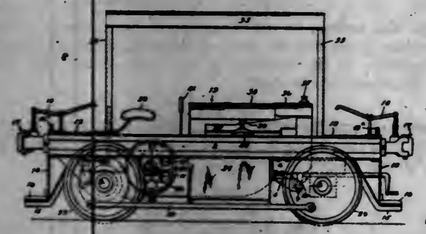


1,484,935. CENTRIFUGAL-FORCE SIGHT FEED. FRANK L. DUNANN, Lompoc, Calif. Filed Apr. 20, 1920. Serial No. 375,375. 2 Claims. (Cl. 184—11.)

1. The combination with an engine having a crank casing and a rotatable member therein for circulating a lubricating medium, of a conduit extending from said crank casing adjacent said rotatable member, a sight glass in

said conduit, a trap for said lubricant in said conduit between said sight glass and said rotatable member, said conduit leading to the opposite end of said casing.

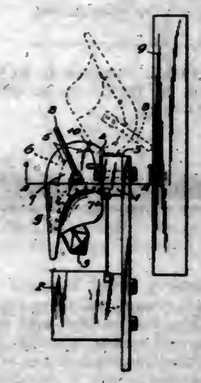
1,484,936. FRAME SUPPORT. WILLIAM ECCLES, Chorlton-cum-Hardy, and HENRY LEWIS GUY, Manchester, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1922. Serial No. 537,602. 10 Claims. (Cl. 74—56.)



1. The combination with a frame and a foundation member, of tiltable members carried by the foundation member and supporting the frame, said tiltable members being arranged in groups whose axes of tilt are substantially at right angles to each other.

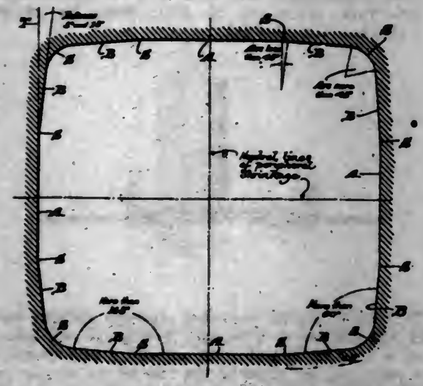
1,484,937. CUSHIONED VEHICLE TIRE, ETC. HENRY C. EGERTON, Ridgewood, N. J. Filed Aug. 31, 1918. Serial No. 252,170. 8 Claims. (Cl. 152—6.)

5. In vehicle tires, a metallic support, a fabric connecting member engaging said support and impregnated with cured phenolic condensation cementing material, a vulcanized rubber tire tread cushioning member vulcanized to said connecting member and secured in said support, said connecting member being formed with projecting gripping cords secured to said connecting member and interlocking with said cushioning member.



1,484,938. RAILWAY CAR. EMIL EISELT, Baltimore, Md. Filed Apr. 24, 1923. Serial No. 634,233. 6 Claims. (Cl. 105—62.)

1. In a railway car, the combination with the underframe having axles connected thereto, of a Fordson tractor frame detachably connected to said underframe, said frame including a gas engine of the explosive type, a transmission mechanism and a power transmitting shaft arranged transversely of said car, and means for operatively connecting said shaft to at least one of said axles.

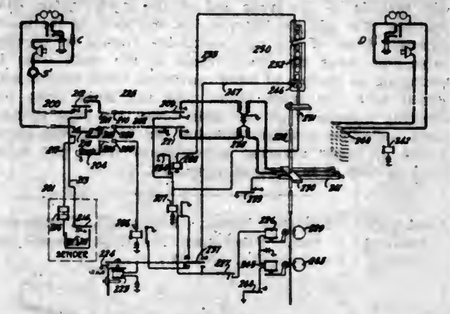


1,484,939. SHUTTLE TRAP OR GUARD FOR LOOMS. WILLIAM G. FISHER, Sunbury, Pa. Filed Sept. 29, 1922. Serial No. 591,277. 4 Claims. (Cl. 139—193.)

3. The combination with the hand rail and lay beam of a loom, of a shuttle guard comprising end plates hinged to the hand rail and having downwardly and outwardly extending parts, forming deflectors, curved retaining arms extending from the hand rail over the lay beam and thence downwardly toward said beam, and a plurality of

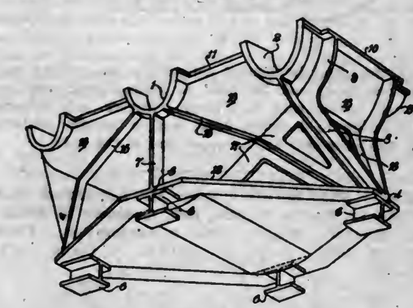
rods spaced apart from one another and extending between the end plates, said rods being connected to said arms.

1,484,940. INGOT MOLD AND INGOT. EMIL GATHMANN, Baltimore, Md. Filed Dec. 31, 1923. Serial No. 683,770. 14 Claims. (Cl. 22—218.)



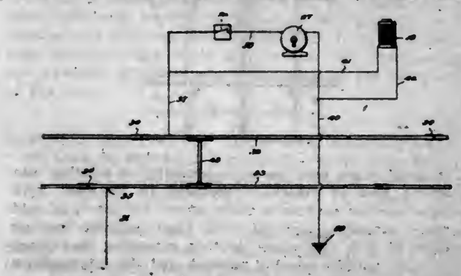
1. An ingot mold having a chamber any cross section of which below the neck is provided with curved salients at the corners which merge on each side into relatively narrow, substantially straight inclined corner walls in turn merging into relatively wide substantially straight centrally located walls.

1,484,941. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1920. Serial No. 433,752. 7 Claims. (Cl. 179—18.)



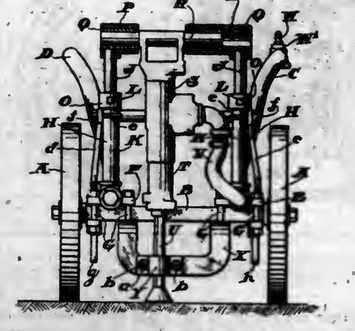
1. In a telephone exchange system, a calling line, a selector switch and a connecting circuit for extending a connection from said line, a control circuit comprising said connecting circuit extending to said switch, a control relay at said switch controllable over said control circuit,

means under the control of said relay for operating said switch, means operated during the advance of said switch



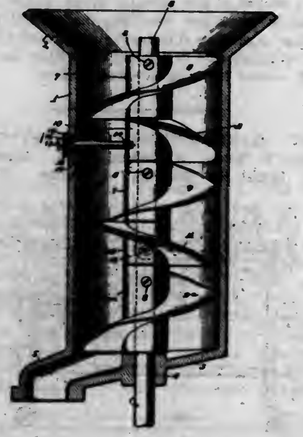
for intermittently opening said control circuit and means under the control of said last named means for rendering said relay quick to release.

1,484,942. GEAR CASING. HENRY LEWIS GUY, Manchester, and WILLIAM ECCLES, Chorlton-cum-Hardy, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1922. Serial No. 537,603. 13 Claims. (Cl. 74—56.)



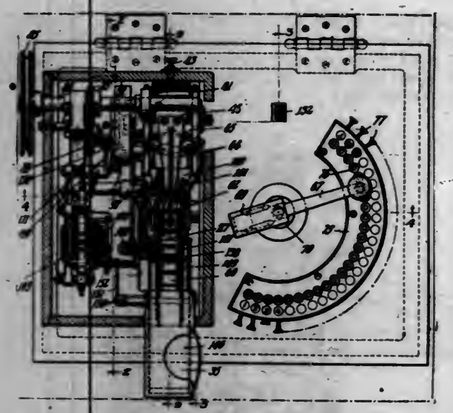
1. In a gear case structure, in combination, a plurality of bearings, struts for supporting the bearings, a plurality of other bearings, and strut structure including converging branches for supporting the latter bearings.

1,484,943. RAILWAY GRADE-CROSSING GATE. CHARLES W. HALL, Princeton, W. Va. Filed Sept. 13, 1923. Serial No. 662,573. 7 Claims. (Cl. 246—129.)



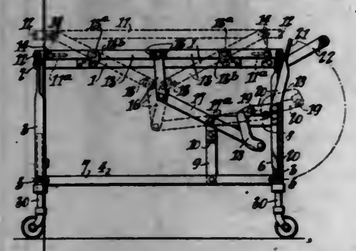
2. In a railway gate, the combination with an insulated block of rails; of a weighted gate beam standing normally in upright position, a motor adapted to lower said gate beam, a main circuit including a switch for said motor and connected with a source of power, said rails providing a gap in said circuit, an element connected with said beam for opening said main switch when the beam is in lowered position, means retaining the beam in said lowered position, and a brake actuated by said element when said beam is in lowered position.

1,484,944. ROAD-SURFACING MACHINE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 14, 1923. Serial No. 638,794. 3 Claims. (Cl. 94—49.)



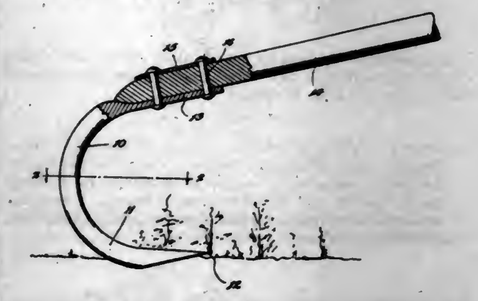
1. A road surfacing machine adapted to be rolled along a roadway, comprising an axle and a pair of wheels, handle bars connected to the axle, vertically adjustable frames mounted in up-right position on said axle, supports on said frame adapted to receive the handle bar of a fluid actuated percussive tool, a surfacing implement adapted to receive the hammer blows of said percussive tool, and a guide yoke connected to the axle for guiding the surfacing implement.

1,484,945. FEED HOPPER FOR PLASTIC MATERIALS. HERBERT MORTIMER HILL, New York, N. Y., assignor to Phenix Cheese Company, a Corporation of New York. Filed Aug. 30, 1922. Serial No. 585,329. 10 Claims. (Cl. 31—22.)



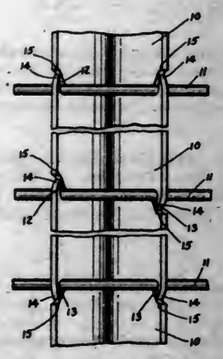
1. A feed hopper for plastic materials, comprising a cylinder, a revoluble shaft located therein and positioned approximately in the axial center thereof, an interrupted thread mounted upon said shaft and revoluble therewith, and another interrupted thread located within said cylinder and in proximity to said first mentioned thread, said second mentioned thread being fixed against rotation.

1,484,946. TICKET ISSUING AND TOTALIZING DEVICE. GEORGE ALFRED JULIUS, Sydney, New South Wales, Australia. Filed Apr. 14, 1920. Serial No. 373,726. 6 Claims. (Cl. 235—3.)



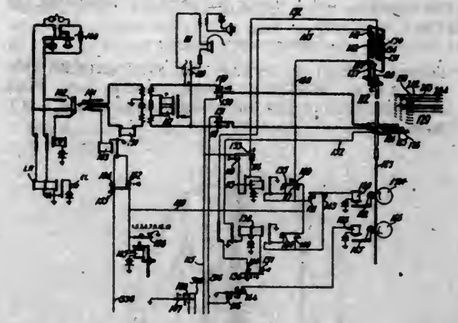
6. In an apparatus of the class described, the combination of a rotatable printing wheel, reciprocable means cooperating therewith to print a ticket between said wheel and means, means for feeding a strip to be printed between said wheel and reciprocable means, means for cutting off a printed ticket from said strip, means for ejecting the printed ticket, a rotating member having means for operating all of said means in proper sequence during one rotation of said member, a continuously rotating member adapted to engage said operating member thereby to rotate the same, a rotatable and reciprocable member, means for transmitting the rotary motion of said member to said printing wheel, means operated by said rotatable and reciprocable member during its reciprocatory motion for causing engagement of the continuously rotating member with the operating member, means actuated during the reciprocatory movement of said rotatable and reciprocable member for establishing a record of the printed ticket, means adjacent to the printing wheel for receiving the ejected tickets, and means also operative during the reciprocatory movement of said rotatable and reciprocable member for separating recorded tickets from unrecorded tickets.

1,484,947. HAND-CONTROL LOAD-LIFTING TRUCK. ROBERT B. KECK, Alhambra, Calif. Filed Mar. 14, 1923. Serial No. 625,106. 4 Claims. (Cl. 254—8.)



1. A combined object lifting and transferring truck comprising a main frame including horizontal opposite sides and end members, a lifter frame that works inside the said top members of the main frame, a pair of vertically swingable frames, the said frames being pivotally mounted, one at each end of the top side members of the main frame, the lifter frame being connected to and movable up or down with the outer ends of the swingable frame, a main vertically swingable lever whose outer end extends to the front end of the truck frame, connections that join the inner end of the lever to the inner adjacent ends of the two swingable frames to thereby raise and lower the lifter frame as the main lever is swung up or down and hand controlled lever connections joined with the truck frame and the main lever for effecting movement of the main lever, the said connections including members adapted for holding the parts stated to their reversed adjustments when the main lever is shifted in reverse directions.

1,484,948. WEEDING TOOL. ROBERT H. KIMBERLIN, Midland, S. Dak. Filed Mar. 29, 1922. Serial No. 547,816. 1 Claim. (Cl. 55—65.)



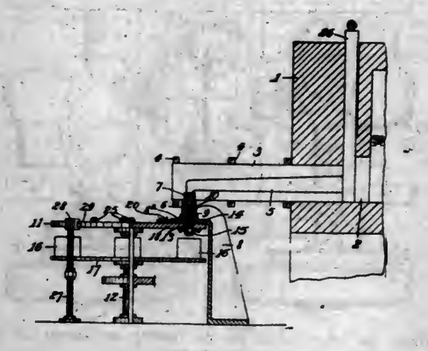
An agricultural implement comprising an arcuate rod having its upper end flattened to form a seat and its lower end terminating in diverging fingers, said fingers each tapering to a knife edge, and a handle secured rigidly upon the seat at the upper end of the rod.

1,484,949. FENCEPOST. CARL M. KITSELMAN and OSBORN L. BARBER, Muncie, Ind., assignors to Kitselman Brothers, Muncie, Ind., a Corporation. Filed Sept. 21, 1922. Serial No. 589,542. 1 Claim. (Cl. 256—58.)

A metal fence post having a plurality of relative thin portions each of which is provided in its edge with oblique notches to receive fence wires, the lower of said notches extending upward with their mouths opening downward and the upper notches extending downward with their mouths opening upward, and the intermediate oppositely positioned notches extending in oppositely inclined directions with their mouths opening in opposite directions, whereby the notches will prevent upward movement of the lower wire in the lower notches, downward movement of the upper wire in the upper notches, and upward and downward movement of the intermediate wire in the intermediate notches.

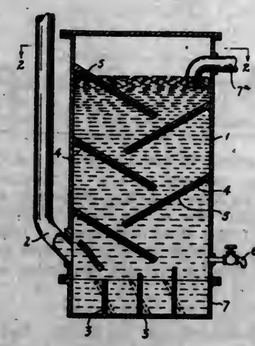
1,484,950. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1920. Serial No. 377,358. 9 Claims. (Cl. 179—27.)

1. In a telephone exchange system, an originating office, an outlying office, trunk lines extending between said offices, an automatic switch in said first office for selecting one of said trunk lines, responsive means individual to said trunk line at the outgoing end thereof, a signal associated with said trunk line at the incoming end thereof, means made effective by the seizure of said trunk line by said switch to operate said responsive means, and means under the control of said responsive means for operating said signal.



1,484,951. AIR TUBE FOR PNEUMATIC TIRES. THOMAS BAKER MCLEROTH, Hadley Wood, England. Filed July 6, 1922. Serial No. 573,238. 3 Claims. (Cl. 152—22.)

3. For use in an air tube of the kind hereinbefore set forth for a pneumatic tire, a stud having a neck and a base, said neck being formed with a substantially axial passage and said base being formed with transverse channels communicating with said passage and intersecting one another, said channels debouching at the periphery of the base.

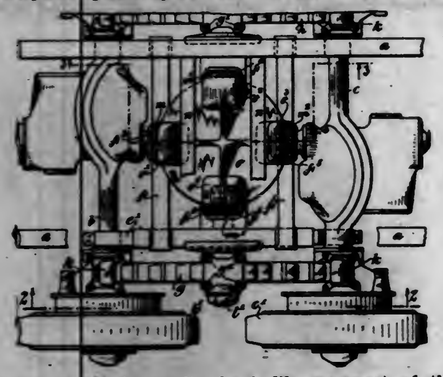


1,484,952. AUTOMATIC FLOW FOR GLASS TANKS. WILLIAM H. MCSWAIN, Moundsville, W. Va., and HARRY W. MCSWAIN, Detroit, Mich. Filed May 5, 1921, Serial No. 466,938. Renewed Oct. 25, 1923. 4 Claims. (Cl. 49—5.)

4. An automatic flow for glass, comprising, in combination with a glass tank, a spout leading from the tank, a horisontal stand located beneath said spout and having a vertical passage therethrough, means for conducting glass from said spout to said passage, a rotating table having the edge portion thereof in closely underlying relation to said stand and having oblong openings in said edge portion, said openings being located to be successively carried by rotation of the table into register with said passage for receiving glass from the latter, a shear, means for actuating said shear across the lower end of said passage at a definite point in the registration of each table-opening with said passage, a second table

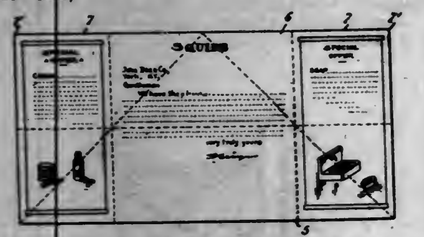
located beneath the first table and molds carried by the second table in position to receive charges of glass detached by said shear.

1,484,953. INTERCEPTOR. SAMUEL L. MARSH, Los Angeles, Calif. Filed Jan. 6, 1923. Serial No. 611,084. 2 Claims. (Cl. 210—52.)



1. An interceptor adapted to separate a solid from a liquid, including a casing, a fluid inlet near the bottom thereof, and an outlet near its top, baffles located at the bottom of said casing and in angular relation to the incoming stream of mixed solids and liquid, whereby the heavier particles in said fluid are carried by their momentum into the pockets formed by said baffles, the stream of fluid passing upward away from said baffles, and means entirely above said baffles for removing the remaining particles from said stream including a plurality of screens projecting from opposite sides of said casing, each screen extending only part way across said casing.

1,484,954. VEHICLE CONSTRUCTION. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 10, 1923. Serial No. 637,960. 8 Claims. (Cl. 180—22.)

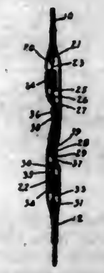


1. In combination with the frame of a motor propelled vehicle a plurality of supporting axles having non-steering wheels thereon, means to maintain the axles in

spaced relationship and non-metallic yielding members interposed operatively between said axles and the main

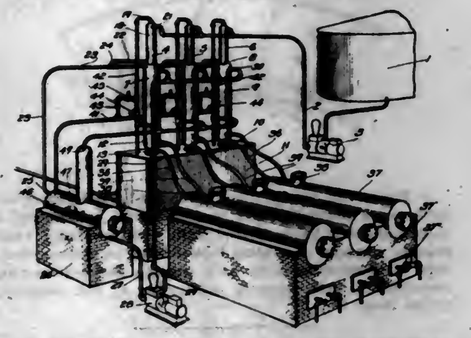
frame to afford capacity for bodily movement of the axles with respect to the frame.

1,484,955. FOLDER. GUTHRIE MCNAB MILLER, New York, N. Y., assignor to E. R. Squibb and Sons, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,419. 6 Claims. (Cl. 229—92.1)



1. As an article of manufacture, a substantially rectangular sheet adapted to bear a message, said sheet being folded on lines extending diagonally from the center of the upper edge to the lower corners to cover the message, the folded sheet then having a triangular shape and being again folded to bring the three corners of the folded sheet together, thereby simulating a rectangular envelope.

1,484,956. CONTROLLER HANDLE. THOMAS I. MORRISH, San Francisco, Calif. Filed July 25, 1923. Serial No. 653,716. 4 Claims. (Cl. 74—33.)



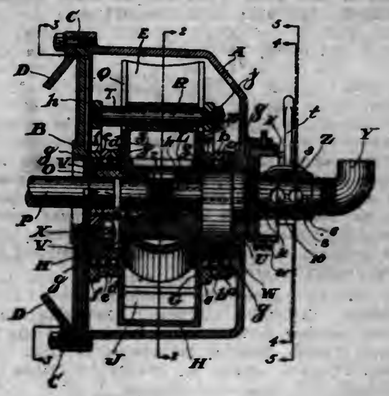
1. A controller handle comprising a pair of jaws formed with a hole to fit on an air brake valve stem or the like, stem sections extending from the jaws and hinged together, the end of one stem section being inwardly slotted to receive the other and having a cylindrical threaded periphery for receiving a handle, a threaded bolt carried by one stem and extending through the other, a nut on the bolt for adjustment to draw the jaws together, and a spring for normally separating the jaws.

1,484,957. YIELDING STRAP FOR SUSPENDERS AND THE LIKE. EDWARD F. MOSER, Warsaw, Ind. Filed May 8, 1922. Serial No. 559,288. 4 Claims. (Cl. 241—12.)

1. A yielding strap construction including a plurality of elastic means in tandem and separated relation, and strap means between the same and associated therewith, the strap means being arranged to permit relative movement between the elastic means and the strap means but prevent stretching the elastic means beyond a predetermined limit.

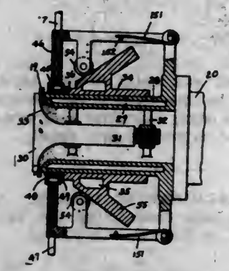
1,484,958. APPARATUS FOR CONVERTING HEAVY HYDROCARBONS INTO LIGHTER HYDROCARBONS. WILLIAM F. MUEHL, Kansas City, Mo., assignor to Interstate Refineries Inc., Kansas City, Mo., a Corporation of Missouri. Filed July 8, 1921. Serial No. 483,162. 2 Claims. (Cl. 196—3.)

1. An apparatus for converting heavy hydrocarbons into lighter hydrocarbons comprising a source of oil supply, a heat exchanging reflux condensing tower having a casing at its upper end communicating with the top of the tower, tubes in the casing, crown sheets connecting the tubes to provide an oil chamber about the tubes, the oil chamber having an oil inlet at the top and an oil outlet at the bottom, the oil inlet at the top communicating with the source of supply, a pre-heating still, a pipe connected to the outlet for the oil chamber and discharging into the pre-heating still above the normal liquid level thereof, an outlet pipe communicating with the pre-heating still below the normal liquid level thereof and discharging into the tower below the oil chamber, baffles in the tower below the oil chamber over which the oil from the last named pipe flows, a sump at the bottom of the tower, a main still, a pipe communicating



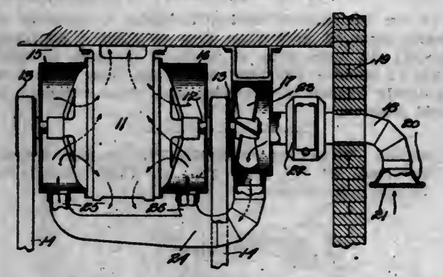
the sump with the main still, a pipe communicating with the main still above the normal liquid level thereof and communicating with the tower above the sump and below the baffles, a vapor conducting pipe connected to the top of the tower above the oil chamber and above the tubes in the oil chamber, a distributor connected to the pipe and located below the liquid level in the pre-heating still, a heat exchanging tower communicating with the pre-heating still, a pipe leading from the top of the last-named tower, and a condenser connected to said pipe.

1,484,959. PRUNER'S COAT. WILLIAM A. MYERS, Riverside, Calif. Filed Mar. 20, 1920. Serial No. 367,550. 4 Claims. (Cl. 2—15.)



1. A pocket construction for a clipping tool, a coat body, a fabric strip secured at its side edges to a face of said coat body and spaced therefrom, the width of said pocket being restricted adjacent its lower end, and a tool retaining means secured inside of said pocket at its restricted portion.

1,484,960. ROTARY CYLINDER MOTOR. CAID H. PECK, Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 28, 1921. Serial No. 488,062. 3 Claims. (Cl. 121—59.)

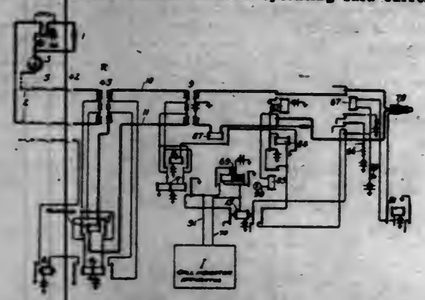


1. A rotary fluid actuated cylinder motor comprising a case or frame, a stationary hollow shaft supported in said case, a rotary sleeve on said shaft, a rotary driving member in the form of a cylinder casing bodily revoluble with said sleeve on said shaft and provided with a plurality of angularly disposed cylinders, the outer ends of the walls of the cylinders being longitudinally slotted at opposite sides for a portion of their length, pistons adapted to reciprocate in said cylinders, wrist pins carried away by said pistons and projecting laterally through the slots in the cylinder walls, stationary eccentrics located within the case or frame at each side of the cylinder casing, one eccentric being formed on the stationary hollow shaft, the rotary sleeve extending through the other eccentric, a plurality of yokes revolubly mounted side by side on each eccentric, there being double the number of yokes for a given number of cylinders, pairs of yokes being connected to the projecting ends of the said wrist pins at each side of the cylinders, a driven shaft extending outwardly from the case or frame in alignment with the said stationary shaft and connected through the agency of said rotary sleeve to be rotated by the rotary cylinder casing, and means operated and controlled by the rotation of the cylinder casing and said rotary sleeve for automatically distributing motive fluid to said cylinders.

1,484,961. MACHINE FOR MAKING GASKETS AND THE LIKE. WILLIS J. PEELLE, Chicago, Ill. Filed June 4, 1923. Serial No. 643,240. 15 Claims. (Cl. 18—12.)

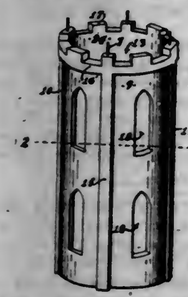
1. In a machine for forming sealing gaskets and the like, the combination of a cylindrical means adapted to contain a mass of rubber-like material in plastic condition, means for laterally extruding a portion of said rubber-like material from said mass in annular form, and means for severing said laterally extruded portion of the rubber-like material to form a sealing gasket.

1,484,962. PROTECTION FOR ELECTRIC MOTORS. GEORGE THOMAS RANDLE, Saylesville, R. I., assignor to Motor Protection Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Oct. 7, 1919. Serial No. 329,114. 11 Claims. (Cl. 172—36.)



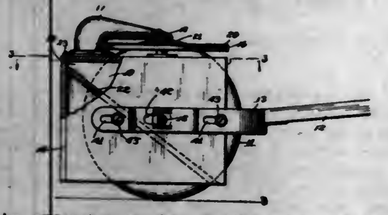
1. The combination with an electric motor of exterior box-like casings applied to and enclosing the opposite ends of the motor, an armature shaft passing from one of said casings, a fan on said shaft, and a conduit for air having branch pipes connected independently and in parallel to the respective casings, said conduit also enclosing and containing said fan.

1,484,963. TELEPHONE-EXCHANGE SYSTEM. ARTHUR RAYNSFORD, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,311. 8 Claims. (Cl. 179—27.)



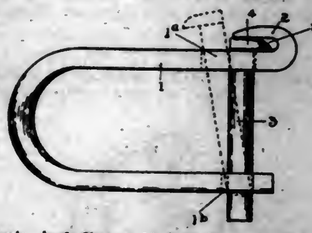
1. In a telephone system, an incoming line, current reversing means associated therewith, a trunk circuit, means associated with said incoming line for applying ringing current to said trunk circuit, a signal for said

trunk circuit, a source of tone, means effective upon the connection of the incoming line to the trunk circuit to trip said ringing current without operating said current



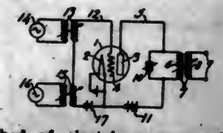
reversing means, and means in said trunk circuit also effective upon the connection of the incoming line to the trunk circuit to apply tone from said source to said incoming line and to actuate said signal.

1,484,964. ILLUMINATING DEVICE. J. BENNEVILLE RHOADS, La Jolla, Calif. Filed Dec. 21, 1922. Serial No. 608,267. 9 Claims. (Cl. 67—22.)



1. An illuminating device, including a plurality of walls arranged around an area to form a miniature tower; the walls being of increased thickness at intervals to resemble pilasters; said walls being formed of a slowly combustible material, and wicks imbedded in said pilasters.

1,484,965. TRACTOR PHONOGRAPH. WARREN RITTER, Brooklyn, N. Y. Filed Feb. 27, 1922. Serial No. 539,365. 6 Claims. (Cl. 46—47.)



5. An apparatus as characterized comprising a box-like body; a vertical rotary shaft mounted thereon; a turn-table mounted on said shaft; a plurality of carrying wheels supporting said body; an axle fixedly attached to one of said wheels and movable transverse of said body; a handle for manipulating said apparatus operatively connected with said body; means for connecting said handle and said axle for shifting said axle in said body; a plurality of driving members mounted on said axle in spaced relation and at opposite sides of said vertical shaft for engaging said shaft to rotate the same successively in correspondence with the movement of said axle; and means for shifting said axle and said driving members in correspondence with the movement of said apparatus.

1,484,966. CLEVIS. WILLIS G. SAMPSON and OTIS SAMPSON, Hansen, Idaho. Filed July 14, 1921. Serial No. 484,745. 1 Claim. (Cl. 278—96.)

A clevis, including a U-shaped member provided with an oblong hole in the normally upper portion and with an extended turned back straight end portion extending backwardly over said oblong hole approximately one-half the length of said hole and provided with another relatively short hole in the normally lower portion of said U-shaped member, and a pin with a head on one end cut away on one side flush with the side of said pin, said pin being adapted to be inserted in said holes so that the flat side of the head passes the straight end of said extended turned back portion, the head resting between the extended end of said turned back portion and the normally upper portion of said U-shaped member when the pin is turned in said holes.

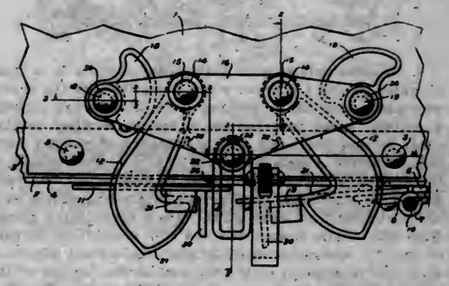
1,484,967. AMPLIFYING SYSTEM. JOHN C. SCHELLENG, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 432,905. 21 Claims. (Cl. 179—171.)

1. The method of electric wave amplification which consists in combining with the given wave to be amplified, a wave of higher frequency in such phase relation that the positive peaks of said given wave occur at substantially the same time as positive peaks of said high frequency wave, and subjecting the combined waves to an amplifying process.

1,484,968. CULVERT. JULIUS H. SCHLAFLY, Canton, Ohio, assignor to The Canton Culvert and Silo Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,491. 8 Claims. (Cl. 137—75.)

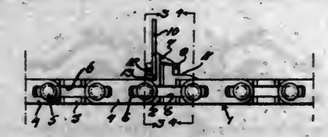
1. A sheet metal culvert provided upon its end with an integral tubular bead formed by rolling plural plies of the metal at the end of the culvert upon themselves.

1,484,969. CEMENT DUMP. BERNARD H. SCOTT, Glendale, Calif. Filed Feb. 3, 1923. Serial No. 616,865. 6 Claims. (Cl. 294—69.)



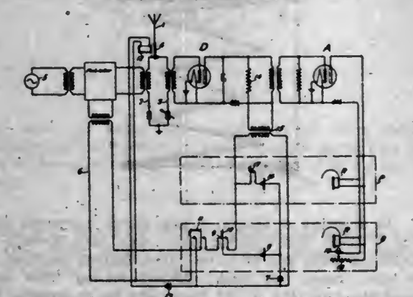
1. In a device of the character described, in combination, an outer casing member, an inner tubular member of less diameter to provide an annular space between said outer and inner members, means holding said inner tubular member in place in said outer member, a closure member around said inner tubular member at the lower end of said outer casing member, a shaft member in said inner tubular member, and means controlled by said shaft and said inner tubular member for holding said closure member in closing position in the lower end of said outer casing member, said means being adapted to be released by the movement of said shaft inwardly.

1,484,970. PROCESS OF MAKING SOUP POWDER FROM PEAS, BEANS, LENTILS, OR THE LIKE. ADOLPH SHERER, Brooklyn, N. Y. Filed Apr. 7, 1922. Serial No. 550,473. 3 Claims. (Cl. 99—11.)



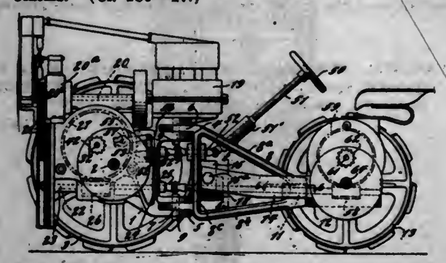
1. The hereindescribed process of making a soup powder from peas, beans, lentils or the like, which consists in immersing them in moist condition in a heated oleaginous material until the moisture is driven off, removing them from said oleaginous material as soon as said moisture is driven off, and pulverizing them.

1,484,971. RAILWAY CAR. ALBA K. SIMMONS, Roanoke, Va., assignor to B. W. Kadel, Baltimore, Md., and John A. Pilcher, Roanoke, Va. Filed Jan. 13, 1922. Serial No. 529,014. 22 Claims. (Cl. 105—308.)



1. A railway car having a door, a door-securing member carried by the car and arranged to support the door in fully closed position, and additional door-supporting means pivotally mounted upon the car for supporting the door in a partly closed position.

1,484,972. CONVEYER-CHAIN LINK. WILLIAM F. SIPPLE, Hazleton, Pa. Filed Nov. 16, 1922. Serial No. 601,226. 4 Claims. (Cl. 198—176.)



4. A conveyer chain link comprising a body portion having a slot; a lug on the body portion having a hole; a flight on one side of the lug; a bolt passing through the lug adapted to hold the flight, and a shoulder on the other side of the lug for preventing the turning of the bolt.

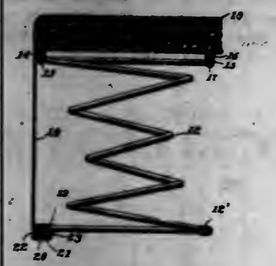
1,484,973. AIRPLANE INTERPHONE SET. GEORGE H. STEVENSON, Rye, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,107. 7 Claims. (Cl. 179—2.)

2. A radio receiving system including an amplifier, a local receiving signaling set connected to said amplifier for receiving radio signals, a second local signaling set, said amplifier connecting said signaling sets for two-way communication.

1,484,974. VEHICLE. NORMAN C. STOREY, Rockaway, N. J. Filed Mar. 12, 1919. Serial No. 282,149. 13 Claims. (Cl. 180—17.)

1. A vehicle comprising front and rear trucks and overlapping truss members connecting the two arranged in different planes, the first truss member forming a pivotal connection with the rear truck, and the second truss member forming a pivotal connection with the first named truss member at a point in advance of the first named pivotal connection.

1,484,975. DECOY DUCK. JOHN O. STUBBS, Hickman, Ky. Filed Feb. 27, 1923. Serial No. 621,498. 3 Claims. (Cl. 43—3.)

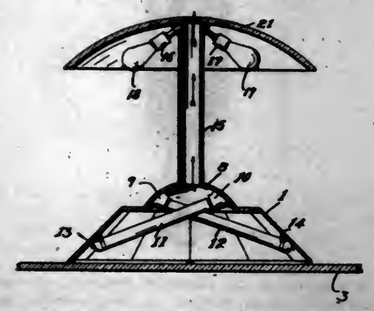


3. A decoy comprising a base of buoyant material having the general outline of a water fowl, said base provided with a recess extending around its upper edge, a

body and head portion composed of two mating halves stamped out of sheet material, and made in the semblance of the body, neck and head of a water fowl, and

arranged to fold outwardly for transportation, or to fold together to form the water fowl, the lower edges of said halves being hinged to the base and arranged to seat in the recess in said base.

1,484,976. SPRING STRUCTURE. DESIRE H. VAN HOVE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich. Filed Feb. 8, 1922. Serial No. 535,070. 3 Claims. (Cl. 155—180.)

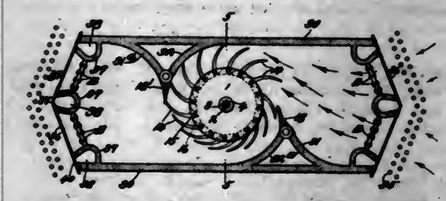


1. In a spring structure, a base frame composed of a strip of sheet metal folded upon itself into S-shape to provide an inner and an outer curve, springs mounted on the base frame, the border springs having their base convolutions located in the inner groove, a covering for the structure including a skirt having its marginal edge fitted in the outer groove, and a U-shaped strip having one flange disposed under the lower wall of the outer groove and having its opposite flange disposed in the outer groove over the lower edge of the outer groove and over the material of the skirt to secure the edge of the skirt in said outer groove, the lower flange of said U-shaped strip having spaced, projecting fingers bent over the open side of the inner groove and over the base convolutions of the border springs fitted in said inner groove.

1,484,977. PNEUMATIC-TIRE DEFLATOR. JULIA P. WARDEN, South Pasadena, Calif. Filed May 31, 1922. Serial No. 564,897. 1 Claim. (Cl. 152—12.)

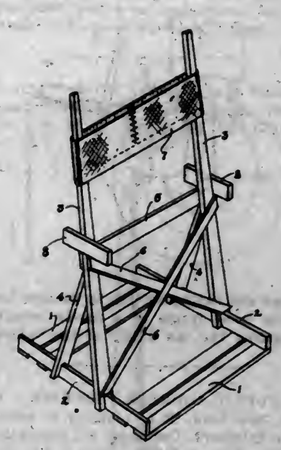
A pneumatic tire deflator comprising a hollow body adapted to be detachably connected to the valve casing of a tire tube; a boss 4 integral with said body, said boss extending inwardly from the inner wall toward the longitudinal axis of said body and arranged to have an air passage 16 between said boss and the inner wall of said body; and a rod secured to said boss, said rod adapted to open the valve in the casing of the tire tube when said body is attached thereto, said body provided with an air passage 17 that is connected to the air passage 16 so that air from a tube can escape through the passages of said body.

1,484,978. LAMP STAND FOR SHOWCASES. FREDERIC L. WHEELER, Berkeley, Calif. Filed Dec. 26, 1922. Serial No. 608,862. 4 Claims. (Cl. 240—81.)



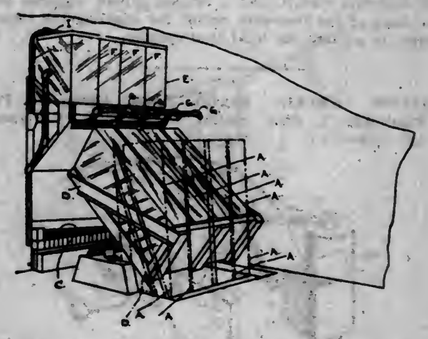
1. A lamp stand having a base, a series of lamps therein, a hollow standard open at top and bottom to allow the heated air to escape therefrom, and lamps supported at the top of said standard.

1,484,979. METHOD OF MAKING INTERMESHING LINKS. CHARLES A. WHITING, Franklin, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed Aug. 1, 1922. Serial No. 579,080. 5 Claims. (Cl. 22—190.)



3. The process of making soldered link-mesh which consists in making the mesh from non-solder-core wire, electro-depositing a soldering compound upon the mesh, heating the mesh to cause the compound to flow and then cooling the mesh and thereby hardening the soldering compound which fills the joints in the links.

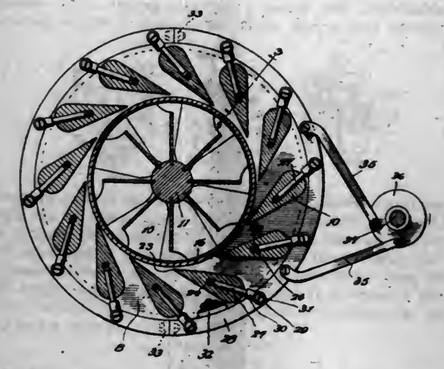
1,484,980. TURBINE WHEEL. FRANK M. ZOTTOLI, Boston, Mass. Filed June 6, 1922. Serial No. 566,396. 6 Claims. (Cl. 253—14.)



4. In combination with a sluiceway located in a body of water having a current which flows through the sluiceway and which has a varying level at different periods, a turbine wheel mounted on a rotary, vertical driving shaft in said sluiceway, and a plurality of current regulating turbine wheels arranged in a row transversely of the sluiceway between said first turbine wheel and each end of the sluiceway, said current controlling wheels each having blades with hubs which have a diminishing spread from the middle toward the top and toward the bottom, so that the clearance space between the several wheels in each row is greatest at the top and at the bottom of the wheel and diminishes toward the middle, whereby when the level of the water is at the line where the said hubs have the greatest spread there will be offered the greatest resistance to the flow of the water and the resistance will be diminished as the level of the water rises above or falls below said middle line.

1,484,981. SUPPORT. DAYTON C. BRENINGER, Massillon, Ohio. Filed June 24, 1921. Serial No. 480,076. 9 Claims. (Cl. 248—41.)

1. A device of the character described arranged to be temporarily fixed and including spaced uprights, and a cushion comprising an endless belt slidably mounted upon said uprights in a position to permit a person standing erect to lean against said belt, the belt being tightly stretched between the uprights.



1,484,982. COMBINED DUMPING AND REFILLING MEANS FOR ICE MANUFACTURE. GEORGE B. BRIGHT, Detroit, Mich., assignor to Detroit Ice Machine Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1922. Serial No. 583,336. 6 Claims. (Cl. 62—105.)

1. In an ice freezing apparatus, the combination with dumping mechanism for discharging the frozen ice cakes, of a tank filler located above the dumping mechanism to refill the ice cans while they are in engagement with the dumping mechanism.

1,484,983. TURBINE. JOHN C. BRITCHER, York, Pa. Filed May 1, 1923. Serial No. 635,950. 1 Claim. (Cl. 253—122.)

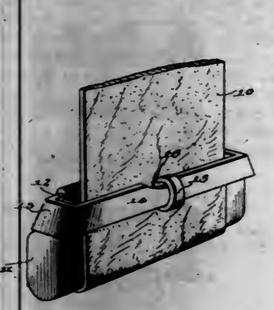
In a turbine, the combination of a rotor, a housing therefor including upper and lower rings spaced apart and defining an opening to admit fluid to the rotor, a plurality of wicket gates pivotally mounted between the said rings and provided with longitudinal sockets opening through their outer ends, a shifting ring encircling

the series of gates, and a plurality of arms slidably engaged in the sockets in the respective gates and having their outer ends pivotally connected with the shifting ring.

1,484,984. SILO OR TANK. OLIVER BRUMBAUGH, Louisville, Ohio. Filed Aug. 17, 1922. Serial No. 582,485. 2 Claims. (Cl. 72—41.)

1. A structure of the character described comprising the combination with a plurality of hollow blocks assembled together to form a wall of channel shaped clips located over the upper end portions of adjacent end walls of each pair of blocks, and provided with shoulders to receive the lower end portions of adjacent end walls of the next tier of blocks.

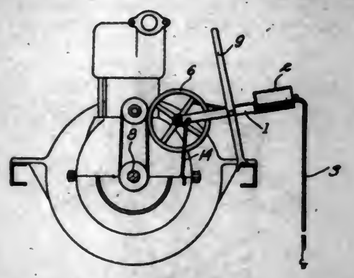
1,484,985. FINGERING MECHANISM FOR CONTRABASS VIOLS. SÖREN CHRISTENSEN, Copenhagen, Denmark. Filed Feb. 4, 1919. Serial No. 275,004. 8 Claims. (Cl. 84—317.)



1. In a viol, the combination with a finger-board; of strings extending over said finger-board; and a plurality

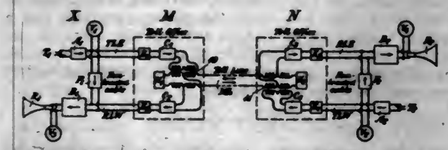
of fretting fingers set at definite intervals along said finger-board; and keys, one for each fretting finger, and

each remote from its fretting finger, said keys being located substantially midway of the ends of the finger-board.



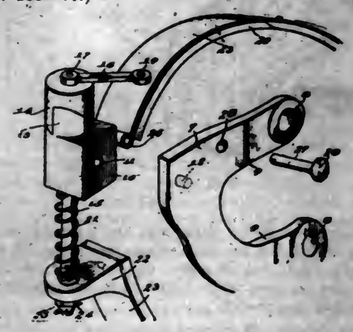
1,484,986. BACKBAND HOOK. JOHN W. CRIM, Columbia, S. C., assignor of one-half to Joseph Norwood, Columbia, S. C. Filed Apr. 14, 1923. Serial No. 632,086. 3 Claims. (Cl. 54—55.)

1. A back band hook including a body in the form of a rectangular frame having tapering walls and forming therein a wedge block receiving space whose larger end opens downwardly, one side of said frame having an outwardly and upwardly curved hook proper and having its upper edge cut away opposite the upper inturned free end of the hook, and a wedge block having a tapering frame entering portion and having an enlarged body portion pendent below the frame when its wedge portion is within the wedge block receiving space of the frame as described.



1,484,987. PUMP. WILLIAM C. DODD, Bald Knob, Ark. Filed Jan. 20, 1923. Serial No. 613,979. 2 Claims. (Cl. 230—27.)

1. A device of the class described comprising a frame, an air pump carried thereby, a friction wheel rotatably mounted in the frame and connected with the pump for actuating the same and a yoke-shaped handle connected



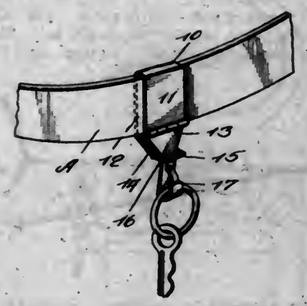
with the frame and having notches in its ends for engaging a part of the hood frame of a motor vehicle to hold the wheel against the fan pulley of the vehicle.

1,484,988. PUBLIC-ADDRESS CIRCUITS. HAROLD S. HAMILTON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 9, 1923. Serial No. 618,072. 6 Claims. (Cl. 179—1.)

1. A public address system for the two-way interconnection of distant auditoriums comprising a toll circuit interconnecting two distant toll offices, a four-wire circuit from each toll office to the associated auditorium, a transmitter connected to one line of the four-wire circuit, a loud speaking receiver connected to the other line of the four-wire circuit, and a by-pass circuit between the two lines of the four-wire circuit for enabling the transmitter to actuate the local loud speaker.

1,484,989. BRAKE. HARVEY HAWK, Grampian, Pa. Filed Apr. 7, 1923. Serial No. 630,522. 4 Claims. (Cl. 188—77.)

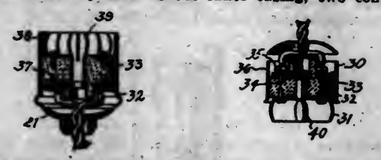
3. In an emergency brake for the rear wheels of an automobile, a bracket adapted to be secured in a fixed position, a cam member pivotally mounted on the bracket and provided with a central passage, a shaft mounted for rotation in the passage in the cam member and provided with a cam member in cooperative engagement with the first-mentioned cam, means fro rotating the shaft, a



brake band having one end pivotally mounted on the bracket and its other end connected with the shaft in such a manner as to permit rotation of the shaft in said end of the brake band, and a resilient means for maintaining the cam members in cooperative engagement.

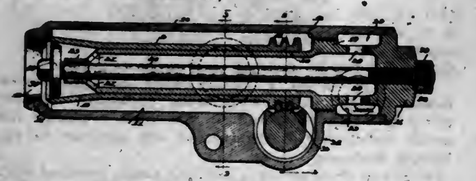
1,484,990. CANT HOOK. JOHN VIRGIL HOGANS, Argyle, Fla., assignor of one-half to Joe Hayes, Newark, N. J. Filed Dec. 15, 1922. Serial No. 607,170. 2 Claims. (Cl. 294—17.)

1. A cant hook including a staff having a groove therein, a dog pivotally mounted on the staff, an arm pivotally mounted within the groove and having its free end bearing against the outer face of the dog to urge the latter inwardly toward the staff, one end of the arm extending into the groove, and a spring connected to the extension and staff.



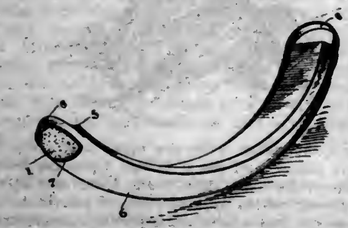
1,484,991. KEY RING. DOMINA C. JALBERT, Woonsocket, R. I. Filed May 9, 1923. Serial No. 637,768. 2 Claims. (Cl. 24—3.)

1. A key-ring of the character described comprising a U-shaped member adapted to embrace a belt and having one leg thereof extending below the other, the short leg having a hasp hinged thereto, this hasp having engagement with the long leg, the extremity of the hasp being formed with a snap hook.



1,484,992. ELECTRIC SWIVEL SOCKET. KENJI KIJIMA, Los Angeles, Calif. Filed Jan. 31, 1921, Serial No. 441,361. Renewed Jan. 24, 1924. 3 Claims. (Cl. 173—324.)

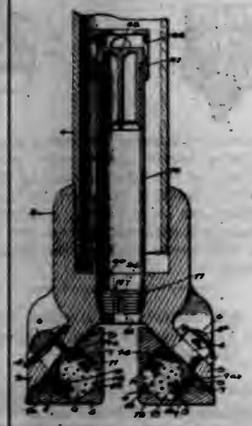
1. In an electric swivel socket, the combination with an outer telescoping casing, a lining therefor of insulating material, an inner insulating member relatively fixed to the casing, and two contact members, constituting, respectively outer and inner concentric and flexible shells completely enclosed within the casing and its lining of insulating material, comprising a plurality of outwardly yielding spring fingers formed with inwardly projecting extremities, of an inner telescoping casing and lining therefor of insulating material, a second inner insulating member relatively fixed to the inner casing, two contact



members carried by the inner insulating member engaging with the yielding fingers of the outer contact members, an annular flange on the inner casing and disposed within the outer casing, a knurled flange on the inner casing and disposed without the outer casing, a detachable ring on the outer casing and disposed between the flanges on the inner casing, and screws securing the detachable ring to the outer casing.

1,484,993. OIL BURNER. GEORGE BAUMAN LEAR, Shreveport, La. Filed Nov. 1, 1922. Serial No. 598,450. 5 Claims. (Cl. 158—75.)

1. A burner including a cylindrical casing having a steam inlet and having a main bore and an oil inlet opening into said bore, said casing having a reduced outlet at one end, a steam tube detachably mounted axially of and within the casing and closing its opposite end, said tube having a steam receiving aperture in communication with the steam inlet of the casing and having its opposite end in fixedly spaced relation to the outlet end of the casing, a regulating sleeve slidably mounted on the steam tube within the main bore of the casing and having one flared end into which the steam tube discharges, movable toward and away from the reduced discharge end of the casing, means for shifting said regulating tube, and a spreader within the flared end of the regulating tube.



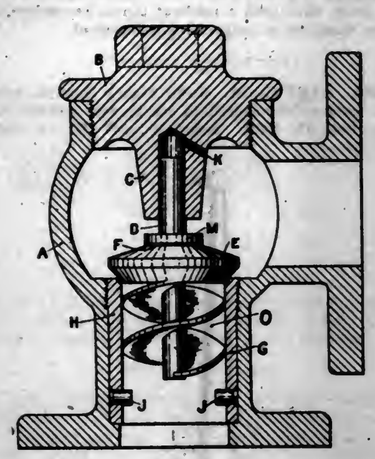
1,484,994. TIRE-RETREADING CORE AND METHOD OF FORMING THE SAME. JOHN L. MAGUIRE and LANTA C. WEESE, Elkins, W. Va. Filed July 19, 1922. Serial No. 575,983. 4 Claims. (Cl. 18—45.)

4. As an article of manufacture, a core for use in retreading tires comprising a solid body arcuate in form and made of a flexible resilient material, said body having concentric inner and outer walls, the outer wall thereof being arcuate in cross sectional contour and the inner wall thereof having a flat portion extending along

the longitudinal median line thereof and oppositely inclined portions merging the flat portion into the outer wall, and a facing of fabric secured to the body and having loop portions at the ends thereof forming handles for the body.

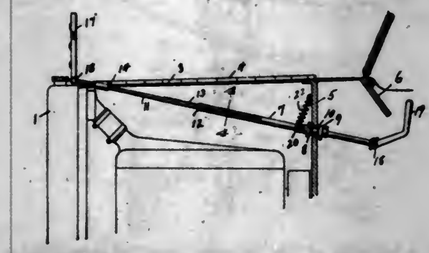
1,484,995. ROLLER CORE DRILL. JEFFERSON DAVIS PACE, Shreveport, La. Filed Nov. 30, 1921. Serial No. 518,851. 4 Claims. (Cl. 255—71.)

1. A drill having a rotary cutter recessed bearing means for the cutter with radial openings, and shot mixed with grease packed in the recess rendering the grease mobile for penetration of the openings to the bearing surfaces.



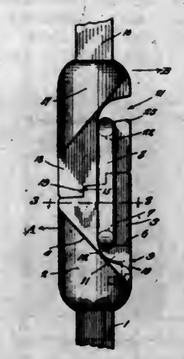
4. A well drill having a coupling sleeve provided with a tapering opening having an annular shoulder formed by a smaller opening which enters the large part of the tapering opening, a core sample tube fitted into the smaller opening, gripper slips situated in the tapering opening each having a depression forming a circular groove when the slips are assembled, and resilient means fitted in said groove to keep the slips together said means extending above the surface of the slips so as to make contact with the wall of the tapering opening and thereby insure a prompt closure of the slips upon a downward motion in said opening.

1,484,996. GRAIN-SCATTERING-PREVENTING DEVICE FOR GRAIN BINDERS. OSCAR E. PAULUS, Harvard, Nebr. Filed June 24, 1922. Serial No. 570,563. 6 Claims. (Cl. 56—472.)



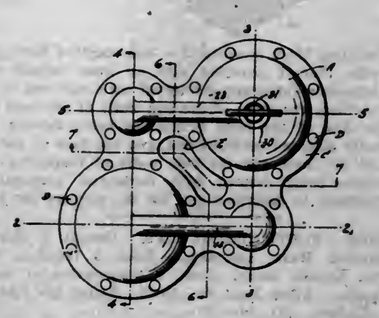
1. The combination with the upper and lower decks of a grain binder, and check springs depending from the lower edge of the upper deck to the lower deck of a supporting frame carried by and disposed and held in parallelism to the upper deck, and a yieldable grain straightening arm supported on the upper end of said frame and extending downwardly from the upper edge portion of the upper deck toward the upper surface of the lower deck and disposed in contact therewith rearwardly of the check springs, thereby acting to straighten the grain during its passage to the check springs.

1,484,997. VALVE. LEWIS JAMES ROSSITER, Erskineville, New South Wales, Australia. Filed July 10, 1922. Serial No. 573,876. 1 Claim. (Cl. 251—129.)



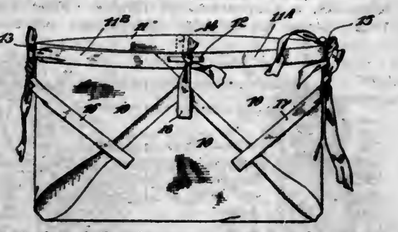
In a non-return valve the combination of a body having an inlet opening at one end, an outlet opening at one side and a chamber having a downwardly projecting tubular guide, a cylindrical seat-bush fitted in said inlet opening, a valve in said chamber having a guiding element at one side arranged in said seat bush and connecting helical blades forming a helical passage therebetween open at the ends, said valve having a stem on the upper side slidably and rotatably engaging in the bore of said tubular guide, said helical blades and passage causing liquid flowing through the inlet opening axially of said helical blades to impart rotary movement to the valve as the latter is lifted from said seat, and a floating washer loosely fitted on said stem and arranged between the valve and the tubular guide, the opposing ends of the valve and said guide being plane.

1,484,998. DIRECTION INDICATOR FOR AUTOMOBILES. HARRY C. SALLAC, St. Louis, Mo. Filed Mar. 16, 1923. Serial No. 625,661. 1 Claim. (Cl. 116—51.)



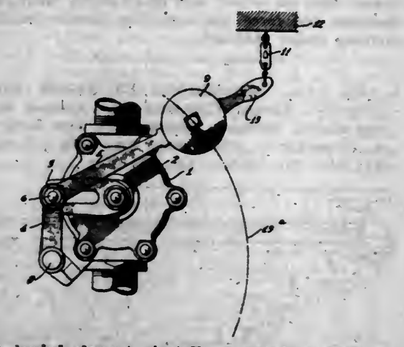
In a direction signal for motor vehicles, a hollow telescopic rod arranged at an inclination through the engine compartment of the vehicle and terminating in juxta-position to the operator's seat thereof, a second rod keyed to the tubular rod and passing through the top of the engine hood at a point adjacent the radiator thereof, an illuminated indicator affixed to the end of the second rod and being arranged to swing in a vertical plane, a collar surrounding the tubular rod in fixed relation thereto, oppositely disposed arms extending from the collar, a bracket secured to the vehicle and springs having their ends secured to the respective arms and bracket respectively for the purpose specified.

1,484,999. ROD COUPLING. CHARLES STEINER, Bristow, Okla. Filed Feb. 3, 1923. Serial No. 616,752. 2 Claims. (Cl. 287—103.)



2. In a device of the class described, upper and lower coupling members, each including a head and a thinned fin, and a link pivotally mounted in the fin of the lower member and extended about the fin of the lower member, the head of the lower member constituting a shoulder on which the link is adapted to rest when said members are separated, the fin of the upper member being provided in one edge with an opening for the reception of the link, and the fins of the upper and lower members being supplied at their meeting ends with coacting longitudinal abutments.

1,485,000. PRESSURE-REDUCING REGULATING VALVE. ELMER R. WILLIAMS, Springfield, Mo. Filed Nov. 26, 1921. Serial No. 517,876. 7 Claims. (Cl. 50—11.)

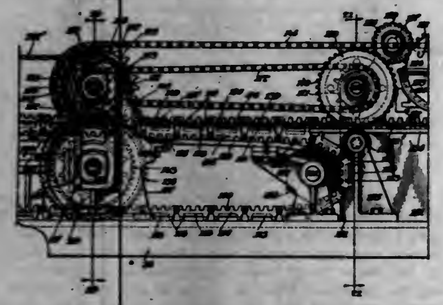


1. A regulator comprising a receiving high pressure chamber and a discharging low pressure chamber, a valve controlling communication between the two chambers, a diaphragm extending across the discharging low pressure chamber, the low pressure chamber having an outlet opening, a valve operated by said diaphragm and seating against the outlet opening, and a lever operatively connected at one end to the diaphragm and the second-named valve and at its other end to the first named valve whereby the first named valve will be held closed by a predetermined pressure within the low pressure chamber acting on said diaphragm but will be opened upon a decrease in pressure in the low pressure chamber, the second named valve closing the outlet opening upon a predetermined reduction in pressure in the low pressure chamber.

1,485,001. WEARING APPAREL. CHARLES M. WILLS, Atlantic City, N. J. Filed Nov. 19, 1921. Serial No. 516,261. 1 Claim. (Cl. 128—284.)

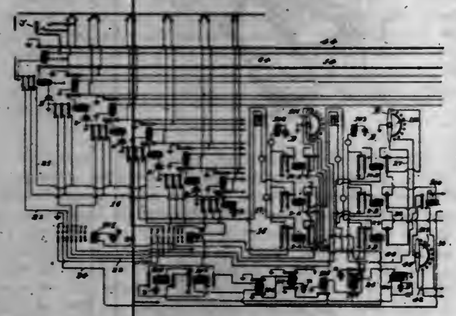
In a device of the character specified, in combination, a triangular body portion, a waist band carried by the body portion, a loop carried by the waist band at approximately one angle of the body portion, two loops carried by the waist band each approximately one-quarter inwardly distanced from an angle of the body portion, a band carried by the end portion of the body portion opposite the waist band capable of being inserted through the first mentioned loop when the device is folded and a band carried by each side of the body portion not attached to the waist band capable of being inserted through one of the second mentioned loops when the device is in folded position.

1,485,002. METHOD OF OPERATING MECHANISM BY GRAVITY. WYLIE G. WILSON, Jersey City, N. J., assignor to Loose Seat Valve Company, a Corporation of Delaware. Filed Sept. 22, 1922. Serial No. 589,738. 4 Claims. (Cl. 137—162.)



4. A loaded element pivotally mounted to move in a circular path traversing a vertical plane so that when said loaded element is raised adjacent the highest point of the circle and released it will fall in the power of natural forces and come to rest after an oscillatory movement about the lowest point in said circle, in combination with a bifurcated lever mounted on an axis parallel with that of said loaded element, a stud carried by said loaded element adapted to reciprocate within said bifurcated lever as the loaded element passes through a predetermined segment of its circular movement and to move said lever through a segment of a circle, with means consisting of a fusible link adapted to support said loaded element in a predetermined position.

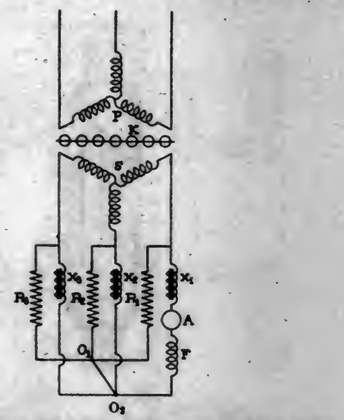
1,485,003. HIGH EXPLOSIVE. CLIFFORD A. WOODBURY, Media, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 14, 1922. Serial No. 529,400. 11 Claims. (Cl. 52—11.)



1. An explosive mixture containing as one ingredient a product obtainable by the direct nitration, with mixed nitric and sulfuric acids, of a hydrocarbon of the olefine series containing from two to four carbon atoms.

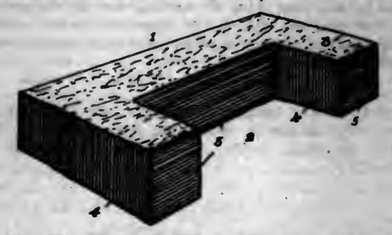
1,485,004. MACHINE FOR MAKING BOXES. JACOB P. WRIGHT, Barberton, and CHARLES F. WRIGHT, Akron, Ohio, assignors to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1922. Serial No. 607,061. 26 Claims. (Cl. 93—44.)

1. The combination with means for successively feeding box blanks, of a die conveyer comprising an endless chain of chambered links having a run extending from and travelling in the same direction as the blanks, each of said links being constructed to receive and support a blank delivered thereto by the feeding means, a former conveyer comprising an endless chain of links having a run mounted to travel adjacent to and in the same direction as the said run of the die conveyer, and having also former bars arranged in co-operative relation to the chambers of the die conveyer, and means for concurrently impelling the said runs of the two conveyers in such a manner that the former bars progressively enter the said chambers and force the succeeding blanks thereinto in partially folded condition.



1,485,005. TELEPHONE-EXCHANGE SYSTEM. JOSEPH L. WRIGHT, Cleveland, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation. Filed Aug. 12, 1916. Serial No. 114,516. 12 Claims. (Cl. 179—27.)

1. In a telephone exchange system, the combination with a plurality of primary trunks, of a plurality of secondary trunks arranged in groups for interconnecting with said primary trunks, a switch common to all of the groups of secondary trunks and for determining a particular group of secondary trunks to be used, a relay individual to each group of secondary trunks, said relay controlled through said switch for determining the individual trunk to be used in said group for interconnecting with said primary trunks.

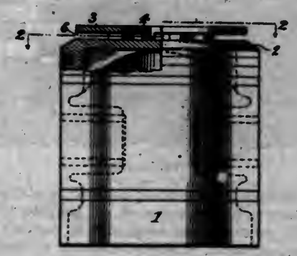


1,485,006. INDUCTION SYNCHRONOUS MOTOR. TADAOKI YAMAMOTO, Tokyo, Japan. Filed Mar. 2, 1923. Serial No. 622,392. 3 Claims. (Cl. 172—120.)

1. An alternating current motor comprising in combination an induction machine, a series wound machine connected mechanically to the said induction machine, a reactor of high inductance in the secondary circuit of the said induction machine, a high resistance in parallel

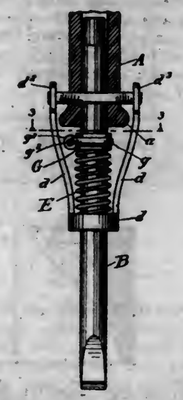
to the said reactor, the said series wound machine being connected in series with the said reactor but in parallel to the said high resistance.

1,485,007. BUILDING BLOCK. WILLIAM A. ZAHN, Pittsburgh, Pa. Filed Mar. 31, 1922. Serial No. 548,326. 1 Claim. (Cl. 72—39.)



A building block comprising a body portion having one side edge thereof provided with an inset formed by a body extension integrally connected with each end of said body portion, the faces of the end walls of the said body portion and of the body extensions being formed with vertically disposed corrugations, and the face of the side wall of the inset and the side walls of respective body extensions being formed with horizontal corrugations, substantially as described and for the purpose set forth.

1,485,008. FLUTE ORGAN PIPE. GEORGE J. ZIMMER, Waltham, Mass., assignor to Hook & Hastings Company, Kendal Green, Mass., a Corporation of Massachusetts. Filed June 10, 1922. Serial No. 567,272. 11 Claims. (Cl. 84—39.)

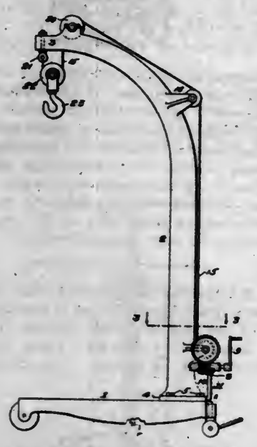


6. An organ pipe having a mouth, means for directing a wind sheet across said mouth including a tubular conduit of pliable material having an end portion provided with a discharge orifice located externally of the pipe to be adjusted relatively to said mouth by bending to produce a desired tonal effect.

1,485,009. PREHEATING PISTON FOR INTERNAL-COMBUSTION ENGINES. CARL ALTENBURGER, Morristown, N. J. Filed June 17, 1921. Serial No. 478,224. 4 Claims. (Cl. 74—108.)

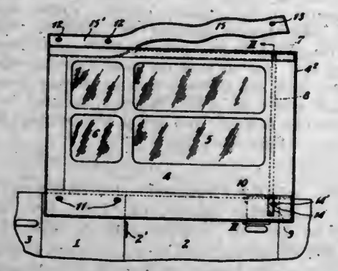
1. In a piston for an internal combustion engine, means supported from the crown of said piston adapted to increase the area of heat-radiating surface exposed directly to the explosive gas and comprising a metallic plate integral with said piston-crown and a chamber between said plate and said crown in communication with the cylinder above the piston.

1,485,010. TOOL HOLDER FOR PNEUMATIC HAMMERS. JESSE EUGENE ASH, Silver Grove, and JOHN MARSHALL CROWE, Covington, Ky., assignors to said Crowe and Louis K. De Bus, Cincinnati, Ohio. Filed Sept. 11, 1919. Serial No. 323,087. 4 Claims. (Cl. 121—32.)



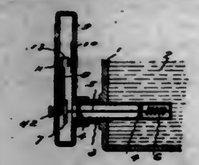
1. In an article of the class described the combination of a tool, an abutment consisting of a section of elastic tubing, and a clamp adapted to clamp the tubing around the tool.

4. In a tool holder for pneumatic hammers the combination of a bracket, a split ring, a collar and means for securing the collar upon the tool, the bracket comprising a collar and spring arms with apertures in the ends, and the split ring comprising semicircular bands with ends adapted to be seated in the apertures in the arms, and a coiled spring surrounding the tool between the collars.



1,485,011. FLOOR CRANE. WILLIAM R. BEATTY, Hammond, Ind. Filed Jan. 14, 1922. Serial No. 529,222. 1 Claim. (Cl. 212—142.)

A floor crane comprising a base, a standard rigid upon said base and extending upwardly and having its upper end portion curved to provide an overhanging upper end portion, bearings extending from opposite sides of the lower portion of said standard, a drum positioned between said bearings and having a shaft rotatably mounted in said bearings and extending beyond one of the bearings, a worm gear carried by the extended end of the shaft of said drum, a web extending from the lower portion of said standard, arms extending from said web and terminating in bearings positioned beneath said worm gear, a drive shaft rotatably mounted in the lower



bearings, a worm carried by said drive shaft between the lower bearings and engaging said worm gear to rotate said drum when the drive shaft is turned, a depending eye at the upper free end of said standard, guiding pulleys carried by said standard at points intermediate its length, a cable wound upon said drum and carried upwardly in engagement with the guide pulleys and connected with said eye, and a hook carrying pulley block upon said cable between the eye and first guide pulley.

1,485,012. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Jan. 9, 1922. Serial No. 527,963. 2 Claims. (Cl. 296—139.)

2. In an automobile inclosure adapted to be mounted upon the automobile door, the combination of suitable curtain fabric; fabric strengthening means disposed adjacent the upper edge of the fabric; a supporting member pivotally connected to said strengthening means intermediate of the ends of the latter so as to permit a rocking movement of said strengthening means upon said support; and fabric-tensioning means consisting of cooperating button elements respectively secured to the fabric and the automobile door or other support, whereby the upper edge of the inclosure may be held in its proper horizontal relation to the door.

1,485,013. MEANS FOR INDICATING LOAD CONDITIONS OF TRANSFORMERS. HENRY J. BLAKESLEE, Hartford, Conn. Filed Dec. 29, 1921. Serial No. 525,812. 7 Claims. (Cl. 73—118.)

1. The combination with a transformer of a device for indicating the load conditions of the transformer, which device comprises a casing inserted in the walls of the transformer casing and containing inside the transformer casing thermal means responsive to temperature changes and containing outside the transformer casing thermal means responsive to temperature changes, said thermal means being designed to act oppositely to each other, and indicating means responsive to the resultant of the opposing actions of said thermal means.

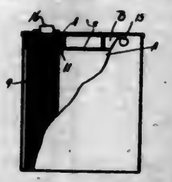
1,485,014. MAGNETO ACCELERATOR. STUART BERTRAM BOOTY, East Perth, Western Australia, Australia, assignor of one-half to James Absalom Turner, Perth, Western Australia, Australia. Filed Feb. 24, 1921. Serial No. 447,605. 6 Claims. (Cl. 123—149.)

1. In a device of the character described, the combination with a notched member adapted to be attached to a magneto spindle, of a pawl member pivoted intermediate of its ends and having at one end a pawl adapted to be moved into engagement with the notched member thereby to prevent it from turning, the opposite end of said pawl member having a cam face, a driving member adapted to be connected to the magneto shaft, a spring connection between said driving member and notched member, a spring connected to the pawl member and co-operating with the cam face to hold the pawl normally out of engagement with the notched member, means co-operating with said spring by which the pawl member is thrown into operative position, and means to disengage the pawl from the notched member.

1,485,015. CLAMP FOR CURTAIN STRETCHERS. ARTHUR J. BROSEY, Chicago, Ill. Filed Mar. 19, 1920, Serial No. 367,161. Renewed Mar. 26, 1923. 5 Claims. (Cl. 24—200.)

2. A curtain supporting clamp comprising opposed jaw limbs, a plurality of segmental plates pivoted at their geometric centers to the end of each of said limbs with their curved edges presented inwardly, said segments being adapted to be fanned out more or less to present curved inner edges conforming with the curvature of the curtain edges to be stretched, and means for forcing said jaw limbs together.

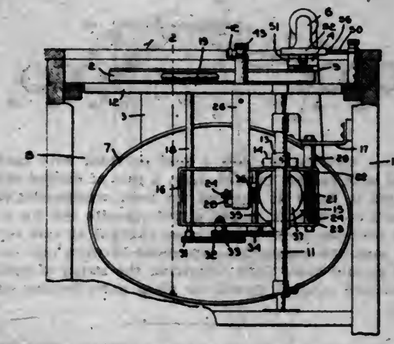
1,485,016. GIB FOR SLIDES FOR MACHINE TOOLS AND OTHER MECHANISM. FORREST E. CARDULLO and CHARLES T. HUMMEL, Cincinnati, Ohio, assignors to The G. A. Gray Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 13, 1923. Serial No. 651,251. 9 Claims. (Cl. 74—84.)



1. In combination, a guiding member, a sliding member movable thereon, a wedge-shaped gib adapted to draw the said sliding member into snug sliding contact with the said guiding member, a screw adapted to limit the retraction of the said gib, and means adapted to wedge the said gib more firmly into place.

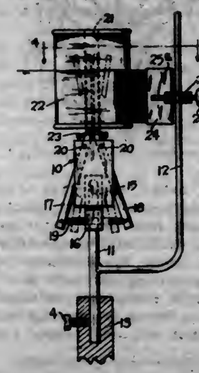
1,485,017. TORPEDO-TESTING APPARATUS. JACOB M. COHEN, Washington, D. C. Filed Dec. 19, 1919. Serial No. 346,193. 2 Claims. (Cl. 234—29.5.)

2. The herein described method of measuring speed and deflection of torpedoes which consists in shooting a torpedo in a straight line along a range parallel to a series of hydrophones adapted to receive and transmit the vibrations produced by the moving torpedo to a chronograph provided with a moving tape upon which said vibrations are recorded to graphically indicate the speed and deflection of said torpedo.



1,485,018. TANK CARBURETOR. HARRY DALTON, Sr., Philadelphia, Pa. Filed May 21, 1921. Serial No. 471,375. 5 Claims. (Cl. 261—104.)

1. In a device of the character described, a supply tank, a plurality of channels positioned in the upper portion of the tank, a series of wicks suspended from the channels, said wicks being spaced apart, a baffle through which said wicks pass, said baffle dividing the tank into an upper and lower compartment, and means for causing a current of air to flow through the channels whereby the surfaces of the wicks above the baffle will be swept by said air.



1,485,019. REPEATER FOR TALKING MACHINES. JOHN J. DEWEY, Quechee, Vt. Filed Dec. 21, 1921. Serial No. 523,880. 6 Claims. (Cl. 274—15.)

1. In a talking machine, the combination with a revolving table, of means to rotate the same, a horizontally-swinging horn, a reproducer carried thereby, a vertical shaft on which the horn is mounted, a device acting on the shaft to raise the latter and the horn thereby to clear the reproducer from the record and to return said reproducer to position to begin playing the record and then to lower the shaft and horn to bring the reproducer back onto the record again, means for actuating said device including a friction wheel adapted to frictionally engage and be driven by the revolving

table, means normally holding the friction wheel out of driving engagement with the revolving table and means operative at the end of the record to establish a driving connection between the wheel and the revolving table.

1,485,020. SPOOL SUPPORT. JAMES T. DOWDALL, Glen Morris, N. Y. Filed Jan. 10, 1923. Serial No. 611,706. 9 Claims. (Cl. 242—134.)

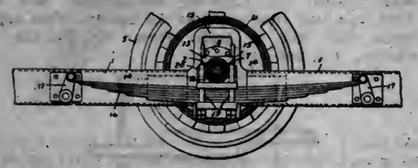
1. In a device of the character described, a vertically disposed post member, a pair of gripping members pivotally associated with said post member and adapted to hold a spool, an arm projecting from said post and extending parallel to said gripping members, and means on said arm for engaging the periphery of said spool to prevent the dropping off of thread strands from said spool.

1,485,021. PROCESS OF DISINFECTING SEEDS AND COMPOSITION THEREFOR. MAX ENGELMANN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 10, 1921. Serial No. 506,790. 18 Claims. (Cl. 167—3.)

1. The process of disinfecting seeds which comprises subjecting the seed to the action of a solution of an organic compound of mercury containing a basis nitrogen atom, the mercury being attached directly to said nitrogen atom.

4. The process of disinfecting seeds which comprises subjecting the seed to the action of a solution of a mercury derivative of an organic compound having an acyl group and an NH: group, the mercury being attached directly to the N-atom, said solution containing also from about 1% to 100% of the hydroxide, carbonate, or bicarbonate of an alkali-metal based upon the weight of the mercury compound present.

10. A composition for disinfecting seeds comprising a water solution containing an alkaline-reacting substance and a mercury derivative of an organic compound containing an acyl group and an NH: group, the mercury being attached directly to the N-atoms of two organic radicals which are unconnected except through the mercury atom.

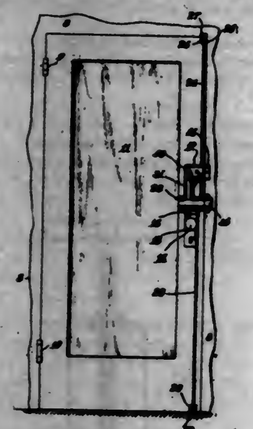


18. A composition for disinfecting seeds comprising a water solution containing an alkali and from about 0.05% to 1% of a mercury derivative of acetamide.

1,485,022. COMPRESSOR. DOUGLAS F. FESLER, Evanston, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company, a Corporation of Delaware. Filed Dec. 19, 1919. Serial No. 346,098. 6 Claims. (Cl. 221—79.)

1. A compressor comprising a barrel having a detachable elongated cap, a screw-threaded piston rod, a piston on one end of said rod comprising a cup leather, a cup in said cap for receiving and compressing said cup leather and for sealing the joint between said barrel and said cap, and a screw-threaded sleeve extending through the end of said cap for controlling the movement of said piston and for securing said cup to said cap.

1,485,023. MOTOR-VEHICLE AXLE. EDWIN FRANKLAND, Pontiac, Mich. Filed Mar. 9, 1922. Serial No. 542,448. 1 Claim. (Cl. 180—75.)

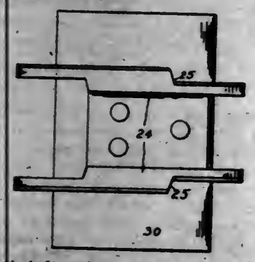


An axle comprising a dead axle member having tubular end portions with flanged inner ends and a center portion with flanged ends, live axle members arranged respectively within said end portions, independent gear trains for driving said live axle members, and housings for said gear trains to which said flanges of the dead axle member are secured, said housings connecting the tubular and middle positions of said member.

1,485,024. DOOR-SECURING MECHANISM. EDWARD E. GAGE, New York, N. Y. Filed Feb. 26, 1920. Serial No. 361,299. 13 Claims. (Cl. 70—24.)

1. In a door locking mechanism the combination of a key operated lock, a shiftable securing bolt, means for

shifting said bolt into locked and unlocked position, a locking member associated with the securing bolt and adapted to engage therewith for locking the securing bolt against movement, manual releasing means connected with the locking member and normally operative to release the same from engagement with the securing bolt, connections from the key operated lock to the locking member operative to retract the locking member from

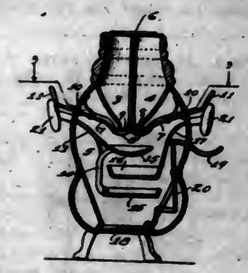


locking engagement with the securing bolt and said manual releasing means and said lock being co-related and formed whereby the key operated lock is capable of rendering the manual releasing means inoperative when said lock is in locking position whereby the locking member may be retracted only upon the operation of the key operated lock, substantially as described.

1,485,025. COMPOUND FOR AND METHOD OF TREATING METALS. MATTHEW GREEN, Detroit, Mich., assignor to Parker Rust-Proof Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1921. Serial No. 503,933. 6 Claims. (Cl. 148—6.)

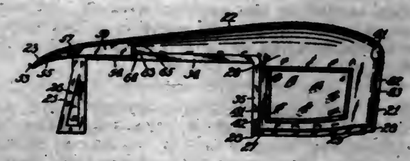
1. A compound for treating metals embodying phosphoric acid and a reducing agent, said phosphoric acid being present in a relatively large amount, sufficient to act in conjunction with the reducing agent to remove rust and to at the same time rust-proof the metal.

1,485,026. UNIT FOR TRACK BELTS. EDWARD GRUBER, Lyndhurst, Ohio. Carved out of application on which Patent No. 1,359,499 was granted Nov. 23, 1920, and filed after grant of the patent. This application filed Mar. 8, 1922. Serial No. 542,119. 3 Claims. (Cl. 305—10.)



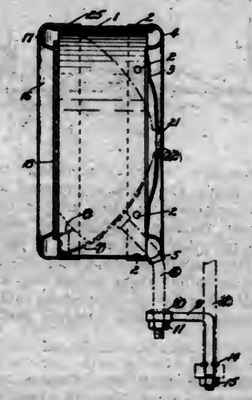
1. In a track belt unit, a shoe, a central rail member having a bottom secured to said shoe and bent up sides forming rails, said rails having flanges extending therefrom, and side rail members secured to the sides of said central rail member supporting the flanges extending therefrom.

1,485,027. BEAD-CLAP BASE. CHARLES GRUNBAUM, Philadelphia, Pa. Filed May 4, 1922, Serial No. 558,496. Renewed Oct. 10, 1923. 7 Claims. (Cl. 63—2.)



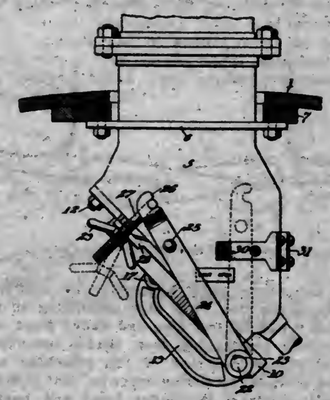
1. In a necklace, a clasp, a cord provided with beads secured with respect to said clasp, a pair of sleeves each of which is flared at one end for bead accommodation, and each of which is shaped at its opposite end for engaging over the parts of said clasp engaged by said cord and a separable connection interposed between and connected to said bases for maintaining the string of beads in connected relation should the clasp parts become separated.

1,485,028. COMBINATION SALT AND PEPER DEVICE. MAY CHRISTIENA GUNTER, New York, N. Y. Filed May 1, 1923. Serial No. 635,931. 1 Claim. (Cl. 65—45.)



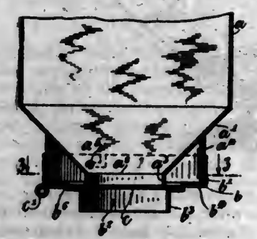
In a condiment holder, comprising a body having salt and pepper compartments therein, means for normally closing the discharge from said compartments, means for opening discharge from said compartment, a series of sifters positioned below the discharge opening of said compartments for mixing the salt and pepper during passage therethrough, a trap door positioned in the bottom of said holder, and means for opening said trap door to discharge the mixed salt and pepper therefrom.

1,485,029. METALLIC MOTOR-VEHICLE TOP. JOHN HAMLIN, Muncie, and TOIVO MAKELA, Indianapolis, Ind. Filed Feb. 6, 1922. Serial No. 534,411. 2 Claims. (Cl. 296—102.)



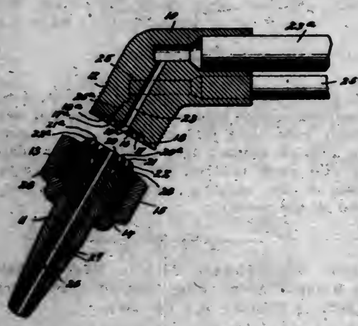
1. In a metallic motor vehicle top, the combination with a vehicle body, and a wind shield at the forward portion of the body, of a top comprising a metallic roof and sides and a back connected together and to the roof, the sides and the back being secured to said body, a receptacle bottom arranged under the forward portion of said roof and extending over said wind shield and connected at its forward end to the forward end of the roof, said bottom having side walls extending up to said roof and being secured thereto, and a door hinged to the rearward end of said bottom and provided with means to latch it to said roof.

1,485,030. AUTOMOBILE HEADLIGHT. RAYMOND C. HANCOCK, St. Louis, Mo. Filed Mar. 9, 1923. Serial No. 623,900. 1 Claim. (Cl. 240—41.)



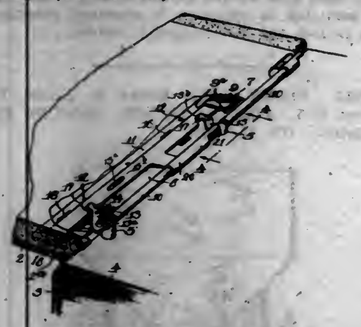
An improved transformed automobile headlight, comprising an external barrel-lamp casing; front and rear beaded-heads for said external casing; means for detachably securing the front head in place; a smaller lamp-casing and its reflector located within said outer casing; a glass in the front of said outer-casing; screws threaded through bearings formed in the rear head of said outer casing, so that the inner ends of said screws engage and press forwardly the inner smaller casing and thereby clamp said glass in direct contact with the inner annular-margin of the bead on the said front head, and between the latter and the reflector of said smaller inner casing; a bracket-bearing formed in the lower portion of the bead of said rear head and a bracket-arm mounted in said bearing and extending therethrough into said outer casing and having its upper end secured to the back of the inner smaller casing.

1,485,031. SAFETY QUICK-CLOSING VALVE. HOWARD H. HOFFMAN, Fairfield Beach, Conn., assignor to The Lake Torpedo Boat Company, Bridgeport, Conn., a Corporation of Maine. Filed May 11, 1921. Serial No. 468,558. 5 Claims. (Cl. 251—125.)



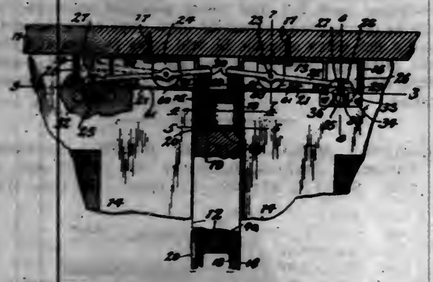
1. A valve adapted to close quickly for safety purposes, comprising a casing within which the aftermentioned valve disk operates, a valve seat member having a valve seat extending into the casing, a valve disk bodily movable within the casing toward and from the valve seat, linkage connecting the valve disk and seat member and arranged outside of the casing, a valve-operating mechanism connected with the linkage, means to releasably hold the valve disk to open position and permit the valve disk to close when said disk is subjected to abnormal pressure, and means to lock the disk in closed position.

1,485,032. FLOUR BOX. HENRY E. JANES, Pelham Manor, N. Y. Filed Jan. 18, 1923. Serial No. 613,553. 3 Claims. (Cl. 45—16).



1. The combination of a container having a discharge opening in its bottom having a lower edge adapted for contact with the upper face of a flat valve, a valve carrying member detachably secured to the container, having a discharge opening therethrough in line with the discharge opening of the container and having a flat floor surrounding and of greater area than the discharge opening of the container, said flat floor being provided about the discharge opening with upwardly open ways for a flat valve, and a flat valve movable in said ways to open and close the discharge opening having its upper face in contact with the lower edge of the discharge opening of the container.

1,485,033. METAL-WORKING TORCH. ALEXANDER FREDERICK JENKINS, Baltimore, Md. Filed Apr. 12, 1922. Serial No. 551,891. 11 Claims. (Cl. 158—27.4.)

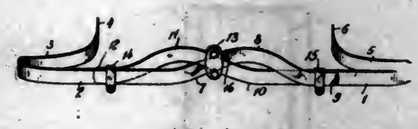


1. In a metal working tool, in combination, a head having on one end a plurality of inclined or beveled seats, one of which surrounds the other, said seats being spaced apart radially of the head and inclined relative to the axis of the head and being so arranged that a plane perpendicular to the axis of the head will intersect said seats or prolongations thereof at different distances from said axis, said head having a passage one end of which lies within the confines of the inner one of said seats and also having a second passage terminating between two of said seats, a nozzle having one end a plurality of inclined or beveled seats, one of which surrounds the other, and which seats are adapted to cooperate with the seats of the head, the seats on said nozzle being inclined relative to the axis of the nozzle, said nozzle having passages for communicating with said passages of the head, and means for securing said nozzle to the head.

1,485,034. LOOSE-LEAF BINDER. JOSEPH KAHN, Chicago, Ill. Filed Sept. 22, 1923. Serial No. 664,154. 9 Claims. (Cl. 129—23.)

1. A binder comprising hinged together covers, a post secured to one cover, a locking member secured to the other cover, and adapted for locking engagement with said post, and a shiftable member co-acting with said locking member to guide the post into locking position.

1,485,035. CONVERTIBLE BUILDING. FRED J. KEPPLER, Buffalo, N. Y. Filed May 22, 1920. Serial No. 383,418. 10 Claims. (Cl. 20—4.)



1. A convertible building having a support, a coupling body mounted on said support, a partition, and means for detachably connecting said partition and support comprising a catch member and a seat member adapted to receive said catch member, one of said members being mounted on the coupling body and the other being mounted on the partition.

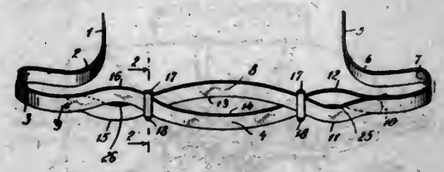
1,485,036. UNIVERSAL JOINT. FRANCIS KINGSLEY, New Rochelle, N. Y. Filed Aug. 10, 1920. Serial No. 402,562. 4 Claims. (Cl. 64—96.)

1. In combination, a drive shaft, a driven shaft, threads near the end of one of said shafts, spring engaging means near the other end of said shafts, the adjacent ends of the shafts being recessed to accommodate a ball, and a coil spring into which the ends of the shaft are inserted and the ends of which respectively engage with the said threads and said spring engaging means.

1,485,037. BUFFER FOR MOTOR VEHICLES. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Jan. 19, 1921, Serial No. 438,294. Renewed Sept. 14, 1923. 15 Claims. (Cl. 293—55.)

4. The automobile buffer comprising two integral resilient steel strips and each comprising an attaching member, an intermediate end loop and an impact receiving buffer front member ararnged in reenforcing cooperation with the other front member of the buffer, each of said buffer front members comprising adjacent its end a bent up portion extending above its end loop and attaching member and clamping devices connecting said cooperating connector portions in laterally adjusted position.

1,485,038. VEHICLE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Jan. 19, 1921. Serial No. 438,295. 7 Claims. (Cl. 293—55.)

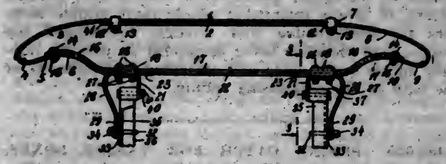


6. The automobile buffer formed of resilient steel strip having greater vertical width than thickness and comprising attaching members, end loops and impact receiving buffer front members arranged in overlapping reenforcing cooperation with each other, each of said buffer front members being bent to form a plurality of contact portions extending upward and downward beyond the level of its end loop and clamping members rigidly connecting said cooperating connector portions.

1,485,039. RESILIENT VEHICLE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 5, 1921, Serial No. 505,470. Renewed Oct. 20, 1923. 8 Claims. (Cl. 293—55.)

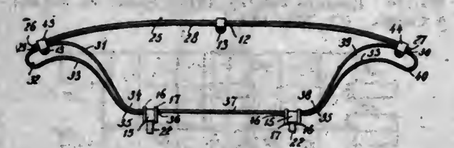
1. The automobile buffer comprising two buffer units of resilient spring steel strip each comprising an attaching member connected end loop and buffer front member having doubled overlapping loop shank connector portions substantially in front of the attaching member and having a gradually flaring edgewise bent buffer front loop extending across the buffer front and having its loop end substantially in front of the opposite attaching member, one of said buffer units being inserted into the loop of the other and U-bolt connectors extending through said loop ends to securely and adjustably connect thereto the co-operating loop shank connector portions arranged in front of said loop ends.

1,485,040. VEHICLE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 25, 1921, Serial No. 510,294. Renewed Oct. 20, 1923. 15 Claims. (Cl. 293—55.)



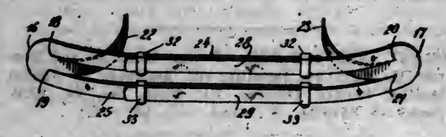
1. The automobile buffer comprising two spring steel strip members each having a rearwardly extending attaching member, an end loop and an inwardly extending impact receiving buffer front member, said buffer front members overlapping and reinforcing each other adjacent the central part of the buffer front and being oppositely vertically displaced to form an apertured vertically wide contact face adjacent the central part of the buffer, enclosing clamping devices having portions extending closely adjacent the edges of said buffer front members on each side of said central contact face and oppositely vertically displaced portions formed in said front members on the outside of said clamping devices to form lateral wide contact faces and to retain said clamping devices in position on the front strips.

1,485,041. RESILIENT BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Feb. 27, 1922, Serial No. 539,405. Renewed Dec. 19, 1923. 9 Claims. (Cl. 293—55.)



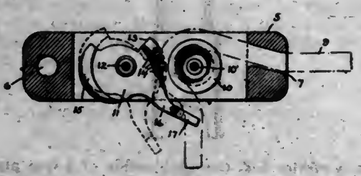
4. The resilient automobile buffer comprising two substantially similar spring strip attaching elements each having a duplex attaching portion adapted to be secured to an automobile frame member and having an outwardly extending end loop adapted to form the end of the buffer and having an inwardly turned loop extending inward considerably from said attaching portions to approach and be aligned with the cooperating inwardly turned loop of the other attaching element, and a resilient buffer front member connected to said inwardly turned loops.

1,485,042. AUTOMOBILE BUFFER-ATTACHING DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 25, 1922. Serial No. 596,885. 12 Claims. (Cl. 293—55.)



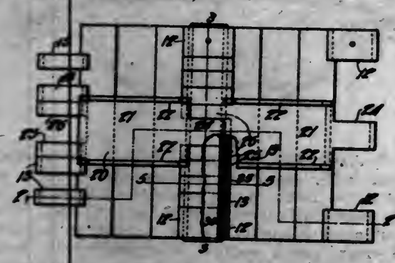
12. The automobile buffer attaching bracket comprising a one-piece sheet steel bracket clamp adapted to extend around and be clamped to buffer elements and having a clamp body and a rearwardly bent bracket arm portion adapted to be clamped to the spring bolt of an automobile frame member.

1,485,043. BRACE-BAR AUTOMOBILE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed May 14, 1923. Serial No. 638,702. 18 Claims. (Cl. 293—55.)



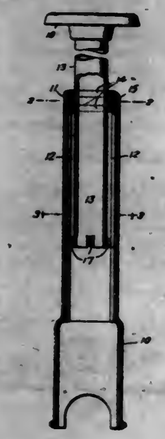
18. The automobile buffer comprising laterally extending rear buffer supporting portions adapted to be connected to the frame of the automobile, and having forwardly projecting curved resilient portions each formed with a looped connector portion adapted to support a buffer front, and a resilient steel buffer front having free ends extending to and ending at the lateral ends of the buffer and adapted to extend into protective position adjacent the automobile wheels.

1,485,044. VEHICLE BUFFER DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Original application filed Oct. 5, 1921, Serial No. 505,468. Divided and this application filed June 6, 1923. Serial No. 643,661. 16 Claims. (Cl. 293—55.)



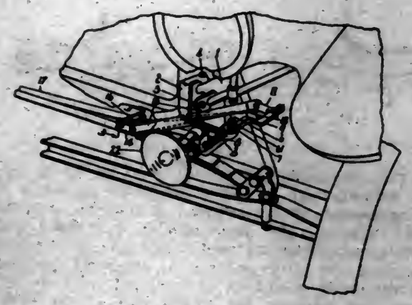
16. The automobile buffer formed of steel plate, and comprising rearwardly and inwardly bent attaching strip portions and connected buffer end portions having a plurality of integrally connected inwardly extending vertically separated front strips forming vertically aligned contact portions of the buffer front.

1,485,045. CLOTHESLINE CLAMP. OSCAR MEYER, Brooklyn, N. Y., and PAUL S. MAILLEFERT, New Haven, Conn.; Alice E. Maillefert administratrix of said Paul S. Maillefert, deceased. Filed Feb. 5, 1920, Serial No. 356,540. Renewed Jan. 3, 1924. 1 Claim. (Cl. 188—64.)



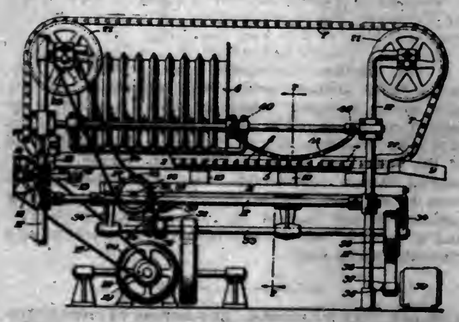
In a device of the class described, the combination with a clothes line, of a frame having a longitudinal slot, a pulley journaled in the slot, said pulley receiving the clothes line and passing through an opening in the end of said frame, a substantially circular cam eccentrically pivoted in the slot, a groove formed along the peripheral edge of the cam adjacent the pulley having teeth to engage the clothes line, a weight on the opposite side of the cam to normally hold the teeth in engagement with the clothes line, and a lever extending from the cam to release the pulley having a bifurcated end engaging the clothes line and holding it in close contact with said pulley and facilitating in releasing the cam from engagement with the clothes line.

1,485,046. TRACK BELT AND UNIT THEREFOR. MATHEW B. MORGAN, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Mar. 22, 1920, Serial No. 367,716. Renewed Feb. 20, 1922. Serial No. 538,094. 6 Claims. (Cl. 305—10.)



1. A track belt unit comprising a bottom member having at both its ends upwardly extending integral transversely aligned sleeves, and a rail member having at its opposite ends integral transverse sleeves which extend downward to positions such that the sleeves at the ends thereof may be transversely aligned with sleeves at the corresponding ends of the bottom member,—the sleeves at both ends of said unit being arranged in longitudinal alignment with openings between sleeves at the other end of said unit, and a pivot pin at each end of the unit extending through the transversely aligned sleeves.

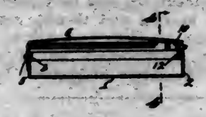
1,485,047. SERVICE BOX. PHILIP MUELLER and ROBERT H. MUELLER, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Jan. 28, 1920. Serial No. 354,694. 3 Claims. (Cl. 137—13.)



1. In a service box, the combination of a cast pipe-like member having an annular groove molded in its inner wall at one end thereof, and a longitudinally disposed rib cast on its inner wall; a non-metallic packing ring in said groove so disposed that its inner periphery projects inwardly of the bore of the cast member beyond the inner peripheries of the walls of the groove to form an outstanding non-metallic bearing; and a second wrought iron pipe-like member slidingly mounted in said cast member with its outer wall taking its bearing on and in contact only with said inwardly projecting packing ring, to prevent contact of metal to metal and binding of the parts due to corrosion, said second member having an integral lug cut and bent outwardly at its end to engage the rib on the inner wall of said cast member.

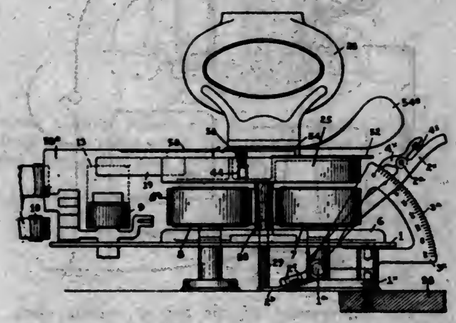
1,485,048. AUXILIARY DIRIGIBLE HEADLIGHT OR SPOTLIGHT. FRED H. PAGE and DON P. SNOOKS, Kalamazoo, Mich. Filed Mar. 7, 1922. Serial No. 541,653. 2 Claims. (Cl. 240—62.)

1. The combination of a bracket adapted for connection to the front corner of the frame and having an arm disposed beneath the headlight of a vehicle, a lever pivotally mounted on said bracket, a spotlight supported at the forward end of said lever, an auxiliary bracket adapted for mounting on the cross rod of the steering gear of a vehicle, a link with universal joint connections to said auxiliary bracket and the rear end of said lever, and a tension spring from said lever to said auxiliary bracket, coacting for the purpose specified.



1,485,049. MECHANISM FOR ASSEMBLING MATCHES AND THE LIKE. MICHAEL PARIDON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1923. Serial No. 630,104. 3 Claims. (Cl. 226—7.)

1. The combination with means for impelling a succession of segregated quantities of substantially parallel splints, of means comprising spaced-apart flexible members for straightening and leveling disarranged top splints, said members being suspended in parallel catenary curves overhanging and extending longitudinally of the path of the progressing splints.



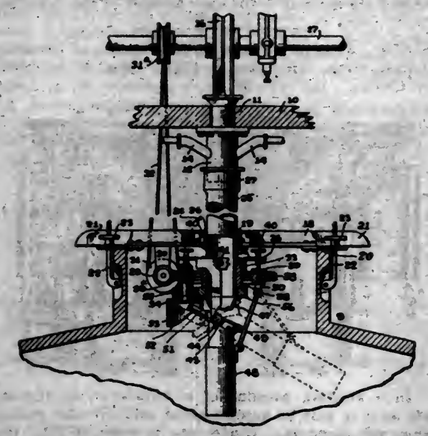
1,485,050. SPRING CATCH FOR VANITY BOXES. HARRY I. PHILLIPS, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 27, 1923. Serial No. 627,956. 2 Claims. (Cl. 220—35.)

1. In a box of the character described, the combination with a bottom having a peripheral wall, a cover having a peripheral wall, one of these parts being inset to form a flange with which the other has telescopic engagement, a slot in the flange, a spring arm having a projection

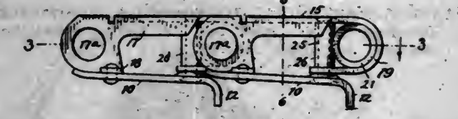
engaging the slot when the parts are closed, and a release operable from without the box for releasing the projection.

1,485,051. ENVELOPE-SEALING DEVICE FOR POSTAGE METERS. ARTHUR H. PITNEY, Stamford, Conn., assignor to Postage Meters & Machines Company, Stamford, Conn., a Corporation of Delaware. Filed Oct. 12, 1922. Serial No. 594,153. 6 Claims. (Cl. 120—6.)

6. In combination with means for moistening and sealing envelopes, and a vertically movable support therefor; of an oscillating lever pivoted adjacent the support and having one end engaged with said support; a toothed segment adjacent the other end of the lever; and a dog on the lever adapted to engage said toother segment to hold the support in any vertically adjusted position.



1,485,052. SPRING CATCH FOR VANITY BOXES. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 27, 1923. Serial No. 627,975. 2 Claims. (Cl. 220—20.)



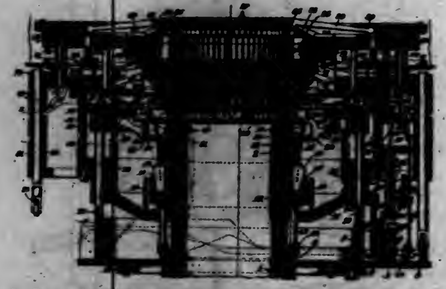
1. In a box of the character described, the combination with a flanged bottom member and a flanged cover, of a partition interposed between the cover and bottom and having upper and lower flanges with which the cover and bottom flanges engage telescopically, a rib on the partition against which the cover and bottom flanges seat, a spring arm secured in the partition, slots in the flanges of the partition, wings on the arm extending into the slots, projections on the wings engaging recesses in the bottom and cover flanges, and a release for freeing the projections.

1,485,053. PILING MACHINE. BERTRAM H. SAUNDERS, Paterson, N. J. Filed Mar. 13, 1920. Serial No. 365,588. 17 Claims. (Cl. 8—19.)

1. A piling machine comprising a stationary feed mechanism for feeding the fabric, said feed mechanism being spaced apart above and independent of the piling mechanism, a piling mechanism having means for supporting it below the feed mechanism, and a detachable guide adapted to connect the feed and piling mechanisms to conduct the fabric from one to the other.

1,485,054. UNIT FOR TRACK BELTS. EDWIN H. SAVAGE, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Dec. 26, 1918, Serial No. 268,276. Renewed Dec. 14, 1921. Serial No. 522,396. 14 Claims. (Cl. 305—10.)

1. A chain unit comprising, in combination, a shoe, and two parallel track rails secured thereon, each consisting of an inverted U-shaped rail whose sides extend rearward beyond the top as ears, and which has at its front end a forwardly extended hinge eye adapted to fit between the two ears of an adjacent similar link.



1,485,055. UNIT FOR TRACK BELTS. EDWIN H. SAVAGE, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Dec. 30, 1918. Serial No. 268,933. 10 Claims. (Cl. 305—10.)

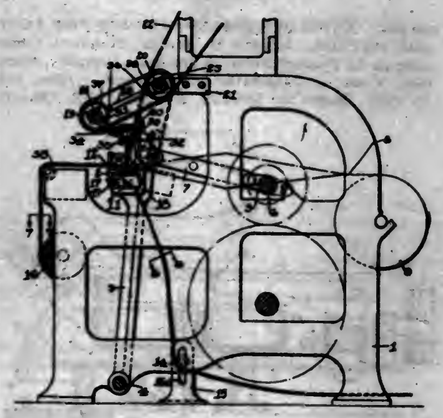
1. A track chain unit, comprising, in combination, an envelope comprising a flat pressed steel annulus having a substantially horizontal bottom shoe member the full width of the unit, the front end of said shoe member being turned down to form a grouser, two rail members which extend horizontally over the shoe member near the side edges thereof, two front loops and two rear loops which respectively connect said rail members with the shoe member, a pressed steel insert having horizontal rail portions which extend beneath and in contact with the rail members of the envelope, struts which extend downward from the front ends of said rail portions within the rear loops and are connected with

the shoe member of the envelope, other struts which extend downward from the front ends of said rail portions and are secured to the shoe member of the envelope.

1,485,056. KNITTING MACHINE. DANIEL S. SPEESE, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,458. 14 Claims. (Cl. 66—33.)

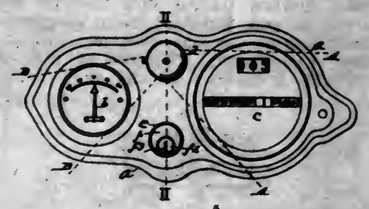
1. In a knitting machine of a cylinder type wherein fabric as it is knit by needles about said cylinder passes downwardly along the cylinder and is removed from the lower portion of the machine, a horizontal rotatable cam platform about the machine cylinder adapted for reciprocating said needles, inner oscillatory threaded guides, outer oscillatory threaded guides, means actuated from said cam platform for bodily moving said inner and outer oscillatory guides in opposite circumferential directions to cross threads at the inner and outer walls of said reciprocatory needles, and means actuated from said cam platform adapted to grip certain of said crossed threads and form loops.

1,485,057. ARTIFICIAL TOOTH. LAKE H. SPRINKLE, Brooklyn, N. Y. Filed Dec. 13, 1922. Serial No. 606,648. 3 Claims. (Cl. 32—9.)



1. In an artificial tooth, a facing having formed therein a cavity, an undercut at the inner end of said cavity, one or more pins having each a base with an anchor at the inner end thereof, said anchor being adapted to engage said undercut and a member, adapted to act as a key pressed against said base in said cavity, thereby securing said base in position.

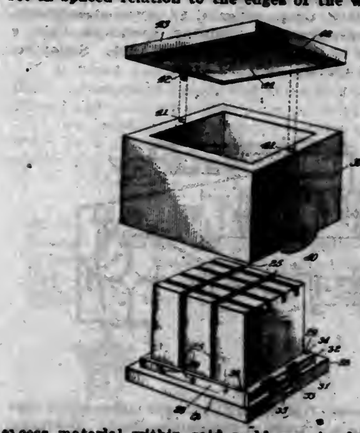
1,485,058. ARTIFICIAL TOOTH. LAKE H. SPRINKLE, Brooklyn, N. Y. Filed Feb. 27, 1923. Serial No. 621,557. 2 Claims. (Cl. 32—9.)



1. An artificial tooth having formed therein a cavity, an undercut at the inner end of said cavity, a pin placed in said cavity and an anchor consisting of a body of a suitable alloy adapted to be softened by heating, extending into said undercut, said pin being secured in position by being forced through the said body after the same had been softened by heating and thereby rendered pliable, and the said body, after being hardened by cooling, being caused thereby to be in forced contact with said pin, thereby securing the latter in position in said cavity.

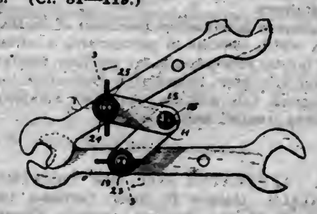
1,485,059. METHOD OF MAKING CLOTH AND MECHANISM THEREFOR. FREDERICK B. STEARNS, Worcester, Mass. Filed Mar. 24, 1922. Serial No. 546,359. 19 Claims. (Cl. 139—1.)

19. The improvement in the art of making cloth, which consists in weaving a fabric and drawing the fibres of a loose material into the warp between the laying of successive weft threads, whereby the drawn through fibres are incorporated in the fabric by the beating up the last laid weft thread.



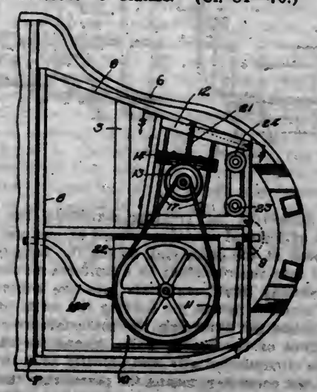
1,485,060. LOCK FOR ELECTRIC CIRCUITS. HORACE T. THOMAS, Lansing, Mich. Filed Dec. 6, 1920. Serial No. 428,664. 3 Claims. (Cl. 200—44.)

1. In an apparatus of the kind described, an electric circuit, an inaccessible apparatus for making and breaking said circuit, an accessible part adapted to reciprocate to operate said make and break apparatus, a spring actuated bolt pressing against the surface of said reciprocating part and a rotatable means carried by said reciprocating part adapted to engage said bolt to prevent or permit its engagement of said reciprocating part to permit or prevent the motion of the same.



1,485,061. ART OF MANUFACTURING CONTAINERS. JOHN M. AHLGREN, Indianapolis, Ind., assignor to Ahlbell Battery Container Corporation, Waukegan, Ill., a Corporation of Illinois. Filed Apr. 26, 1922. Serial No. 557,131. 7 Claims. (Cl. 18—56.)

1. In a mold structure, side walls and a bottom plate having a rabbet in its edge providing a bottom forming surface surrounded by a shoulder, said surface of a size to project between said side walls with the shoulder spaced therefrom, means to hold the bottom of the rabbet in spaced relation to the edges of the walls whereby



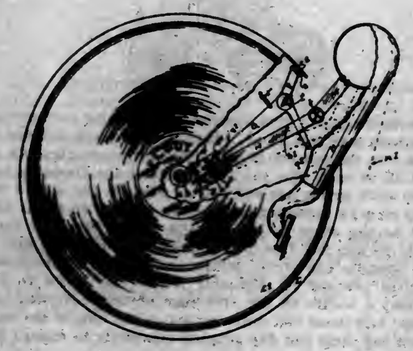
excess material within said mold may be formed into a flange in a plane offset from the plane of the bottom and overlapping said side walls.

1,485,062. WRENCH. PAUL C. BALDUS, Milwaukee, Wis. Filed Apr. 28, 1920. Serial No. 376,124. 5 Claims. (Cl. 81—119.)

1. The combination, with a pair of wrenches provided with handles, of linkage connecting the handles of said wrenches together permitting them to swing and move bodily relatively to each other, one end of said linkage having an adjustable spaced connection with one of the handles to dispose said wrenches in parallel planes.

1,485,063. PNEUMATICALLY-PLAYED PIANO. WILLIAM M. BAUER, Chicago, Ill. Filed May 11, 1922. Serial No. 560,033. 9 Claims. (Cl. 84—70.)

1. In a pneumatically-played piano, in combination with the piano-casing, a frame hingedly supported in said casing to be lowered on the hinges from its normally-raised position, a head on rods extending through cushioned bearings on the side-bars of said frame in which said rods are slidably supported at their end-portions, a spring-retracted motor secured on said head in cushioned bearings thereon, and a pump-containing box supported in said casing and having the pump-shaft geared to the motor.

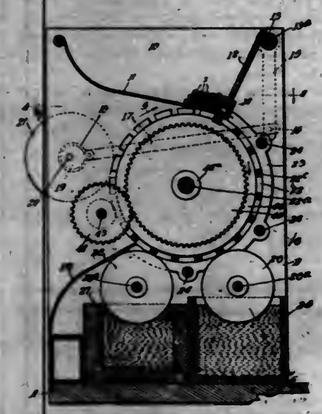


5. In combination with a piano-casing, motor-supporting means therein comprising a solid head on rods, said rods being longitudinally movable in bearings, and a pump-operating motor secured on said head.

1,485,064. SHOTGUN RIB. JOHN F. BERGER, Trenton, N. J. Filed Apr. 21, 1923. Serial No. 633,788. 2 Claims. (Cl. 33—58.)

1. In combination, a gun barrel, a rib extending longitudinally with the barrel and pivoted to the breech end thereof, and means at the muzzle end of the barrel for raising and lowering the muzzle end of the rib in the manner and for the purpose specified.

1,485,065. AUTOMATIC PHONOGRAPH STOP AND START DEVICE. EVERETT H. BICKLEY, Upper Darby, Pa. Filed Mar. 31, 1921. Serial No. 457,418. 36 Claims. (Cl. 192—118.)



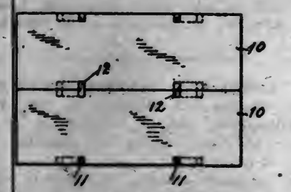
1. In a talking machine, comprising a driven turntable, a reproducer coacting on a tone-arm, and a brake; the combination of a lever connecting with said tone-arm thru a friction joint, said lever being adapted to latch said brake at the extreme outer position of the tone-arm and unlatch said brake when the tone-arm has ceased to move at an inner position substantially as described.

1,485,066. AUTOMATIC TINNING MACHINE. JOHN BRICKEN, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 13, 1921. Serial No. 436,948. 9 Claims. (Cl. 91—12.1.)

2. In an automatic tinning machine; in combination a vibrating hopper member; a tube conveyor; a retainer: a drum tension member; an acid pot, a soldering pot; an acid roll; a tinning roll; and power operated means for operating said mechanism.

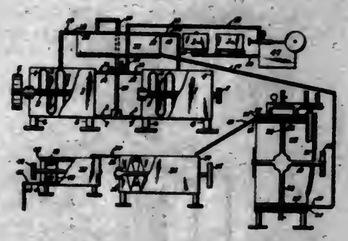
6. In a machine of the class described; in combination a tube container; a tube conveyor; an acid pot; a solder

pot; means interposed between the acid pot and solder pot for transferring acid and solder to a predetermined



point upon the tubes, and means acting in conjunction with the aforementioned means for placing a ring of solder on the tubes.

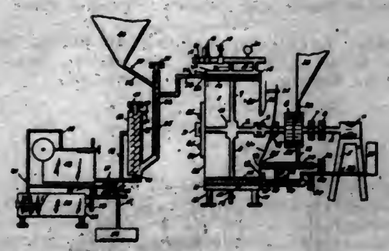
1,485,067. BALANCED BICYCLE BAG. LOUIS ROOD BRISTOL, Gainesville, Fla. Filed Oct. 17, 1923. Serial No. 669,038. 1 Claim. (Cl. 224—30).



A device of the kind described, comprising in combination with a bicycle frame, a back strip of fabric adapted to fold over the top bar of the frame and approximately fit and fill at each side, the open space of the frame; a bag strip sewn by its side and bottom edges to one end of the back strip; a combined bag strip and flap sewn by its side and bottom edges to the opposite end of the back strip with the flap left free to fold down over the outer side of the opposite bag strip; straps and buckles at the lower corners adapted to releasably secure the device to the frame; a buckle on the free edge of the individual bag strip; and inner and outer straps on the flap of the combined bag strip and flap adapted separately to engage the said buckle.

1,485,068. INTERLOCKING TILE SLAB. EDWARD W. BUNGMS, Milwaukee, Wis. Filed Apr. 17, 1922. Serial No. 554,036. 6 Claims. (Cl. 72—67.)

1. Interlocking tile slabs formed with diagonal slots in their opposite edges, in combination with keys filling the registering slots of adjacent tile slabs, whereby a weight imposed upon one tile slab is distributed through such keys to the adjacent tile slabs.

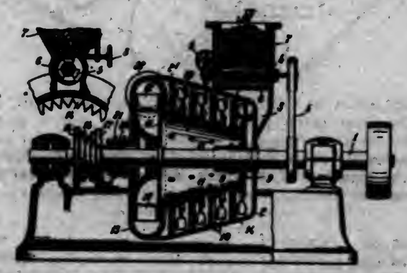


1,485,069. PROCESS OF MANUFACTURING ICE-CREAM MIXES, MILK-CHOCOLATE MIXES, CONFECTION MIXES, AND THE LIKE. GEORGE WILSON BURT, Portland, Oreg., assignor, by mesne assignments, to The Crouse-Tremaine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 12, 1919. Serial No. 296,406. 5 Claims. (Cl. 99—16.)

2. The process of producing ice cream mixes which comprises forming a mixture of the milk products, sweetening materials and body-giving materials in the desired proportions as to solids but with moisture in excess of the amount desired for the final mix, evaporating said mixture until the moisture content is reduced to a value not exceeding the desired amount, homogenising the mixture, and sterilising the resulting ice cream mix in hermetically sealed containers.

5. The process hereinbefore described of making an ice cream mix which consists in pasteurizing a suitable mixture of a lacteal substance, a fat yielding substance, and a saccharine substance, immediately thereafter condensing without ageing this mixture, and then emulsifying the mixture thus treated, and cooling it.

1,485,070. APPARATUS FOR THE TREATMENT OF MATERIALS. GEORGE W. BUAT, Portland, Oreg., and CHARLES R. MABEE, Toronto, Ontario, Canada; said Mabee assignor of his entire interest to Mabee Patents Corporation, Dover, Del. Filed May 19, 1919. Serial No. 298,317. 9 Claims. (Cl. 99—2.)



1. In apparatus for treating materials, the combination of a cylindrical container closed at one end and partially closed at the other end, means for introducing dry materials into the container in a uniform manner, means for introducing liquid materials into the container in a uniform manner, means for heating the walls of the container, means for spreading the materials over the concave surface of the heated walls, means for moving the materials circumferentially and spirally over the concave walls of the container, means for permitting the vapor to escape from the container under pressure exceeding that of the atmosphere, and means for permitting the materials treated to escape continuously from the container.

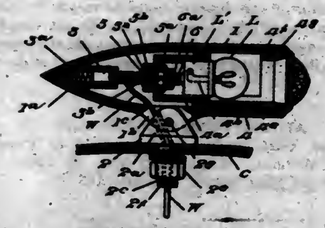
1,485,071. SOLVENT FOR ORGANIC COMPOUNDS AND THE RESULTING COMPOSITIONS. WOODMAN W. CLOUGH and CARL O. JOHNS, Elizabeth, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed Mar. 18, 1922. Serial No. 543,484. 4 Claims. (Cl. 134—79.)

2. A liquid composition of matter containing about 47.5% of isopropyl acetate and about 52.5% of isopropyl alcohol and having a boiling-point of about 80.1° C.

3. As a composition of matter, a solution of cellulose nitrates in a constant boiling-point mixture of isopropyl acetate and isopropyl alcohol.

1,485,072. DISINTEGRATOR AND FEEDER. AUGUST FARNER, Kusnacht, near Zurich, Switzerland, assignor to the Firm G. Hunsiker, Ruti, Canton Zurich, Switzerland. Filed Apr. 16, 1923. Serial No. 632,348. 9 Claims. (Cl. 83—11.)

1. In a disintegrator, a casing, a hollow rotor thereon, and having openings therethrough, communicating means between the rotor and casing and means for withdrawing the finer material inwardly through said openings in opposition to centrifugal action.

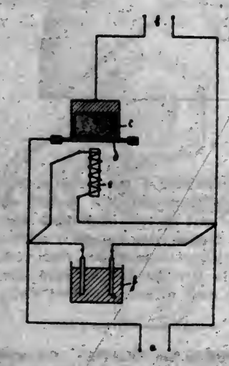


1,485,073. PENCIL. CHARLES J. FUNK, Chicago, Ill., assignor of The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 27, 1921. Serial No. 496,122. 8 Claims. (Cl. 120—18.)

6. In a pencil of the kind described, a handle member having a central bore, a point member adapted to be removably mounted upon the handle member, a tubular guide for the lead carried by the point member, an abutment rod adapted to enter the inner end of the guide for adjusting the position of the lead, means carried by the tubular guide for engagement with the abutment rod to prevent relative longitudinal movement of the rod when the point is mounted upon the pencil, and a centrally fixed tubular guide in the handle for receiving the free end of the abutment rod, said fixed tubular guide extending to the rear or upper end of the handle and a head within the bore of the handle in which the fixed tubular guide is held to provide an annular space at the upper end of the pencil as a magazine for extra leads and means for closing the outer end of said magazine.

1,485,074. COWL LIGHT. ANGUS R. GROSS, Baltimore, Md. Filed May 4, 1921. Serial No. 466,800. 16 Claims. (Cl. 240—7.)

1. In combination a lamp casing open at one end and closed at the other; an electrical contact connection in the closed end of the casing; a removable lamp holder adapted to be entered into the casing through said open end and wholly contained within the casing and when entered to establish electrical connection between the lamp and the said contact in the casing, said holder being



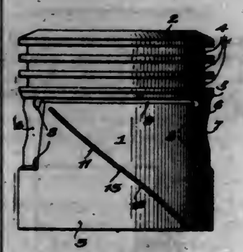
bodily removable from the casing with the lamp; and a member connected with said holder and positioned in advance of said lamp to close the outer end of the casing, and a glass or jewel mounted in said member.

1,485,075. KEY LABEL. ALBERT P. GUMAER, South Orange, N. J. Filed Mar. 26, 1923. Serial No. 627,884. 3 Claims. (Cl. 40—2.)

1. An identifying means for door keys comprising a centrally apertured plate adapted to be detachably connected to a key by bendable retaining means, a name plate interposed between the key and the apertured plate having lettering thereon visible through the apertured retaining means.

1,485,076. MEANS FOR FLATTENING THE CURRENT WAVES OF PULSATING DIRECT CURRENT. CONRAAD A. A. HAIGHTON, The Hague, Netherlands. Filed Dec. 20, 1922. Serial No. 608,078. 2 Claims. (Cl. 171—97.)

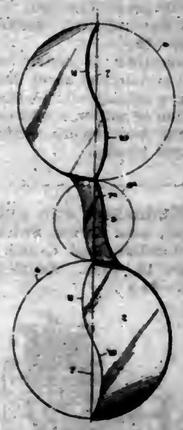
1. In a pulsating direct current system, means for flattening the current waves of the pulsating direct current comprising a variable resistance loose contact inter-



posed in said circuit, an electro-magnetic means interposed in and energized with the frequency of the pulsations of current in said circuit, said loose contact being controlled by said electro-magnetic means whereby, when the excitation of the electro-magnetic means is increased the resistance of the loose contact is increased, and, when the excitation of the electro-magnetic means is decreased, the resistance of the loose contact is decreased.

1,485,077. ADVERTISING SIGN. PAUL V. HANN, Columbus, Ohio, assignor of one-half to Chester K. Hann, Columbus, Ohio. Filed May 15, 1923. Serial No. 639,196. 2 Claims. (Cl. 40—138.)

2. A sign of the class described comprising front and back opaque plates, the front plate having an opening therein, a netting covering the opening, said back plate having the stipulation of a netting carried thereby and in registry with the opening and the netting covering the opening.



1,485,078. PISTON. HARRY J. HATER, Cincinnati, Ohio. Filed Apr. 24, 1922. Serial No. 556,234. 2 Claims. (Cl. 74—109.)

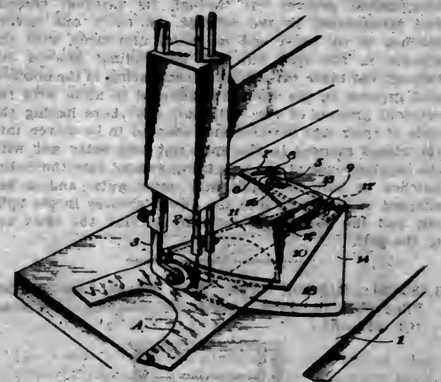
1. A piston comprising a head and a depending skirt, said skirt having a transverse slit therein and said skirt having a diagonal slit therein extending from the bottom of said skirt and terminating before it reaches the transverse slit and without connection therewith, said skirt being incompletely cut through by said slit at a point spaced from both ends of said diagonal slot.

1,485,079. PROPELLER BLADE. CHARLES F. HOFFMANN, South Norwood, Ohio. Filed Oct. 24, 1922. Serial No. 596,631. 7 Claims. (Cl. 170—159.)

1. The process for forming a pair of wings from a circular piece of material which consists in locating the diameter of the circle, forming a line of intersection on the circle in the form of a pair of arcs extending in

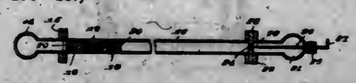
opposite directions from each other upon opposite sides of the diameter of the circle, and cutting the material along this line.

1,485,080. SWITCH. EDWARD THOMAS JONES, New Orleans, La. Filed Dec. 27, 1921. Serial No. 525,153. 7 Claims. (Cl. 200—15.)



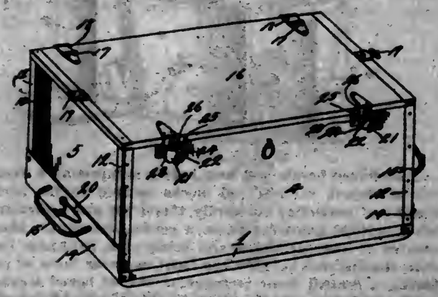
1. A switch comprising a supporting member, an insulated vertical elongated support thereon, a rotatable shaft longitudinally on the extremity of said support, a bearing member for said shaft substantially throughout the length of said support, laterally projecting switch blades carried by said shaft, contacts arranged on opposite sides of said elongated support and adapted to receive said switch blades in their respective rotated positions.

1,485,081. ERASER FOR BLACKBOARDS. LINWOOD U. KINDER, Kansas City, Mo., assignor to National Wood Renovating Company, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 17, 1922. Serial No. 554,111. 2 Claims. (Cl. 15—223.)



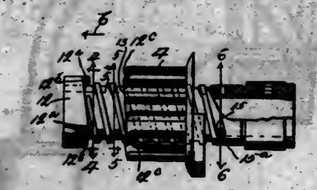
1. An eraser for blackboards comprising a rigid back, an erasing pad attached to one side of said back, a cushioning pad attached to the other side of said back, and binding material encircling the edges of said back and attached to said pads, substantially as set forth.

1,485,082. WORK CLAMP AND GAUGE. GEORGE A. KIRKBRIDE, Philadelphia, Pa. Filed Dec. 11, 1922. Serial No. 606,138. 5 Claims. (Cl. 112—2.)



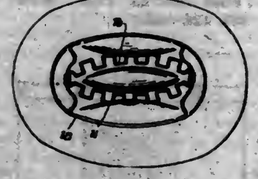
1. In a device of the class described, a radius plate having a slot therein, means for pivoting said radius plate to the work plate of a sewing machine, a set-screw extending through the slot of the radius plate and adapted to lock the radius plate in adjusted position, and a work clamp pivoted to said radius plate.

1,485,083. APPARATUS FOR CRACKING HYDROCARBONS AND RECOVERING GASOLINE. MEINHARD H. KOTERBUS and LEVI M. BOWMAN, Tulsa, Okla. Filed May 5, 1921. Serial No. 466,978. 1 Claim. (Cl. 196—25.)



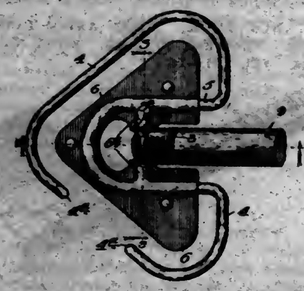
In an apparatus of the character described, a heater, a cracking tube extending through the heater, spaced sections of steel wool within said tube adjacent to its intake end and at one side of the heater, gravel between said sections of steel wool, reticulate disks within the tube to confine said steel wool and gravel in place, said tube having an apertured outlet plate therein adjacent to its outlet end and having an otherwise unobstructed internal passage within and across the heater.

1,485,084. COLLAPSIBLE CRATE. CHRISTIAN S. LEHMAN, Lawn, Pa. Filed May 4, 1923. Serial No. 636,621. 3 Claims. (Cl. 217—14.)



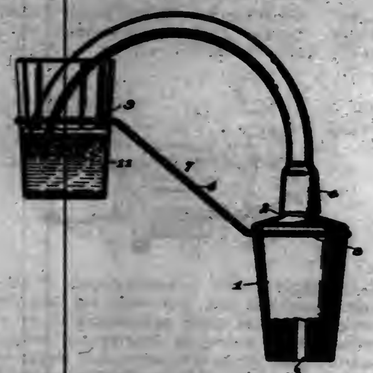
1. A collapsible box comprising a bottom, a front side hingedly connected to the forward end of the bottom, and foldable onto the bottom, end sections hingedly connected to the inner side of the front side and foldable onto the front side, said end sections having apertured spring lugs and lugs carried by the upper side of a foldable rear side and adapted to be received by said spring lugs.

1,485,085. ENGINE-STARTING-GEAR LIMITING MEANS. TRUMAN J. MARTIN, Allentown, Pa. Filed Feb. 24, 1921. Serial No. 447,511. 1 Claim. (Cl. 74—7.)



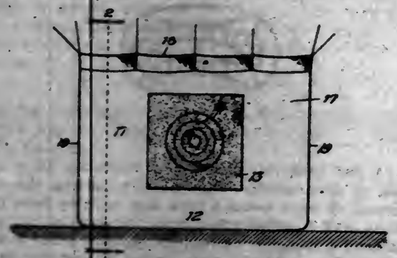
The combination with a starting gear of an engine starting mechanism, said gear being fed forwardly and rearwardly on a feed screw and stopped at the ends of its movement, of means for limiting the movement of the starting gear on the feed screw, said means comprising radially disposed engaging surfaces carried by the starting gear and the feed screw, the feed screw radial surfaces being formed by radially disposed round apertures in the screw between the threads at the ends of said threads.

1,485,086. HAT-FORM HOLDER. WILLIAM H. MEAD, Autaugaville, Ala. Filed Sept. 28, 1923. Serial No. 665,462. 3 Claims. (Cl. 2—108.)



1. A hat form retaining device consisting of a main frame of substantially elliptical form having the sides composed of wires bending back and forth to form crenelations, and legs depending from the ends of the main frame and engageable between the sides of a hat and its sweat band to hold the main frame against the crown of a hat.

1,485,087. MOP. JACOB A. MEINHARDT, Chicago, Ill. Filed May 31, 1923. Serial No. 642,626. 4 Claims. (Cl. 15—229.)



1. In combination, a mop-frame, a handle-pivoting pin of angular cross-section in the frame, a handle-receiving socket pivoted on the pin, a spring in the socket, and a handle fitting the socket to confine the spring therein yieldingly against the pin.

1,485,088. COMBINED FERMENTING BUNG AND WIRE JAR HOLDER. THOMAS R. MICHEL, Sandusky, Ohio, assignor of one-third to Bert F. Keech and one-third to Fred J. Hinkey. Filed May 23, 1923. Serial No. 640,942. 2 Claims. (Cl. 217—105.)

1. A device of the character described comprising in combination a perforated stopper provided with an annular groove adjacent its top and a bracket comprising a rod bent at its ends into two ring parts lying in parallel spaced planes, one of said rings adapted to seat in the annular groove of the stopper.

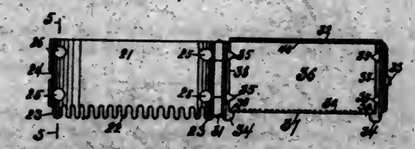
1,485,089. GOLF TARGET. ALVIN J. MUSSELMAN, Chicago, Ill. Filed Dec. 28, 1922. Serial No. 608,749. 1 Claim. (Cl. 124—15.)

A target for golf practice and the like comprising a backing and a coating of plastic material adhering to the face of said backing so that golf balls driven against said target will adhere thereto.

1,485,090. NUT LOCK. TONEY ANTON PASSIC, Ashland, Wis. Filed Feb. 15, 1923. Serial No. 619,234. 3 Claims. (Cl. 151—14.)

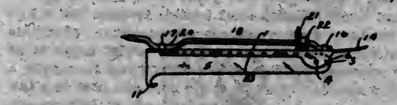
1. In a nut lock, the combination of a threaded bolt provided with a longitudinal groove, an internally and externally threaded split nut engaging the threads on the bolt and provided with radially disposed notches on the inner end of the nut and a longitudinal groove cut through the internal threads of said nut and adapted to aline with the groove in the bolt, said split nut having longitudinal grooves cut through its external threads and terminating in the notches, an outer nut having notches in its inner end in radial alinement with the notches in the split nut and longitudinal grooves cut through the inner threads and terminating in the notches, said grooves in the outer nut adapted to aline with the external grooves of the split nut, split keys having the ends of their legs bevelled and adapted to be driven into the alined grooves in the split nut and outer nut with the bevelled ends of the legs being swaged into the radial notches in both the split and outer nuts, and a key adapted to be driven into the alined grooves in the split nut and the bolt for temporarily locking the split nut to the bolt.

1,485,091. RIBBON CASE. EARL PEPPER, Lamkin, Miss. Filed Feb. 14, 1923. Serial No. 619,069. 3 Claims. (Cl. 211—81.)



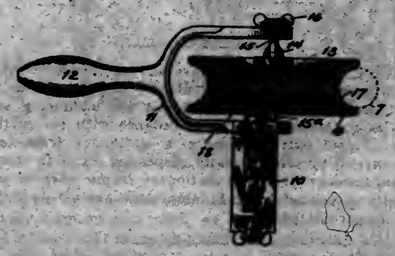
1. In a device of the character described, a case, a vertical partition comprising a plurality of horizontally disposed vertically spaced panels, a plurality of horizontally adjustable pivot-bearing arms mounted on each panel and a plurality of horizontally adjustable tension devices mounted on each panel.

1,485,092. BROOM AND MOP HOLDER. FRANK J. RAUCHUT, Philadelphia, Pa. Filed June 23, 1923. Serial No. 647,327. 1 Claim. (Cl. 24—244.)



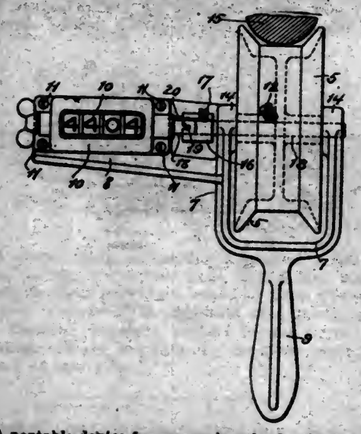
A combined broom and mop holder, comprising a vertical backboard, vertical end blocks secured to the backboard and projecting forwardly therefrom and presenting inner vertical abutment faces, a central triangular block secured to the backboard and being of a thickness less than the distance between the front and rear faces of the blocks, a central front rectangular shaped board secured to the front face of the triangular block in substantially flush relation with the front faces of the end blocks and arranged in spaced relation to the said end blocks to provide open-ended, spaced passages between said vertical end blocks for the handles of a broom and mop, said front board being substantially coincident with the base of the triangular block and projecting from the inclined sides thereof, and horizontal clamping rollers confined by the central front board in the spaced passages between the triangular and end blocks and arranged to roll downwardly and convergingly with relation to each other on the inclined sides of the triangular block for clamping the handles of a broom and mop against the inner vertical faces of the end blocks.

1,485,093. SAFETY RAZOR. STUART SPEIRS, New York, N. Y. Filed Apr. 20, 1922. Serial No. 555,744. 3 Claims. (Cl. 30—12.)



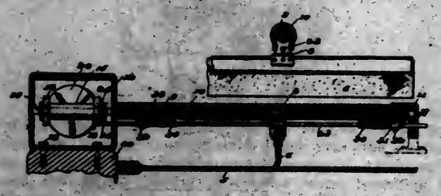
1. In a safety razor the combination of a convex platform curved along its longitudinal axis, a concave bending and locking member curved along its longitudinal axis adapted to be locked to said platform and a blade clamped between the convex face of the platform and concave face of said locking member, said blade locking member provided with a positioning flange on its upper edge and having over hanging gripping lugs to hold the blade in an initially flexed position prior to its locking engagement with the platform.

1,485,094. CAN OPENER. WILLIS M. THOMPSON, Chicago, Ill. Filed May 14, 1920, Serial No. 381,260. Renewed Jan. 8, 1924. 1 Claim. (Cl. 30—3.)



An improved can-opener, composed of two body-sections pivotally connected and adapted to be folded to shorten the length of the tool as desired; one of said body-sections being provided with a longitudinal depression; a pointed can-opener rod fixed on the body-section which has said longitudinal depression in it, and a cutter mounted to slide and rotate on said can-opener rod in said depression, substantially as set forth.

1,485,095. PORTABLE MEASURING DEVICE. DAVID M. TILLEE, Broken Arrow, Okla., assignor to The Tiller Manufacturing Company, Kansas City, Mo. Filed Mar. 9, 1921. Serial No. 450,947. 2 Claims. (Cl. 33—134.)

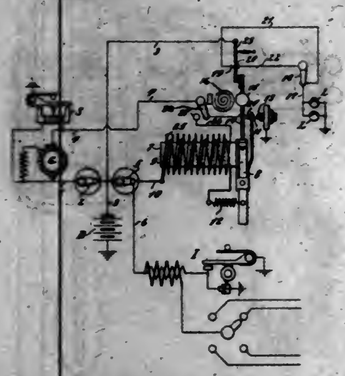


1. A portable registering device comprising a frame having two side members, longitudinally adjustable bearings carried by said side members, a wheel the hub of which is carried by said adjustable bearings and a registering device carried by the frame and geared to said wheel.

1,485,096. PORTABLE MEASURING DEVICE. DAVID M. TILLEE, Kansas City, Mo. Filed Aug. 2, 1921. Serial No. 489,819. 2 Claims. (Cl. 33—134.)

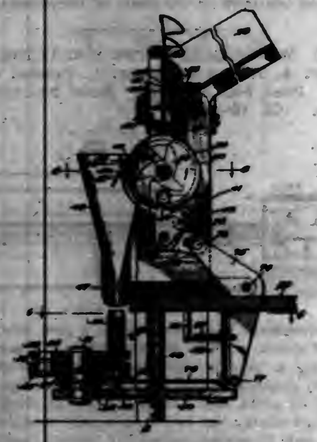
1. A portable device for measuring the depth of a drilled hole or well consisting of a frame, a shaft journaled therein, a shelf on said frame and in line with the shaft journaled in said frame, a counter detachably secured to the frame, a shaft constituting a part of said counter device, a wheel secured to the shaft in the frame and adapted to be turned by contact with a drill cable, and a coupling sleeve detachably secured to the wheel shaft and also detachably connected with the shaft of the counter so that the latter may be removed without removing the coupling sleeve, or the latter may be disconnected from the shaft in the frame so that the rotation of said latter shaft will not be imparted to the shaft of the counter.

1,485,097. WINDSHIELD WIPER FOR AUTOMOBILES. STANLEY A. TUTTLE and HARRY L. PARKER, Oakwood, Mich. Filed Feb. 17, 1923. Serial No. 619,584. 3 Claims. (Cl. 15—253.)



1. A windshield wiper comprising a feed screw having a squared shank, a sleeve mounted on said squared shank and having a pair of friction wheels, a friction disk alternately engaged by said friction wheels, a nut mounted on said feed screw and having a wiper, a longitudinally movable rod having one end forked and connected to said sleeve, a pair of sleeves adjustably mounted on said rod, and coil springs mounted on said rod in engagement with said pair of sleeves, said coil springs being arranged in the path of travel of said nut whereby the endwise movement of the nut alternately compresses the springs and moves the rod longitudinally.

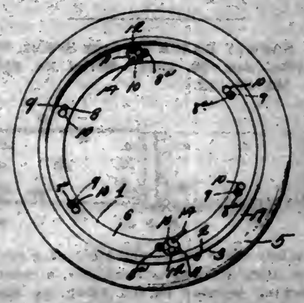
1,485,098. AUTOMOBILE ALARM SYSTEM. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Sept. 9, 1920. Serial No. 409,134. 5 Claims. (Cl. 177—311.)



5. For automobiles and the like, in combination with a battery and generator, an ignition circuit, means for connecting the battery in the ignition circuit, means controlled by the generator current for connecting the genera-

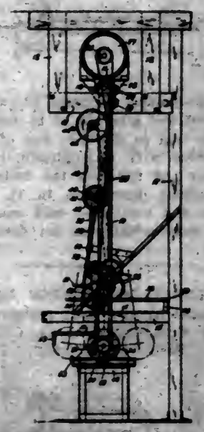
tor in the ignition circuit, an electric make-and-break device, means for connecting the make-and-break device in closed circuit with the battery in parallel with the ignition circuit, said device including an electro-magnet and a biased armature, a signal operating element carried by

the armature, a signal disposed in the path of movement of the said element as the armature vibrates, and means for supplying the generated current to a winding on the magnet, whereby the magnet is energised and the armature retracted while the generator is being operated.



1,485,099. LEAD-LOADING MACHINE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed May 6, 1918. Serial No. 232,990. 12 Claims. (Cl. 226—2.)

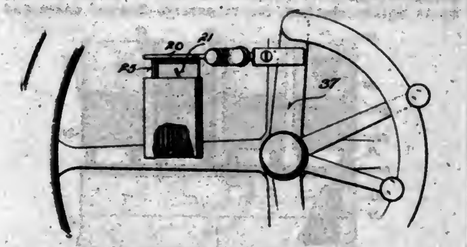
1. In a lead delivering machine, the combination of a rotary cylinder having a group of grooves adapted to receive leads and also having a groove extending at right angles to said first mentioned grooves and a finger to withdraw the leads from said first mentioned grooves, normally resting in said second mentioned groove.



1,485,100. AUXILIARY DEMOUNTABLE-RIM FLANGE. WILLIAM J. WALL, Christiansburg, Va. Filed Sept. 21, 1921. Serial No. 502,290. 1 Claim. (Cl. 301—26.)

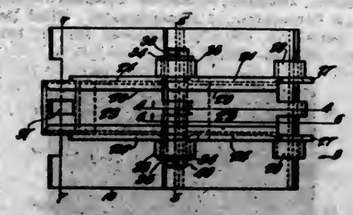
The combination with a wheel felly having a demountable rim thereon, of means for holding said demountable rim on said felly, said means comprising an annular plate engaging the outer face of the felly and the outer face of the demountable rim and provided with concentrically disposed slots having one of their ends larger than their other ends, headed lugs carried by the felly and adapted to be passed through the enlarged portions of the concentrically disposed slots, eccentric clamp plates pivoted to the annular plate adjacent the enlarged portions of the slots and forming means cooperating with the heads of the headed lugs whereby the annular plate may be moved to a position where the headed lugs will be forced into

the reduced portions of the slots and held therein by the engagement of the headed lugs with the outer face of the annular plate, said eccentric plates being provided with recesses in their peripheries for the reception of the heads of the headed lugs, and handle members extending outwardly from the eccentric plate, and positioned thereon whereby when the plates are in operative position said handle members will extend inwardly in relation to the wheel felly.



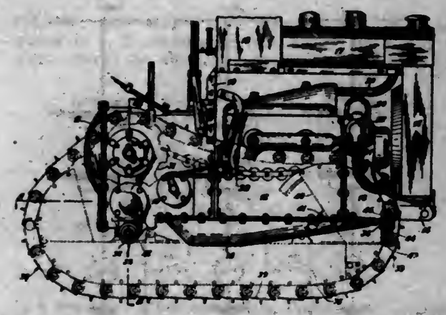
1,485,101. SWING SAW. JULIUS WESSEL, New York, N. Y. Filed July 24, 1922. Serial No. 576,988. 1 Claim. (Cl. 125—14.)

A swing saw comprising a pivotally suspended frame, a cutting member rotatably mounted thereon, means for operating said cutting member and for advancing said frame in its pivotal path in accordance with the cutting action of said cutting member, a stationary frame and shoes carried by said pivotally suspended frame in travelling engagement with said stationary frame whereby said pivotally suspended frame is maintained against deviation from its pivotal path.



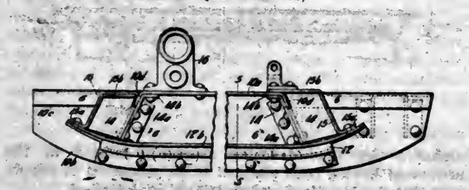
1,485,102. MATCH RECEPTACLE. ALBERT S. WELLS, Milwaukee, Wis. Filed Feb. 20, 1922. Serial No. 537,747. 2 Claims. (Cl. 206—22.)

1. The combination of a box for containing matches, a traveler transversely reciprocable therein, a slide, means cooperating with said slide and said traveler for reciprocating said traveler on the reciprocation of said slide,



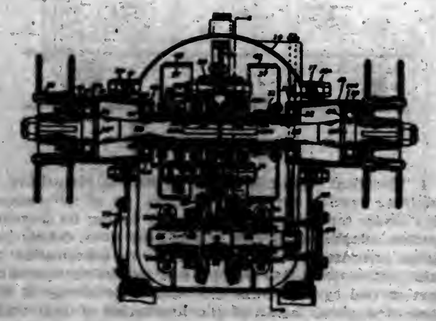
and means for feeding said matches from said box, said box having an opening through which said matches are directed.

1,485,103. TRACK BELT AND UNIT THEREFOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 17, 1920. Serial No. 396,955. 5 Claims. (Cl. 305—10.)



1. A pressed metal track belt comprising a bottom plate and a rail member formed from a single blank having substantially vertical side members with rounded ribs at their upper edges having spaced, double thick walls and a depressed longitudinal plate portion between the inner walls of said ribs, the lower edges of the side members being secured to the bottom plate.

1,485,104. TRACTOR. ROLLIN H. WHITE, Euclid Heights, and EDWIN H. SAVAGE, Cleveland, Ohio, assignors to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,123. 2 Claims. (Cl. 180—9.1.)



1. In a tractor, the combination of a body comprising a rear transmission unit, an intermediate engine unit, and a front gear cover and radiator supporting unit, each of said units including unitary casings positioned in alignment and detachably secured to each other at their adjacent ends; and supporting track units having frames pivoted at one end to said unitary transmission casing and connected at the other end to said gear cover casing.

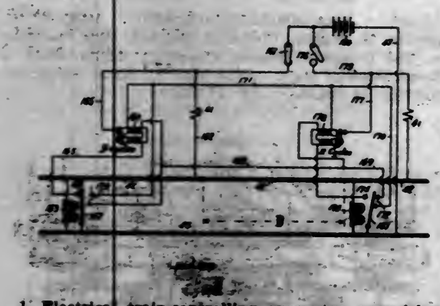
1,485,105. SIDE FRAME FOR TRACK-LAYING TRACTORS. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921, Serial No. 461,284. Renewed Apr. 24, 1922. Serial No. 556,359. 7 Claims. (Cl. 305—9.)

1. A track frame comprising a pressed metal main member having downturned sides, and a shoe which is disposed between the lower edges of said downturned sides and is secured thereto, said shoe having a centrally disposed upwardly pressed groove in its lower face which extends longitudinally from the front to the rear end of said shoe.

1,485,106. TRANSMISSION-GEARING MOUNTING. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed May 5, 1922. Serial No. 558,722. 4 Claims. (Cl. 74—57.)

1. The combination of a gear casing having aligned holes in its opposite sides, bearing sleeves which respectively project through said holes into the casing and are removably secured to the casing to close said holes, differential gearing within the casing including a differential drum having oppositely extended aligned tubular hubs which are respectively mounted in inner ends of said sleeves, two driving axles which respectively project through said sleeves and differential drum hubs and are rotatably mounted in bearings located in the outer ends of said sleeves, an annular disk which loosely embraces the projecting end of each axle shaft and is secured to the end of the sleeve in which said axle shaft and its bearings are supported, a wheel secured to the end of said axle shaft and having an annular bearing surface adjacent its hub, and an annular disk of flexible material secured dust tight to said plate in rubbing contact with said surface, and a spring acting to force said flexible disk against said surface.

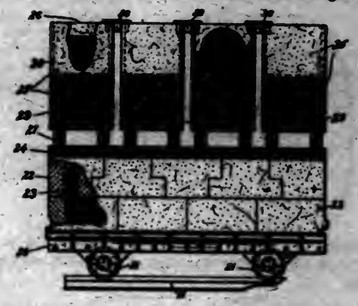
1,485,107. WATER HEATER. ELMER J. ZEIGLER, Camden, N. J. Filed Sept. 8, 1923. Serial No. 661,705. 2 Claims. (Cl. 126—54.)



1. In a heating attachment for gas stoves and the like, a removable top therefor comprising a casing having apertures in its side walls and heat-admitting apertures

in its bottom, cradles on the bottom of the casing having recessed upper edges forming seats, a pipe coiled to

embrace the heat-admitting apertures located in the seats and having ends adapted to be connected to supply and distributing pipes, substantially as described.

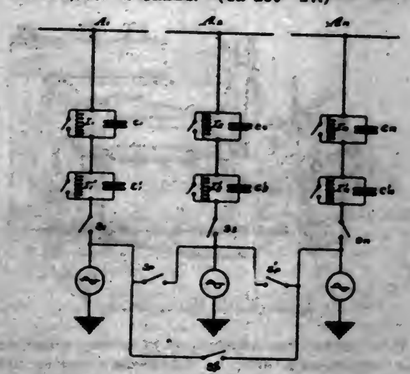


1,485,108. RAILWAY SAFE-RUNNING DEVICE. ARTHUR REGINALD ANGUS, London, England. Filed Aug. 3, 1914. Serial No. 854,895. 8 Claims. (Cl. 246—23.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Electrical train-controlling apparatus comprising a receiving portion carried by a train, an electro-responsive device carried by said train and having its movable portion adapted to occupy a line-clear or a danger position according to the condition as to energization of said electro-responsive device, a direction-corresponding part carried by said train and adapted to occupy in the case of a given facing of the locomotive of said train different positions in accordance with opposite directions of running of said train, switching means on the track adapted to be given different positions according to the directions in which a train is to be allowed to run, means on the track adapted to cause inductively electric potential to occur differently in said receiving portion in correspondence with said different positions of said switching means respectively, and means on said train adapted to co-operate with said direction-corresponding part to enable the occurrence of electric potential in said receiving portion as aforesaid to cause a condition as to energization of said electro-responsive device corresponding to the line-clear position of said receiving portion but only in the case of correspondence between the occurrence of electric potential in said movable portion and the position of said direction-corresponding part.

1,485,109. TUNNEL KILN. HUGO W. H. BEYTH and MILTON F. HERCHER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 27, 1920, Serial No. 426,712. Renewed Jan. 7, 1924. 5 Claims. (Cl. 25—142.)

1. In a tunnel kiln having longitudinal muffle benches in the heating chamber and a car traversing passage therebetween, the combination therewith of a car comprising a wheeled support, an imperforate refractory body portion thereon having a plane top disposed substantially on a level with said benches, small refractory blocks of high heat conductively spaced on said car top so as not to obstruct the transverse flow of gases and

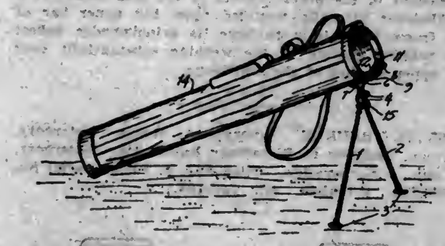


stacks of refractory containers disposed on said blocks in spaced relation transversely and longitudinally of the car.

1,485,110. TUNNEL KILN. HUGO W. H. BEYTH, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1920, Serial No. 430,876. Renewed Jan. 7, 1924. 6 Claims. (Cl. 25—142.)

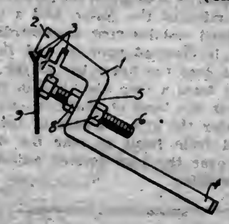
1. A tunnel kiln comprising a movable kiln car platform, a refractory turntable mounted thereon to rotate in a horizontal plane, a plane-surfaced layer of super refractory material on said table to support the ware, a refractory superstructure supported upon said movable platform partially surrounding said turntable at the sides to form a car body having a substantially solid top, and means for rotating the turntable while the car is within the tunnel kiln.

1,485,111. RADIO TRANSMISSION SYSTEM. JOSEPH BETHENOD, Paris, France. Filed Aug. 2, 1921. Serial No. 489,306. 8 Claims. (Cl. 250—17.)



1. In a radio transmission system, an aerial divided into two separate sections adapted to radiate different wave lengths, generators therefor, and a connection of substantially infinite impedance in each of said sections to the wave length of the other section for limiting induction effects therebetween.

1,485,112. GAS VAPORIZER. HERBERT A. CHURCH, Crary Mills, N. Y. Filed Aug. 11, 1920, Serial No. 402,880. Renewed June 8, 1923. 2 Claims. (Cl. 48—180.)

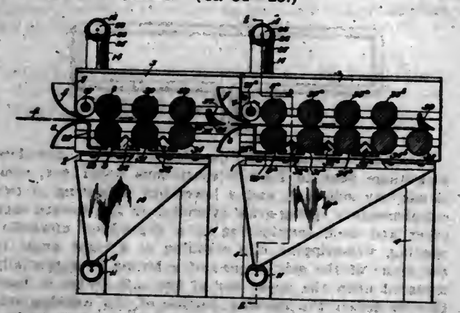


2. The combination with the cylinders of a gas engine and the intake manifold connected thereto, of a plurality of stationary spherical members mounted in the gas passages of the manifold, two of said members disposed close to the intake port of the cylinders, the third member being disposed in the down-leg of the manifold adjacent the juncture of the said leg with the arms of the manifold, the members adjacent the intake ports being adjustable for diverting the explosive mixture towards the opposite sides of the intake ports.

1,485,113. GOLF-BAG SUPPORT. FRANCOIS W. DE BLIEUX, Chicago, Ill. Filed Oct. 9, 1922. Serial No. 593,371. 2 Claims. (Cl. 150—1.5.)

2. In a golf bag support, a head comprising integral spaced portions adapted for frictional engagement with the mouth of the bag, legs extending from said head and adapted yieldingly to spread apart as they recede therefrom, a hook slidable upon said legs whereby they may be retained in parallelism at will, and feet terminating said legs.

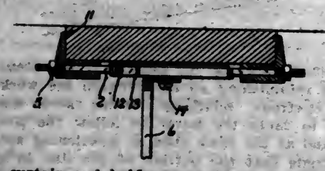
1,485,114. SAW SET. OTTO FRISK, Kiron, Iowa, assignor to A. E. Anderson, Kiron, Iowa. Filed Aug. 8, 1921. Serial No. 490,673. 1 Claim. (Cl. 76—71.)



In a saw set, a frame comprising substantially parallel ends, one of said ends terminating in a head and being formed with a plurality of parallel notches, the depth of the successive notches increasing as they recede from said head, the intermediate portion of said frame being disposed at right angles to said ends and formed with a threaded perforation, a screw gage arranged in said threaded perforation and disposed parallel to the ends of said frame, and means for locking said gage in adjusted position.

1,485,115. PROCESS OF MAKING CONFECTIONS. FRANK L. GUITTARD and ALFRED L. CARRIL, San Francisco, Calif., assignors, by mesne assignments, of one-third to Frank X. Schwarzenbek, San Francisco, Calif. Filed Aug. 1, 1922. Serial No. 579,027. 11 Claims. (Cl. 91—68.)

5. The process of applying chocolate coatings to candy centers which consists in placing centers in a container, causing movement of the centers while in the container, introducing warm melted chocolate into the container during the movement of the centers, then introducing into the container dry powdered chocolate.



11. The process of applying chocolate coating to candy centers which consists in placing the centers in a container, causing movement of the centers while in the container, introducing warm melted chocolate into the container during movement of the centers, then introducing a dry powdered edible substance into the container during movement of the centers and then alternately introducing warm melted chocolate and dry powdered edible substance until coatings of the desired thickness are produced on the centers.

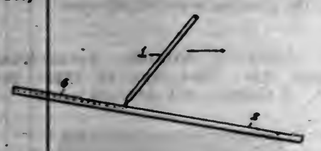
1,485,116. TIN-PLATE POLISHING AND CLEANING MACHINE. JAMES E. KANE and ARTHUR J. MASKERNY, Jr., Canton, Ohio. Filed June 30, 1922. Serial No. 571,910. 2 Claims. (Cl. 51—23.)

1. A tin plate cleaning and polishing machine including a series of rolls through which tin plates are adapted to pass horizontally, and a conveyer for depositing cleaning material upon the tin plates as they pass through the machine, the conveyer comprising an endless chain having buckets rigidly mounted thereon arranged to travel transversely across the machine, and means for vibrating the chain as it passes over the plates to evenly distribute the cleaning material thereon.

1,485,117. CURTAIN HOLDER. PETER KUSNIEWSKI, Milwaukee, Wis. Filed Sept. 16, 1921. Serial No. 501,052. 2 Claims. (Cl. 156—24.)

2. A curtain rod holder comprising a yoke of adjustable width having two overlapping portions, a curtain rod supporting member adjustably clamped to said overlapping portions and adapted to bind them in rough adjusted position, said overlapping portions having screw-threaded extremities, a pair of clamping members slidably carried by said screw-threaded extremities and adapted to grip opposite sides of a window casing, and nuts carried by said screw-threaded extremities and adapted to force said clamping members into binding engagement against sides of said window casing.

1,485,118. MUFFLE TUNNEL KILN. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1921, Serial No. 440,610. Renewed Jan. 7, 1924. 23 Claims. (Cl. 25—142.)



1. A tunnel kiln comprising outer walls defining a kiln chamber for conveying ware therethrough, a combustion chamber within the kiln arranged longitudinally thereof, means providing an air conduit adjacent the combustion chamber, and means for positively circulating air through said conduit to absorb heat from the combustion chamber and transfer it indirectly to the ware.

1,485,119. BUCKLE. JEROME R. LA VIGNE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,720. 1 Claim. (Cl. 24—184.)

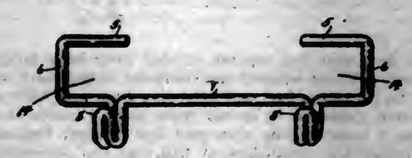
In a rustless buckle, the combination with a one-piece wire-frame bent to form a continuous upper bar, complementary side-bars, and a lower bar consisting of two complementary spring-arms extending in line toward each other and each terminating in a depending, upwardly-opening, web-gripping clip standing at a right angle to the plane of the said frame; of a buckle-lever pivotally mounted upon the upper bar of the said frame in position to deflect the running portion of the webbing substantially over the complementary spring-arms of the frame.

1,485,120. ARC WELDING. JAMES F. LINCOLN, East Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 28, 1922. Serial No. 570,449. 3 Claims. (Cl. 219—10.)

1. In metal working by electricity, the steps which consist in establishing an arc between the work and a suitable electrode, relatively moving such work and electrode to cause the latter to follow the line to be welded, and at the same time so positioning such work and electrode that the portion of the line in question under the arc inclines downwardly in the direction of travel of the electrode relatively to the work.

1,485,121. GARMENT-FASTENER BUTTON. JULIUS MALTZ and THEODORE H. MILLER, Waterbury, Conn., assignors to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Feb. 6, 1923. Serial No. 617,287. 3 Claims. (Cl. 24—245.)

1. A garment-fastener button, having a button-base provided with two upstanding prongs, and a solid button-head of resilient material in which the said prongs are driven and embedded for the anchorage of the head

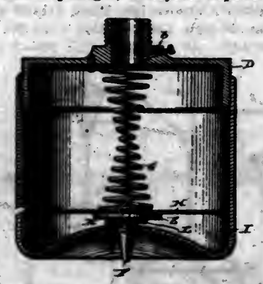


to the base, the ends of the said prongs being bent within the outer face of the said solid head for anchoring the head to the base.

1,485,122. BUCKLE. THEODORE H. MILLER, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,768. 1 Claim. (Cl. 24—18.)

A rustless buckle having a one-piece, wire frame bent to form a continuous upper bar, side-bars, two inwardly-extending aligned loops forming the lower bar of the frame, and two inwardly-extending gripping-arms forming extensions of the lower reaches of the said loops; of a buckle-lever pivotally mounted upon the upper bar of the frame in position to have its gripping-edge deflect the running portion of the webbing substantially over the upper reaches of the said loops.

1,485,123. BUCKLE. ROSWELL A. MOORE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,738. 2 Claims. (Cl. 24—184.)

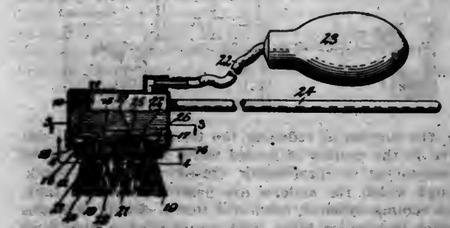


1. In a rustless buckle, the combination with a one-piece wire-frame having its lower bar bent to form a depending, upwardly-opening gripping-hook for the reception of the fixed end of the webbing upon which the hook is clamped, of a buckle-lever pivotally mounted upon the upper portion of the frame, and a piece of webbing having its fixed end inserted downwardly into the said hook, which is clamped upon it and then passed from front to rear over the lower bar of the frame and then downward to form a loop and then in front of the said hook and over the bend of the fixed end of the webbing and then under the gripping-edge of the said lever, and then upward from front to rear for deflection by the buckle-lever over the loop formed adjacent to the fixed end of the webbing.

1,485,124. STETHOSCOPE. MAGNUS J. MYERS, Daytona, Fla. Filed Feb. 14, 1922. Serial No. 536,534. 2 Claims. (Cl. 181—24.)

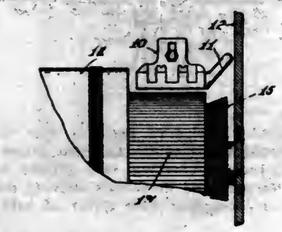
1. A stethoscope of the character indicated comprising a cylindrical body section, a concavo-shaped bottom section integral with and closing the lower end of the body section, and having a central opening, a top section longitudinally adjustable within the open end of the body section and formed with a sound outlet, a diaphragm dimensioned in accordance with the interior of the body

section, and located therein immediately above the bottom section, a weighting element affixed to the lower surface of the diaphragm, a stylus depending from the



weighting element and projecting through the opening in the bottom section and a spring interposed between said top section and the diaphragm.

1,485,125. WINDOW VENTILATOR. ALFRED C. SCHOEPFER, Detroit, Mich. Filed Sept. 16, 1921. Serial No. 501,016. 3 Claims. (Cl. 98—31.)



1. In a ventilator, brackets adapted to be secured to each vertical side of a window frame on the interior thereof, each having a lug adjacent the sill end, a channel member for each bracket, each being offset at the lower end to provide a foot to engage over the outside of the lug of the respective bracket, means for securing the said offset lower end and lug in pivotal relation, a foldable fabric member connecting each channel with its respective bracket, and a glass deflector member engaging in the channel members at each end and having the lower portion of the said edge notched to extend about the bracket permitting the lower edge of the glass to lie in close proximity to the sill below the said pivot points.

1,485,126. APPLICATOR. HENRY SCHUMACHER, Buffalo, N. Y. Filed July 18, 1921. Serial No. 485,668. 4 Claims. (Cl. 128—65.)

1. An applicator having a receptacle adapted to receive the material to be applied and comprising a tubular body and a head arranged at the front end of said body, said head having outer and inner disks which are spaced apart, ducts extending through said disks, bristles extending through said outer disk into the space between the same and the inner disk, and a filling of cement arranged between said disks and securing the inner end of the bristles therein.

1,485,127. ARCING MEANS FOR BRUSH HOLDERS. EDWARD SEARS, Deer Lodge, Mont. Filed Sept. 13, 1922. Serial No. 587,950. 5 Claims. (Cl. 171—324.)

5. In combination with the case of a commutating motor or generator and its brush holders, conducting means disposed intermediate of the brush holding ends of the brush holders and the case of the motor or generator adapted to reduce the air gap therebetween and to induce grounding of an arc at the brush holders through the casing.

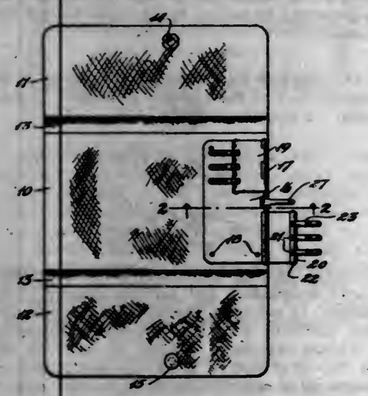
1,485,128. PISTON PACKING RING. FRANK E. SMALL, Jamaica, N. Y. Filed June 14, 1923. Serial No. 645,361. 2 Claims. (Cl. 74—109.)

2. A piston packing ring comprising a split ring provided with interlocking end portions adapted to engage on insertion to permit a limited outward movement of the ring, said ring being also provided with notch portions forming shoulders adapted to each be pressed toward the other end to effect the engagement of the said interlocking end portions in the piston ring.

1,485,129. BURNER FOR PETROL GASES AND THE LIKE. HUBERT ELWELL SMITH, London, England. Filed Aug. 25, 1923. Serial No. 659,383. 2 Claims. (Cl. 158—112.)

1. A burner for gasolene and air mixtures, comprising a tube having perforations large enough to provide for the passage of the flames and products of combustion distributed along its length, the tube being closed at one end, transverse diaphragms of gauze at the other end to prevent backfire, and a perforated partition extending longitudinally of said tube to form a combustion chamber therewithin, the outer surface of said partition constituting a combustion surface.

1,485,130. HAIR-CUTTING TOOL. WALTER SOVITZKY, Milwaukee, and CHARLES DURAN, Kenosha, Wis. Filed Feb. 9, 1923. Serial No. 617,906. 1 Claim. (Cl. 30—1.)

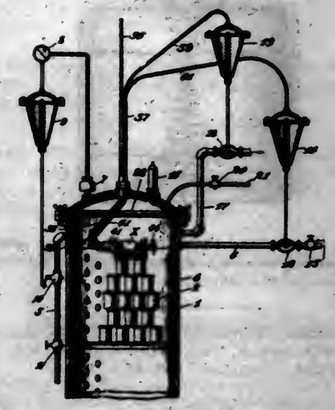


In a hair cutting machine, the combination of spaced sets of stationary teeth, said teeth acting as a comb for guiding the hair towards the rear portions, one set of

teeth being relatively coarse and the other set of teeth being relatively fine, said fine set of teeth being arranged in an order of decreasing length, a reciprocatory cutter bar for each set of teeth, said cutter bars each having a series of relatively short cutting teeth cooperating with

the first mentioned series of teeth, a pair of cranks revolubly mounted intermediate the two series of stationary teeth, links connecting said cranks with the respective cutter bars and detachable driving means for selective operative coupling with either of said cranks.

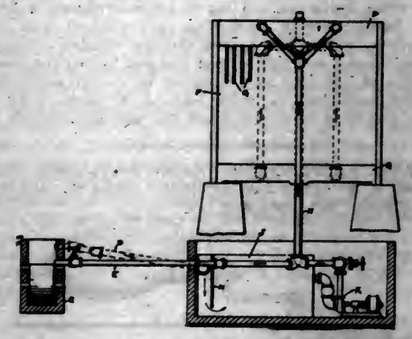
1,485,131. SECURITY CASE. HIRAM C. STALLINGS, Carrollton, Ga. Filed Nov. 22, 1922. Serial No. 602,534. 5 Claims. (Cl. 150—40.)



1. In a key case of the class described, a base plate, swinging plates hinged to one edge of the base plate, swinging hooks hinged to the free edge of each plate and a further hook pivoted directly to the base plate.

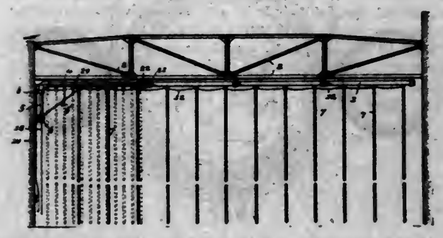
1,485,132. METHOD OF MAKING ABRASIVE WHEELS. PETER JOEL STIEFEL, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1920, Serial No. 418,582. Renewed Jan. 7, 1924. 6 Claims. (Cl. 25—153.)

1. The method of making an abrasive wheel, comprising the steps of supporting the wheel consisting of granular abrasive and heat setting bonding material upon a substantial portion of its peripheral face by a refractory, retaining the wheel in such position and firing it while in this position to bond the abrasive grains.



1,485,133. METHOD AND APPARATUS FOR AUTOMATICALLY CONTROLLING PROCESSING. WILLIAM P. WHITE, Brooklyn, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 25, 1921. Serial No. 480,442. 19 Claims. (Cl. 99—2.)

1. In the art of preserving food products by applying heat in a closed retort to sealed food packages having flexible portions, the method of regulating external pressure on said packages which method comprises reducing the pressure in said retort when said flexible portions have moved inwardly beyond a predetermined limit.



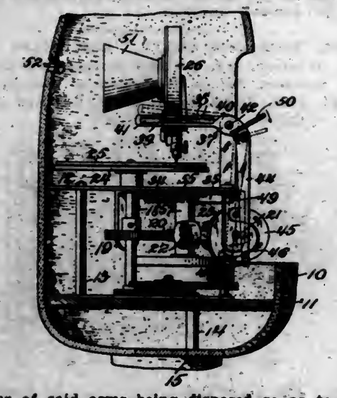
7. An apparatus for preserving foods by heat treatment of sealed packages comprising in combination a closed retort, means to supply fluid pressure to said retort, means to release fluid pressure from said retort, and devices operable by a portion of a specimen package to operate the means to supply pressure when the pressure in the retort is less than the pressure within the package, and to operate the means to release pressure when the pressure in the retort is greater than the pressure in the specimen package.

1,485,134. PROCESS AND APPARATUS FOR REDUCING THE TEMPERATURE OF COOLING OIL. HERBERT A. WRIGHT, Detroit, Mich. Filed Jan. 3, 1921. Serial No. 434,771. 6 Claims. (Cl. 266—6.)

1. The process of reducing the temperature of oil employed in the cooling of heated metal articles, consisting in employing a practically closed containing tank, through which the articles are passed, a settling tank, and a cooling radiator, connected into a circuit by means of inlet and outlet pipes, and establishing a flow from said containing tank to the bottom portion of said settling tank, thence from the upper portion of the latter to said cooling radiator, and thence back to said closed containing tank.

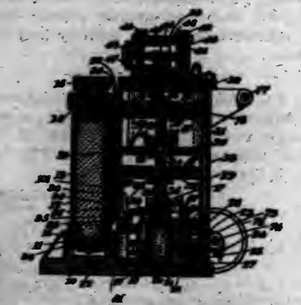
1,485,135. TRACK FOR GYMNASIUM CLIMBING POLES. FRANK ALBACH, St. Louis, Mo., assignor to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 21, 1922. Serial No. 555,879. 17 Claims. (Cl. 46—67.)

1. In a pole climbing apparatus, the combination of a stationary track section, a swinging track section adapted to move into aligned relation with the stationary section, a latch mechanism adapted to lock said sections in aligned relation, a series of trucks having movement upon said tracks, means for limiting the degree of separation of said trucks, the swinging track section having a length sufficient to store the series of trucks in a closely arranged condition, and a series of climbing poles suspended from said trucks.



1,485,136. CLOSURE FOR RECEPTACLES. HENRY A. HOUSE, Bridgeport, Conn. Filed Aug. 31, 1922. Serial No. 585,390. 5 Claims. (Cl. 220—60.)

1. A receptacle closure, comprising a tubular member having an inturned upper margin and a chine depressed inwardly from the outer surface of said member, and a head having an upwardly inclined outer margin terminating in a rounded shoulder adapted to bear against the inturned upper margin of said member, and a depending flange provided with tongues adapted to engage the chine of said member.



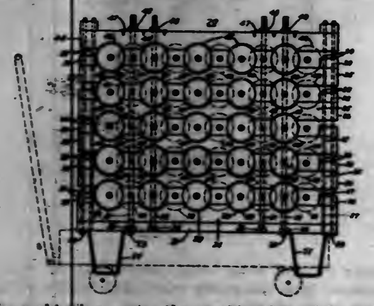
1,485,137. TALKING DOLL. CHARLES A. HUNTER, Far Hills, N. J. Filed Dec. 6, 1922. Serial No. 605,224. 1 Claim. (Cl. 274—14.)

A phonograph comprising a motor frame, a motor in the frame, said motor including a brake, a record support above the frame, a reproducer mounted in the body portion so as to swing horizontally and vertically, a right-angled lever pivoted at the juncture of its arms, a pin on the reproducer engaging one of said arms and adapted to be raised thereby and to descend by gravity along said arm so as to be returned to its initial starting position,

the other of said arms being disposed so as to engage the brake to stop the motor when such return of the reproducer takes place.

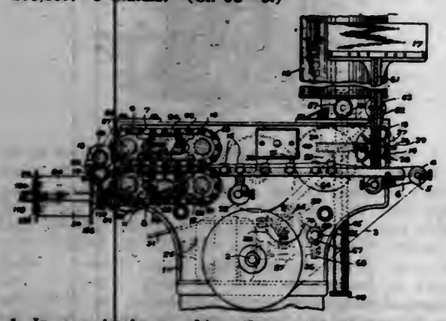
1,485,138. LIFTING JACK. LAWRENCE T. JOHNSON, Buffalo, N. Y. Filed Apr. 7, 1923. Serial No. 630,443. 4 Claims. (Cl. 138—9.)

1. In a lifting jack, a cylinder, a lifting piston in the cylinder, a pump cylinder, a pump piston in the same, means for operating the pump piston, there being a passage from the pump cylinder to the lifting piston cylinder and a suction passage to the pump cylinder from a source of supply, a check valve in the passage from the pump cylinder to the lifting piston cylinder, a check valve in the passage from the pump cylinder to the source of supply, and means actuated by the lifting piston for opening and holding open the check valve in the passage from the pump cylinder to the source of supply when the lifting cylinder has been moved a predetermined distance.



1,485,139. HOSE COUPLING. SAMUEL LEVITT, Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J., a Corporation of New Jersey. Filed Aug. 16, 1921. Serial No. 492,655. 4 Claims. (Cl. 285—87.)

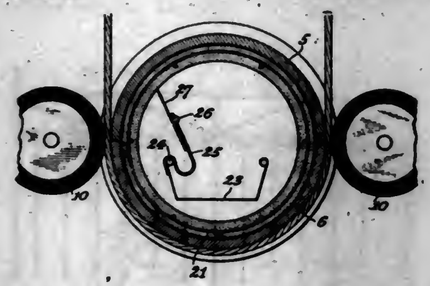
4. A hose coupling comprising a conically recessed case member, a ferrule enclosing a hose end and entering said case member, and a pliable spiral element cooperating



with said ferrule and adapted to be positively rotated and forced against the hose when the case member and ferrule are secured together.

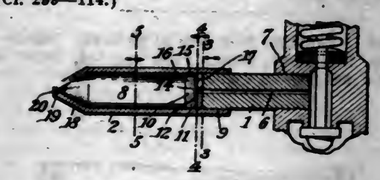
1,485,140. SHIPPING CRATE. HARL ALLEN MCCORMICK, Anderson, Ind., assignor to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed Oct. 27, 1921, Serial No. 510,827. Renewed July 30, 1923. 8 Claims. (Cl. 217—13.)

1. In a shipping crate, the combination with a plurality of frames including longitudinal members provided with transverse indents in the upper and lower surfaces thereof, forming receptacles for articles of manufacture; of a base adapted to have the frames placed in stacked relation thereon; and means secured to the base for rigidly holding the frames in position thereon whereby the articles of manufacture will be securely held in position in the indents.



1,485,141. PACKAGING MACHINE. CHARLES H. MACDONALD, Montclair, N. J., assignor, by mesne assignments, to Ivers-Lee Company, Newark, N. J., a Corporation of Delaware. Filed Feb. 20, 1919. Serial No. 278,289. 3 Claims. (Cl. 93—5.)

1. In a packaging machine, the combination of means for forming a package comprising a continuous strip of separated article holding compartments, means for severing said strip at predetermined intervals, and means for accumulating severed portions of said strip in predetermined numbers, including a multi-compartment hopper arranged in position to receive said severed portions in one compartment at a time, and means co-operating with the severing mechanism for moving said hopper to present another compartment in severed portion receiving relation to the severing means periodically upon the severing of a predetermined number of portions.



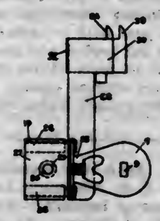
1,485,142. PROCESS AND APPARATUS FOR MAKING CENTRIFUGAL CONCRETE PIPES. JOHN C. MITCHELL, East Orange, N. J., assignor to Lock Joint Pipe Company, Ampere, N. J., a Corporation of New Jersey. Filed Apr. 28, 1922. Serial No. 557,123. 10 Claims. (Cl. 25—30.)

1. In the process of making centrifugally molded concrete pipes, the steps herein described of depositing concrete in a rotating mold and removing the laitance and other objectionable matter from the interior surface of the pipe by the wiping action of a body yielding in the direction of rotation of the mold and while said mold is still in rotation.

4. The combination with a rotary mold for the manufacture of centrifugally molded concrete pipes, of overhead pulleys in fixed bearings, endless belts running over the same and pulleys on the mold which is slung in the endless belts, whereby the mold is supported and may be rotated by said belts, and steadying wheels engaging the pulleys on the mold for maintaining the mold in proper position.

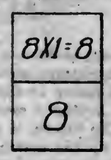
1,485,143. OUTLET NOZZLE FOR ATOMIZING AND SPRAYING LIQUID ANTISEPTICS UNDER PRESSURE. LEWIS KEMPTON MOSLEY, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,669. 5 Claims. (Cl. 299—114.)

2. An outlet nozzle for spraying liquids under pressure, comprising a tubular body having interposed in its bore intermediately of its inlet and outlet ends a gradually widening spiral channel having its longitudinal extent in the same plane transversely of the bore and forming part of the longitudinal extent of said bore.



1,485,144. RECEPTACLE. GUY E. MORGAN, Chicago, Ill., assignor to The Jumbo Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1922. Serial No. 546,575. 17 Claims. (Cl. 229—8.)

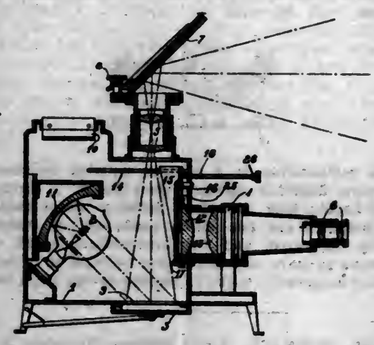
1. An elongated collapsible receptacle in the form of a figure having three dimensions, said figure having its head disposed about the end of said receptacle, and closure flaps for said end operation of which simulates opening and closing of the mouth of the figure.



1,485,145. BRACKET FOR SUPPORTING WINDOW SHADES, CURTAINS, AND OVERDRAPES. EDWARD MORRISON, WILLIAM F. FUTRALL, and ALEXANDER EGLINSKI, Lorain, Ohio. Filed Mar. 16, 1922. Serial No. 544,143. 1 Claim. (Cl. 156—24.)

In a bracket for attachment to the side frame members of a window, the combination with a flattened base member, said base member being of greater length than width and being formed of a single strip of sheet metal, said base member having turned-over side portions to form a slideway disposed longitudinally of a main portion of the base member, an L-shaped window shade roller holding bracket having one of its arms of greater width than the connecting neck portion between the arms, said greater width portion being adapted to be received within the slide-way, and adapted to be moved longitudinally of the frame member within the slideway to any one of various desired positions, a threaded set screw adapted to clamp said member to the base member, said screw being adapted to hold the L-shaped member in any set adjusted position, said bracket having an opening adapted to receive the end of a shade roller, said base member having a turned down portion

disposed at right angles to the main portion of the frame member and a wood screw receiving opening in the turned down portion adapted to permit a wood screw to pass therethrough to secure the end of the said frame member to a side of the wood frame of the window, said base member turned down end portion having turned over sides whereby a slideway is provided within said last named portion, a substantially L-shaped flat sheet metal curtain support having a curtain rod engaging prong extending upwardly therefrom, the lower arm of said L-shaped support adapted to slide in the said last named slideway and to fit snugly therein, said wood screw adapted to pass through and lock said support in the slideway, said prong adapted to fit into a curtain rod opening to carry the curtain rod.

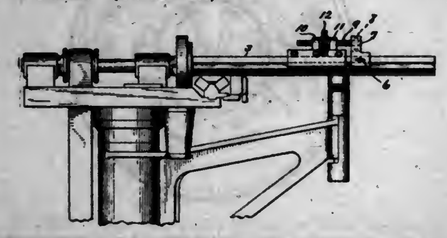


1,485,146. EDUCATIONAL AND GAME CARDS. ROSCOE MUNDELL, Robesart, Saskatchewan, Canada. Filed May 18, 1920. Serial No. 382,432. 1 Claim. (Cl. 283—44.)

An educational device comprising a deck of cards each of which has its obverse and reverse faces divided into upper and lower portions, the upper portion of the reverse face of each card having a multiplier, multiplicand, and product, and the lower portion having a number corresponding to the multiplier of the upper portion, the upper portion of the obverse face of each card having a letter of the alphabet and the name of an object beginning with such letter and the lower portion having a pictorial representation of the object named in the upper portion, said upper portion of the obverse side of each card having a number in an upper corner thereof representing the numerical position of such letter in the alphabet.

1,485,147. PROJECTION APPARATUS WITH MOVABLE CONDENSING LENS. WILLIAM L. PATTERSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,370. 5 Claims. (Cl. 88—26.)

1. In a projection apparatus, the combination with a source of light, of a holder for objects to be projected by transmitted light, a holder for objects to be projected by reflected light, and an adjustable condenser lens in optical relationship with the first mentioned object holder,



and means for moving said lens nearer the light source when the apparatus is to be used for transmitted light alone than when used for reflected light.

1,485,148. APPARATUS FOR THE EASY CLAMPING OF THE PROTECTING TUBES USED IN PERMANENT WAVING OF THE HAIR. HENRI ROBERT PHILIPPE, Paris, France, assignor to Felix Coune, Chicago, Ill. Filed Nov. 14, 1922. Serial No. 600,885. 1 Claim. (Cl. 132—36.)

In combination with a heating tube for a hair waving appliance, of a clip and a scalp protector comprising a pair of clamping levers hinged at one end, said levers being provided at the other end with operating handles, and means intermediate said handles and hinge adapted to hold the clamping levers around the end of the tube adjacent to the scalp, whereby the tube will be sealed and the scalp protected from the heat applied to the tube during the hair waving operation.

1,485,149. ATTACHMENT FOR TRIMMING MACHINES. HENRY RENKEN, New York, N. Y., assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed May 3, 1922. Serial No. 558,321. 4 Claims. (Cl. 29—67.)

1. In a trimming machine, the combination of an adjustable stop, a member cooperating therewith and adapted to be rigidly secured to the side of the work table of the machine and a floating connection between the stop and said member.

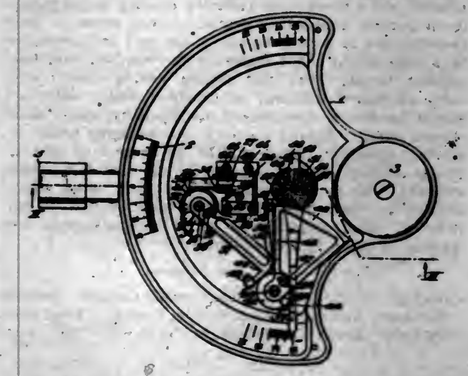
1,485,150. SPLICING MECHANISM FOR CIRCULAR-KNITTING MACHINES. FRANK W. ROBINSON, Reading, Pa. Filed Aug. 22, 1922. Serial No. 583,538. 4 Claims. (Cl. 66—21.)

1. In combination in a circular knitting machine, a main yarn finger, a splicing yarn finger, a circle of needles having long and short butts, a set of knitting cams including the two stitch cams, one of which is pivotally supported, and the intermediate guard cam, and means to move said guard cam to cause it to be operative or inoperative with the needles having short butts.

1,485,151. FURNACE. LOUIS ROESSEL, Brooklyn, N. Y.; ARTHUR E. BELLIS, Springfield, Mass., and CHARLES S. COLLINS, Bronx, N. Y., assignors to Bellis Heat Treating Company, New Haven, Conn., a Corporation of Connecticut. Filed May 4, 1921. Serial No. 466,780. 10 Claims. (Cl. 263—14.)

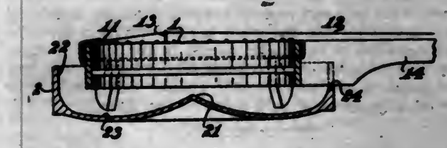
1. A furnace for heat treating metals having a high temperature chamber from which free air is excluded, and preheating and quench chambers open to the atmosphere, means for supplying a combustible fuel mixture to the high temperature chamber, and means for transferring the products of combustion from said high temperature chamber to the preheating and quench chambers.

1,485,152. BAROMETER. MYLES TREGONMOUTH SANDYS, Rock, England. Filed Mar. 20, 1923. Serial No. 626,300. 9 Claims. (Cl. 73—4.)



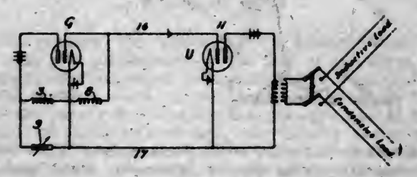
1. In a barometer, the combination of a pressure-scale, an altitude-scale arranged to be read against said pressure-scale, and an index co-operating with said altitude-scale and said pressure scale, said index and said altitude-scale being arranged to be set one in relation to the other.

1,485,153. ELECTRIC HEATER. FRANK E. WOLCOTT, Hartford, Conn. Filed May 19, 1921. Serial No. 470,852. 14 Claims. (Cl. 219—19.)



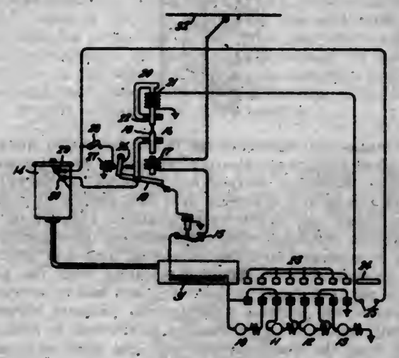
1. In a heating device, the combination with a heat receiving member having a flat radiating surface, of a heating unit co-operating therewith, said member and unit being provided one with a tapered cavity on the side remote from the flat surface and the other being correspondingly tapered to mate therewith to hold them automatically by direct surface contact in predetermined position with said flat surface horizontal.

1,485,154. GAUGE. ERIK H. ALDEBORGH, Poughkeepsie, N. Y., assignor to C. E. Johansson, Inc., Poughkeepsie, N. Y., a Corporation of Delaware. Filed Nov. 5, 1920. Serial No. 422,042. 3 Claims. (Cl. 33—147.)



1. In a gauge, a body portion, a sleeve having a limited rectilinear reciprocating movement therein, means yieldingly holding the sleeve at the limit of its outward movement, a plunger having a measuring pin, longitudinally adjustable in the sleeve, a clamp carried by the sleeve, a pin carried by the clamp, and motion converting and amplifying mechanism operated by said pin.

1,485,155. BANJO RESONATOR. ALBERT M. ANDERSON, Seattle, Wash. Filed May 22, 1922. Serial No. 562,782. 7 Claims. (Cl. 84—271.)



7. A resonator for banjos and like musical instruments comprising a substantially circular shell having a sharp central peak, the surface between the periphery and peak being formed on a curve which is concave in cross section towards the banjo at all points, and the center of curvature of which follows a circle lying towards the periphery of the resonator from an axis extending through its center.

1,485,156. SYSTEM OF DISTRIBUTION. HAROLD D. ARNOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1917. Serial No. 188,562. 18 Claims. (Cl. 250—36.)

1. An oscillation generator comprising a resonant circuit for determining the frequency supplied by said generator, a load circuit adapted to be energized by said generator and a three electrode electric discharge repeater for transferring alternating current energy from said generator to said load circuit and preventing said load circuit from reacting on said generator.

1,485,157. OVERLOAD PROTECTIVE DEVICE. CLINTON J. AXTELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 9, 1920. Serial No. 394,983. 5 Claims. (Cl. 200—96.)

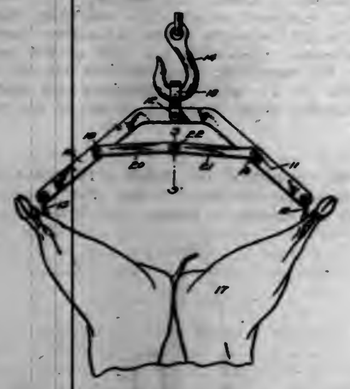
1. An overload circuit breaker adapted to open at a plurality of predetermined different values of current in the circuit controlled thereby, comprising a coil energised responsively to the current in the controlled circuit, a magnet structure therefor, a switch member controlled thereby for controlling the controlled circuit and electromagnetic means for changing the magnetic reluctance of the said magnetic structure to change the value of current at which the circuit breaker is to open.

5. An overload circuit breaker adapted to open at one value of current when the translating device controlled by the breaker is connected to a source of supply of one voltage and to open at a higher value of current when the translating device is connected to a source of supply of lower voltage, comprising a coil energized by the current, a magnet structure therefor, a switch member controlled thereby, the said magnet structure having a magnetic movable member, and an electromagnet energised from the source of lower potential for moving the said movable member to vary the magnetic reluctance of the said magnet structure to vary the value of current at which the circuit breaker is to open.

1,485,158. GEAR. ROGER D. BABSON, Springfield, Mass., assignor to Baush Machine Tool Company, a Corporation of Massachusetts. Filed Nov. 30, 1921. Serial No. 518,995. 1 Claim. (Cl. 74—7.)

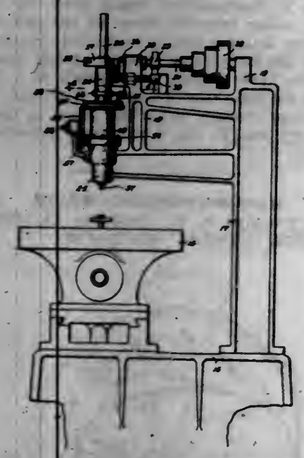
A gear composed of an alloy consisting chiefly of aluminum and containing copper, magnesium, manganese and chromium, which alloy has been worked and heat treated, the magnesium being less than 1%, the copper being 2% to 5% and the chromium and manganese taken together being about 1% or less of the composition.

1,485,159. HEATER OR LIKE UTENSIL. ROBERT BARTHOLOMEW, Bridgeport, Conn. Filed Apr. 19, 1920. Serial No. 374,865. 3 Claims. (Cl. 126—261.)



3. A heater for bottles and other food containers comprising a shallow pan-member of relatively large diameter having a handle on its side and a beaded circular rim, and a separable cover adapted to fit around the rim of the pan-member and to be held in position thereby, said cover formed with inwardly sloping side walls extending a considerable distance above the pan-member to provide a frusto-conical steam dome for collecting the vapor arising from the water in the pan, the walls of said cover merging into a contracted cylindrical neck at the top having parallel sides extending upwardly to surround the upper portion of the bottle at a slight distance from the sides thereof whereby to provide a narrow steam passage through which the vapor is impelled at high velocity due to the accumulated pressure in the steam dome.

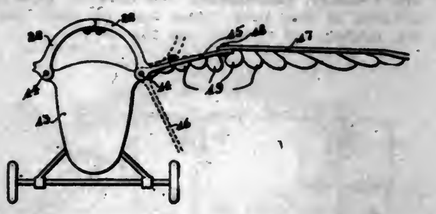
1,485,160. MASK-SUPPORTING MEANS. MORDECAI BASSAN, Brooklyn, N. Y. Filed May 18, 1923. Serial No. 639,775. 5 Claims. (Cl. 2—119.)



1. Mask supporting means of the character designated, comprising a crown band frame, mask supporting arms pivotally mounted on said frame, a mask attached to and between said supporting arms, a spring which tends constantly to retract said arms, and an automatic spring latch for engaging a supporting arm when lowered, substantially in the manner and for the purpose set forth.

1,485,161. GAMBREL. WILLIAM A. BLAKE, Alexandria, Ind. Filed May 22, 1922. Serial No. 562,707. 2 Claims. (Cl. 294—79.)

1. A device of the class described including coacting bars overlapping at one end and the overlapping portions pivotally united, a clip device bearing against one of the overlapping portions and united thereto by the same pivot by which the link members are united and outturned to bear against the adjacent edges of the overlapping portions of the links.



1,485,162. OSCILLATORY ARC SHAPER. ALFRED BONOM, Montreal, Quebec, Canada. Filed Aug. 2, 1921. Serial No. 493,344. 10 Claims. (Cl. 29—23.5.)

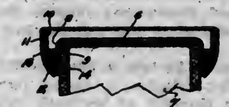
10. A device as set forth in claim 5 in which the sleeve is provided with a ratchet wheel and a gear wheel concentric therewith, a means to actuate the ratchet wheel step by step in the feeding direction, and a gear wheel meshing with the aforesaid gear wheel for the rapid rotation of the sleeve in its nonfeeding direction.

1,485,163. FLYING MACHINE. FRANK BRAUN, Los Angeles, Calif. Filed Jan. 30, 1923. Serial No. 615,948. 4 Claims. (Cl. 244—12.)

1. In a flying machine, a wing-structure having a pivot base by which the wing-structure can be swung in a vertical plane transversely to the longitudinal axis of the flying machine and having a bracing member projecting upwardly to a point above the upper surface of

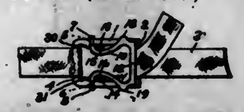
the wing-structure and above the pivot base to abut with a cooperating wing-structure above the flying machine in operative position when the wings are spread.

1,485,164. MEANS FOR INDICATING THE LIQUID CONTENT OF DISTANT TANKS AND THE LIKE. THOMAS CARROLL, Langley Field, Va. Filed Jan. 3, 1922. Serial No. 526,660. 25 Claims. (Cl. 116—118.)



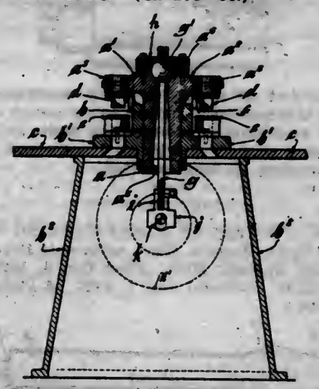
10. Means for indicating the liquid content of distant tanks, comprising an indicating instrument provided with a visible indicating surface and a series of discharge nozzles arranged to discharge onto said surface at points spaced along the length thereof, means adapted to be mounted in communication with different predetermined levels in a supply tank and connected with and placing said discharge nozzles in communication with the predetermined tank levels, respectively, and means normally inoperative for utilizing a differential pressure between a supply tank and said indicating instrument to conduct liquid from the tank and discharge the same onto said indicating surface.

1,485,165. RECEPTACLE CLOSURE. IGNATIUS J. CELONA, Brooklyn, N. Y. Filed Dec. 27, 1922. Serial No. 609,240. 2 Claims. (Cl. 215—44.)



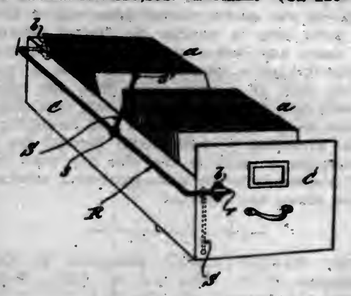
1. A jar closure of the lacquered type having a flange with means to secure the closure upon the jar, said flange having an inner bead bent outwardly and upwardly from the lower edge of the flange and being substantially concentric with the lower portion of the flange, an outer bead in one piece with the inner bead and spaced from the inner bead, said outer bead being formed by bending the material from the upper edge of the inner bead outwardly and downwardly to provide a space between the beads and to enclose this space from above, the raw edge of the material being turned inwardly into the space between the two beads.

1,485,166. JAR CAP. IGNATIUS J. CELONA, Brooklyn, N. Y. Filed Jan. 30, 1923. Serial No. 615,971. 3 Claims. (Cl. 215—40.)



1. A container cap comprising a disc having a flange at its edge with an abutment at the base of the flange, a pressure ring supported by and extending beneath the flange, sealing means between said abutment and the pressure ring, and a releasing annulus outwardly of the flange and carrying said ring, said annulus having its upper edge lying uniformly above the plane of the disc, whereby under pressure on the top of the annulus the circumferential portion of the cap is expanded to facilitate removal of the same.

1,485,167. CLAMP. ARTHUR LEWIS COCHRANE, Toronto, Ontario, Canada. Filed May 31, 1921. Serial No. 473,752. 2 Claims. (Cl. 24—170.)



2. In a clamp comprising a body member of relatively rigid material having openings in its sides and a clamping member having resilient legs having their ends outturned to form pintles extending into and turning freely in said openings, in combination with projections on the outer faces of the legs forward of the outturned ends, and rounded projections on the inner faces of the sides of the body member in the path of movement of the projections on the legs of the clamping member adapted to cooperate with said projections on the legs of the clamping member to hold it in closed position.

1,485,168. NOTCHING OR LIKE PRESS. ALBERT ENOCH COOPER, Stafford, England, assignor of one-half to Charles Jones, Lower Broughton, Salford, Manchester, England. Filed Mar. 20, 1922. Serial No. 545,230. 5 Claims. (Cl. 164—86.)

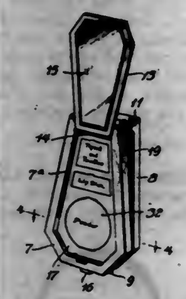
1. In a stamping or punching press, a body part having overhanging head parts at diametrically opposite points, a stationary cylindrical guide in which said body part moves vertically, a tool holder and tool carried by each overhanging part, a stationary support for said guide, matrices carried by said support one for each tool, and means for reciprocating said body part to operate the tools.

1,485,169. SPACE INDICATOR FOR FILING DEVICES. SIEGFRIED CRYSTAL, New York, N. Y. Filed Mar. 31, 1923. Serial No. 629,101. 1 Claim. (Cl. 129—16.)

In combination with a file container of the character designated, a space indicator pivotally mounted on a longitudinal extraneous rail, said rail the extremities of which are slidably mounted on the ends of the container, said space indicator being adjustable upon said rail with relation to the length of the file, substantially in the manner and for the purpose described.

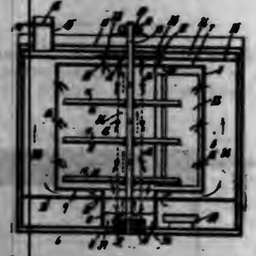
1,485,170. METHOD OF MAKING PNEUMATIC TIRES. LOUIS P. DESTRIBATS, Trenton, N. J. Filed June 17, 1920. Serial No. 389,665. 4 Claims. (Cl. 154—14.)

1. A method of making tires which includes the following steps: first, forming an endless fabric band composed of a plurality of layers; second, placing said band on an expansible annulus; third, expanding said annulus to shape the central portion of the band; fourth, shaping the edges of the inner layers of the band to the sides of the annulus; fifth, placing beads on the last named layers; and sixth, shaping the edges of the remaining layers to the sides of the annulus and to the beads.



1,485,171. SPARK-PLUG TESTER. BERNARD C. DOPPEE and HARRY W. CENTNER, Cincinnati, Ohio. Filed Mar. 21, 1921. Serial No. 454,176. 1 Claim. (Cl. 175—183.)

In a hand testing implement for spark-plugs of electric ignition internal-combustion engines, the combination of a suitable handle, an insulating strip extending longitudinally from one end of said handle, an insulating guard plate having a transverse slot through which said insulating strip on the handle extends outwardly, a short narrow metal strip extending from the outer end of the said insulating strip and having a pointed inner end, and a narrow metal strip mounted on the upper surface of said insulating strip immediately



forward of said guard plate but to the rear of the pointed inner end of the said short metal strip and also having a pointed outer end that corresponds to that at the adjacent but spaced pointed inner end of the first-named metal strip to produce the desired detecting or testing spark gap, and a pendent integral metal strip extending through a transverse slot made in the said insulating strip at a right angle from the inner end of the said rear metal plate on the said insulating strip to a point below the lower edge of said insulating guard plate for grounding a short circuit through the engine and producing a spark in the said gap when ignition current is normally intact in the spark-plug, substantially as herein shown and described.

1,485,172. VANITY CASE. BENJAMIN B. DOWELL, Washington, D. C. Filed Mar. 30, 1923. Serial No. 628,865. 13 Claims. (Cl. 150—34.)

6. A vanity case comprising casing members hingedly connected at one end and having recesses in the outer sides thereof, and cover-plates hingedly connected to said casing members at the other end thereof and overlying said recesses so as to conceal toilet articles therein when the cover-plates are closed; said cover-plates being approximately of the same dimensions as the casing members; and means for releasably securing the free ends of said casing members and cover-plates in closed position.

1,485,173. BAKING OVEN. EZRA S. EATON, Newton, Mass., and WILLIAM W. CUMMINGS, Jr., Hanover, N. H., assignors to The Industrial Appliance Co. of New England, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1922. Serial No. 542,193. 8 Claims. (Cl. 107—60.)

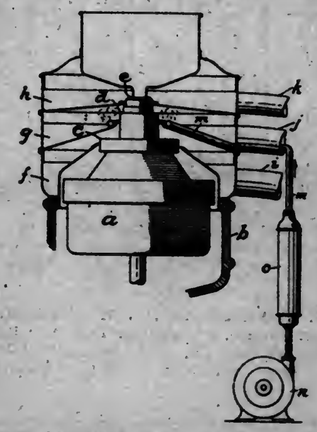
4. A baking oven having, in combination, a vertically positioned baking cylinder, a casing surrounding said cylinder with a plurality of vertically extending chambers between said casing and baking cylinder and with a horizontal chamber extending across said baking oven between the top of said cylinder and the top of said casing, the top of said cylinder being provided with openings, a plurality of shelves with openings therethrough horizontally positioned within said cylinder, a flue extending out of the bottom of said cylinder and upwardly therefrom with openings into the atmosphere and into said horizontal chamber and means to force heated gases upwardly in said vertically extending chambers and into said cylinder and downwardly through the openings in said shelves and out of said cylinder and upwardly in said flue.

6. A baking oven having, in combination, a vertically positioned baking cylinder, a casing surrounding said cylinder with a plurality of vertically extending chambers between said casing and baking cylinder, a plurality of shelves with openings therethrough horizontally positioned and rotatably mounted within said cylinder and means to force heated gases upwardly in one of said chambers and into said cylinder and downwardly through the openings in said shelves and out of said cylinder.

1,485,174. STRIKER PLATE FOR DOORS. ARTHUR B. ELLERY, Akron, Ohio. Filed June 16, 1923. Serial No. 645,774. 5 Claims. (Cl. 70—15.)

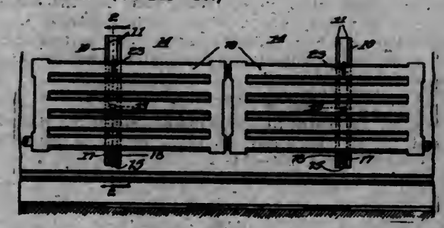
1. A bolt keeper for doors, comprising a base plate with means by which it may be attached to the door frame, a plurality of corrugations on the outer surface of the base plate, a catch plate, a plurality of mating corrugations in the underside of the catch plate, safety catch and closed catch surfaces on the catch plate, means to secure the catch plate in position on the base plate, and a roller mounted in the closed catch surface and adapted to form a bearing surface for the door latch.

1,485,175. PLUG RECEPTACLE. ALVARADO L. R. ELLIS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 5, 1921. Serial No. 449,950. 5 Claims. (Cl. 173—332.)



1. A contact for a plug receptacle comprising a plurality of U-shaped loops stacked on each other with the arms of successive loops extending crosswise of each other, and a conducting wire electrically and mechanically connecting the loops together.

1,485,176. PROCESS OF MANUFACTURING SPOKES. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Oct. 4, 1921, Serial No. 505,243. Renewed Aug. 1, 1923. 5 Claims. (Cl. 144—309.)

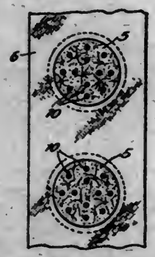


5. The process of manufacturing spokes comprising forming a tapered inner head on the billet, then chucking the tapered inner head and using it as reference and turning the body of the spoke and extension thereof, and cutting an annular groove to form the spoke tenon, as specified.

1,485,177. PROCESS AND MEANS FOR PREVENTING ONE OF TWO CENTRIFUGALLY-SEPARATED LIQUIDS FROM CONTAMINATING THE OTHER. ERIK AUGUST FORSBERG, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 20, 1923. Serial No. 669,655. 7 Claims. (Cl. 233—11.)

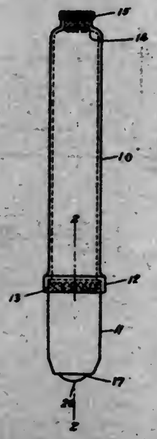
3. In the centrifugal separation of water from a liquid of different specific gravity, the process of preventing, after such separation, the contamination of such liquid discharging from the centrifugal bowl by the discharging water, which comprises creating a draft of air toward the locus of discharge of said liquid from the bowl and heating said air before it reaches said locus.

1,485,178. RADIATOR SUPPORT. JOHN C. FRANK, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 619,920. 6 Claims. (Cl. 248—30.)



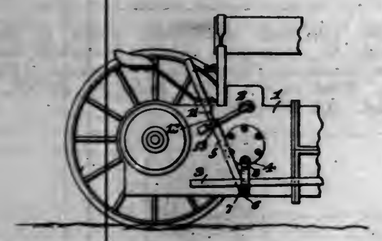
1. A support for a radiator comprising, in combination, a member having a longitudinal way therein provided by a channel provided with a central back-forming web with overhanging flanges, a block T-shaped in cross-section slidable in said channel and behind said flanges, means carried by said block to support a radiator, and means coacting with the back of said channel to press said block against said flanges to hold the block in adjusted position.

1,485,179. WHEELBARROW. JACOB L. FUNK, Vallejo, Calif. Filed Feb. 27, 1923. Serial No. 621,572. 3 Claims. (Cl. 280—52.)



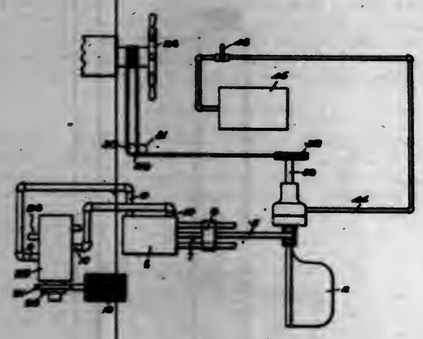
1. A wheel barrow having longitudinal side bars and legs depending therefrom, generally diagonal braces connecting the legs to the side bars, handles arranged beneath the rear ends of the side bars and pivotally connected therewith to swing vertically longitudinally of the side bars, and means to clamp the forward ends of the handles to the diagonal braces at selected adjusted positions.

1,485,180. FRICTION MATERIAL. ORRIN D. GRAY, Chicago, Ill., assignor to Advance Automobile Accessories Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 5, 1922. Serial No. 565,908. 4 Claims. (Cl. 188—259.)



2. In combination with a band having a fabric lining adapted to be pressed against a moving surface, a compressible friction insert carried in the lining in a manner to present one face yieldably against the moving surface, and a solidified lubricant carried within the body of the insert in a manner to be exposed to the moving surface and adapted to be mechanically fed thereagainst with yielding of the insert under pressure, substantially as described.

1,485,181. MARKING DEVICE. RICHARD GRUND, Cleveland, Ohio. Filed Dec. 28, 1921. Serial No. 524,537. 3 Claims. (Cl. 120—43.)



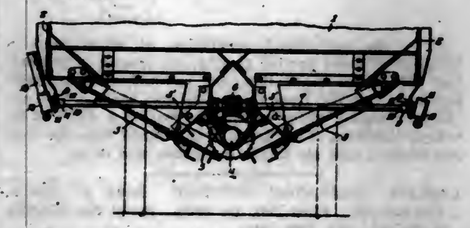
1. A marking pen comprising a tubular casing, consisting of an upper and a lower section detachably secured together, said upper section having a filling opening at its upper end, a cap for closing said opening, said lower section having a circular opening at its lower end, a ball seated in said opening, a thrust bearing arranged above said ball, said thrust bearing having a central aperture and a tubular member extending upwardly from its upper surface, a disk fixed at the upper end of said lower section, said disk having a central aperture and a tubular member adapted to extend down inside of the tubular member on the thrust bearing and a coiled spring under tension arranged between said disk and said thrust bearing.

1,485,182. CLUTCH-PEDAL HOLDER OR RETAINER. WILLIAM G. HAEHL, Manilla, Ind. Filed Aug. 18, 1923. Serial No. 658,129. 3 Claims. (Cl. 74—81.)

1. A clutch pedal holder or retainer comprising a substantially elongated bar of metallic material bent to provide an elongated resilient arm and an arcuate coupling portion, said coupling portion aperture for the passage of a hold-fast device to secure the bar in position, said arm extending at an inclination with respect to said coupling portion and provided intermediate its ends with a slit extending inwardly from one edge and further lengthwise of its center and with the material freed by the slit extended laterally with respect to the arm and bent in arcuate form to provide a hook downwardly disposed.

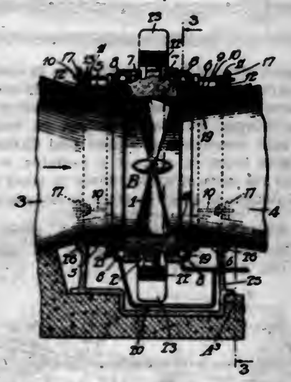
1,485,183. SYSTEM FOR CONTROLLING MOVING BODIES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 6, 1914, Serial No. 855,373. Renewed July 24, 1923. 3 Claims. (Cl. 114—146.)

1. A system for the teledynamic control of moving bodies including in combination, a vessel having a rudder shaft, a rudder fast upon said shaft, means responsive to radiant energy from a distance and connected to said shaft to operate said rudder, a clutch loose upon said shaft, manual steering means, an operative connection between said manual steering means and said clutch, and means to engage said clutch and rudder.



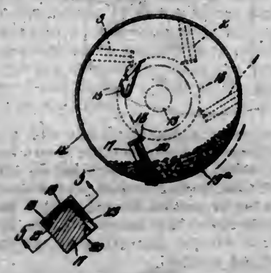
1,485,184. RADIATOR GUARD. PERCIVAL VAN R. HARRIS and JOHN D. REYNOLDS, Philadelphia, Pa. Filed Mar. 5, 1921. Serial No. 449,614. 2 Claims. (Cl. 180—68.)

1. A radiator guard for motor vehicles embodying a perimetrical frame of angular cross-section, one limb of said angular cross section being disposed in a vertical plane and the other lateral thereto, and a series of bars disposed in edgewise relation within said perimetrical



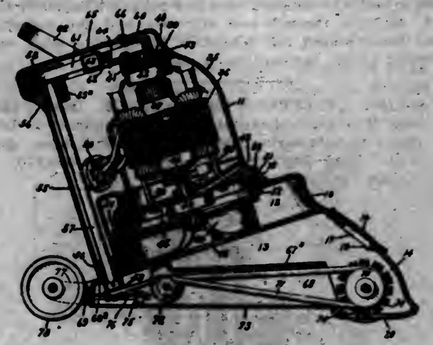
frame, said bars having their ends secured to the lateral limb of the aforesaid frame and their adjacent edges free from connection with the vertical limb thereof.

1,485,185. DOOR-OPERATING MECHANISM. HARRY S. HART, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 3, 1922. Serial No. 548,950. 10 Claims. (Cl. 105—300.)



1. In combination, an operating shaft for the dump doors of a railway car, a socket secured thereto, said socket having a lever receiving portion, said portion having a hole therein having wedge-shaped lever gripping walls.

1,485,186. HYDRAULIC TURBINE. LEROY F. HARZA, Chicago, Ill. Filed Nov. 24, 1919. Serial No. 340,187. 29 Claims. (Cl. 253—148.)

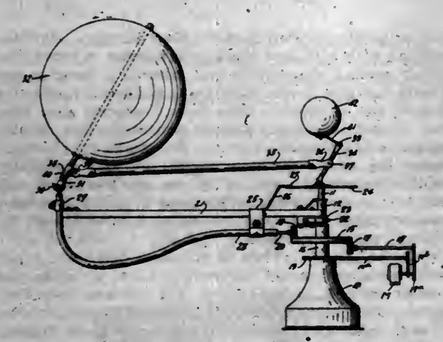


1. A hydromotive unit comprising an axial flow rotor and a rim or casing secured thereto so as to rotate therewith, constructed and arranged to be rotatably mounted with clearance between the adjacent ends of the penstock and draft tube, and means for disposing of the leakage between fixed and revolving parts substantially as described.

1,485,187. SELECTING AND DELIVERING MECHANISM FOR PACKAGING MACHINES, ETC. ANDREW Y. HODGDON, Dedham, Mass., assignor to Gordan Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1923. Serial No. 660,437. 4 Claims. (Cl. 221—135.)

1. A selecting and delivering mechanism comprising a loose article holder, a selected article receiver located outside a mass of loose articles in the holder, and a collecting member movable successively through said mass and to a delivering position relative to said receiver, and provided with means for retaining and thereby selecting an article from the mass and delivering only the selected article to the receiver, the said collecting member including a collecting and guiding portion adapted to segregate and position slidably side by side a group of loose articles from the mass, and permit the group to slide by gravity, and an article-retaining portion with which an end article of the group is temporarily engageable by a sliding movement of the group, the other articles being left loose on the guiding portion, the arrangement being such that the loose articles and the temporarily engaged article are successively released by the collecting member, the loose articles being released first and allowed to drop upon the mass, and the temporarily engaged article being subsequently released and allowed to drop into the receiver.

1,485,188. SUCTION CLEANER. EARL B. HOFF, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Filed Nov. 6, 1919. Serial No. 336,078. 16 Claims. (Cl. 15—8.)

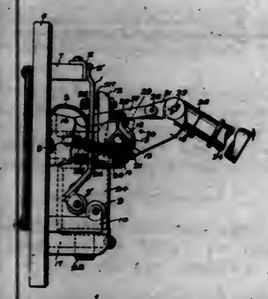


1. In a suction cleaner, the combination of a substantially horizontal fan chamber, a suction nozzle connected therewith, a rotatably mounted brush in said nozzle, a motor mounted on the fan chamber with one end of its shaft projecting into it, a fan on such end, a shaft carried by the motor shell, and separate power transmitting means connecting one end of such shaft to the end of the motor shaft remote from the fan and the other end to said brush.

1,485,189. WRINGER ROLL. GEORGE R. KELTIE, Woonsocket, R. I., assignor, by mesne assignments, to American Wringer Company, Inc. Filed Feb. 17, 1923. Serial No. 619,548. 5 Claims. (Cl. 68—33.)

1. In a wringer roll, a metal shaft, a rubber body on the shaft, and means embedded in said body and fast on the shaft and having peripheral portions embedded in the ends of the body and extending lengthwise thereof and terminating substantially at the ends of the roll.

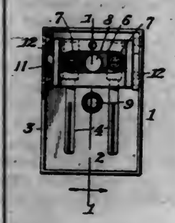
1,485,190. EDUCATIONAL DEVICE. THOMAS C. KITE, Shenandoah, Va. Filed Nov. 13, 1922. Serial No. 600,602. 3 Claims. (Cl. 35—3.)



1. In an educational appliance for demonstrating the movement of the earth about the sun, a vertical shaft having an angular extension, a horizontal arm associated with the shaft, a sphere carried by the outer end of the arm, means for rotating the arm about the shaft, means for maintaining the axis of the sphere parallel to the angular extension of the shaft, and a sun sphere having its axis fixed as regards the axis of the vertical shaft, and means for rotating the sphere upon the arm, said means for maintaining the axis of the sphere parallel to said angular extension including an axis shaft upon which the sphere is supported, sleeves surrounding the axis shaft and inclined stationary shaft and a link connection between the sleeves maintaining the sleeves parallel.

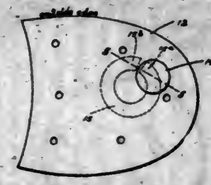
1,485,191. ELECTRIC CONTACT DEVICE. ADOLF KRAUSS, Cannstatt, Germany, assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1917. Serial No. 188,998. 4 Claims. (Cl. 200—30.)

3. In a mechanical interrupter, a rigid interrupter lever, a spring attached at both ends to the lever, a bearing gripping opposite surfaces of the spring intermediate the ends thereof for supporting the lever for deflection from and to a normal position, and a supplemental spring attached at one end to the lever and fastened to a second bearing for resisting the deflection of the lever from said normal position.



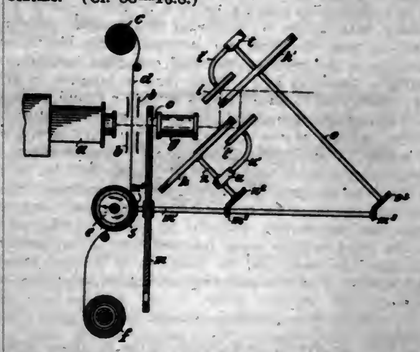
1,485,192. ELECTRIC SWITCH. WILLIAM L. KUBACH, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Aug. 29, 1922. Serial No. 584,952. 6 Claims. (Cl. 200—89).

5. In an electric switch of the class described, the combination with a pivoted supporting member, a conducting switch member mounted on said supporting member, stationary contacts located near the ends of said conducting member and on opposite sides thereof whereby upon rotation of said supporting member said conducting member engages said stationary contacts, and means for yieldingly supporting said conducting member on said supporting member comprising a pair of springs, one located on each side of the pivot about which said supporting member turns arranged to bias said conducting member toward the adjacent contact members.



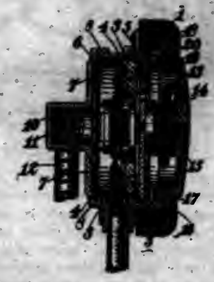
6. In an electric switch of the class described, a pivotally mounted contact supporting block, a conducting member carried by said block and movable relatively thereto, fixed contact members located on opposite sides of said conducting member adjacent the ends thereof, spring means for biasing one end of said conducting member away from said block and the other end of said conducting member toward said block, said fixed contact members being so located with respect to the ends of said conducting member that upon pivotal movement of said block the end of said conducting member biased toward said block engages the adjacent fixed contact before the other end of said conducting member engages the other fixed contact, whereby upon further pivotal movement of said block said spring means permits said conducting member yieldingly to engage said contacts.

1,485,193. TERMINAL MEMBER. JOHN ANDREW MCKAY, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,397. 2 Claims. (Cl. 173—330.)



1. A terminal member comprising a hollow carrying means, a head of insulating material having end trunnions pivotally secured within said carrying means and provided with transverse recesses and wire conduit, a plate detachably connected to said head over said recesses, and contact members having binding posts disposed within said transverse recesses of said head.

1,485,194. CUSHIONED HEEL. WILLIAM T. MCLAUGHLIN, Boston, Mass. Filed Feb. 20, 1923. Serial No. 620,202. 4 Claims. (Cl. 36—35).

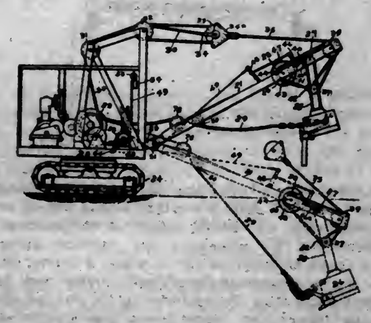


3. A heel comprising a resilient body, and a cushioning member composed of a non-metallic insert secured in the body, and a metal spring constituting an incomplete convolution of a helix, having an end portion anchored in the insert, and a major portion located outside the insert, projecting laterally from the insert into the body, and free to rise and fall without obstruction by the insert and by the anchored end portion.

1,485,195. OPTICAL RECTIFIER FOR CINEMATOGRAPHIC APPARATUS. OSKAR MESSTER, Berlin, Germany. Filed Apr. 28, 1921. Serial No. 465,274. 4 Claims. (Cl. 88—16.8.)

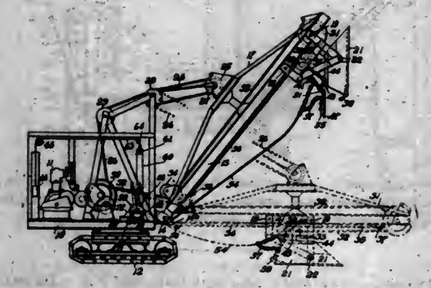
1. The combination with cinematographic apparatus adapted for operation with a continuously running filmband, of optical compensating means, comprising two parallel mirrors inclined with respect to the optical axis of the objective of the apparatus and movable alternately into the ray-path through said objective, and two deflecting mirrors arranged for oscillation on opposite sides with respect to the first-mentioned mirrors.

1,485,196. TELEPHONE TRANSMITTER. ROBERT LAMBERT MURRAY, Bushey Heath, England, assignor to Telephone Manufacturing Company Limited, London, England. Filed Aug. 24, 1921. Serial No. 494,770. 3 Claims. (Cl. 179—122.)



2. In a telephone transmitter, the combination of a support, a diaphragm arranged to receive directly sound-vibrations from a part of the human body, a microphone operatively connected with said diaphragm and mounted between the same and said support, and a shield that constitutes the sole means for holding said diaphragm and said microphone in position on the support, which shield is carried by the support and has an aperture through which said diaphragm extends axially, with marginal clearance, beyond the front face of the shield, which front face is situated so far rearwardly of the front face of said diaphragm as to constitute a pressure-distributing support for the transmitter when the front face of the diaphragm bears against a part of the human body, substantially as described.

1,485,197. ELECTRICAL SIGNAL-CONTROLLING DEVICE. JAMES L. O'KEEFE, Meridian, Miss., assignor of one-half to Kutcheu Threefoot, Meridian, Miss. Filed Apr. 21, 1923. Serial No. 633,793. 1 Claim. (Cl. 200—80.)



An electrical signal controlling device comprising a rotary shaft, a series of electrically disconnected contact rings of different diameter arranged concentrically with relation to the axis of said shaft and having flat contact faces disposed in a plane perpendicular to said axis, two pairs of radially disposed guides mounted on said shaft in relatively right angular relation, a contact member slidably mounted on one pair of guides and movable thereon into electrical contact with the faces of said rings successively, sliders on the other pair of guides, a pair of transversely flexible springs secured to each slider at one end, and to said contact members at the opposite end, for yieldingly restraining said members against the centrifugal action of said shaft, and means whereby independent electrical circuits may be closed through said members for each contact ring with which they may be in electrical contact.

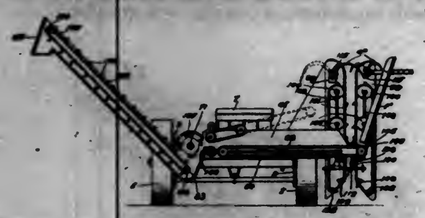
1,485,198. EXCAVATING MACHINE. MORTON E. PUGH, Chicago, Ill. Filed Jan. 27, 1923. Serial No. 615,228. 22 Claims. (Cl. 214—138.)

1. In an excavating machine having a boom and a bucket, the combination of means for moving said boom and means for holding said first mentioned means to thereby releasably hold the bucket against movement with relation to the boom.

1,485,199. SKIMMER-SCOOP EXCAVATING MACHINE. MORTON E. PUGH, Chicago, Ill. Filed Feb. 10, 1923. Serial No. 618,238. 16 Claims. (Cl. 214—102.)

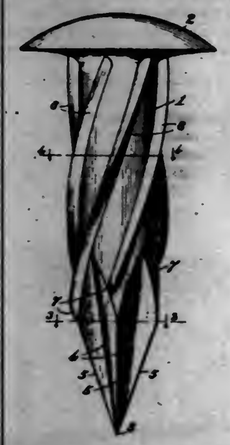
1. In a machine of the character described having a boom, a scoop, operable along said boom, means for dumping the scoop, and means for automatically righting said scoop from its dumping position as it travels along said boom.

1,485,200. GARAGE. PRESTON A. ROBERTS and PETER C. BACH, Washington, D. C., assignors to The P. A. Roberts Construction Co., Inc., Washington, D. C., a Corporation of Virginia. Filed Feb. 15, 1923. Serial No. 619,290. 7 Claims. (Cl. 20—19.)



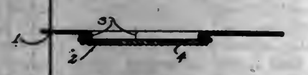
1. A garage structure including a front wall formed of an upper and a lower section and with the former projecting outwardly from the latter, said upper section including means to provide a lengthwise extending chamber in the lower portion thereof, said lower section formed of a plurality of inner and outer rectangular closure elements normally arranged in overlapping position and each independently vertically adjustable and independently laterally shiftable, said elements having their upper ends permanently extended in said chamber, said lower section provided with a pair of duplex track members disposed in parallelism throughout and arranged at the top of said chamber, means for shiftably suspending said inner elements from one of said duplex track members, means for shiftably suspending the said outer elements from the other duplex track member, and said suspending means being adjustably connected with said elements to enable the adjustment independently of each of said elements vertically.

1,485,201. ENSILAGE-HARVESTER ATTACHMENT. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Original application filed Mar. 6, 1916, Serial No. 82,516. Divided and this application filed June 30, 1919. Serial No. 307,734. 6 Claims. (Cl. 56—16.)



4. A harvester comprising a stalk cutter at the side of the harvester, a hopper at the rear of said stalk cutter, deflecting arms for directing the severed stalks into

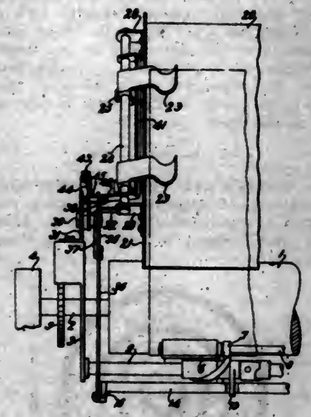
said hopper, an ensilage cutter at the rear of the harvester, a feeding device for delivering the stalks to said



ensilage cutter, and means for adjusting said deflecting arms to deposit the stalks in opposite directions, as desired, upon said feeding device.

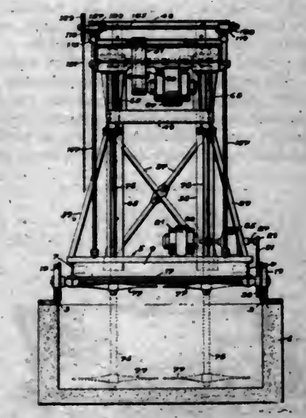
1,485,202. MASONRY ANCHORAGE DEVICE. HEYMAN ROSENBERG, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,591. 10 Claims. (Cl. 85—44.)

1. A masonry anchorage device comprising a body having a head at one terminus, a hardened penetrating point at the other, and high pitched threads extending along the body.



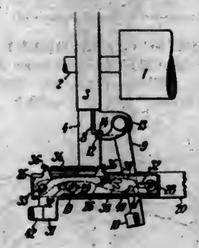
1,485,203. CUT-OUT METAL LETTER. HARRY G. RUSSELL, Battle Creek, Mich. Filed Mar. 26, 1923. Serial No. 627,681. 2 Claims. (Cl. 40—140.)

1. In a sign, a face plate having a character cut out therefrom, a flange extending around the edges of said character, and a bead on said face plate and abutting said flange, said flange holding said bead to the same configuration as the cut-out character.



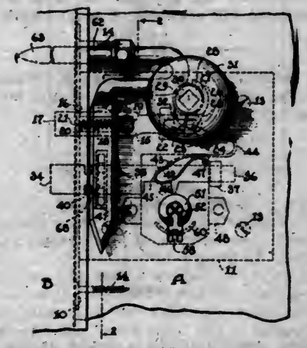
1,485,204. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 31, 1921. Serial No. 457,372. 21 Claims. (Cl. 197—127.)

1. In a typewriting machine, the combination with a platen, of a collating table at the delivery side thereof, a rod extending along a side edge of said table, a plurality of clip members mounted on said rod for individual movement into and out of position to clamp work-sheets against said table, yielding means to retain the clip members in effective position when so placed, and means to return the effectively-positioned clip members to ineffective position including a bail mounted on said rod, so



that when swung from its normal position it will engage all effectively-positioned clips and shift them to ineffective position.

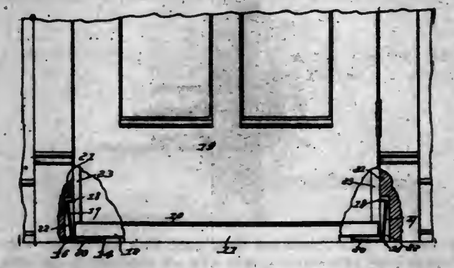
1,485,205. APPARATUS FOR AGITATING MATERIALS. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1923. Serial No. 619,815. 14 Claims. (Cl. 259—144.)



1. Apparatus for agitating material, comprising, in combination, a vat, rails, a carriage having wheels mounted on said rails, an electric motor on the carriage and a transmission for propelling the carriage along the rails, a frame mounted on the carriage, a carrier on said frame, shafts depending from said carrier and having paddles for agitating the material in the vat, an electric motor on the carrier, transmission means between the carrier motor and the paddle shafts for rotating the latter, a pair of upright screws on the carriage threaded to the carrier, and means to rotate said screws to raise or lower the carrier and vary the elevation of the paddles in the vat.

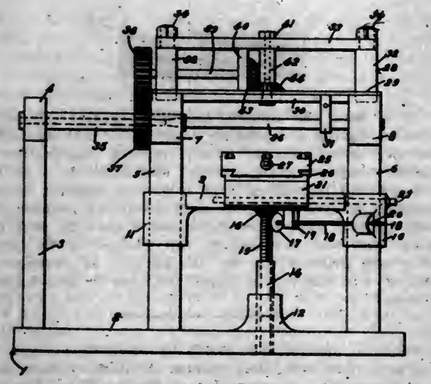
1,485,206. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 14, 1920. Serial No. 373,788. 15 Claims. (Cl. 197—114.)

1. In a typewriting machine, the combination with a traveling carriage and a platen revolubly mounted therein, of line-space mechanism for said platen, a line-space lever to operate said line-space mechanism, means for locking said lever and normally preventing actuation thereof, and movable means for absorbing the shock of the hand in returning the carriage to the right, said movable means releasing said locking means when near the end of its movement to permit line-spacing of the platen.



1,485,207. BURGLARPROOF ATTACHMENT FOR LOCKS. ANTONIO FELICE ACCETTA, West Dover, Ohio. Filed Sept. 30, 1922. Serial No. 591,612. 10 Claims. (Cl. 70—14.)

1. In combination with a lock having a slidable bolt, key-actuated means for moving the same, a securing device engaged with the door jamb, means for mounting said device on a door adjacent the lock, the casing of the lock having a slot, and said device having an element passed through the slot and formed with an opening through which the bolt of the lock may be projected so as to engage said element within the lock casing.

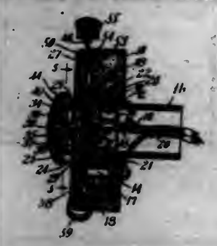


1,485,208. STORMPROOF-DOOR THRESHOLD. RALPH ALTMAN, WALTER L. WOOLEY, and OTTO F. SOTIER, St. Louis, Mo. Filed Apr. 27, 1921. Serial No. 464,972. 2 Claims. (Cl. 20—64.)

1. The combination with a door sill of a weather strip disposed longitudinally upon the surface thereof and provided with a depending web movable in a guide slot in the sill and terminating at its lower edge in a foot, and angular trips tiltably mounted in the door frame with inwardly extending arms terminally disposed in operative relation with said foot and upwardly extending

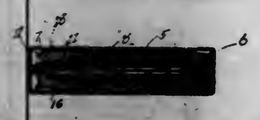
arms having terminal inwardly projecting trip ears arranged in the paths of movement of the free and hinged edges of the door.

1,485,209. MILLING MACHINE. HUBERT HENRY BARROWS, San Bernardino, Calif. Filed Nov. 8, 1920. Serial No. 422,628. 1 Claim. (Cl. 90—18.)



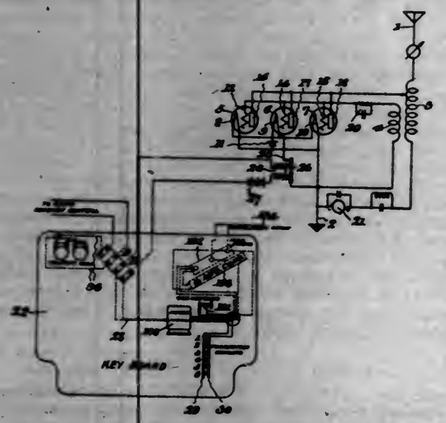
In a device of the class described, a main frame comprising standards, an auxiliary frame including a base bar supported on the standards, a cap, posts cooperating with the base bar and the cap, and securing elements passing through the cap, the posts and the base bar and connecting them with the standards, a first horizontal shaft journaled in one standard, a second horizontal shaft journaled in one post, means for connecting the shafts, a vertical shaft journaled in the base bar and in the cap, intermeshing beveled pinions on the second horizontal shaft, and on the vertical shaft, the pinion of the vertical shaft being supported on the base bar, and the pinions being located between the base bar and the cap, work-supporting means adjustable on the standards, and an arbor journaled in one standard and insertable therethrough from a point outside of the main frame for engagement with the first horizontal shaft, the arbor extending entirely across the work-supporting means, and the work-supporting means being located below the vertical shaft.

1,485,210. ELECTRIC SWITCH. ISRAEL BERENSON, Boston, Mass. Filed Feb. 17, 1923. Serial No. 619,750. 4 Claims. (Cl. 200—7.)



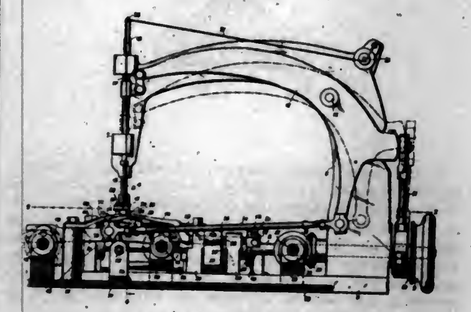
1. An electric switch comprising, in combination, a base of insulating material, a cover plate for said base, a sleeve mounted to rotate in said base, said sleeve being in circuit with a source of electric supply, a a core of

insulating material in said sleeve, a push button yieldingly mounted upon said core and adapted to engage said sleeve to complete an electric circuit therethrough,



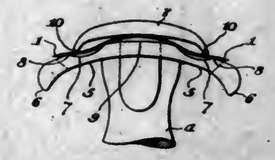
a contact point mounted upon said base in circuit with said source of electric supply and an arm in circuit with said sleeve and adapted to engage said contact point to complete an electric circuit therethrough.

1,485,211. RENEWABLE ELECTRIC FUSE. THURSTON BERGER, Lindsay, Calif., assignor to J. P. Berger, Lindsay, Calif. Filed June 24, 1921. Serial No. 480,153. 1 Claim. (Cl. 200—131.)



In a fuse, the combination of a tubular insulating member having a depending finger piece, said insulating member being provided with a tapered end portion, a primary cap internally tapered and adapted to fit the tapered end portion of said insulating member, a fuse adapted to extend through said insulating member and said primary cap, tapered recesses formed in said primary cap, and a secondary cap adapted to be forced over said primary cap for the purpose of causing the end of said fuse to be tightly engaged in said tapered recesses.

1,485,212. RADIO TELEGRAPH SYSTEM. JOHN B. BRADY, Somerset, Md., assignor to Morkrum Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 28, 1921. Serial No. 525,298. 8 Claims. (Cl. 250—8.)

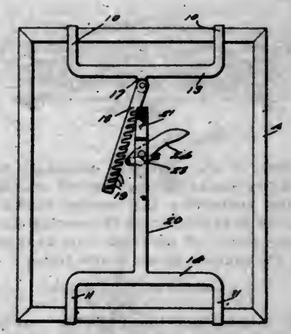


1. In a system of radio telegraphy, a transmitter comprising an electron tube oscillator, a grid control circuit therefor, means for either opening or closing said grid circuit through each of a definite number of successive definite time intervals for each character signal to thereby radiate energy in corresponding combinations of impulses and means for receiving said impulses, means for amplifying said impulses, a relay actuated by said impulses and a type printer controlled by said relay whereby said impulses select particular characters and cause said characters to be printed.

1,485,213. TUFTING-ATTACHMENT MECHANISM FOR SEWING MACHINES. AUGUST J. CARTER, Chattanooga, Tenn. Filed July 21, 1922. Serial No. 576,540. 30 Claims. (Cl. 112—79.)

1. In a machine of the class specified, the combination with a reciprocating needle, means for guiding a strand thereto, loop forming mechanism, and cutting means separate and apart from the loop forming mechanism and mounted to have a rising and falling and reciprocating movement independently of the movement of the loop forming mechanism for severing the loops to produce closely associated pile members of equal length.

1,485,214. SAFETY RAZOR. HENRY M. CHANCE, Philadelphia, Pa. Filed July 27, 1922. Serial No. 577,786. 2 Claims. (Cl. 30—12.)

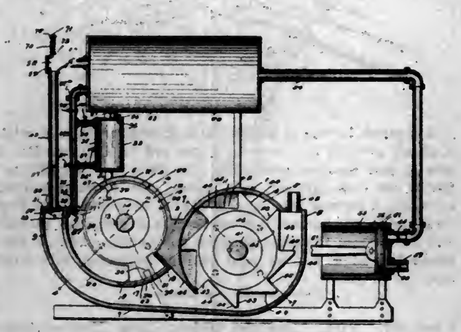


1. A safety razor including a holder having a guard, a flexible razor blade, a clamp securing the blade and the holder together, means for preliminarily flexing said blade longitudinally, and means permitting counter-flexing of said blade, said first mentioned means including a depending edge of said clamp engaging the blade in a substantial line, said second mentioned means including a longitudinal groove in said holder directly under the depending edge of the clamp.

1,485,215. EXTENSION-CORD CONNECTION. ENOS E. COAR and CASMIER THILMAN, South Bend, Ind. Filed Feb. 24, 1921. Serial No. 447,570. 3 Claims. (Cl. 173—360.)

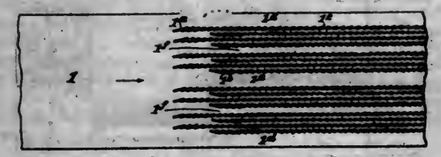
1. An extension cord connector having a handle, a plug carried at one end of the handle, a fixed contact carried at the end of the plug, radially movable contact elements projecting laterally from the plug, resilient means normally retracting said radial contacts, and a spreader disposed in the plug in the rear of said radial contacts and yieldingly impelled in a direction to normally extend the same, said spreader being provided with manual actuating means to permit retraction of the radial contacts by their resilient means.

1,485,216. PICTURE HANGER. HENRY A. COOPER, West Union, Ohio. Filed Apr. 23, 1923. Serial No. 634,164. 2 Claims. (Cl. 40—145.5.)



1. A picture frame hanger comprising a pair of yokes having lateral ends terminating in retaining lips, said yokes being intended for engagement upon the upper and lower edges of a frame, a bar extending upwardly from the lower yoke and having its free end rearwardly offset and formed with a hole adapted for engagement upon a securing element, a bar depending from and pivotally connected with the upper yoke, and a locking lever pivoted upon the first named bar and having an adjustable connection with the second named bar.

1,485,217. PAWL-AND-RATCHET MECHANISM. GEORGE F. CRASS, Ithaca, N. Y., assignor of one-half to John H. McCormick, Ithaca, N. Y. Filed May 4, 1922. Serial No. 558,450. 3 Claims. (Cl. 74—16.)

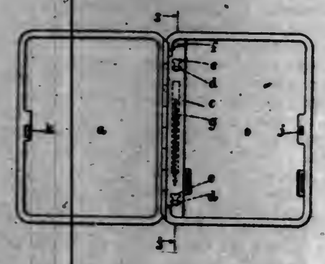


1. In a pawl and ratchet mechanism, the combination with ratchet teeth each having an operative and a neutral side, of a pawl operatively associated with said teeth, and an anti-friction member journaled in said pawl adapted for engaging the neutral sides of said ratchet teeth for permitting easy riding movement of the pawl thereover during operation of said mechanism.

1,485,218. ENGINE. ARTHUR J. CULP, Clanton, Ala. Filed Oct. 10, 1919. Serial No. 329,788. 1 Claim. (Cl. 60—13.)

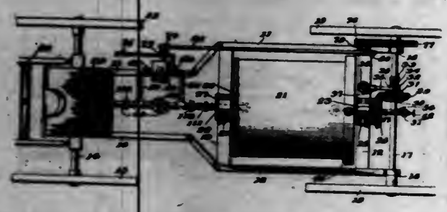
In a device of the class described comprising a casing having a central partition dividing the casing into a pair of compartments, an oscillating head arranged in one of said compartments, a combustion chamber arranged in the mentioned compartment and arranged to receive said oscillating head, a fuel supply pipe communicating with the combustion chamber, a rotor mounted in the other chamber, an air receiving chamber communicating with the rotor, an air inlet pipe communicating with the air receiving chamber, butterfly valves arranged within the inlet pipes, a lever pivotally mounted in the casing, a governor secured to the rotor and arranged to operate said lever when the rotor reaches a predetermined rate of speed, a rod pivotally secured to the upper end of the lever, an adjustable cam mounted upon said rod and arranged to operate the valve in the air intake pipe, a second rod arranged parallel with the first mentioned rod, means formed on the last mentioned rod and arranged to engage the valve controlling the flow of fuel to the intake pipe of the combustion engine, an adjustable lug mounted upon the first mentioned rod, and spring means connecting the lug with the second mentioned rod, as and for the purpose specified.

1,485,219. PROCESS OF PRODUCING EXPANDED METAL. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, Warren, Ohio, a Corporation of Ohio. Filed June 2, 1921. Serial No. 474,506. 8 Claims. (Cl. 164—6.5.)



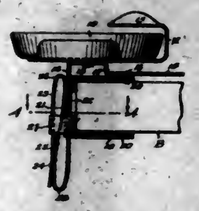
1. The herein described method of producing expanded metal which consists in simultaneously forming in defined areas, a plurality of rows of longitudinally alined slits in a sheet to form parallel rows of inclined strands, inclining the strands of each row with relation to the plane of the sheet while maintaining them as a whole in said plane, and thereafter drawing the margins of the sheet in opposite directions in the plane of the sheet.

1,485,220. WRENCH. DAVID S. FLOWERS, Des Moines, Iowa, assignor of two-fifths to L. V. Darnall, two-fifths to William Pyne, and one-fifth to (Mrs.) W. H. Pyne, Des Moines, Iowa. Filed Feb. 27, 1922. Serial No. 539,502. 1 Claim. (Cl. 81—91.)



A wrench having a handle, a jaw member formed with a shank pivoted at its end to one end of said handle, a second jaw member pivoted to the first jaw member between the ends thereof, said second jaw member having a shank, a curved slot in said shank, said slot extending away from the second jaw member in a direction around and away from the pivot between the handle and first jaw member, and a pin on said handle projected into said slot.

1,485,221. BOX. CHARLES EDMOND GEE, London, England. Filed Mar. 21, 1923. Serial No. 626,593. 1 Claim. (Cl. 206—41.)

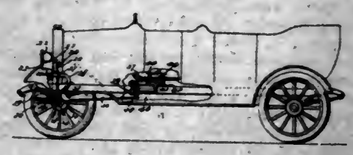


A box of the kind comprising two parts and a strip, one part being hinged to the strip and incapable of sliding thereon whilst the other part is secured to the strip and is capable of sliding thereon characterized in that means are provided whereby the sliding movement is effected against the action of a spring or other resilient member.

1,485,222. SPRAYING APPARATUS. CHARLES L. GINTY, Cambria, Lockport, N. Y. Filed Aug. 18, 1922. Serial No. 582,719. 15 Claims. (Cl. 299—43.)

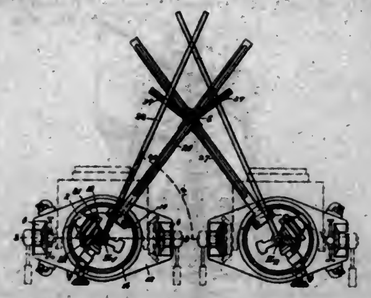
7. In ambulant spraying apparatus, a wheeled supporting frame, a spray liquid tank rotatably mounted on said frame, driving connections from said wheel frame to the spray liquid tank for rotating the latter, and means actuated by said wheeled frame for forcing air under pressure into said tank, or for exhausting air from the said tank.

1,485,223. ASH-TRAY MOUNTING. CHARLES A. GREENE, New York, N. Y. Filed May 11, 1923. Serial No. 638,351. 4 Claims. (Cl. 248—20.)



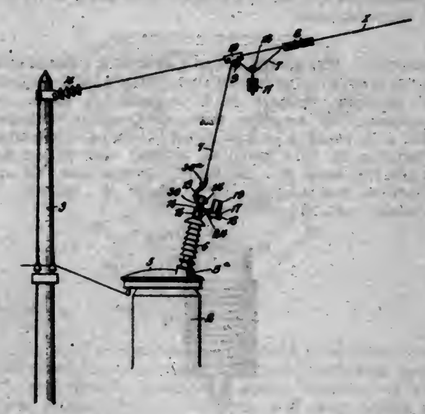
1. An ash tray mounting comprising a tray holder within which the tray is adapted to set, an attaching member having relatively adjustable clamping jaws and detachable means of connection therebetween for associating the attaching member with the holder to dispose the clamping jaws in horizontally or vertically spaced relation with respect to the holder whereby the same may be respectively clamped into engagement for vertically and horizontally disposed supporting devices.

1,485,224. TRUCK. HAROLD LOUIS HAMILTON, Cleveland, Ohio, assignor to The Electromotive Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 22, 1922. Serial No. 589,833. 6 Claims. (Cl. 105—218.)



1. A truck of the character described, comprising a frame, bearing blocks having vertical movement in the frame, axles supporting the bearing blocks, wheels on the axles, and links connecting the bearing blocks with the intermediate portion of the frame, said links pivotally connected to the bearing blocks in the frame.

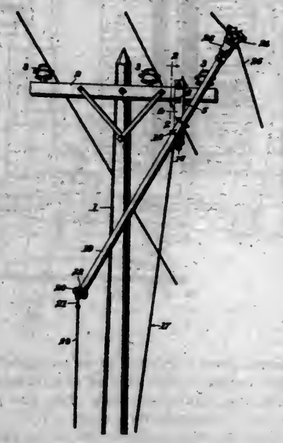
1,485,225. DIRIGIBLE HEADLIGHT. GEORGE L. HORTON, Caseville, Mich. Filed Aug. 17, 1922. Serial No. 582,411. 1 Claim. (Cl. 240—61.)



A dirigible headlight having a lamp carrying spindle and means for communicating rotary movement thereto, a bracket provided with a bearing sleeve through which the spindle extends, and spindle centering means mounted in the sleeve for yieldingly holding the spindle with the supported lamp in a neutral position, the means for communicating rotary movement to the spindle consisting of a bracket plate having a clip for securing it to the side frame bar of a car, a rocking lever pivotally engaged at an intermediate point with said bracket plate and provided in the plane of the pivot with a pendant arm, foot buttons provided with stems engaged with the extremities of said rocking lever, a swinging arm carried by said bracket plate remote from the pivot point of the rocking lever and operatively connected with the lmap spindle, and a link connection between the extremity of the pendant arm of the rocking lever at an intermediate point of the swinging arm.

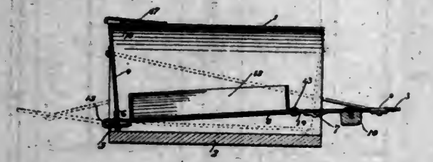
1,485,226. THEODOLITE FOR MAKING ANGULAR DETERMINATIONS DIRECT FROM PHOTOGRAMS. KARL REINHARD HUGERSHOFF, Tharandt, Germany. Filed Nov. 6, 1919. Serial No. 336,229. 7 Claims. (Cl. 33—46.)

1. In a theodolite for making angular determinations direct from photograms, the combination of a base having uprights rigidly secured thereto, a photographic plate holder pivotally mounted in said uprights, means for adjusting said holder in any direction, a horizontal angle measuring disk rotatably mounted in said base and a vertical angle measuring device supported on said disk.



1,485,227. AUTOMATIC CIRCUIT-BREAKER ATTACHMENT FOR HIGH-TENSION TRANSMISSION LINES. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed May 13, 1920, Serial No. 381,134. Renewed May 2, 1923. 14 Claims. (Cl. 175—294.)

12. The combination with a transformer surmounted by a cap and having a bushing rising therefrom, of a hook-shaped contact member, a flexible conductor connected to a line, and suspending the hook-shaped contact member, another contact member mounted on the bushing adapted to receive and hold the hook-shaped contact member, and means for maintaining the hook-shaped member, under tension, whereby, when the hook-shaped member is released from the other contact member the contact members are separated beyond arcing distance.

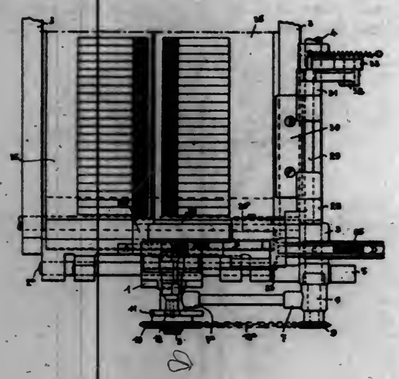


1,485,228. CROSS-ARM HOOK FOR ELECTRIC TRANSMISSION LINES. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Aug. 26, 1920. Serial No. 406,209. 7 Claims. (Cl. 175—265.)

5. Means for use in electric transmission lines, comprising a cross arm hook consisting of an elongated channel hanger, a channel jaw at one end of the hanger, with the webs of the channels directed toward each other for engagement with opposite faces of a cross arm, means for drawing the hanger and jaw toward each other to grip the cross arm, said cross arm hook depending from the cross arm in spaced relation to the pole, a sleeve swiveled to the other end of the hanger with the passage through the sleeve perpendicular to the axis of the

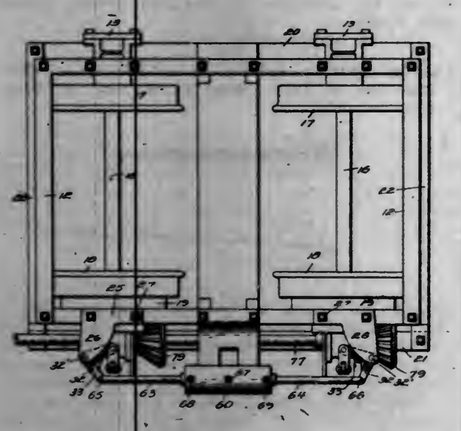
swivel, a link at the end of the hanger remote from the clamp, other links attached to the sleeve, said sleeve receiving a manipulating pole for engaging and carrying a line wire with the carrying means insulated from the body of the pole, and manipulating means for attachment to the pole and to the links on the sleeve and hanger, whereby to control the pole and parts carried thereby from a distance.

1,485,229. NEST. RUDOLPH H. JULIEN, Copas, Minn. Filed Apr. 10, 1923. Serial No. 631,152. 4 Claims. (Cl. 119—50.)



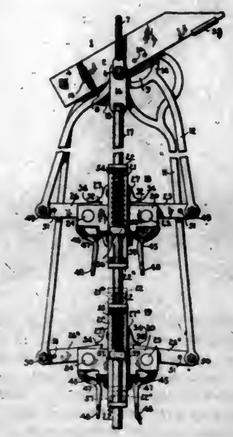
4. The combination of a housing having open ends, a door controlling the entrance end of the housing and pivotally mounted at a point above its lower edge, a door controlling the exit end of the housing and pivotally mounted at its lower edge and provided at said edge with a longitudinally extending slot, a link connecting said doors, above the pivots thereof, a nest-supporting frame having pivotal connection at one end with the lower edge of the entrance controlling door and provided at its opposite end with a slotted tongue slidably engaging the pivot of the exit controlling door and playing through the slot in said door, and a nest resting on said frame.

1,485,230. DEVICE FOR ALIGNING CIGARETTES DISCHARGED FROM CIGARETTE-MAKING MACHINES. EWALD KOERNER, Dresden, Germany. Filed Mar. 10, 1922. Serial No. 542,643. 3 Claims. (Cl. 131—30.)



1. In a device for aligning cigarettes discharged from a cigarette-making machine of the continuous-rod type, a transporter arranged so as to receive the cigarettes from the machine, means for clamping the cigarettes to the

transporter, means for reciprocating the transporter, means for stripping the cigarettes from the transporter when the latter returns from its extreme end position,



and a delivery apron arranged so as to travel in a direction at right angles to the axes of the cigarettes and so as to receive the cigarettes when they are stripped off the transporter, substantially as set forth.

1,485,231. GEAR-SHIFTING MECHANISM. WILLIAM P. LEFTWICH and DIRA S. STOUT, Nallen, W. Va. Filed Mar. 8, 1923. Serial No. 623,701. 9 Claims. (Cl. 74—7.)

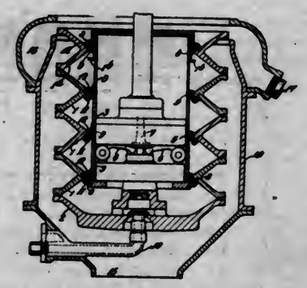
1. In a gear shifting mechanism for Shay engines, the combination with a hanger element adapted to be supported from a wheel truck and provided at its inner side with an axle supporting means and further provided with an outwardly opening pocket, of a line shaft extending through said hanger, a truck wheel propelling means carried by said shaft at one side of the hanger, a shiftable carrier slidably mounted in said pocket, a bearing for the line shaft at the inner end of the carrier, means for connecting the bearing to the line shaft whereby the latter is coupled to the carrier, and a shiftable lever pivotally connected to said element and further connected to the carrier for shifting the latter carrying the line shaft therewith to move said propelling means out of propelling position with respect to the truck wheel.

1,485,232. CABLE JACK. WILLIAM B. MCCAIN, Blanchard, Wash., assignor of one-half to Myol N. Peaslee, Blanchard, Wash. Filed Sept. 20, 1922. Serial No. 589,380. 21 Claims. (Cl. 254—70.)

1. A cable jack comprising a lever head, pairs of clamping jaws, a fulcrum shaft mounted in the lever head, disks eccentrically mounted on the fulcrum shaft and secured eccentrically to the lever head, and links having circular openings at one end to receive the disks and connected at their other ends to operating levers for the clamping jaws.

1,485,233. EXPANSIBLE-COLLAPSIBLE ELEMENT AND METHOD OF PRODUCING THE SAME. HARRY C. MALLORY, Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Apr. 22, 1914, Serial No. 833,593 (now Patent No. 1,366,473, dated Jan. 25, 1921). Divided and this application filed Aug. 31, 1920. Serial No. 407,208. 7 Claims. (Cl. 251—31.)

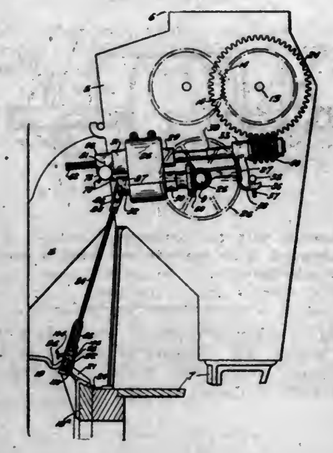
2. A device of the character described, comprising a shell having a circumferentially corrugated body portion and a closed end integral therewith of relatively greater thickness than said body portion, said closed end comprising a projection extending centrally thereof, and a conical head at the outer end of said projection constituting a valve face, substantially as specified.



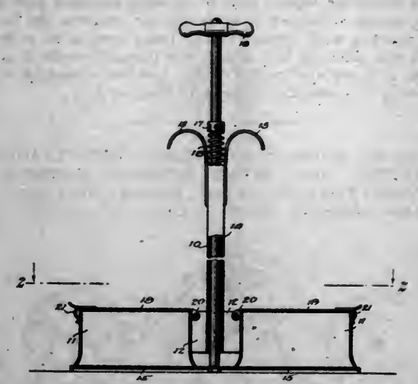
1,485,234. SHANK STIFFENER. FREDERICK P. MARX, St. Louis, Mo. Filed Nov. 12, 1921. Serial No. 514,624. 4 Claims. (Cl. 36—76.)

1. In a shoe, an arched shank stiffener located between the welts of the shoe and comprising an arched lower metallic strip and an arched upper metallic strip having its ends adjacent the ends of the lower strip and its intermediate portion arched away from the intermediate portion of the lower strip, and the rear portion of said strips extending a relatively considerable distance rearwardly beyond the breast wall of the shoe heel, a non-metallic filler having an arched central portion and wedge-shaped ends completely filling the space between said strips, and means for holding the filler in place between said strips.

4. In a shoe, a shank stiffener located between the welts of the shoe and having its rear end a relatively considerable distance rearwardly from the breast wall of the shoe heel and said stiffener comprising a pair of arcuate metallic strips arranged one above the other, and the upper one of said strips forming an arch separated from the lower strip, a non-metallic filler having attenuated ends filling the space between said strips, means for preventing said filler from becoming displaced laterally, and an elastic cushion extending from the forward end of said shank stiffener across the break line of the shoe.



1,485,235. CENTRIFUGAL SEPARATOR AND THE LIKE. WILHELM MAUSS, Johannesburg, South Africa. Filed Sept. 14, 1923. Serial No. 662,702. 9 Claims. (Cl. 233—19.)

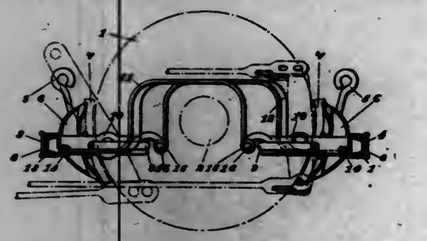


1. In a centrifugal decanter, a drum composed of sections forming between them V-sectioned settlement chambers separated by peaks and axially separable to discharge solids from said chambers, said drum having an inlet and a liquid overflow remote from said inlet, and baffles arranged on the sides of the peaks nearest to the inlet of the apparatus.

1,485,236. COTTON-GIN FEEDER. ARTHUR W. MERKEL, Atlanta, Ga. Filed July 10, 1923. Serial No. 650,703. 12 Claims. (Cl. 19—67.)

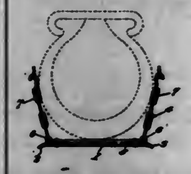
3. In a cotton gin feeder, the combination with a casing having feed rollers and picker rollers mounted therein and provided with shafts extending through the casing sides, and a movably mounted gin breast, of gear devices on the end of the picker roller shaft and on the end of one of the feed roller shafts, swinging gear mechanism comprising means for changing the speed of rotation of the feed rollers and including gear devices, one of said gear devices being in continual mesh with the gear devices on the end of the picker roller shaft and the other gear device being separably engaged with the gear device of the feed roller shaft, and connecting means between the said gear mechanism and the breast for controlling the operation of the feed rollers, the said connecting means including devices operable to permit the gin breast to be raised without disturbing the operation of the feed rollers and the said gear mechanism.

1,485,237. EGG POACHER. HENRY PARODI, New York, N. Y. Filed Aug. 30, 1922. Serial No. 585,240. 6 Claims. (Cl. 53—1.)



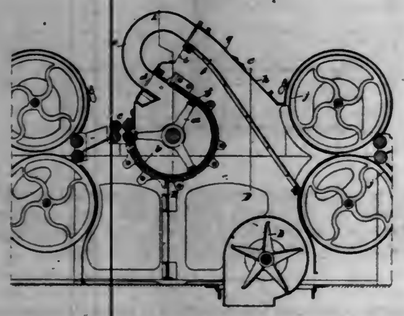
1. An egg poacher comprising a submersible receptacle including an open ended annular body and a laterally turnable bottom underlying the lower end of the body and movable in its own plane to uncover the same.

1,485,238. BRAKE MECHANISM. ALFRED K. PEHRSON, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 8, 1923. Serial No. 644,146. 14 Claims. (Cl. 188—212.)



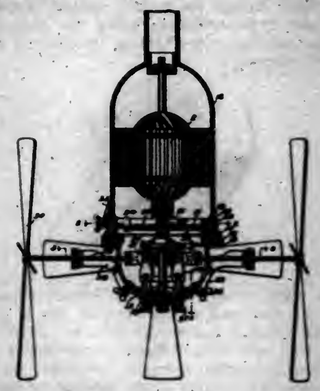
9. In a brake mechanism, a pair of brake beams, each comprising a tension member, a compression member and a strut, means for supporting said beams and resilient members for maintaining said beams level and for imparting

a releasing movement to said beams when the breaking power is released, each of said members at one end be-



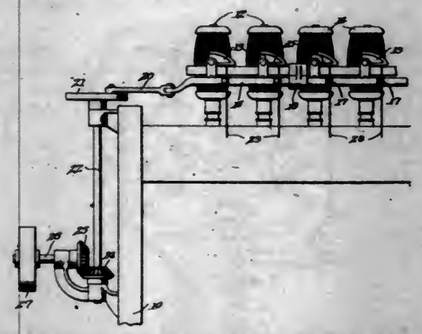
ing connected with the compression member of one of said beams and at its opposite end being secured to the other of said beams.

1,485,239. ANTISKID DEVICE. THEODORE J. TOLLACKSON, Westby, Wis., assignor of one-half to John W. Christensen, Westby, Wis. Filed June 1, 1921. Serial No. 474,068. 1 Claim. (Cl. 152—14.)



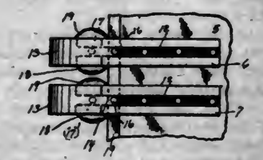
An anti-skid device comprising an inner and outer bar arranged in superposed relation and secured together, said inner bar having each of its ends provided with an eye, means connected to said eyes for securing the bars in position with respect to the tread portion of a tire, and said outer bar having each end thereof formed to provide a flared and curved biting member extending and curving in a direction outwardly from an eye.

1,485,240. MACHINE FOR OPENING AND CLEANING COTTON AND OTHER FIBROUS MATERIALS. HENRY WILKINSON, Oldham, England. Filed May 23, 1923. Serial No. 640,877. 1 Claim. (Cl. 19—86.)



In a machine of the class described the combination with cylinders or beaters provided with grid bars arranged for about three quarters of the circumference and in which a portion of the grid bars are arranged at an opposite angle to the other portion and having a delivery outlet at the same side as the feed, of a trunk or trunks the full width of the machine to deliver the fibre.

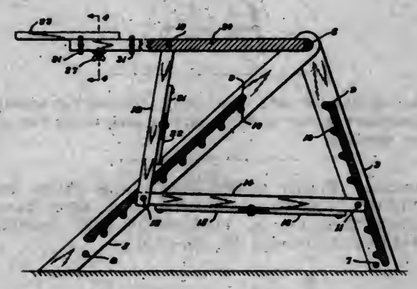
1,485,241. FAN. JOSEPH ARONOFF, New York, N. Y. Filed June 19, 1922. Serial No. 569,463. 3 Claims. (Cl. 230—1.)



1. The combination of a plurality of fans disposed at an angle to each other on horizontal axes, an electric motor arranged with its armature shaft vertical for rotating all the fans, controlling devices for inclining one or more of such axes from the horizontal at will, and controlling devices for operatively disengaging one or more of said fans from said actuating means at will.

1,485,242. ATTACHMENT FOR SPOOLERS. WILLIAM E. BALL, Brunswick, Me. Filed Oct. 30, 1922. Serial No. 597,957. 2 Claims. (Cl. 242—157.)

1. The combination with a spooling machine having a thread guide provided with a slot, of means located in the path of travel of the thread in advance of the guide for alternately moving the thread longitudinally of the slot.



1,485,243. MEANS FOR REENFORCING EXCAVATOR-BUCKET TEETH. EDWIN T. BLAKE, Berkeley, Calif. Filed Mar. 14, 1923. Serial No. 625,083. 1 Claim. (Cl. 37—142.)

In a device of the character described the combination of a bucket tooth having a removable point adapted to be attached to said tooth, flared portions formed integral

with said point and on a plane parallel to the length of the tooth, said flared portions being curved from the front toward the rear, and adapted to contact the sides of said point, substantially as and for the purpose specified.

1,485,244. ADJUSTABLE FOLDING STAND. ELMER W. BORGER, Palmerton, Pa. Filed July 17, 1922. Serial No. 575,700. 5 Claims. (Cl. 45—74.)

1. In a device of the character described, the combination of pivotally connected, spaced supporting standards, having notched channel portions longitudinally disposed therein, a supporting arm pivotally mounted at one end between the upper ends of said standards, transverse pivot members carried between said standards and adapted to seat in said channel and notched portions, substantially horizontally disposed transverse bars mounted on said pivot members and cooperating therewith, substantially vertically disposed brace members mounted on one of said pivot members at one end and pivotally supporting said pivoted arm at their opposite end, said pivot members being adapted to longitudinal adjustment in said channel and notched portions and thereby effect vertical adjustment of said arm member on its pivot.

1,485,245. METHOD OF TAKING FINGER PRINTS. FLOYD D. BOYD, Bloomfield, Nebr. Filed Dec. 15, 1922. Serial No. 607,219. 2 Claims. (Cl. 41—41.)

1. A new and improved method of taking finger prints, consisting of moistening the fingers with suitable acid, then bringing the fingers into contact with a piece of paper or other suitable material, and subsequently subjecting the said material to heat, whereupon the prints of the fingers are burned in said material.

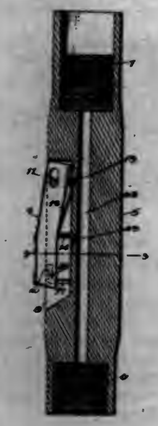
1,485,246. METAL CONSTRUCTION FOR AIRCRAFT. EDWARD EUGENE BROWN and DERMOT JOSEPH MOONEY, Westminster, England. Filed Aug. 24, 1921. Serial No. 494,996. 1 Claim. (Cl. 189—37.)

As a new article of manufacture, a spar of the class described comprising a vertical web formed of separate plates, the central portions of said plates being given concavo-convex form to impart a tubular formation to the web at the central portion, the upper and lower portions of the plates of the web being formed into diverging legs having flanges at their edges, and tubular elements closing the diverging legs and secured to the web adjacent the legs.

1,485,247. TEST INDICATOR. MAURICE J. CARLSON, Jersey City, N. J. Filed Apr. 29, 1922. Serial No. 557,260. 2 Claims. (Cl. 33—172.)

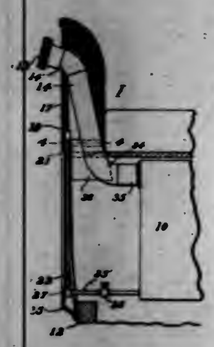
1. In an indicator, a bar having a measuring-scale, a spring pressed bifurcated member having a screw-threaded stud, a pivot pin passing through portions of said screw-threaded stud and through a portion of said bar, a pointer carried by said bifurcated member which coacts with said measuring-scale, and a work-contact-member having a screw-threaded bore therein for effecting the detachable connection of said work-contact-member to said screw-threaded stud.

1,485,248. SWAB. WILLIAM JAMES CARPENTER, Gorman, Tex., assignor of one-half to Cree and Company, Gorman, Tex. Filed Jan. 24, 1923. Serial No. 614,634. 3 Claims. (Cl. 103—225.)



1. A swab of the class described comprising a head, a stem connected therewith, a tubular member surrounding the stem, a packing member carried by the tubular member, a valve seat at the lower end of the tubular member, a valve slidably mounted on the stem, a spring carried by the stem for holding the valve upon its seat, a nut on the stem for adjusting the spring and means for expanding the packing member on the upward stroke by the pressure of the liquid being raised.

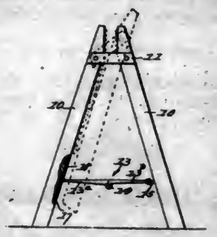
1,485,249. UNDERREAMER. GROVER HARRIS CRAIG, Houma, La., assignor of one-half to Joseph H. Thatcher, Houma, La. Filed Nov. 21, 1921. Serial No. 516,701. 4 Claims. (Cl. 255—76.)



1. An underreamer comprising a body having a longitudinally extending recess, a bit freely received in said recess and having an elongated slot, a pivot pin extend-

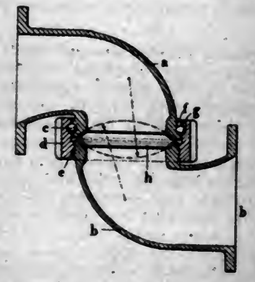
ing through said slot and slidably and pivotally connecting the bit to the body, and spring means to urge the bit

outwardly, there being a pin and a slot connection between the lower portion of the bit and the body.



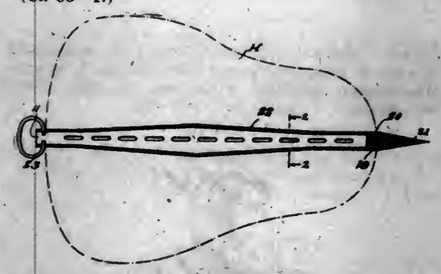
1,485,250. ATTACHMENT FOR GASOLINE TANKS. LEWIS P. CROSS, Carnegie, Okla. Filed Oct. 10, 1921, Serial No. 506,626. Renewed Oct. 19, 1923. 3 Claims. (Cl. 220—86.)

1. The combination with an inlet connection for a gasoline tank, of an apertured and slotted plate, through which the connection extends, a gage tube mounted opposite the slot in the plate and having connection with the tank, and a U-shaped bracket surrounding the tube and partly surrounding the inlet connection and secured to the latter.



1,485,251. KNOCKDOWN TRESTLE. CHARLES H. DAVIS, Glouster, Ohio. Filed Apr. 23, 1921. Serial No. 463,843. 1 Claim. (Cl. 304—5.)

The combination with the standards of a trestle pivotally connected, of a brace comprising members pivotally connected by a rule joint, the one extremity of one member being pivotally connected to one of said standards, a socket plate provided with a plurality of sockets or seats, said plate being disposed on the other standard in facing relation with said brace, the extremity of the

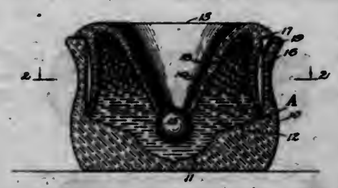


other member of said brace being adapted for selective engagement in any of said seats or sockets for the purpose specified.

1,485,252. FLUID-TIGHT JOINT FOR PIPES FOR FLUIDS UNDER PRESSURE. LUC LÉON BASILE DENIS, Paris, France. Filed Oct. 15, 1920. Serial No. 417,259. 3 Claims. (Cl. 285—120.)

1. In a tight articulation for fluids under strong pressure and high temperature, a pair of pipe elements having spherical seats on their opposing ends, a joint ring screwed on one of the pipe elements, a ball bearing connecting said joint ring to the other pipe element, and a flexible metal tightening ring having spherical bearing faces engaging said spherical seats.

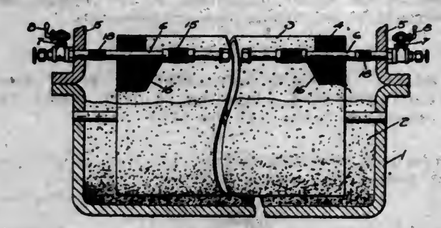
1,485,253. UTENSIL FOR THE TREATMENT OF FOODSTUFFS. EUGENE S. DEVLIN, New York, N. Y. Filed May 20, 1922. Serial No. 562,286. 1 Claim. (Cl. 53—1.)



As a new article of manufacture, a utensil for the treatment of foodstuffs of the character set forth comprising a tubular perforated body of gradually increasing diameter toward its longitudinal center, said body having an open end provided with means for effecting the removal of the body from the article to be treated and provided at its opposite end with a detachable tapered and pointed driving element, as and for the purpose specified.

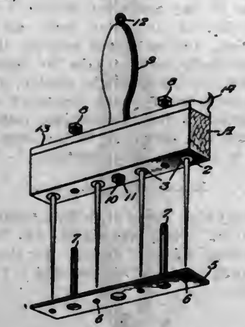
1,485,254. APPARATUS FOR COATING WIRE WITH VARNISH AND THE LIKE. WILLIAM ALEXANDER DICKIE, Spondon, near Derby, England, assignor to American Cellulose and Chemical Manufacturing Company Limited, a Corporation of Delaware. Filed Jan. 10, 1922. Serial No. 528,316. 5 Claims. (Cl. 91—32.)

1. In apparatus for coating wire with viscous insulating dope or varnish containing volatile solvent, the combination with means for supplying the liquid coating to a travelling wire, of a rotary tubular doctor disposed above the coating applying means co-axially with the line of travel of the wire, and having its surplus removing orifice surrounding and co-axial therewith, and means for rapidly rotating said tubular doctor about its axis.



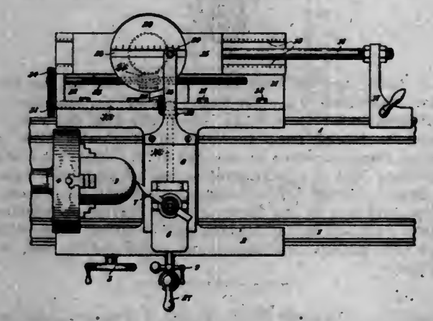
1,485,255. INKSTAND. HARRY M. DUNGAN, Oregon, Mo. Filed Aug. 8, 1922. Serial No. 580,463. 10 Claims. (Cl. 120—59.)

2. An inkstand comprising a body forming a well, and a removable inverted cup having a downwardly tapering tubular central portion open at its lower end for the entrance of a pen nib, said inverted cup having an annular flange outside of and spaced from said central portion making line contact with the body at the interior, and there being a space between the flange and body except at the contacting line.



1,485,256. PROCESS AND APPARATUS FOR MANUFACTURING PAPER. JAMES HENRY DURKIN and DAVID WILKIN, Battle Creek, Mich. Filed Mar. 3, 1922. Serial No. 540,942. 6 Claims. (Cl. 92—43.)

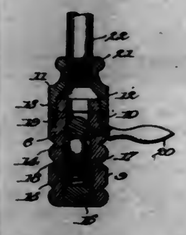
6. The combination with a cylinder, of a water pipe disposed parallel with respect to the cylinder, said pipe having outlet openings extending at an angle, said openings being adapted to direct the water upon said cylinder outwardly at an angle to the main body of the cylinder, and sleeves carried by said pipe and being adapted to



close part or all of the water outlet openings in said pipe, said pipe being adapted to turn on its longitudinal axis.

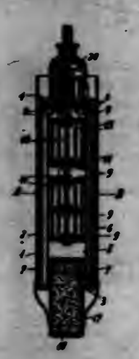
1,485,257. ICE PICK. JOHN B. DYE, Springfield, Mo. Filed Nov. 22, 1921. Serial No. 516,985. 2 Claims. (Cl. 83—62.)

1. An ice pick including a head having sockets therein, rubber sleeves within said sockets, metal picks having one end secured within the sleeves, said rubber sleeves forming a pliable base for the metal picks, and a plate at the outer end of the sockets for covering the sleeves and preventing them from being pulled out with the picks.



1,485,258. LATHE ATTACHMENT. WILLIAM DZUS, Saranac Lake, N. Y., assignor of thirty per cent to G. M. Richardson, Saranac Lake, N. Y. Filed July 20, 1922. Serial No. 576,350. 5 Claims. (Cl. 82—11.)

1. An attachment for lathes comprising in combination with a lathe having track rails and a carriage slidably mounted thereon, a tool rest and shifter slidably mounted transversely of the carriage, a bracket table secured to one side of the carriage, a pair of rotatable disks adjustably supported on the bracket table, connec-

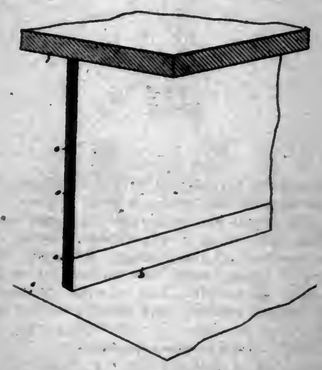


tions between the shifter, carriage and said disk, and means for rotating said disks to cause simultaneous movement of the shifter transversely of the carriage and movement of the carriage upon the lathe rails.

1,485,259. BRACKET ATTACHMENT. SIMON EHRICH, Bronx, N. Y. Filed Mar. 6, 1922. Serial No. 541,424. 2 Claims. (Cl. 287—14.)

2. A device of the character described comprising a base section having an axial bore, an intermediate clamping section, and an upper section, the upper section being threadedly engaged with the lower section and bearing against the intermediate section, the lower section being bifurcated for the reception of a rod in operative relation to the intermediate clamping section, and a yieldable ball operating in the bore and movable with respect to the bifurcated portion.

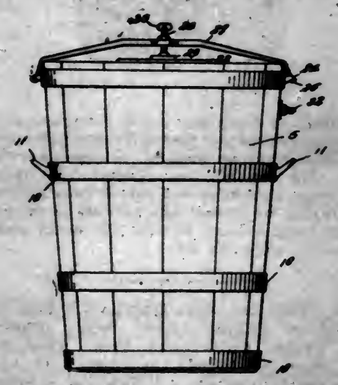
1,485,260. DEVICE FOR THE TREATMENT OF AFFECTIONS OF THE AIRWAYS OF THE HUMAN BODY. FRITZ ERNST, Zurich, Switzerland. Filed Mar. 17, 1922. Serial No. 544,504. 1 Claim. (Cl. 128—192.)



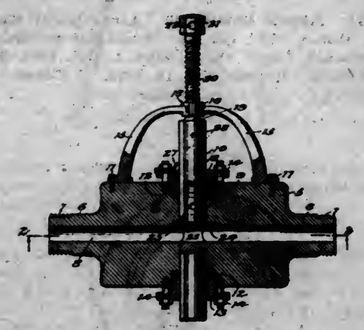
A device for the treatment of affections of the airways comprising an outer tube, having perforations, a perforated inner tube in the outer tube and the wall of which is spaced from the wall of the outer tube, a mouth piece connected to one end of the outer tube and extending into the corresponding end of the inner tube, a closure for the opposite end of the inner tube, resistances arranged in the inner tube and having supporting means attached to the closure, and electrical conductors also attached to the closure and connected to said resistances.

1,485,261. COMPASS SAW. ELMER E. FEARING, Charleston, S. C. Filed Feb. 23, 1922. Serial No. 538,693. 1 Claim. (Cl. 145—31.)

A compass saw adapted to be started in a hole and to work thence to and along an arc extended about the hole, the saw including a handle and a blade carried thereby, the blade having a flat portion at its free end and adapted to be used to make a substantially straight cut from the hole toward the arc, the blade being provided with a transversely curved portion disposed at the inner end of the flat portion and located otherwise than at a right angle to the flat portion, thereby enabling the operator to make an easy transition from the substantially straight cut to the arc, the location of the transversely curved portion of the blade at the inner end of the flat portion of the blade, serving to dispose the curved portion relatively near to the handle, and giving the operator an increased control over the saw whilst the transition is being made from the straight cut to the arc.



1,485,262. PARTITION CONSTRUCTION. ERNEST FLAGG, New York, N. Y. Filed May 31, 1923. Serial No. 642,645. 2 Claims. (Cl. 20—4.)



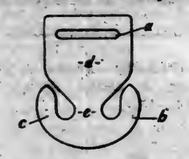
1. A construction of a partition comprising a mold board and a plaster support, said partition being characterized by the fact that the mold board forms a continuation of the plaster support.

1,485,263. WOODEN VACUUM TUB FOR ICE-CREAM TUBS. EDWARD J. HAYES, Beaumont, Tex. Filed Dec. 27, 1922. Serial No. 609,207. 3 Claims. (Cl. 217—7.)

1. In an article of the class described, a wooden container, a metallic container therein, a rigid cover for the wooden container, a detachable cover for the metallic container, said last named cover engaging through an opening within the first mentioned cover and means for establishing a vacuum between the interior of the wooden container and the said metallic container.

1,485,264. CHOKE NIPPLE FOR OIL LINES. MEEL JEROME HEALD, Tulsa, Okla. Filed Apr. 11, 1922. Serial No. 551,607. 1 Claim. (Cl. 251—4.)

A choke nipple for oil lines comprising a body portion having a screw-threaded nipple projecting from each end thereof, a passage formed in the body portion and extending longitudinally thereof through said screw-threaded nipples, a second passage formed in the body portion and arranged at right angles to the first-mentioned passage and intersecting the same, a plurality of arms secured to one face of said body portion, said arms forming a yoke member overlying the second-mentioned passage, a valve member having a plurality of valve openings mounted in the second-mentioned passage and arranged to intersect the first-mentioned passage, and a screw-threaded extremity engaging the said yoke member, said screw-threaded extremity serving to move the valve through its passage upon operation of the valve member in a rotary direction.

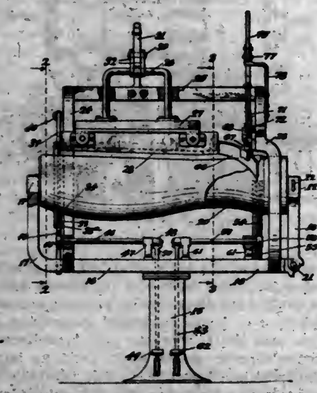


1,485,265. TUBE FOR PNEUMATIC TIRES. ALBERT ENNIS HENDERSON, Toronto, Ontario, Canada. Filed Jan. 22, 1917. Serial No. 143,811. 27 Claims. (Cl. 152—13.)

14. In combination with a tube for pneumatic tires having its rim side portion protected by overlapping diagonally arranged unconnected series of fabric strips imbedded therein adjacent to the surface of the tube and spaced apart by intermediate rubber, a valve base adapted to receive from without the button of the valve stem, said valve base being overlappingly connected with the said protecting series.

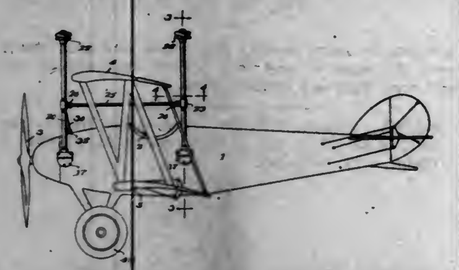
1,485,266. MEANS FOR SECURING SANITARY TOWELS TO BELTS OR SUPPORTS. HAROLD SPOTSWOODE HENNAH, London, England. Filed Mar. 21, 1921. Serial No. 454,061. 1 Claim. (Cl. 24—264.)

A device for securing sanitary towels to a belt or support, comprising a body portion of sheet-material having an upper member provided with a horizontal slot in the upper end thereof and constricted in width towards the base, and arms projecting upwardly and inwardly from opposite sides of said base towards the edges of said body portion said edges of said body and said arms being in opposed relation and substantially reversely curved to form slots of substantially circular shape terminating in short tapering slits where said arms nearly meet the edges of said body portion, said member and said arms lying in a common plane.



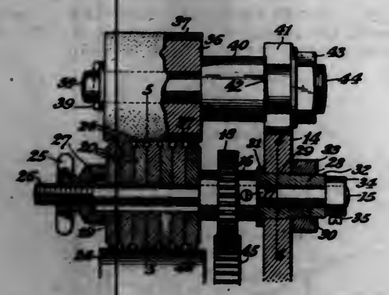
1,485,267. CIGAR HOLDER. JEFFERSON HEEKS, Detroit, Mich. Filed Dec. 5, 1922. Serial No. 605,023. 1 Claim. (Cl. 206—41).

A holder of the kind described comprising a body portion, a mouth piece detachably carried by one end of the body portion, springs arranged within the body portion, clips carried by the springs adapted to embrace a cigar, and beaded pins extending through the wall of the body portion and secured to said springs, pressure upon the pin heads spreading the springs and releasing the clip.



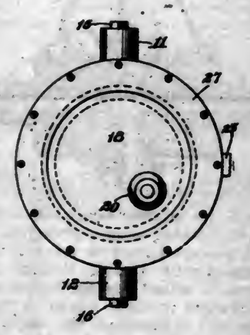
1,485,268. PUTTY-TRIMMING MACHINE. ARTHUR HUGHES, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,352. 7 Claims. (Cl. 164—57.)

1. A trimming apparatus for putties comprising a form upon which a sheet of material is adapted to be sustained, a split annular blade mounted in encircling relation to



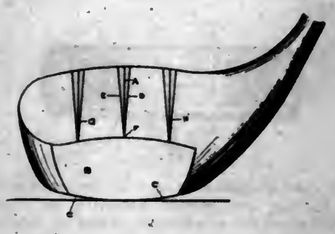
the form, and mechanism for constricting the blade to cut the sheet of material in forming the upper end of a putty.

1,485,269. AEROPLANE. JESSE C. JOHNSON, Delray, Fla. Filed Sept. 4, 1923. Serial No. 660,875. 1 Claim. (Cl. 244—15.)



In an aeroplane, a motor driven shaft, transverse shafts extending through the sides of the aeroplane driven by said first mentioned shaft, housings for the shafts, bearing sleeves for the last mentioned shafts in the lateral branches of the housings, inverted L-shaped casings on the ends of the sleeves, gears therein secured to the lateral shafts, upright bearing sleeves secured on the casings, shafts journaled therein having gears meshing with the first mentioned gears, a helicopter on each of the last mentioned shafts, adjustable transverse brace means for the last mentioned sleeves, pivotally secured longitudinal brace means for said sleeves, an arm depending from the outer transverse brace means, a pivotally supported slotted link therefor, an interiorly threaded traveler having a pivot passing through the slot of the link, a threaded rod journaled in bearings received through the traveler and having a cranked end received in the cock pit of the craft, all as and for the purpose set forth.

1,485,270. MACHINE FOR PRINTING TICKETS. JOHN ALWYN KELLER, Bay Shore, N. Y., assignor to Keller Printing Company, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1923. Serial No. 625,574. 3 Claims. (Cl. 101—219).

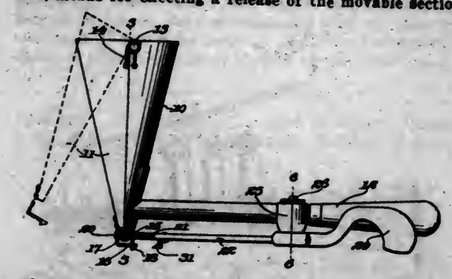


1. In a machine of the class described, for printing successively upon the ticket units of a continuous ticket-strip, a revoluble shaft, type-discs having printing characters at their periphery and keyed in locked connection directly to and upon said shaft, whereby said type-discs have a fixed mounting directly on the shaft itself, an impression platen or bed positioned parallel to said revoluble shaft, a framework having a supporting seat, a bushing-block turnably mounted in said seat and having a cylindrical bore in a longitudinal plane eccentric to the axis of said bushing in its turnable movement, said printing-disc shaft having its revoluble bearing in said bore of the bushing-block, and means for locking said bushing-block in fixed position in its seat, whereby delicate adjustment of the plane of the printing-disc shaft to compensate for very slight variation in the thickness of the paper ticket-strips passing between the type-discs and the platen may be effected by slight movement of the turnable bushing-block in its seat.

1,485,271. SHOCK ABSORBER. ALEXANDER G. KEMMERLING, Celina, Ohio, assignor of one-half to Israel F. Randabaugh, Celina, Ohio. Filed Aug. 5, 1922, Serial No. 579,826. Renewed Oct. 19, 1923. 5 Claims. (Cl. 280—96.2.)

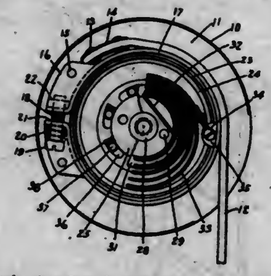
1. In a device of the class described, a stationary member having an annular opening therein, a disk rotatable in the stationary member, a wheel spindle carried by the disk and a resilient device placed under tension by the rotation of the disk.

1,485,272. GOLF CLUB. HAROLD JOHN KINSMAN, Falmouth, England. Filed Feb. 27, 1923. Serial No. 621,638. 5 Claims. (Cl. 46—4.)



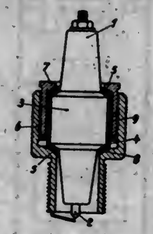
1. In a golf club the combination with a guide line on one face thereof in a plane normal both to the striking face and to the addressing surface, of a line inclined to the guide line on one side thereof and intersecting it at the edge of the face.

1,485,273. DIPPER. CHARLES KLEINTOP, Allentown, Pa. Filed June 20, 1923. Serial No. 646,596. 3 Claims. (Cl. 107—48.)



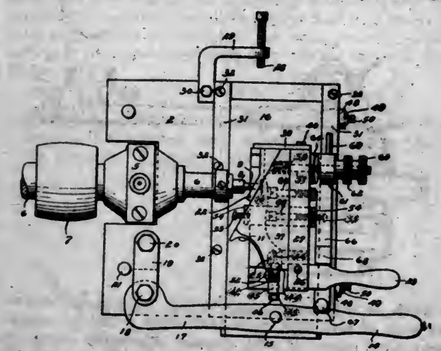
1. A dipper of the character described comprising a body portion having a stationary section, and a relatively movable pivoted section, a handle supporting the stationary section, means for holding the movable section normally fixed with relation to the stationary section, a cutter

blade mounted for movement within the stationary section, means for effecting a release of the movable section,



and means controlled by the last mentioned means for operating said cutter just prior to releasing the movable section for the purpose specified.

1,485,274. SHOCK ABSORBER FOR VEHICLES. MICHAEL I. KLINE, Indianapolis, Ind., assignor to American Metals Corporation, Indianapolis, Ind., a Corporation. Filed Dec. 23, 1921. Serial No. 524,429. 6 Claims. (Cl. 267—10.)



1. A shock absorber for checking the rebound between two relatively movable bodies comprising a hub member fixedly secured to one of said bodies, a clutch member rotatably mounted on said hub member, one of said members being provided with recesses therein, a brake shoe surrounding said member, a flexible strap secured at one end to said brake shoe and at the other end to the other relatively movable body, a rotary clutch mounted in one of said recesses in engagement with the surface of the adjacent member so arranged as to permit the free rotary movement of said members in one direction, and prevent such movement in the opposite direction, and a spring mounted in one of said recesses for yieldingly forcing said rotary clutch into clutching engagement with one of said members.

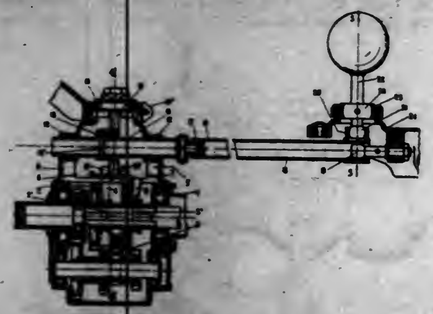
1,485,275. DISMOUNTABLE SPARK PLUG. HERMANN KOMMERER, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Apr. 14, 1923. Serial No. 632,153. 4 Claims. (Cl. 123—169.)

1. A dismountable spark-plug, comprising in combination, an insulating body, a metal socket enclosing part of said insulating body, packing material provided between said insulating body and said metal socket, a plug body and a screw-cap for securing said insulating body in said plug body, said metal socket being made to yield in the longitudinal direction of the plug.

1,485,276. CUTTING MACHINE. CHRISTIAN G. KUEBLER, St. Louis, Mo., assignor to Cinderella Heel Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 24, 1921. Serial No. 455,070. 11 Claims. (Cl. 90—18.)

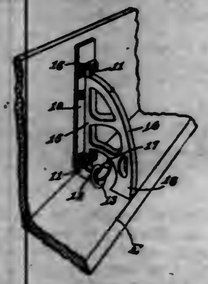
1. In a machine of the character described, the combination of a bedplate, a guideway thereon, a slide, a cradle mounted on slide, workholding members mounted on said cradle, a cutter, and means for driving the said cutter, one of the said workholding members being adjustable and the other being yieldable.

1,485,277. DIRIGIBLE HEADLIGHT. JOSEPH P. LAMUTH, Casper, Wyo. Filed May 15, 1922. Serial No. 560,963. 1 Claim. (Cl. 240—62.)



In a motor operated vehicle, the combination with a steering mechanism thereof, of headlights mounted for simultaneous partial rotation, a substantially L-shaped bracket having its long arm arranged at an inclination and fixed to the inclined portion of the fender of the vehicle, a second L-shaped bracket having its long arm straight and fixed to the frame of the vehicle in depending relation thereto, each of said brackets being provided with aligned openings aligned with an opening in the fender, a post depending from each lamp and adapted to pass through the aligned openings for rotation therein, an extension projecting laterally from the lower end of each post, means surrounding each post and engaging the adjacent bracket and extension respectively for preventing undue vertical movement of the post, a rod having off set ends arranged in opposite directions and thence extended on the body of the rod, one of said ends being enlarged and apertured and the opposite end being bifurcated for receiving the adjacent end of the extension, means associating the apertured end of the rod with the steering mechanism and means bridging the posts of the respective lamps for the purpose specified.

1,485,278. CHANGE-SPEED GEAR. VINCENZO LANCIA, Turin, Italy. Filed Dec. 14, 1922. Serial No. 606,947. 4 Claims. (Cl. 74—58.)

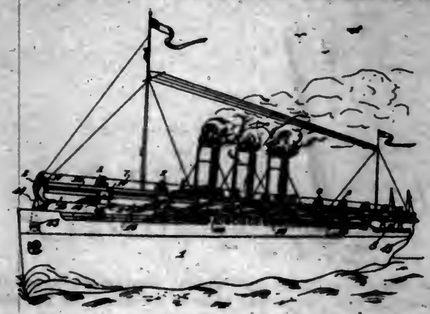


1. In a change speed gear comprising a plurality of slidable pinions, supports parallel with the axis of said pinions, members mounted to slide along said supports

each member engaging one of said pinions to shift it and having a recess, a control part mounted to oscillate and move longitudinally along an axis parallel with said supports, a finger on said control part adapted to engage the recess of either of said members, pins mounted in the gear casing and parallel with said supports, these pins having their ends in front of and spaced from each other,

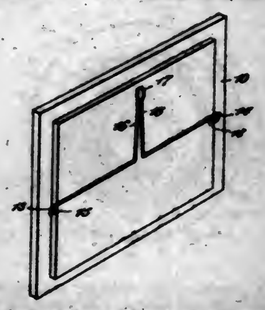
a tooth on said control part which is engaged between the ends of said pins when said finger is not in engagement with either of said recesses and slides along the same pins after said finger has been engaged with the recess of either of said members and moved longitudinally to shift the same member and its associate slidable pinion.

1,485,279. SIDEBOARD BRACKET. EARL S. LANDIS, Monroe, Ind. Filed Jan. 24, 1923. Serial No. 614,629. 3 Claims. (Cl. 296—14.)



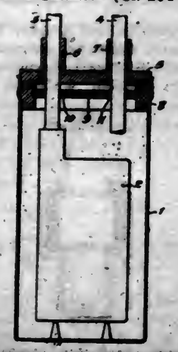
1. A bracket device for detachably mounting side boards upon a hay rack for the purpose of forming a wagon body, comprising supporting members secured upon the outer side of each side board and formed with hooks, eye bolts carried by the sills at the sides of the hay rack and within which said hooks are engageable, and brace members pivoted upon said supports and swingable to extend at right angles thereto bearing upon the sills.

1,485,280. LIFE RAFT FOR VESSELS. ARTHUR W. LYDA, North Canton, Ohio. Continuation of application Serial No. 374,618, filed Apr. 17, 1920. This application filed July 31, 1922. Serial No. 578,537. 7 Claims. (Cl. 9—22.)



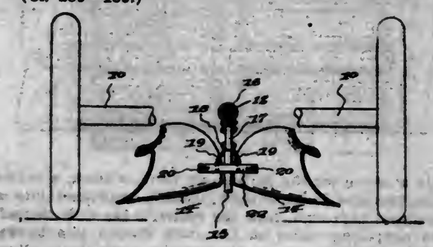
1. In combination with a vessel, a horizontally disposed rail carried along the side of the vessel, a life raft comprising a plurality of sections hingedly connected together and suspended from said rail, means for lowering the rail, and means for automatically releasing said sections from the rail as the sections reach the surface of the water.

7. In a life raft formed of a plurality of sections, a hinged connection between sections comprising a pair of bifurcated members, pivotally connected, upon horizontal, transverse axes to the end portions of adjacent sections,



a plate pivotally connected upon a vertical axis to each of said members, and a longitudinal pivotal connection between said plates.

1,485,281. DEVICE FOR HANGING PICTURES. WILLIAM F. MCGOWAN, Brooklyn, N. Y. Filed Mar. 14, 1921. Serial No. 451,965. 1 Claim. (Cl. 40—145.1.)

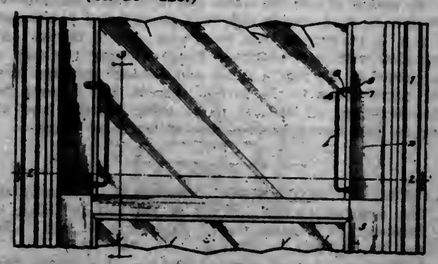


A picture hanger comprising a single length of wire bent to form a loop, downwardly diverging portions extending from said loop and bent at right angles to the axis of said loop and adapted to lie flat against the article to be hanged, the said wire having its ends bent inwardly and provided with sharpened portions for engagement with a picture frame whereby the weight of the picture will cause a tight engagement of the sharpening portions with the same.

1,485,282. RADIO BATTERY CONSTRUCTION. PAUL M. MASSO, Brooklyn, N. Y. Filed Mar. 22, 1923. Serial No. 626,881. 2 Claims. (Cl. 204—29.)

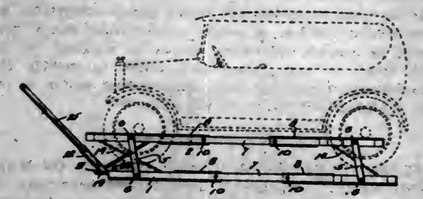
1. A storage battery construction which includes a cup-shaped cover of flexible insulating material, a strengthening plate of stiffer insulating material disposed within the cup of said plate, said cover plate and stiffened plate having apertures through which the terminal posts from the battery plates extend, and sleeves on the upper surface of the cover plate in alinement with the apertures therein to insulate the terminal posts for a considerable distance above the normal surface of the cover plate.

1,485,283. DUSTGUARD. ANDREW MAXWELL, Chicago, Ill. Filed Mar. 8, 1923. Serial No. 623,706. 8 Claims. (Cl. 280—159.)



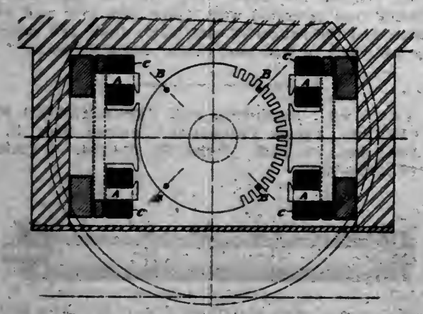
7. A dust guard for road vehicles comprising a guard positioned beneath the same and shaped to deflect dust rearwardly, and depending pivoted links carried by the vehicle and supporting the guard.

1,485,284. HAIRPIN. JOSEPH J. O'BRIEN, Springfield, Mass. Filed Nov. 9, 1922. Serial No. 599,916. 5 Claims. (Cl. 132—50.)



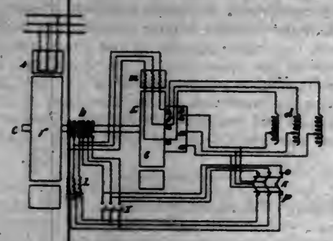
1. A hair pin consisting of a U-shaped body providing opposing legs spaced apart from each other, the legs being provided with terminal portions forming hair entering points, said terminals being spaced apart from each other a less distance than the portions of the legs near the longitudinal center thereof, and said portions being disposed outwardly of the planes of the terminals to provide leg propelling cam surfaces, the said outwardly disposed portions having sloping surfaces and being capable of moving the terminals into contiguous relation when the hair pin is inserted in the hair, but not into cross-wise relation.

1,485,285. SASH GRIP. JOHN T. O'GORMAN, New York, N. Y. Filed Mar. 23, 1922. Serial No. 546,131. 1 Claim. (Cl. 16—125.)



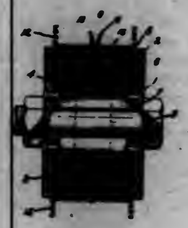
As a new article of manufacture, a sash grip comprising an elongated body provided at its ends with attaching members, said attaching members comprising outer end portions adapted to be secured to the inner face of the upper sash of a window, and inner end portions merging the outer end portions into the body, said inner end portions extending substantially at right angles to the axis of the body and in the plane of the latter for the initial part of their length from their juncture with the body and then being bent to extend laterally of said plane for the remainder of their length, whereby the body will be supported in a plane parallel to and offset inwardly from the plane of the inner face of the upper sash when the outer end portions of the attaching members have been secured to the inner face of the upper sash and the upper sash may be slid vertically in the usual manner without said body being moved thereby into contact with the lower sash.

1,485,286. AUTOMOBILE JACK. WILLIAM H. OVERHOLSER, Churubusco, Ind. Filed Oct. 23, 1922. Serial No. 596,406. 2 Claims. (Cl. 254—88.)



1. In an automobile jack, the combination of an upper frame and a lower frame, each of said frames comprising a plurality of longitudinal bars having U-shaped metal plates affixed thereto and having channels between the bars and the plates, telescopic bars slidably mounted in said channels, said telescopic bars having a plurality of spaced orifices, bolts adjustably securing said telescopic bars to the first named bars and plates to permit of adjustably lengthening or shortening the two frames, cross bars affixed to the respective longitudinal bars other than the telescopic bars, an operating lever mounted on the forward cross bar of the lower frame, and means adjustably connecting the said lever with a rearward cross bar of the upper frame for operating the upper frame to an elevated position.

1,485,287. COMMUTATION OF DIRECT-CURRENT MACHINES. JOSEPH PERRET, Paris, France, assignor to Forges et Ateliers de Constructions Electriques de Jeumont, Paris, France. Filed Nov. 23, 1921. Serial No. 517,319. 6 Claims. (Cl. 171—228.)

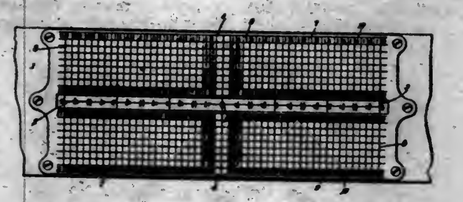


1. In a bi-polar direct current machine adapted to be mounted directly on a vehicle axle the combination of an armature, a bi-polar field structure of substantially the same internal height as the diameter of said armature, and a plurality of commutating poles mounted on said field structure to form commutating zones.

1,485,288. ALTERNATING-CURRENT MOTOR GROUP. JOSEPH PRÉAUBERT and LÉON ORY, Paris, France, assignors to Forges & Ateliers de Constructions Electriques de Jeumont, Paris, France. Filed Jan. 16, 1922. Serial No. 529,659. 8 Claims. (Cl. 172—274.)

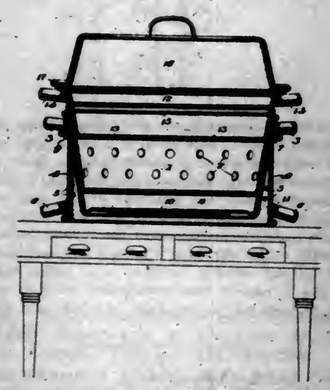
1. An alternating current motor group comprising an asynchronous motor, a series commutating motor connected in cascade therewith, means to regulate the no load speed of said group, and means to modify the transformation ratio of said commutating motor to obtain a high power factor at all loads.

1,485,289. ELECTRIC COIL AND METHOD OF MAKING SAME. CHARLES F. PETERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 20, 1922. Serial No. 555,669. 6 Claims. (Cl. 175—21.)



6. The method of making an electric coil comprising the mounting of fabric disks saturated with liquid resin on a tube to form a limp spool, mounting said spool between rigid metal plates, winding a bundle of insulated conductor wire tightly and compactly on said spool, flanging the fabric disks over the wire bundle, winding tape saturated with liquid resin over said wire bundle and the flanges of said fabric disks, and subjecting the whole to high heat to polymerize the resin.

1,485,290. MANDREL FOR PAPER-MAKING MACHINES. AUSTIN PHILHOWER, Hanover Neck, N. J. Filed Jan. 22, 1923. Serial No. 614,204. 7 Claims. (C. 242—72.)

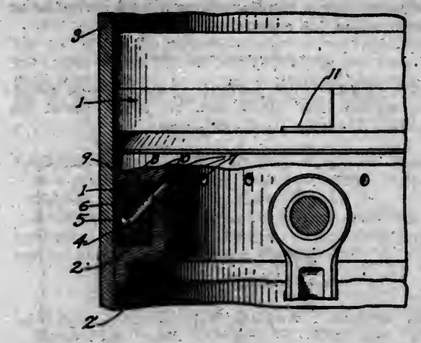


1. In a mandrel, a body, a section movable with respect to said body to vary the effective diameter thereof, a slide, a ring rotatably carried by the body and having a helical groove therein for receiving an end of said slide whereby the latter is moved longitudinally of the body when said ring is rotated in one direction, and means on said slide cooperating with said body to simultaneously move said slide diagonally relative to the body to project said section laterally therefrom.

1,485,291. LEVEL. GLENN P. PILES, Ruble, Mo. Filed Feb. 28, 1922. Serial No. 539,902. 1 Claim. (Cl. 33—212.)

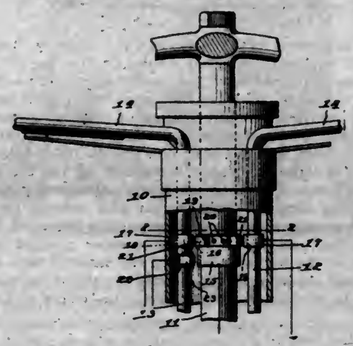
In a device for the purpose set forth, a stock, a bubble tube arranged longitudinally thereon, graduated into a fractional inch scale from the center to the ends thereof, and computing scales on the stock divided into blocks, and the vertical rows of blocks being centrally in alignment with the graduations on the tube, said blocks having vertical sub-divisions, the aligning sub-divisions having imprinted therein foot scale marks, and the adjacent sub-divisions having imprinted therein inch scale marks or fractions thereof, as and for the purpose set forth.

1,485,292. STERILIZER. ISAAC C. POPPER, New York, N. Y., assignor to The Theroz Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 14, 1918. Serial No. 266,666. 1 Claim. (Cl. 167—3.)



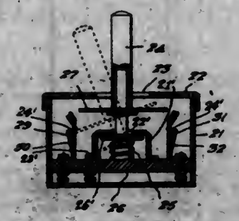
An article of the character described including a lower receptacle, a reversible rim, said parts being perforated, a pan, a perforated disk removably placed therein and provided with a downturned flange whereby the disk is supported in the pan, a gauze and bandage steriliser having perforations in the bottom thereof, and a cover for the steriliser, all of said parts being nestable and all but the disk having beaded rims at the outer edges.

1,485,293. PISTON RING. FREDERICK C. REINEKING, Los Angeles, Calif., assignor of one-half to Ralph G. Zeledon, Los Angeles, Calif. Filed Aug. 31, 1921. Serial No. 497,331. 4 Claims. (Cl. 74—109.)



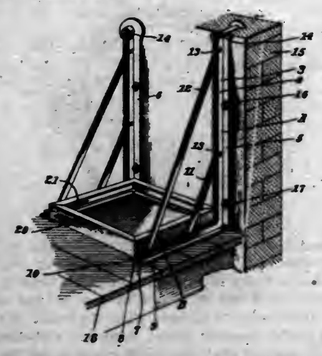
1. The combination with a cylinder, of a piston having a ring groove, a ring having an annular groove mounted in said ring groove, a plurality of passages extending upwardly and inwardly from said annular groove

through the ring, apertures in axial alinement with said passages extending through said piston from said



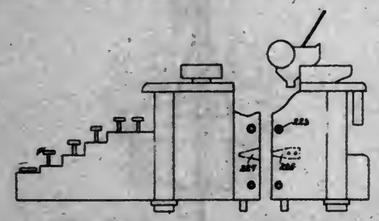
ring groove, said passages and apertures inclined so that oil will flow through the same from the walls of said cylinder.

1,485,294. AUTOMOBILE SIGNAL CONTROL SWITCH. JOSEPH J. RICE, Jr., Frackville, Pa. Filed Mar. 1, 1922. Serial No. 540,345. 1 Claim. (Cl. 200—59.)



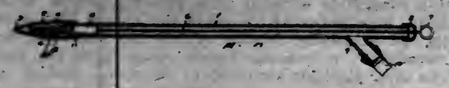
An automobile signal control switch comprising a steering column, a steering post and control rods therein, a collar attached to and insulated from said steering post, spring contact members attached to said collar, other collars attached to and insulated from the control rods, said latter named collars adapted to contact with the spring contact members thereby closing an electric circuit to operate a signal.

1,485,295. DIRECTION SIGNAL. ZALA RIDDLE, San Francisco, Calif. Filed Apr. 2, 1920. Serial No. 370,791. 1 Claim. (Cl. 200—1.)



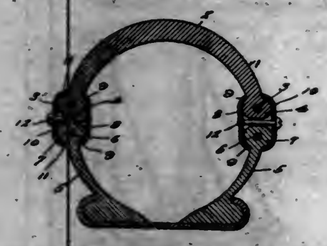
A switch for automobile signalling devices comprising a casing, a cover provided with an enlarged opening and threadedly mounted on the casing, a base secured within the casing and being spaced and arranged parallel with the bottom thereof, a housing provided with a slotted top wall and an offset flange securing said housing to the base, a plate engaging the top wall of the housing and adapted to normally close the slot therein, a coil spring arranged centrally within the housing and having its end convolution bearing against the plate and base respectively, a swinging handle rising from the plate and being yieldably supported by the spring through the medium of the pate, said handle projecting through and beyond the slot in the top wall of the housing and through and beyond the opening of the cover, a disk arranged within the casing and carried by said handle intermediate of its ends, a plurality of stationary contacts secured to said base and arranged in the path of the disk and an offset portion arranged on the free ends of some of said stationary contacts and inclined toward the housing as and for the purpose specified.

1,485,296. WALL BRACKET FOR CABINETS. EDWARD W. SALMON, Jr., Baltimore, Md., assignor to Leo Fesenmeier, Baltimore, Md. Filed Aug. 3, 1922. Serial No. 579,455. 3 Claims. (Cl. 248—18.)



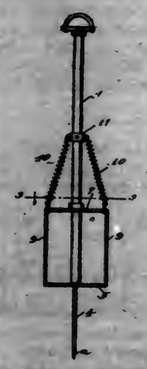
1. A supporting hanger of the character described, comprising an L-shaped arm including spaced web portions throughout its length, each web portion having an outwardly directed flange with the web portions connected together at one end of the arm to provide an attaching eye, and a brace having its ends connected to the arm between the said web portions.

1,485,297. TYPEWRITING MACHINE. FRANZ SÁNDOR, Erfurt, Germany, assignor to Deutsche Werke Aktiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed June 18, 1921. Serial No. 478,675. 10 Claims. (Cl. 197—22.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



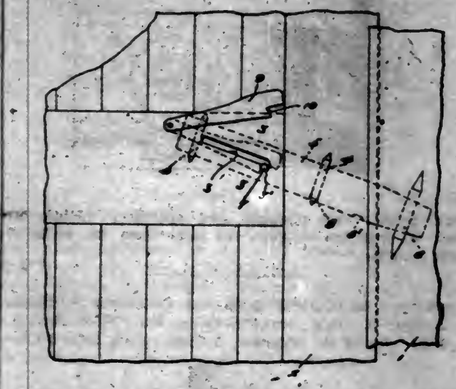
1. A typewriting machine embodying two independent sections separated along a transverse plane, separable cooperating centering means on said sections to properly aline the same, means for detachably securing the sections fixedly together, each of said sections being constructed to be directly and independently supported on the same support by its individual base, the rear section carrying the platen and its controlling devices and the front section carrying the printing instrumentalities.

1,485,296. EMBALMING IMPLEMENT. WILLIAM O. SCHROTH, Cincinnati, Ohio. Filed Apr. 26, 1923. Serial No. 634,769. 4 Claims. (Cl. 27—24.)



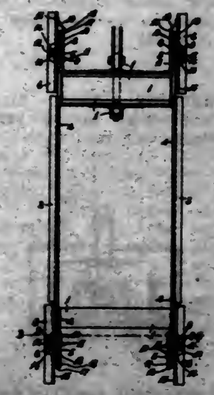
1. An embalming implement having a suction tube and means for creating suction therein, and a cage carried at the end of the tube and consisting of spaced longitudinal strands united at their free ends to provide a penetrating point, said strands being bulged laterally to effect distending of the artery in which the point is inserted, and the tube adjacent the points of connection with the strands being provided with cutting elements.

1,485,299. TIRE. MARTIN L. SCOTT, Pecan Gap, Tex. Filed Apr. 19, 1922. Serial No. 554,418. 3 Claims. (Cl. 152—19).



1. A casing for pneumatic tires comprising a tread section and side wall sections, the confronting edges of the tread and side walls formed with cross sectionally rounded beads, annular metal members having flanged edges disposed in the casing to contact with the beads of the tread and side walls, annular metal members arranged against the tire to contact with the outer surfaces of the beads of the tread and side walls, and adjustable means passing between the beads and connecting the pairs of metal members for forcing the same together to compress the beads of the tire casing therebetween.

1,485,300. SPEAR. NICHOLS S. SCOTT, Fort Benning, Ga. Filed Aug. 28, 1922. Serial No. 584,866. 3 Claims. (Cl. 294—61.)

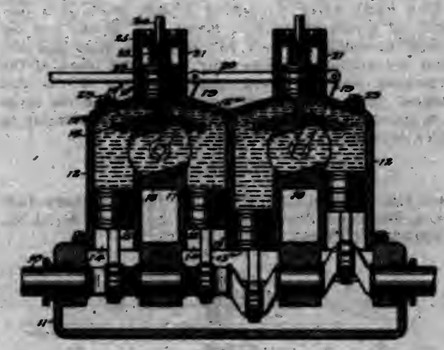


1. A device of the character described comprising a handle member, a penetrating member extending outwardly from an end thereof, the adjacent end of the handle member affording a stop, a cross member slidably mounted upon the penetrating member, the contact of said cross member with the adjacent end of the handle member limiting the movement of the cross member inwardly of the penetrating member, and means for normally holding said cross member at the limit of its inward movement at the inner end of the penetrating member.

1,485,301. BARN-DOOR LATCH. JOSEPH GORDON SEBASTIAN, Mackey, Ind. Filed Oct. 10, 1921. Serial No. 506,576. 1 Claim. (Cl. 292—189.)

In combination with a door and its frame, a latch bar having a tapered front end, staples on the door for slidingly supporting the latch bar, said staples being arranged to hold the latch bar at an incline so that it will move to latching position under the action of gravity, a staple on the frame for receiving the tapered end of the latch bar when the same is in latching position, the door having an inclined slot therein which is covered by the latch bar, the lower end of the slot having a depending portion, a pin passing through the latch bar and through the slot, said pin engaging the depending portion when the bar is in latching position, a locking member pivoted to the interior of the bar and engaging the interior part of the pin to hold the same in the depending part of the slot and a notch in the latch bar for engaging one of the staples.

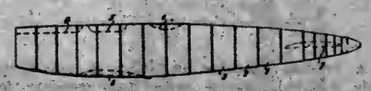
1,485,302. RUNNER OR GUIDING MEANS OF MINE SKIPS, CAGES, AND OTHER VEHICLES EMPLOYED IN VERTICAL SHAFTS. GEORGE WALTER SHARP, Johannesburg, Transvaal, South Africa. Filed Aug. 31, 1922. Serial No. 585,437. 6 Claims. (Cl. 187—95.)



5. Guiding means for mine skips, cages and similar vehicles, comprising, for each guided side of the vehicle and for both the top and bottom of the vehicle, a trunnion

fixed to the drawbar, a trunnion bracket rotatably mounted on said trunnion, and a swivel runner section pivotally mounted on the trunnion bracket in such a way that said runner section can move in a plane at right angles to the plane in which the trunnion bracket moves about the trunnion, the swivel runner sections being provided at the back with rounded or curved surfaces or members which roll on the faces of the trunnions, as set forth.

1,485,303. WOOD SUBSTITUTE. JAMES W. SHERIDAN, New York, N. Y. Filed Sept. 19, 1921. Serial No. 501,646. 1 Claim. (Cl. 106—33.)

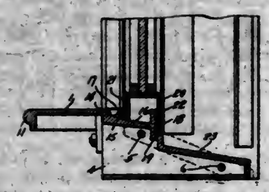


A composition of matter as a substitute for wood, which comprises three parts of sawdust, two parts of talc, one part of cork, and shellac as a binder.

1,485,304. HYDRAULIC BRAKE. SAMUEL BRINTON SHOEMAKER, South Strafford, Vt. Filed Apr. 11, 1922. Serial No. 551,556. 6 Claims. (Cl. 188—90.)

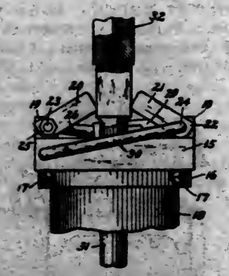
1. In a hydraulic brake, a fluid chamber communicating with a pair of cylinders, means affording a passage from one cylinder to the other, a manually-variable valve controlling said passage, means forming a by-pass to establish a communication between said cylinders independently of the first-mentioned passage, and automatic means controlling said by-pass and actuated by the pressure of the fluid in the chamber.

1,485,305. AEROPLANE FLYING MACHINE. HUGH OSWALD SHORT, Rochester, England. Filed Sept. 11, 1922. Serial No. 587,562. 2 Claims. (Cl. 244—30.)



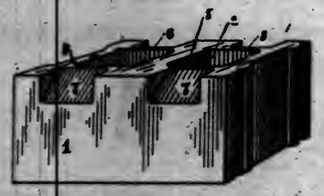
1. In fuselages for aeroplane flying machines; a body composed of a plurality of annular sleeves of sheet metal the end of one of said sleeves entering and fitting in contact for a requisite distance within the adjacent end of the next sleeve and so on, rings of angle section metal located within the interior of the body, one flange of each ring in contact with the interior surface thereof and located to coincide with the overlapping ends of said annular sleeves, and rivets passing through said flanges of said rings and said overlapping ends of said sleeves to permanently and rigidly fix together the overlapping and contacting edges of said annular sleeves and said interiorly located rings.

1,485,306. DENTAL BRIDGEWORK. JACOB J. STARK, Brooklyn, N. Y. Filed Dec. 7, 1922. Serial No. 605,475. 1 Claim. (Cl. 32—12.)



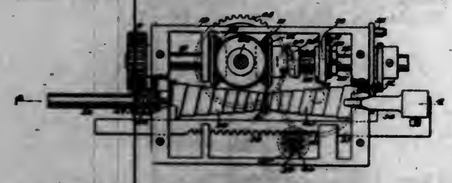
In a device of the class described, a stud structure T-shaped in plan, said structure including a shank forming the T-stem and including a pair of resilient strip elements arranged side by side integral continuations of said elements being oppositely directed away from the stem and then inwardly directed toward the stem to form a plurality of T-head portions each bendable at a multiplicity of points to vary the shape of the stem while resiliently resisting such bending.

1,485,307. SILL CONSTRUCTION. JOHN F. STECKENREITER, Brooklyn, N. Y. Filed Nov. 18, 1921. Serial No. 516,054. 10 Claims. (Cl. 189—75.)



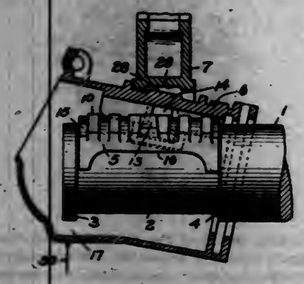
1. A sill made of metal having downwardly projecting end flanges for disposition against a hollow jamb member, a plurality of tie rods extending across between and through the flanges, the ends of the tie rods extending within the jamb members, and means on the ends of the tie rods to fasten them to the jamb members.

1,485,308. HOLDING DEVICE FOR SUCKER RODS. RALPH H. STEGEMAN, Anaheim, Calif. Filed Dec. 22, 1922. Serial No. 608,585. 5 Claims. (Cl. 24—249.)



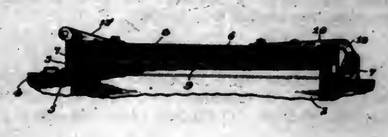
2. A holding device of the character described comprising a support, jaws, a mounting for movably supporting the jaws including shafts, an operative connection between the shafts and comprising a slotted arm whereby movement of one shaft effects a corresponding movement of the other shaft, and manually operable means for moving one of the shafts.

1,485,309. BUILDING BLOCK. CHARLES A. STEWARD, Plano, Ill. Filed Nov. 20, 1920. Serial No. 425,412. 3 Claims. (Cl. 72—41.)



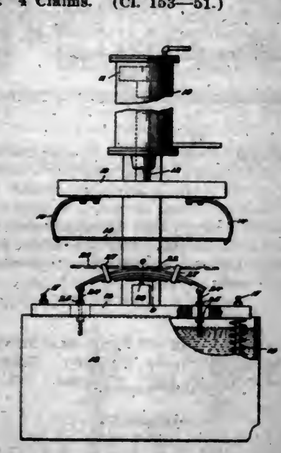
1. A block having a vertical passage therein, and provided at top and bottom with inclined ducts extending from said vertical passage through opposite side walls of said block, said ducts being open and respectively adapted to mate with similar ducts in other blocks to form ventilative passages.

1,485,310. SHUTTLE-THROWING MECHANISM. CARL H. STRALUCKE, New York, N. Y. Filed June 21, 1922. Serial No. 569,938. 5 Claims. (Cl. 139—145.)



5. In a shuttle throwing mechanism, a picker, a reciprocating shaft for operating said picker, said shaft having a notch, a spring for moving said shaft in one direction, a reciprocating bar for moving the shaft in the opposite direction, a pivotally mounted catch having a projection adapted to fit into said notch for locking the shaft against movement, said catch being formed with a notch extending from one side past the center, a shaft normally extending through said notch, a roller carried by said catch, a cam carried by said shaft and movable to a position engaging said roller for moving the catch to a position out of engagement with said shaft, said shaft being locked when the springs are under tension and unlocked for permitting the springs to operate the shaft and picker.

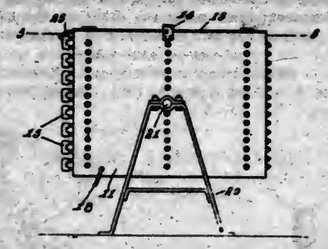
1,485,311. RAILWAY TRUCK. EDGAR W. SUMMERS, Pittsburgh, Pa.; Patience C. Summers executrix of said Edgar W. Summers, deceased. Filed May 9, 1921. Serial No. 468,009. 13 Claims. (Cl. 105—220.)



1. In a railway truck, the combination of an axle provided with a journal having at its end a flange forming a thrust bearing face, a bearing mounted upon the journal and having a substantially semi-circular end face cooperating with said thrust bearing face, and a journal box enclosing said journal and bearing and having the outer portion of its lower wall spaced from the journal to permit the outer end of the box to be turned upwardly to an extent sufficient for the removal of said bearing.

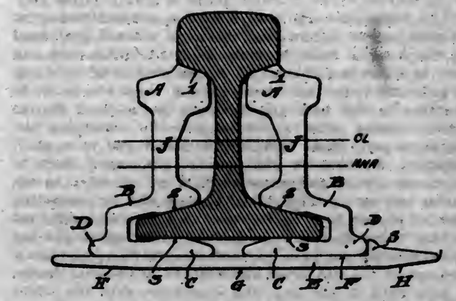
1,485,312. HATCH COVER. EDWARD A. SWEELEY, Alexandria, Va., assignor to The Wine Railway Appliance Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Oct. 3, 1922, Serial No. 592,060. Divided and this application filed June 1, 1923. Serial No. 642,819. 5 Claims. (Cl. 98—22.)

1. A hatch cover comprising a body made of a plurality of layers of wood, a metal rim, having one leg thereof extending between two layers of wood and the other leg extending downwardly below the plane of the undermost layer of wood, the latter leg of the rim adapted to enclose the walls of a hatch when the cover is in its closed position and the rim forming a frame to which both layers of wood are secured.



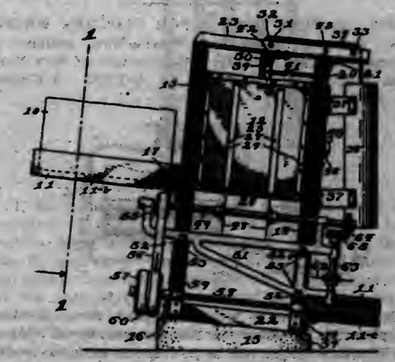
1,485,313. BENDING MACHINE. JOHN WALLACE TAYLOR, Cleveland, Ohio. Filed June 21, 1921. Serial No. 479,354. 4 Claims. (Cl. 153—51.)

1. A bending machine including in combination, a flexible mandrel, spaced supporting elements for the mandrel, said elements being relatively adjustable so that the mandrel may be flexed to different degrees of curvature, the mandrel so diminishing in cross section from one supporting element toward the adjacent element that the portion thereof between said supports automatically assumes a circular curve for all adjustments of the supporting means.



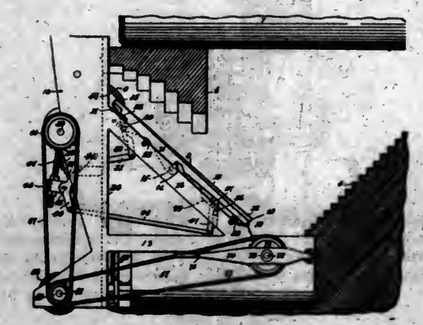
1,485,314. ICE-LOOSENING DEVICE. JOSEPH H. TAYLOR and WILLIAM F. POWELL, Rocky Mount, N. C. Filed June 11, 1923. Serial No. 644,753. 3 Claims. (Cl. 62—113.)

1. An apparatus for thawing ice from molds, comprising a receptacle, piping lining the interior of the receptacle and through which a fluid is adapted to circulate to produce an artificial heat, said piping having an inlet



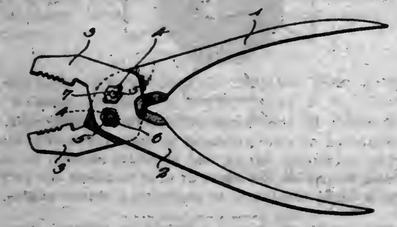
and an outlet opening, and straps supported by the bottom and end walls of the receptacle to prevent the mold from coming in contact with said piping.

1,485,315. RAIL-JOINT STRUCTURE. MCLEOD THOMSON, Chelsea, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1922. Serial No. 587,852. 12 Claims. (Cl. 238—188.)



6. A rail joint structure including opposite base supporting joint bars each having a truncated base part reduced in thickness of metal, and an eccentrically loaded abrasion plate.

1,485,316. MACHINE FOR MARKING ICE. WALTER D. TICKEL, Oklahoma City, Okla., assignor to Peerless Ice Scoring Machine Co., Oklahoma City, Okla. Filed May 12, 1920. Serial No. 380,843. 17 Claims. (Cl. 125—13.)

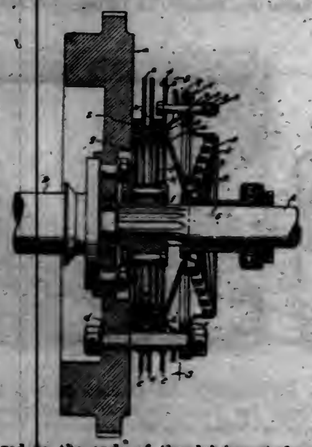


14. In a device for the purpose described, the combination of a cage, and a scoring device arranged to score the ice in its passage out of said cage.

1,485,317. MECHANICAL-STOKER FURNACE GRATE. STANISLAW WADAS, Philadelphia, Pa. Filed Sept. 15, 1921. Serial No. 500,751. 5 Claims. (Cl. 110—33.)

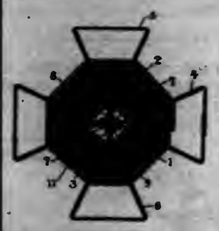
1. In a mechanical stoker furnace grate, a hopper, a rocking feeder bar journaled upon a horizontal axis, a coking grate including separate grate bars having their upper ends pivoted to said feeder bar and cooperating therewith to form a bottom for said hopper, a main grate including grate bars alternate ones of which are mounted near their lower ends for swinging movement or vibration and the remaining ones of which are mounted near their upper ends for swinging vibration, said grate bars of the coking grate having their lower ends resting upon the upper ends of said alternate grate bars of the main grate, the bars of the coking and main grate extending longitudinally of the furnace with the bars of the main grate inclined, and means to vibrate all of the grate bars of said main grate.

1,485,318. PLIERS. WILLIAM M. WAY, Coalinga, Calif. Filed Nov. 20, 1922. Serial No. 602,093. 9 Claims. (Cl. 294—44.)



1. Connecting means for the handles of a tool of the type specified embodying a pin carried by and movable with one handle and extending slidably through a slot in the other handle, said pin being disposed at one end of the slot when the jaws are in engagement with one another and being automatically moved to the opposite end of the slot as the handles are spread apart, whereby to permit additional adjustment of the jaws to be had.

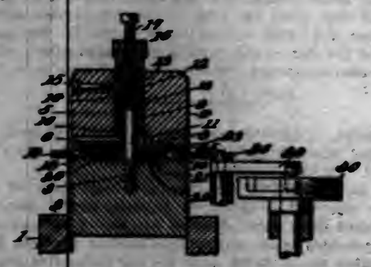
1,485,319. CLUTCH. ERNEST E. WEMP, Detroit, Mich. Filed May 19, 1921. Serial No. 470,851. 20 Claims. (Cl. 192—69.)



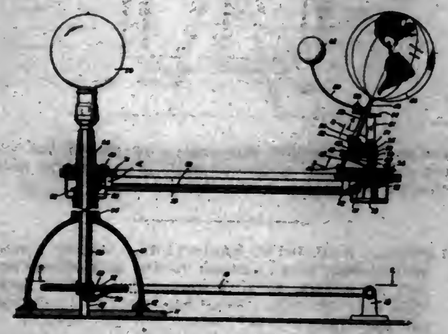
3. In a clutch of the type described, a set of clutch disks provided with clutch facings, and a second set of clutch disks some of which are united but spaced and are provided with outwardly-extending portions beyond the other set of clutch disks for the purpose of providing air-cooling fins.

18. A clutch, having in combination a fly wheel, driving studs carried by the fly wheel, a plurality of driving

and driven discs, and a clutch assembly unit cooperating with said discs but an independent assembly and removably secured to the ends of the driving studs, said unit including an abutment, thrust ring, and a thrust-producing means between the abutment and the thrust ring.

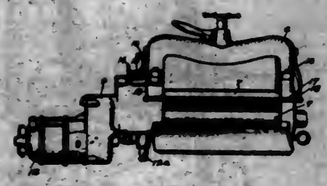


1,485,320. SHIPPING FRAME FOR LONG-PILE GOODS. FRANK R. WHEELER, New York, N. Y., and BOWMAN M. MCMERKIN, Shelton, Conn., assignors, by mesne assignments, to Central Union Trust Company of New York, trustee, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1919. Serial No. 325,077. 2 Claims. (Cl. 206—51.)



1. A device of the character described comprising, a body composed of slats arranged in cross formation, more than two outwardly flaring end members secured to said slats, and means on the edges of said members for carrying and holding the fabric in convolving obtuse angles.

1,485,321. DEVICE FOR LAPPING GAUGES. GEORGE ED. WILKINSON, Elgin, Ill., assignor to Elgin National Watch Company, Chicago, Ill., a Corporation of Illinois. Filed May 26, 1919. Serial No. 299,743. 5 Claims. (Cl. 51—113.)

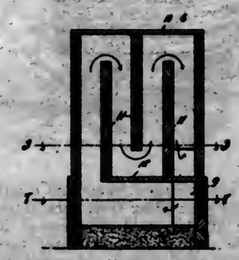


1. In a device of the class described, the combination of a rotating lapping member, a second lapping member spaced therefrom and positively rotated thereby, work holding means normally arranged between said lapping members means for moving said work holder relatively to said lapping members, and means for moving one of the lapping members toward the other as the gauges in the work holding means are reduced in thickness.

1,485,322. TELLURIAN. SCHAI A. WINETSKY, New York, N. Y. Filed Aug. 29, 1921. Serial No. 496,325 2 Claims. (Cl. 35—3.)

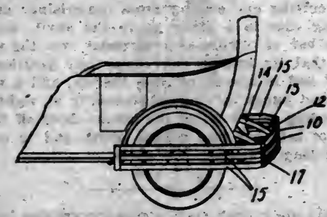
1. A tellurian comprising, a base, a sun and means for illuminating it mounted on the base, a bevel gear fixed to the base, a tube rotatably mounted in the base, an arm and a casing carried by the upper end of tube and a gear fixed to the lower end, a crank mounted in bearings in the base and having a worm fixed thereto which meshes with the tube gear for operating the latter, a gear frame fixed to the upper end of a shaft rotatably mounted in the arm, a bevel gear fixed to the lower end of the frame shaft, a rod mounted in the casing and having a bevel gear on each end for connecting the bevel gear fixed to the base to the bevel gear fixed to the frame shaft to operate the latter as the casing revolves about the base, an earth having its axis properly inclined to the sun rotatably mounted in the gear frame, a gear fixed to the arm and concentric with the frame shaft, a shaft having a bevel gear which meshes with the fixed gear on the arm, a plurality of gears mounted in the frame and connecting the rotary frame shaft to the axis of the earth, a moon connected by an arm to a sleeve mounted on the axis of the earth, a gear integral with the sleeve, a second gear mounted on the rotary frame shaft to convey the motion of the latter to the moon, a plate inclined at an angle to the horizontal mounted on the gear frame, and a roller mounted on the moon connecting arm and co-operating with the plate to give the moon the proper relative positions to the earth.

1,485,323. SAFETY DEVICE FOR CLOTHES WRINGERS. JAMES J. WOOD, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Aug. 14, 1922. Serial No. 581,623. 6 Claims. (Cl. 192—133.)



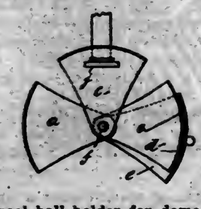
1. In combination, a wringer, means for controlling the application of power to the wringer for driving it which means when moved in one direction from neutral position effects the operation of the wringer in one direction and when moved in another direction from neutral position effects the operation of the wringer in the opposite direction, a guard frame which presents a part which lies along and substantially in front of the wringer rolls, said part being free to be moved and carried by the frame in a substantially horizontal plane, a pivotal support for the frame on which it moves, and a connecting mechanism between the guard frame and the controlling means for moving the latter to the neutral position when said part of the guard frame is moved in the same direction as material passing through the wringer.

1,485,324. ROLLING WINDOW SCREEN. ARTHUR YERLY, Gary, Ind. Filed Mar. 21, 1919. Serial No. 283,978. 1 Claim. (Cl. 156—39.)



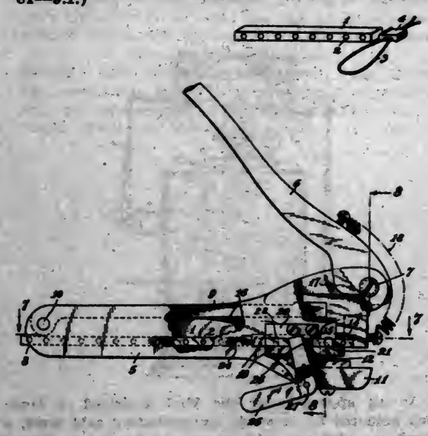
A device of the kind described comprising in combination with a spring actuated roller, a screen carried by the roller, resilient tapes secured to the side edges of the screen, guides for the side edges of the screen, each being formed from a single piece of sheet metal folded on itself to provide a flange for attachment to a vertical stile of a window frame, the guides being formed with spaced parallel side portions extending from the attaching flange, one of said side portions being offset from the flange but both being inturned at their free edges, the resilient tapes slidably engaging between the inturned portions of the guides, means carried by the screen at its edges and disposed within the guides to prevent lateral or sidewise movement of the screen, and means for moving the flanges of each guide towards each other to effect a clamping operation on the tapes and the adjacent edges of the screen for the purpose specified.

1,485,325. FURNACE. CONRAD H. ZIBE, York, Nebr. Filed Apr. 6, 1922. Serial No. 550,064. 2 Claims. (Cl. 110—97.)



1. In a furnace construction, a fire-box, said furnace including a central compartment and lateral compartments, said lateral compartments communicating with the fire-box at one end of the fire-box, said lateral compartments communicating with the central compartment at the rear of the furnace, and adjacent to the upper wall of the fire-box, a plurality of vertical walls disposed within the lateral compartments, one of the walls having its lower edge spaced from the upper wall of the fire-box, the opposite walls having their upper ends arranged in spaced relation with the upper wall of the furnace to provide baffles, and baffles in the central compartment to obstruct passage of products of combustion therethrough.

1,485,326. AUTOMOBILE BUMPER. WILLIAM F. ADAMS, Santa Monica, Calif. Filed Aug. 31, 1923. Serial No. 660,380. 1 Claim. (Cl. 293—55.)

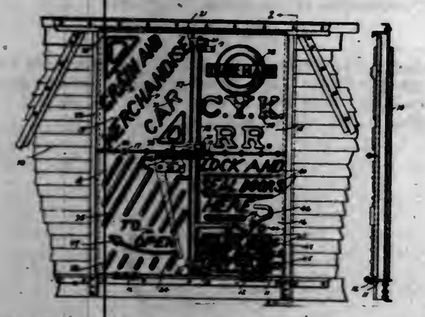


A bumper for automobiles including transverse guard means rigidly attachable to a part of the automobile and side guard means attached to the transverse guard means and adapted to be readily adjusted to permit the removal and application of the automobile wheels.

1,485,327. HOLLOW WOOL-BALL HOLDER FOR DOMESTIC USE. JOHN BLENNERHASSETT, Birmingham, England. Filed Dec. 5, 1922. Serial No. 605,125. 2 Claims. (Cl. 242—146.)

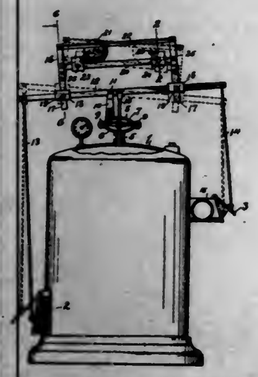
2. A hollow wool ball holder for domestic use combining a plurality of fixed hollow ball members spaced apart, a swingable hollow ball member diametrically pivoted to the fixed members to swing over them to open the entrance to the holder and to close said entrance while leaving a space between it and the adjacent members, and a suspension means for the holder, substantially as described.

1,485,328. METHOD AND MEANS FOR SEALING. WINFRED M. BROOKS, South Orange, N. J. Filed June 12, 1923. Serial No. 644,829. 14 Claims. (Cl. 81—9.1.)



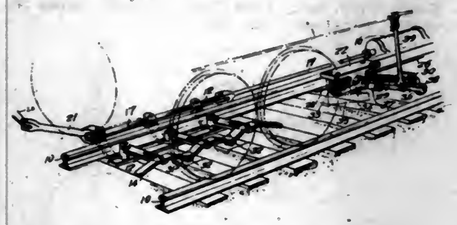
1. The method of producing seals which consists in providing a bar of compressible material with openings, then introducing an element to be sealed into one of said

openings, then severing a seal length, containing the element to be sealed, from the bar and then compressing the seal.



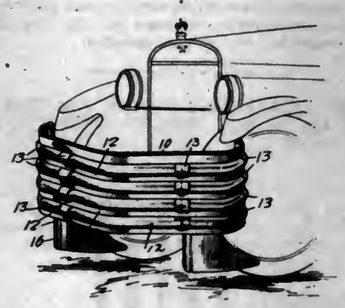
11. A cutting and sealing press comprising: an anvil, a shearing edge in a plane above the anvil, means for feeding a bar of compressible material over the shearing edge so that its leading end comes into position above the anvil and in spaced relation thereto, and a shearing member and punch moving substantially at right angles to the feeding movement of the bar to shear off the leading end of said bar into a seal length and to compress said seal length against the anvil.

1,485,329. RAILWAY-CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1923. Serial No. 617,125. 3 Claims. (Cl. 105—409.)



2. As an article of manufacture a sheet metal body plate for the vertical parts of railway cars, the parts of said plate within its margins being corrugated, stiffened and strengthened with integral intelligence-conveying lettering arranged out of the main plane of said plate so as to resist the bending of the plate on various cross lines, the letters running one into another and effecting continuity of reinforcement.

1,485,330. DRAFT REGULATOR FOR STEAM BOILERS. ARTHUR C. DOLE, Sr., and ARTHUR C. DOLE, Jr., Kansas City, Mo. Filed Mar. 19, 1921. Serial No. 453,787. 9 Claims. (Cl. 236—26.)

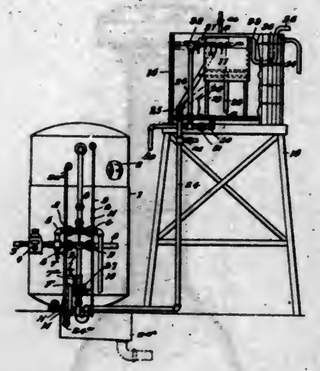


1. In an apparatus of the kind described, a lever, means actuated by pressure for oscillating said lever, a support mounted on said lever and having a runway arranged to be tilted in opposite directions when the lever is oscillated, two stop members adjustable toward and from each other on said support and disposed respectively at opposite sides of the fulcrum of said lever, and a weight movable by gravity on said runway when the latter is tilted and arranged to have its movement in opposite directions respectively limited by said stop members, substantially as set forth.

1,485,331. RAILROAD SAFETY DEVICE. ISAAC L. EDWARDS, Aurora, Ill. Filed Jan. 18, 1923. Serial No. 613,519. 5 Claims. (Cl. 246—190.)

1. The combination of cooperating members on train and road bed, the latter comprising a bar thin in a vertical direction and mounted for horizontal movement laterally and longitudinally at the same time to place it into and out of position for operation, the upper surface of said bar being its working surface, and means for thus moving such bar.

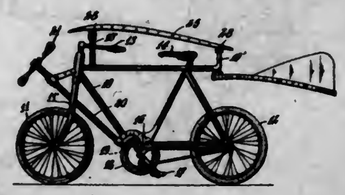
1,485,332. BUMPER FOR MOTOR VEHICLES. ISAAC L. EDWARDS, Aurora, Ill. Filed May 14, 1923. Serial No. 638,967. 7 Claims. (Cl. 293—54.)



2. A bumper comprising a frame and elastic strip form cushioning means protruding from such frame, the frame having in rear of the cushioning means a space into which the same may pass, said space being narrower than the thickness of such means whereby the latter may squeeze therein.

1,485,333. PROCESS OF DEODORIZING AND PRESERVING. HENRY HICKS HURT, Yonkers, N. Y., assignor to Robeson Process Company, New York, N. Y., a Corporation of New Jersey. Filed May 18, 1920. Serial No. 382,381. 4 Claims. (Cl. 167—3.)

1. The process of temporarily preserving and deodorizing albuminoid animal matter which consists in applying to the same a sulfite waste liquor preparation.



4. The process of temporarily preserving and deodorizing albuminoid animal matter which consists in applying to the same an acid sulfite waste liquor preparation substantially free of lime.

1,485,334. PROCESS OF REGENERATING SPENT ZEOLITES. HEINRICH KREIDSHEIM, New York, N. Y., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed July 22, 1920. Serial No. 398,087. 22 Claims. (Cl. 23—13.)

1. In the softening of water by zeolitic methods wherein hard water to be softened and a regenerating flow of salt solution are alternately passed through a bed of zeolites, the process which comprises continuing the flow of salt solution as long as emerging solution carries substantial amounts of hardness-giving substances, discontinuing the flow, removing from the zeolitic material the salt solution remaining therein, rinsing salt out of the zeolitic material by water, and delivering the reclaimed salt solution and the weaker solutions formed in rinsing to a storage receptacle in such a way that the various salt solutions shall be stored in superimposed order of their densities therein.

1,485,335. MANUAL BICYCLE AEROPLANE. ELIAS MARTINEZ, Port Arthur, Tex. Filed July 6, 1923. Serial No. 649,836. 3 Claims. (Cl. 244—14.)

1. In an aeronautical machine, a pair of wings, socket elements thereon, a vehicle, and bolts carried by said vehicle adapted to engage in said sockets to attach the wings to the vehicle, said bolts having transversely movable hooks adapted to engage shouldered elements in the sockets to hold the bolts against displacement from the sockets.

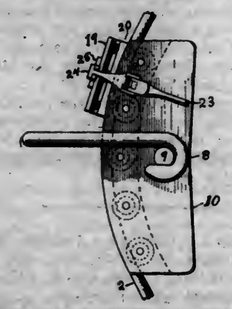
1,485,336. PRESSURE GAUGE. JOHN R. PADESKY, La Crosse, Wis., assignor to National Gauge & Equipment Company, La Crosse, Wis., a Corporation of Wisconsin. Filed July 30, 1923. Serial No. 654,584. 2 Claims. (Cl. 116—129.)

1. In a gauge, a casing open at one end, a dial plate supported in said casing, a pointer in said casing movable over said dial, devices in said casing for operating said pointer, a cap fitted to the open end of said casing, and a spacing member between said cap and dial having a part bearing on said dial to hold the same in spaced relation with said pointer, said cap and spacing member having openings to expose the indications on said dial

and said spacing member also having an opening therein to provide clearance space for said pointer operating devices.

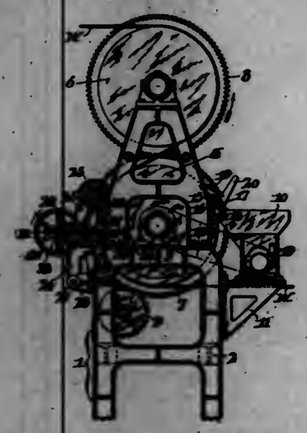
1,485,337. CARTRIDGE PLUG OR WAD. ALFONS G. SCHURICHT and GEORGE T. WRIGHT, Alton, Ill., assignors, by mesne assignments, to Western Cartridge Company, a Corporation of Delaware. Filed June 4, 1921. Serial No. 475,150. 10 Claims. (Cl. 102—42.)

1. A cartridge plug or wad comprising, cellular organic material impregnated with a polymerized oil and compressed to form a pliable article.



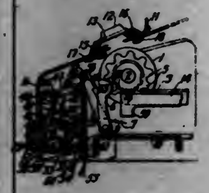
9. In the art of making cartridge plugs or wads, the process comprising, heating an oil to a polymerizing temperature, impregnating a cellular organic material therewith, and heating the impregnated mass at a cementing temperature.

1,485,338. FLOATING TRAWLING FISH SEINE. PAUL M. SKRMETTI, San Pedro, Calif. Filed Jan. 21, 1922. Serial No. 530,899. 8 Claims. (Cl. 43—9.)



1. A trawling fish seine comprising a bag section, and a trough section arranged in advance of the bag section and adapted to be folded against the bag section to completely close the latter, said bag section having an unrestricted mouth which merges into the trough section.

1,485,339. SPUDDING SHOE. DAN W. UBER, Sheffield, Pa., assignor to Moser Manufacturing Company, Kane, Pa., a Corporation of Pennsylvania. Filed June 16, 1922. Serial No. 568,768. 8 Claims. (Cl. 255—33.)

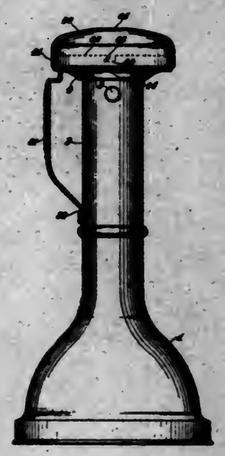


1. A spudding shoe having a cable bearing comprising rotatable members, and means for holding the cable in contact with said members.

1,485,340. APPARATUS FOR APPLYING GRANULAR SURFACING MATERIALS UPON PREPARED ROOFING. GEORGE RITTER, Perth Amboy, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 11, 1922. Serial No. 535,945. 8 Claims. (Cl. 91—29.)

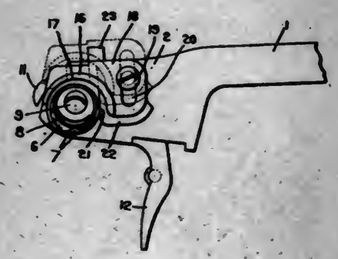
1. In apparatus for applying surfacing material to a base sheet or web, the combination of a main roll about which the web is passed; a cooperative auxiliary pressure roll; pivot arms by which the auxiliary roll is supported for free rotation; a shaft with cranks carried jointly by the arms; and rods respectively coordinated, at one end, with fixed elements and pivoted at the other to the cranks of the shaft.

1,485,341. COMPUTING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,838. 24 Claims. (Cl. 235—60.)



1. In a computing machine, the combination of a register comprising number-wheels for indicating the results of different kinds of computing operations, and automatically-operated means to indicate the kind of result run up on the number-wheels.

23. In a computing machine, the combination of a register comprising number-bearing elements, and automatically-operated means comprising two lamps of different colors to indicate the kind of computation run into the number-bearing elements.

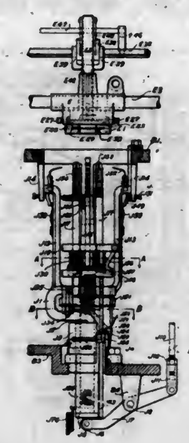


1,485,342. CIGAR LIGHTER. GEORGE BENHAM and MARTIN A. O'MARA, St. Louis, Mo.; said Benham assignor to said O'Mara. Filed Dec. 6, 1917. Serial No. 205,851. 2 Claims. (Cl. 67—4.1.)

1. A cigar lighter, comprising, a burner, igniter mechanism adapted to kindle said burner and including a movable element, means for retaining said element against movement, an actuator yieldingly connected with and adapted to tension said element, during the initial movement of said actuator and while said element is so retained,

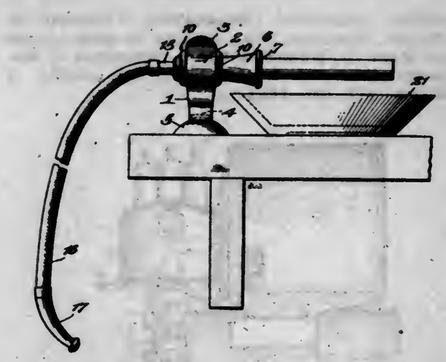
means carried by said actuator adapted to thereafter operate said retainer to release said element, and a muffler carried by said element.

1,485,343. LOOM TEMPLE. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 23, 1922. Serial No. 590,017. 6 Claims. (Cl. 139—295.)



1. A loom temple comprising a shank having a head, a toothed roll rotatably mounted upon a journal extending laterally from said head, a cap having a concave face partially enclosing and normally lying in proximity to the periphery of said roll, means pivotally connecting said cap to said head and means requiring said cap to be bodily moved away from said roll before said cap can be swung pivotally to expose the roll whereby contact of the cap with the teeth of the roll will be prevented.

1,485,344. AUTOMATIC LABEL FEEDER. ROBERT H. FENN, Whitestone, N. Y. Original application filed Dec. 26, 1918, Serial No. 268,296. Divided and this application filed Oct. 7, 1920, Serial No. 415,369. Renewed July 13, 1923. 17 Claims. (Cl. 216—55.)



1. In an automatic box machine, a label feeder comprising a vertically reciprocated yoke platen with cam means

for operating the same, said yoke platen provided with a hollow shaft extending below, and a bearing therefor;

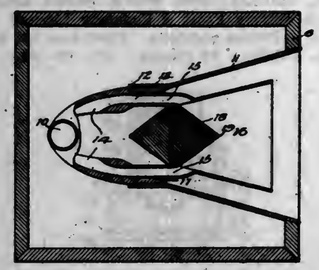
vertical arms extending upwardly from the sides of said yoke platen and guides therefor.

1,485,345. COMBINATION CIGARETTE HOLDER AND SMOKING TUBE. ROBERT G. FLEMING, Newark, N. J., assignor to The Smokador Manufacturing Company, Inc., Bloomfield, N. J. Filed July 11, 1923. Serial No. 650,797. 2 Claims. (Cl. 131—51.)

2. In a combined cigarette holder and smoking tube, a receiver, a cigarette holder, means formed to removably support the holder, means to prevent axial movement of the holder in the supporting means and to retain the holder with the lighted end of the cigarette in a predetermined position overlying the receiver, and a tube having one end connected to the holder and its opposite end provided with a mouth piece.

1,485,346. SMOKER'S APPLIANCE. ROBERT G. FLEMING, Newark, N. J., assignor to The Smokador Manufacturing Company, Inc., Bloomfield, N. J. Filed July 11, 1923. Serial No. 650,796. 4 Claims. (Cl. 131—51.)

4. A holder for cigars and the like including a support, and a pair of members on the support formed to engage opposite sides of a cigar, one of the members being slidable along the support, and means to tension said member, the members being formed at their free ends to allow a cigar



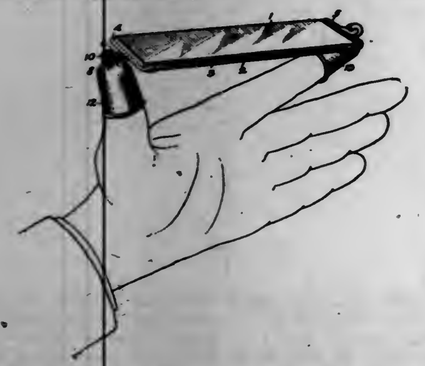
to be engaged therebetween and by pressure thereon to cause sliding of said member to allow the cigar to engage the support and be held thereon by the tensioning means.

1,485,347. SPARK-PLUG CLEANER. CONRAD JACOBS, New York, N. Y. Filed Dec. 20, 1921. Serial No. 523,705. 3 Claims. (Cl. 15—104.01.)

1. A spark plug cleaner, comprising a handle, a blade pivotally mounted in the handle, said blade including a body portion, and an end portion lying in a plane extending at an angle to the plane of the body portion and intersecting it along a line extending diagonally of the axis of the body of the blade.

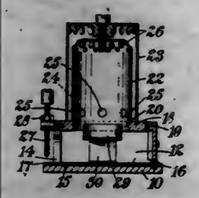
1,485,348. SOUND CLARIFIER. CORREL W. JOHNSON, New York, N. Y. Filed June 15, 1922. Serial No. 568,586. 1 Claim. (Cl. 181—27.)

A sound clarifier, including an amplifying member, a pair of deflector horns within said member disposed one above the other, a deflector member within each of said horns, a pair of tubes connected to each of said horns and opening into the rear end of each of said deflector horns, sloping walls on said deflector member within each of said horns associated with the tubular opening to direct the sound forward within the horn, and a plurality of passages formed in the walls of the amplifier member, the



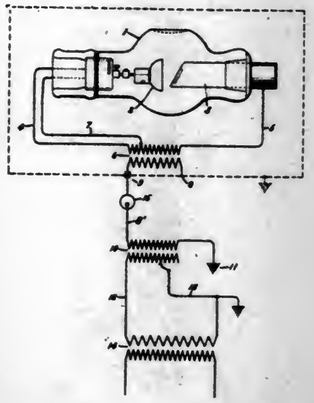
inner ends of said tubes being mounted in the wall in line with the outer ends of said passages, whereby the tubes and the arms are supported from the walls of the amplifier member.

1,485,349. AIRCRAFT. GEORGE FRANCIS MYERS, New York, N. Y. Filed Aug. 23, 1909, Serial No. 514,165. Renewed Feb. 13, 1920. Serial No. 358,434. 10 Claims. (Cl. 244—14.)



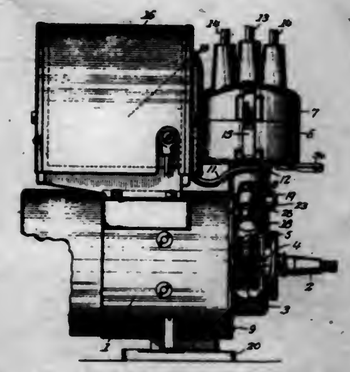
1. A flying machine comprising a body, a stabilizing plane connected with the said body by a pivot which inclines downwardly from its front end to its rear end lengthwise of the machine, and a stabilizing plane which inclines upwardly from its front end to its rear end lengthwise of the machine.

1,485,350. RAZOR STROP. JOHN W. SHEPARD, Tucson, Ariz. Filed Feb. 2, 1923. Serial No. 616,547. 8 Claims. (Cl. 51—198.)



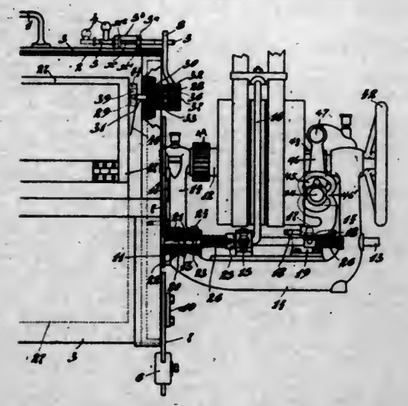
2. A razor strop of the character described, comprising a strop body, and a cup-shaped support connected with said body adjacent each end thereof.

1,485,351. MEANS FOR CONTROLLING THE SUPPLY OF HEAT IN VULCANIZING AND OTHER APPARATUS. WALTER HENRY WELCH, Bristol, England, assignor to Harvey Frost & Company Limited, London, England, a British Company. Filed Jan. 16, 1923. Serial No. 613,024. 15 Claims. (Cl. 18—18.)



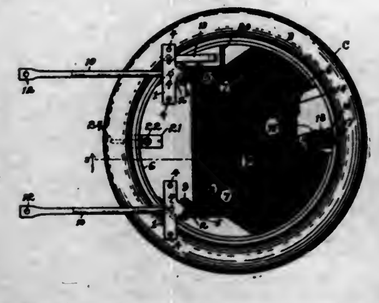
1. In a heating device, the combination of a two-part heating-element whereof one part is arranged to be heated directly and the other is arranged to be heated conductively from the first, means for heating the said first part, and automatic means for introducing into the heat-conducting path between the two parts an element which is a poor conductor of heat and for varying the length of the said poor conductor so as to control the supply of heat to the conductively-heated part.

1,485,352. ELECTRIC DISCHARGE APPARATUS. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1921. Serial No. 471,239. 4 Claims. (Cl. 250—34.)



1. An X-ray apparatus comprising an X-ray tube, a transformer having a secondary winding connected to the terminals of said tube, a metal container for said tube and transformer, a ground connection including one point of the primary of said transformer and said container, a leading-in conductor insulated from said container connected to another point of said primary and a local insulating transformer external to said tank having one terminal of the secondary grounded and another terminal connected to said leading-in conductor.

1,485,353. IGNITION APPARATUS. WILLIAM S. HARLEY, Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 1, 1919. Serial No. 335,003. 8 Claims. (Cl. 123—149.)



1. In an ignition apparatus, the combination of an electric generator having a housing and an armature shaft journaled therein, a distributor having stationary contacts and a rotatable contact segment, a casing for the distributor supported by the generator housing, a shaft for the distributor segment journaled in a bearing integral with casing and housing, a gear on the armature shaft, and a gear on the distributor shaft adapted to mesh with the other gear, the distributor shaft, and the segment and gear thereon being removable as a unit through the casing.

1,485,354. WASHING MACHINE. OTTO HERRMANN, Erfurt, Germany, assignor to J. A. John Aktien-Gesellschaft, Erfurt-Ilversgehofen, Germany. Filed Aug. 7, 1922. Serial No. 580,206. 6 Claims. (Cl. 192—135.)

1. In a rotary washing machine, the combination with a rotatable inner drum and a stationary outer drum having a slidable cover, of a spring-pressed belt fork tending to maintain itself in the neutral position, a belt drive controlled by said fork and adapted to rotate the inner drum in opposite directions when the fork is reciprocated from one side of the neutral position to the other, a latch adapted to participate in the reciprocating movements of the fork and tending to lock the fork in the neutral position, connection between the latch and said cover whereby the latch is tripped so as to unlock the fork when the cover is closed and released when the cover is opened, and a continuously operated swinging lever adapted to engage with the latch so as to reciprocate the belt fork when the latch is tripped by the closing of the cover.

1,485,355. TIRE CARRIER. NELSON R. WILLIAMSON, Portland, Ind. Filed Mar. 12, 1923. Serial No. 624,410. 4 Claims. (Cl. 280—164.)

2. A device of the nature set forth, including a step, means for hinging the step to a vehicle whereby it may be turned up or down, means for supporting the step when it is in substantially horizontal position, means for detachably retaining the step in upturned position, and means for detachably retaining a tire and its rim around said step.

3. A device of the nature set forth comprising a step, a ring surrounding the step, means for hinging said ring to brackets, means for securing the brackets to a vehicle, brace arms connecting said brackets to a vehicle, and means for detachably connecting an inflated vehicle tire to said ring.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Polish, Silver. C. M. Kimball Company. 179,153; Feb. 5; Serial No. 181,191; published Nov. 13, 1923.
Polish, Stove. C. M. Kimball Company. 179,089; Feb. 5; Serial No. 181,192; published Nov. 13, 1923.
Polishes, Metal, silver, and stove. C. M. Kimball Company. 179,259; Feb. 5; Serial No. 153,003; published Nov. 13, 1923.
Powder and preparation for the hands. J. D. La Croix. 179,125; Feb. 5; Serial No. 184,408; published Nov. 13, 1923.
Preparation for the same use to which soaps, cleaning fluids, washing powders, etc., are put. Solidified Naphtha Corporation. 179,215; Feb. 5; Serial No. 182,273; published Nov. 13, 1923.
Soap. General Paint and Varnish Company. 179,109; Feb. 5; Serial No. 183,277; published Nov. 13, 1923.
Soap. J. C. Wolford. 179,105; Feb. 5; Serial No. 183,461; published Nov. 13, 1923.
Soap, Medicated. Société Anonyme des Laboratoires Innoxa. 179,011; Feb. 5; Serial No. 181,354; published Nov. 13, 1923.
Soap stock. American Cotton Oil Company. 179,026; Feb. 5; Serial No. 177,466; published Nov. 13, 1923.
Soaps and shaving creams. Palmers, Limited. 179,098; Feb. 5; Serial No. 184,291; published Nov. 13, 1923.
Soaps, Toilet. L. T. Piver, Inc. 179,231; Feb. 5; Serial No. 184,421; published Nov. 13, 1923.

CLASS 5.

Adhesive cements. McCaw, Stevenson & Orr, Ltd. 178,985; Feb. 5; Serial No. 141,922; published Nov. 13, 1923.
Glues or pastes. Dextro Products Inc. 179,308; Feb. 5; Serial No. 186,220; published Nov. 20, 1923.
Tire-repair compounds, adhesives, etc. H. G. House. 179,307; Feb. 5; Serial No. 186,232; published Nov. 20, 1923.
Varnishes, adhesive gums, and sealing wax, Bottle. Deutsche Capselin- & Zinnolitwerke Gesellschaft mit beschränkter Haftung. 179,003; Feb. 5; Serial No. 166,661; published Nov. 6, 1923.

CLASS 6.

Aldehyde, solid methyl alcohol, and solid ethyl alcohol, Agglomerates of solid. Elektrizitatswerk Lonza. 179,139; Feb. 5; Serial No. 183,699; published Nov. 13, 1923.
Alum, boric acid, camphorated oil, etc. U. S. Pure Drug Laboratories. 179,073; Feb. 5; Serial No. 183,130; published Nov. 13, 1923.
Alum, boric acid, powdered borax, etc., Powdered. Hy-Pure Laboratories. 179,075; Feb. 5; Serial No. 183,115; published Nov. 13, 1923.
Blood purifier, liniment, skin lotion, etc. E. W. Merriss Home Remedy Company. 179,400; Feb. 5.
Carbohydrates in the animal body and remove the symptoms of diabetes mellitus, Substance which will effect the combustion of. Connaught Antitoxin Laboratories, University of Toronto. 179,174; Feb. 5; Serial No. 168,919; published June 26, 1923.
Chemical carbon destroyer. C. J. Schopp. 179,339; Feb. 5; Serial No. 172,953; published Apr. 17, 1923.
Chemical composition employed in stamping patterns. S. S. Bendick. 179,180; Feb. 5; Serial No. 165,264; published July 18, 1922.
Chemical preparation. A. P. Kottler. 179,018; Feb. 5; Serial No. 178,928; published July 24, 1923.
Chemical substances used in the manufactures, anticorrosives, and drug for vulcanizing rubber. T. H. Roberts. 179,135; Feb. 5; Serial No. 183,760; published Nov. 13, 1923.
Clay, cleansing and tissue crèmes, Facial. J. C. Pickett. 179,078; Feb. 5; Serial No. 183,083; published Nov. 13, 1923.
Cleaning and disinfectant preparation. M. Glauber & Company. 179,344; Feb. 5; Serial No. 183,829; published Nov. 20, 1923.
Composition for treating leucorrhea. S. S. Atkins. 179,145; Feb. 5; Serial No. 183,642; published Nov. 13, 1923.
Compound for treating colds, influenza, etc. J. J. Enhelder. 179,077; Feb. 5; Serial No. 183,057; published Nov. 13, 1923.
Corn remover. J. C. Dawes. 179,199; Feb. 5; Serial No. 183,332; published Nov. 13, 1923.
Cough drops. C. F. Eggimann. 179,351; Feb. 5; Serial No. 183,445; published Nov. 20, 1923.
Cream, headache powder, and liniment, Skin. J. T. Kardas. 179,223; Feb. 5; Serial No. 181,897; published Nov. 6, 1923.
Dentifrice and also liquid cream dentifrice, Liquid. Solvora, Inc. 179,101; Feb. 5; Serial No. 183,805; published Nov. 20, 1923.
Diastatic preparation used for desizing and degumming of fabrics, etc. American Burtonizing Company and Wallerstein Laboratories. 179,144; Feb. 5; Serial No. 183,619; published Nov. 13, 1923.
Electrolyte for storage batteries. L. E. Brownell. 179,181; Feb. 5; Serial No. 164,302; published Nov. 20, 1923.

Fire-extinguishing chemical compound. Protex Chemical Co. 179,233; Feb. 5; Serial No. 183,888; published Nov. 13, 1923.
Hair-dressing preparation. C. E. Bonyata. 179,138; Feb. 5; Serial No. 183,690; published Nov. 13, 1923.
Hair shampoo. Romano Baldassare and Co. 179,004; Feb. 5; Serial No. 181,717; published Nov. 6, 1923.
Insect destroyer. Bedsole-Colvin Drug Co. 179,352; Feb. 5; Serial No. 183,329; published Nov. 20, 1923.
Insecticides. E. Govett. 179,150; Feb. 5; Serial No. 183,521; published Nov. 13, 1923.
Insecticides. Hood River Spray Company. 179,322; Feb. 5; Serial No. 183,832; published Nov. 20, 1923.
Insecticides. O. H. Jadwin. 24,475; renewed Apr. 3, 1924.
Insecticides. S. H. Sachaklian. 179,371; Feb. 5; Serial No. 183,165; published Nov. 20, 1923.
Laxative, Antiseptic. Abel-Jensen Laboratories. 179,210; Feb. 5; Serial No. 183,515; published Nov. 13, 1923.
Liniment for external use. I. B. Jefferson. 179,167; Feb. 5; Serial No. 165,083; published Nov. 13, 1923.
Lip sticks. Societe Guerlain. 179,133; Feb. 5; Serial No. 183,772; published Nov. 13, 1923.
Lotion, Hand. M. Sullivan. 179,194; Feb. 5; Serial No. 183,418; published Nov. 13, 1923.
Medicated tablets and capsules for headache, etc. W. A. Libby. 179,157; Feb. 5; Serial No. 173,839; published Nov. 13, 1923.
Medicinal preparation. F. Grosse. 179,270; Feb. 5; Serial No. 182,206; published Nov. 13, 1923.
Medicinal preparation. Thompson-Barlow Company. 179,349; Feb. 5; Serial No. 183,458; published Nov. 20, 1923.
Medicinal preparation. Tryalax Manufacturing Co. 179,071; Feb. 5; Serial No. 181,790; published Nov. 6, 1923.
Medicinal preparation for the treatment of pains, aches, etc. Mrs. E. Smith. 179,373; Feb. 5; Serial No. 182,881; published Nov. 20, 1923.
Medicinal preparation used in the treatment of gout, rheumatism, etc. Schering & Glatz, Inc. 179,374; Feb. 5; Serial No. 182,839; published Nov. 20, 1923.
Medicinal tea, Celery. P. C. Melrose. 22,607; renewed Mar. 7, 1923.
Medicine to be used in the treatment and prophylaxis of cancer, Patent. G. Fermé. 179,159; Feb. 5; Serial No. 179,465; published Nov. 13, 1923.
Medicines. S. Bela. 179,168; Feb. 5; Serial No. 165,663; published Nov. 13, 1923.
Medicines for disorders of the stomach, indigestion, etc. Sampico Indian Medicine Co. 179,275; Feb. 5; Serial No. 181,022; published Nov. 20, 1923.

Pharmaceutical preparation. H. C. Thorburn. 179,044; Feb. 5; Serial No. 185,193; published Nov. 13, 1923.
Pharmaceutical preparations, face creams, powders, etc. M. L. Murata. 178,992; Feb. 5; Serial No. 160,715; published Nov. 6, 1923.
Powder, Toilet. Eli Lilly and Company. 179,143; Feb. 5; Serial No. 183,579; published Nov. 13, 1923.
Powders, Foot. J. V. Ryback. 179,068; Feb. 5; Serial No. 181,781; published Nov. 6, 1923.
Preparation for growing hair and eradicating dandruff. I. J. Harris. 179,321; Feb. 5; Serial No. 183,830; published Nov. 20, 1923.
Preparation for pyorrhea or Riggs' disease. Lawrence Chemical Company. 179,195; Feb. 5; Serial No. 183,889; published Nov. 13, 1923.
Preparation for removing freckles. M. Sullivan. 179,072; Feb. 5; Serial No. 183,175; published Nov. 13, 1923.
Preparation for removing wrinkles. M. Sullivan. 179,146; Feb. 5; Serial No. 183,176; published Nov. 13, 1923.
Preparation for rheumatism, sprains, etc. Linitane Company. 179,141; Feb. 5; Serial No. 183,751; published Nov. 13, 1923.
Preparation for the hair. R. H. Cromwell. 179,069; Feb. 5; Serial No. 181,734; published Nov. 6, 1923.
Preparation for the treatment of corns, etc. Kahley Company. 179,335; Feb. 5; Serial No. 176,797; published Nov. 20, 1923.
Preparation for the treatment of headache, neuralgia, etc. Gilbert Bros. & Co. 179,084; Feb. 5; Serial No. 182,511; published Nov. 13, 1923.
Preparation for the treatment of headache, neuralgia, etc. Gilbert Bros. & Co. 179,196; Feb. 5; Serial No. 183,377; published Nov. 13, 1923.
Preparation for the treatment of itch, sores, etc. Germ-O-Salv Company. 179,086; Feb. 5; Serial No. 182,342; published Nov. 13, 1923.
Preparation for the treatment of pyorrhea. M. E. Hisey. 179,282; Feb. 5; Serial No. 181,341; published Nov. 20, 1923.
Preparation for the treatment of rheumatism, etc. I. Gold. 179,225; Feb. 5; Serial No. 181,886; published Nov. 6, 1923.
Preparation for the treatment of syphilis and other spirochetal diseases. Boot's Pure Drug Co. 179,151; Feb. 5; Serial No. 183,552; published Nov. 13, 1923.
Preparation for the treatment of toothache. J. L. Case. 179,079; Feb. 5; Serial No. 183,094; published Nov. 13, 1923.
Preparation for the treatment of tuberculosis, asthma, and hay fever. J. L. Rowsey. 179,166; Feb. 5; Serial No. 165,036; published Nov. 13, 1923.
Preparation for use as a preventive of rheumatism and for neutralizing uric acid. A. J. Adams. 179,162; Feb. 5; Serial No. 168,910; published Nov. 13, 1923.
Purgative tea. A. Sicre. 23,951; renewed Dec. 26, 1923.
Radium, Radium Emanation Corporation. 179,355; Feb. 5; Serial No. 183,890; published Nov. 20, 1923.
Remedies for cough-producing affections and colds. Wescoe Laboratories. 179,085; Feb. 5; Serial No. 182,633; published Nov. 13, 1923.
Remedy for stomach disorders and constipation. I. A. Melnick. 179,191; Feb. 5; Serial No. 183,488; published Nov. 13, 1923.
Salt. F. I. W. Bursch. 24,550; renewed Apr. 17, 1924.
Shampoo. A. Noll. 179,142; Feb. 5; Serial No. 183,757; published Nov. 13, 1923.
Shampoo. R. I. Paddon. 179,074; Feb. 5; Serial No. 183,120; published Nov. 13, 1923.
Snuff. A. Carmel. 179,345; Feb. 5; Serial No. 183,818; published Nov. 20, 1923.
Specific, Rheumatism. J. P. Teague. 179,221; Feb. 5; Serial No. 181,965; published Nov. 6, 1923.
Toilet preparation for the eyes. D. Anschl. 179,346; Feb. 5; Serial No. 183,811; published Nov. 20, 1923.
Toilet preparations. M. J. Langdon. 179,087; Feb. 5; Serial No. 182,474; published Nov. 13, 1923.
Tonic and system renovator. P. C. Hyde. 179,224; Feb. 5; Serial No. 181,893; published Nov. 6, 1923.
Tonic, Stomach. Universal Remedies Company. 179,193; Feb. 5; Serial No. 183,426; published Nov. 13, 1923.
Tonic, Vitamine. Elkins Medicine Co. 179,091; Feb. 5; Serial No. 182,143; published Nov. 13, 1923.
Tonics, General. E. T. Wix. 179,169; Feb. 5; Serial No. 166,729; published Nov. 13, 1923.
Tooth paste and a cream for the skin. Gilbert Bros. & Co. 179,198; Feb. 5; Serial No. 183,372; published Nov. 13, 1923.
Water neutralizer, scale remover, and scale preventive for boilers. P. Edwards. 179,088; Feb. 5; Serial No. 182,238; published Nov. 13, 1923.
Welding preparation. Wilson Instrument & Specialty Company. 179,192; Feb. 5; Serial No. 183,429; published Nov. 13, 1923.
Zinc oxide. Grasselli Chemical Company. 178,997; Feb. 5; Serial No. 163,975; published Nov. 13, 1923.

CLASS 7.

Ropes, cords, and twine. New York Net & Twine Co. 179,042; Feb. 5; Serial No. 168,120; published Nov. 6, 1923.
Twine and rope, jute, hemp, etc., Cotton. H. G. Kleinfelder & Son. 179,420; Feb. 5.
Twines for fishing nets. Stuarts & Jacks, Limited. 179,024; Feb. 5; Serial No. 178,301; published Nov. 13, 1923.

CLASS 9.

Pistols, rifles, and sporting guns. Colt's Patent Fire Arms Manufacturing Company. 24,696; renewed May 8, 1924.

CLASS 10.

Fertilizers. Pacific Bone Coal & Fertilizing Company. 179,392; Feb. 5.
Fertilizers, Liquid. H. J. Taubert. 179,102; Feb. 5; Serial No. 183,807; published Nov. 6, 1923.
Lime for agricultural purposes, Hydrated. Kelley Island Lime and Transport Company. 179,277; Feb. 5; Serial No. 181,128; published Nov. 20, 1923.

CLASS 12.

Roofing material. Continental Roofing & Manufacturing Co. 179,153; Feb. 5; Serial No. 180,052; published Nov. 13, 1923.
Tile construction units, Metal. Goldsmith Metal Lath Company. 179,413; Feb. 5.

CLASS 13.

Bathroom fixtures. C. F. Church Manufacturing Co. 179,156; Feb. 5; Serial No. 181,111; published Nov. 27, 1923.
Cookers, Steam-pressure. Metropolitan Manufacturing Company. 179,175; Feb. 5; Serial No. 168,541; published Nov. 20, 1923.
Garment-hanging fixtures. Lawson Manufacturing Company. 179,223; Feb. 5; Serial No. 180,186; published Nov. 20, 1923.
Pipe couplings, metal pipes, etc., Metal. National Tube Company. 179,126; Feb. 5; Serial No. 184,415; published Nov. 13, 1923.

CLASS 14.

Molybdenum and tantalum. Fansteel Products Company. 179,283; Feb. 5; Serial No. 181,521; published Nov. 20, 1923.
Steel, Sheet. Milwaukee Rolling Mill Company. 179,065; Feb. 5; Serial No. 185,874; published Nov. 13, 1923.

CLASS 15.

Lubricants. Harvey Oil Co. 179,358; Feb. 5; Serial No. 184,029; published Nov. 20, 1923.
Oil and gasoline, Motor. Kentucky Independent Oil Company. 179,364; Feb. 5; Serial No. 184,286; published Nov. 20, 1923.
Oil, Lubricating. Roxana Petroleum Corporation. 179,311; Feb. 5; Serial No. 185,991; published Nov. 20, 1923.
Oils and gasoline, Lubricating. Sweney Gasoline & Oil Co. 179,097; Feb. 5; Serial No. 184,221; published Nov. 6, 1923.
Oils and gasoline, Lubricating. Union Oil Company of California. 179,036; Feb. 5; Serial No. 172,300; published Nov. 6, 1923.
Oils and greases, etc. Sterling Oil Company of Pennsylvania. 179,212; Feb. 5; Serial No. 182,620; published Nov. 6, 1923.
Oils, Lubricating. G. A. Bergfors. 179,309; Feb. 5; Serial No. 184,212; published Nov. 20, 1923.
Oils, Lubricating. Standard Oil Company of New York. 179,029; Feb. 5; Serial No. 175,969; published Nov. 6, 1923.
Oils, Lubricating. Waverly Oil Works Company. 179,312; Feb. 5; Serial No. 185,802; published Nov. 20, 1923.

CLASS 16.

Calcimines. Muralo Company. 179,107; Feb. 5; Serial No. 183,397; published Nov. 13, 1923.
Colors, paste, and ready-mixed paints, varnishes, oil pastes, and shellacs, Dry. Albert K. Sheldon Company. 179,298; Feb. 5; Serial No. 179,747; published Nov. 20, 1923.
Finishing or polishing material. "Bear Cat" Products Co. 179,235; Feb. 5; Serial No. 186,210; published Nov. 20, 1923.
Paint, Enamel. C. A. Woolsey Paint & Color Company. 179,108; Feb. 5; Serial No. 183,326; published Nov. 6, 1923.
Paints and paint enamels. Toch Brothers. 179,170–1; Feb. 5; Serial Nos. 181,590–1; published Nov. 13, 1923.

Ames, Adelbert, jr., Hanover, N. H. Photographic-lens system. 1,482,503; Feb. 5.
Anderson, Albert C., Antonito, Colo. Pump. 1,482,376; Feb. 5.
Anderson, Paul H. (See Seaboyer, G. E., and Anderson.)
Armstrong, John J., Los Angeles, Calif., assignor of one-half to R. B. Booth, Honolulu, Hawaii. Hose coupling. 1,482,722; Feb. 5.
Arnold, Thomas A., Tacoma, Wash. Emergency brake for motor vehicles. 1,482,538; Feb. 5.
Arthur, John E., and C. L. Moody, Lane, Ill. Boring machine. 1,482,879; Feb. 5.
Associated Trading Corporation. (See Sanborn, John B., assignor.)
Atkinson, Harry L., San Francisco, Calif. Follower-block mounting. 1,482,832; Feb. 5.
Atlas Powder Company. (See Converse, Leroy S., assignor.)
Atwood Machine Company. (See Bradley, Edward E., assignor.)
Aus, Herman C. L., Hamilton, Newcastle, New South Wales, Australia. Insectproof sliding-sash window. 1,482,426; Feb. 5.
Auster, Louis and M., New York, N. Y. Bathing cap. 1,482,723; Feb. 5.
Auster, Marie. (See Auster, Louis and M.)
Auto Mail Distributer, Inc., The. (See Barry, William, assignor.)
Averill, Rex G., assignor to The Ohio Brass Company, Mansfield, Ohio. Electric coupler. 1,482,833; Feb. 5.
Averill, William H., assignor to Bell Clip Manufacturing Company, Boston, Mass. Display stand. Des. 63,865; Feb. 5.
Babcock & Wilcox Company, The. (See Pratt, Arthur D., assignor.)
Badische Anilin- & Soda-Fabrik. (See Mittasch, A., and Kircher, assignors.)
Bair, Joseph H., Philadelphia, Pa. Counter. 1,482,539; Feb. 5.
Banitt, John N., and J. Thiemann, Goodhue, Minn. Bank-teller's window guard. 1,482,961; Feb. 5.
Banks, Walter W., Salem, N. J. Bridge for billiard and pool tables. 1,482,962; Feb. 5.
Barber Asphalt Paving Company, The. (See Ritter, George, assignor.)
Barber-Colman Company. (See Hathaway, E. F., and Lea, assignors.)
Baron, Charles S., Tiffin, Ohio. Liquid container and top. 1,482,724; Feb. 5.
Barons, Grace B., Rochester, N. Y. Toy animal. Des. 63,866; Feb. 5.
Barry, William, Oswego, assignor to The Auto Mail Distributer, Inc., Syracuse, N. Y. Mail-distributing apparatus. 1,482,834; Feb. 5.
Bartlett, George S. (See Bickel, Joseph W., assignor.)
Barton, Ben D., Jackson, Mich. Power attachment for motor vehicles. 1,482,880; Feb. 5.
Batcheller, Birney C., Brooklyn, N. Y., assignor to Bemis Bro. Bag Co., St. Louis, Mo. Bag-turning machine. 1,482,377; Feb. 5.
Batcheller, Hugh W., Worcester, Mass. Lamp holder for automobile hoods. 1,482,454; Feb. 5.
Batcheller, Hugh W., Worcester, Mass., assignor to Worcester Electric Supply Company. Dash lamp. Des. 63,867; Feb. 5.
Batchelor, William N., Baltimore, Md. Deposit and collection receptacle for milk bottles. 1,482,378; Feb. 5.
Bates, C. J., & Son. (See Korhammel, Otto J., assignor.)
Bates, Thomas O., Liverpool, England. Machinery for making wafer biscuits, cup wafers, and similar articles from liquid. 1,482,963; Feb. 5.
Battle Creek Box Co. (See Cummings, Charles A., assignor.)
Bausch & Lomb Optical Company. (See Hart, Edwin, assignor.)
Baxter, Harry, Newman, Ill. Grain-bundle shocker. 1,482,594; Feb. 5.
Bechtel, John, sr., Earlham, Iowa. Fan. 1,482,504; Feb. 5.
Bechtol, Archie H., Memphis, Tenn., and W. A. Tratsch, Chicago, Ill. Target for amusement devices. 1,482,725; Feb. 5.
Beckwith Company, The. (See Howes, George W., assignor.)
Becton, Ida M., East Rutherford, N. J. Apron. 1,482,777; Feb. 5.
Bell Clip Manufacturing Company. (See Averill, William H., assignor.)
Bellis Heat Treating Company, The. (See Collins, Charles S., assignor.)
Belt, Fred R., assignor to Fred R. Belt Company, Chicago, Ill. Miner's lamp. Des. 63,868; Feb. 5.
Belt, Fred R., Company. (See Belt, Fred R., assignor.)
Bemis Bro. Bag Co. (See Batcheller, Birney C., assignor.)
Benedict, Hershel A., East Orange, and E. M. Moller, Jersey City, N. J. Anchor. 1,482,964; Feb. 5.
Benjamin, E. V., Company, The. (See Goben, Edward G., assignor.)
Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)
Benjamin Gross Company. (See Fiedler, Louis, assignor.)
Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Signal device for automobiles. 1,482,540; Feb. 5.
Berge, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Speedometer. 1,482,595; Feb. 5.
Berge, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Odometer mechanism. 1,482,596; Feb. 5.
Berge, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Speedometer. 1,482,597; Feb. 5.

Berggren, Per J., Chicago, Ill. Telescope adjustment. 1,482,881; Feb. 5.
Bergner, Jean, Dusseldorf, Germany. Float-controlled valve. 1,482,505; Feb. 5.
Berlin, Harry S., assignor to The Victor Rubber Company, Springfield, Ohio. Pneumatic-tire tread. Des. 63,869; Feb. 5.
Berry, Edward R., Malden, Mass., assignor to General Electric Company. Quarts working. 1,482,455; Feb. 5.
Bertrand, Frederic E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Channeling machine. 1,482,379; Feb. 5.
Best, C. L., Gas Traction Company. (See Best, Clarence L., assignor.)
Best, Clarence L., San Leandro, assignor to C. L. Best Gas Traction Company, San Leandro, Calif. Traction engine. 1,482,726; Feb. 5.
Bevan, Llewellyn E. W., Salisbury, Southern Rhodesia, South Africa. Bacteriological test apparatus. 1,482,966; Feb. 5.
Bianchi, Attilio. (See Occhipinti, G., and Bianchi.)
Bickel, Joseph W., Chicago Heights, assignor of one-half to G. S. Bartlett, Evanston, Ill. Meter. 1,483,039; Feb. 5.
Bierman, Edwin W., assignor to Standard Four Tire Company, Keokuk, Iowa. Automobile tire. Des. 63,870; Feb. 5.
Bigoney, Thomas W., Philadelphia, Pa. Shoe heel. 1,482,456; Feb. 5.
Bigoney, Thomas W., Philadelphia, Pa. Shoe heel. 1,482,457; Feb. 5.
Black, Elmer A., Louisville, Ky. Pool-ball cabinet. 1,482,965; Feb. 5.
Blakney, John H., assignor to Lournay, Inc., Milwaukee, Wis. Cologne bottle. Des. 63,871; Feb. 5.
Blaw-Knox Company. (See Shipman, William P., assignor.)
Blodgett, Charles L., Alameda, assignor of one-half to M. L. Larsen, Oakland, Calif. Book-locking device. 1,482,781; Feb. 5.
Blot, Paul, assignor to Societe Blot-Garnier & Chevalier, Paris, France. Electromechanical lamp. 1,483,055; Feb. 5.
Boley, Ernst, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey. Dies. 1,482,835; Feb. 5.
Boney, Ashton M. (See Bunker, J. W., and Boney.)
Bonier, Louis P., Woonsocket, R. I. Combined receptacle and cutting board. 1,483,040; Feb. 5.
Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 1,482,782; Feb. 5.
Boone, Daniel, Mining Machine Company. (See Hess, Louis F., assignor.)
Booth, Robert B. (See Armstrong, John J., assignor.)
Borchers, Julius, New York, N. Y. Box and making the same. 1,482,727; Feb. 5.
Boucher, Donat P., Northbridge, Mass. Paper bag. 1,482,783; Feb. 5.
Bound Brook Oil-Less Bearing Company. (See Shoemaker, George A., assignor.)
Boutin, Stanley, assignor to W. E. Gilbert, G. H. Empsall, and H. Duckworth, trustees, doing business as Duckworth Chain & Manufacturing Company, Springfield, Mass. Feeding and delivering mechanism. 1,482,427; Feb. 5.
Bowmar, Gershon, Toronto, Ontario, Canada. Insulating head for pistons. 1,482,778; Feb. 5.
Boye, James H., Chicago, Ill. Holder for drinking glasses. Des. 63,872; Feb. 5.
Bracco, Rose F., Chicago, Ill. Satchel clip. 1,482,728; Feb. 5.
Bradford, Thomas R., Sturgis, Mich. Child's cart. 1,482,506; Feb. 5.
Bradley, Edward E., assignor to Atwood Machine Company, Stonington, Conn. Stop motion. 1,482,779; Feb. 5.
Braisted, Le Roy, Wellesley, assignor to Milford Iron Foundry, Milford, Mass. Welded column and making it. 1,482,541; Feb. 5.
Brewer-Titchener Corporation, The. (See Winans, Daniel M., assignor.)
Brierton, Benjamin E., Birmingham, Ala. Optometrical instrument. 1,482,967; Feb. 5.
Brooks, Albert E., Everett, Wash. Seal. 1,482,672; Feb. 5.
Brooks, William J., assignor to G. H. Harvey, Middletown, Ohio. Valve. 1,483,041; Feb. 5.
Brooks, Winfield L., and W. M. Smith, Worcester, Mass., assignors to Royal Worcester Corset Company. Sewing-machine attachment for spiral stitching. 1,482,907; Feb. 5.
Brown, Frank A., Kansas City, Mo. Key holder. 1,482,673; Feb. 5.
Brown, John R., assignor to The Reliance Gauge Column Company, Cleveland, Ohio. Float for steam traps and the like. 1,482,832; Feb. 5.
Brubaker, Henry J. and J. B., San Dimas, Calif. Irrigating valve. 1,482,836; Feb. 5.
Brubaker, John B. (See Brubaker, Henry J. and J. B.)
Brunsman, Walter J., Cincinnati, Ohio. Automobile curtain. 1,482,458; Feb. 5.
Brush, Alanson P. (See Nacker, Owen M., assignor.)
Bryant Electric Company, The. (See Catlin, Hoyt, assignor.)
Bryant Electric Company, The. (See Ullrich, Emil H. W., assignor.)
Buchanan, Corrinne N., assignor of one-half to L. Daniels, Everson, Wash. Tongs. 1,482,380; Feb. 5.
Buchwald, Henry C., Baltimore, Md. Braking mechanism for wheeled vehicles. 1,482,729; Feb. 5.
Buck, David D., assignor of one-half to O. C. Lovett, Flagler, Colo. Manicuring device. 1,482,837; Feb. 5.
Buckley, Arthur B., Cairo, Egypt. Transmitter for electric recording and signaling system. 1,482,968; Feb. 5.
Buettner, William J., Carnegie, Pa. Bushing for tubular radiators. 1,482,542; Feb. 5.
Bugge, Peter A., Seattle, Wash. Saw set. 1,482,780; Feb. 5.
Bulger, Joseph H., Los Angeles, Calif. Drop ladder. 1,482,883; Feb. 5.
Bullington, Frank A., Kansas City, Mo. Rotary internal-combustion engine. 1,482,627; Feb. 5.
Bullington, Frank A., Portland, Oreg. Rotary engine. 1,482,628; Feb. 5.
Bullington, Frank A., Portland, Oreg. Rotary engine. 1,482,629; Feb. 5.
Bunker, John W., and A. M. Boney, assignors to Service Bag Co., Inc., New York, N. Y. Laminated structure. 1,482,908; Feb. 5.
Burford, Robert A., jr., Birmingham, Ala. Refrigerating system. 1,482,730; Feb. 5.
Burr, Harry J., New Hartford, assignor to Postcraft Company, Inc., Utica, N. Y. Stamp-affixing and envelope-sealing machine. 1,482,731; Feb. 5.
Busse, George A., Chicago, Ill. Spring repairer. 1,482,674; Feb. 5.
Butterbaugh, Ralph B., assignor to R. E. Hauser, Minneapolis, Minn. Pneumatic tool. 1,482,543; Feb. 5.
Caban, Jacob M., Philadelphia, Pa. Mail receptacle. 1,482,459; Feb. 5.
Cake, Horace M., Philadelphia, Pa. Propulsion mechanism. 1,482,381; Feb. 5.
Calkins, James B., Auburn, assignor to M. E. Calkins, Ithaca, N. Y. Winding apparatus. 1,482,909; Feb. 5.
Calkins, Marcus E. (See Calkins, James B., assignor.)
Callejas, José M., Habana, Cuba. Hydraulic motor. 1,482,545; Feb. 5.
Calleson, Amos, Brooklyn, N. Y. Apparatus for forming sheet-metal caps. 1,482,732; Feb. 5.
Campbell, George W., Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,482,733; Feb. 5.
Campbell, Sterling H., St. Louis, Mo. Coupler release rigging. 1,482,884; Feb. 5.
Campbell, Sterling H., St. Louis, Mo. Coupler release rigging. 1,482,885; Feb. 5.
Caps, Arthur W., Kansas City, Mo. Paper reel. 1,482,912; Feb. 5.
Caps, Arthur W., Topeka, Kans., assignor, by mesne assignments, to O. D. Collis, Clinton, Iowa. Clutch. 1,482,544; Feb. 5.
Carborundum Company, The. (See Hartmann, Miner L., assignor.)
Carlson, Walter C. E., Chicago, Ill. Extricating device for motor vehicles. 1,482,382; Feb. 5.
Caronti, Virgilio, Chicago, Ill. Performance pedestal. 1,482,910; Feb. 5.
Carrow, Claude C., Philadelphia, Pa. Pump. 1,482,734; Feb. 5.
Casale, Antonio J., and J. B. Simpson, Takoma Park, D. C., assignors to National Differential Manufacturing Company. Rear-axle construction. 1,482,838; Feb. 5.
Catlin, Hoyt, Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. 1,482,911; Feb. 5.
Catsules, James, assignor of one-half to R. Feiser, West Hoboken, N. J. Kitchen utensil. 1,482,735; Feb. 5.
Catsules, James, West Hoboken, N. J. Fruit and vegetable knife. 1,482,736; Feb. 5.
Ceresole, Paul A. V., London, England. Contact breaker for internal-combustion engines. 1,482,969; Feb. 5.
Chambers, John A., Belfast, Ireland. Spring catch or fastener. 1,482,384; Feb. 5.
Chambers, Robert M., and J. Jackson, Belfast, Ireland. Sliding glass window. 1,482,383; Feb. 5.
Chandler, John, Chino, Calif. Fruit drier. 1,482,972; Feb. 5.
Childers, William L., assignor of one-half to C. L. Wells, Quincy, Ill. Piston. 1,482,675; Feb. 5.
China, Nettie J., Inglewood, Calif. Doll. Des. 63,873; Feb. 5.
Christianson, Andrew, et al. (See Orr, Herbert P., assignor.)
Churchill, Henry R., Buffalo, N. Y. Hinge for vehicle visors. 1,482,784; Feb. 5.
Cincinnati Coffin Company, The. (See Goke, P. J., and Kemper, assignors.)
Cissel, John F. (See Gallagher, George D., assignor.)
Clark, James H., and T. C. Whitehead, Detroit, Mich. Tractor wheel. 1,482,913; Feb. 5.
Clarke, Hal H., Cherokee, Okla. Tire alarm. 1,482,737; Feb. 5.
Cleeland, Roy A., Butler, Pa. Pencil or similar article. Des. 63,874; Feb. 5.
Clement, Adam J., et al. (See Lyon, Kyle, assignor.)
Cohen, Philip, Buffalo, N. Y. Shirt stud. 1,482,385; Feb. 5.
Cohn, Emil, Berlin, Germany. Pneumatic hammer, drilling machine, and the like. 1,482,507; Feb. 5.

Colihan, Thomas J., Girardville, Pa. Wrench. 1,482,508; Feb. 5.
Collins, Charles S., New York, N. Y., assignor, by mesne assignments, to The Bellis Heat Treating Company, New Haven, Conn. Crucible. 1,482,887; Feb. 5.
Collis, O. D. (See Caps, Arthur W., assignor.)
Colt, Martha S., Mount Wolf, Pa. Holder for cleaning devices. 1,482,886; Feb. 5.
Condon, Stephen, Spencer, Iowa. Carpenter's trestle. 1,482,598; Feb. 5.
Conley, Gardner L., Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind. Candle. Des. 63,875; Feb. 5.
Conley, Gardner L., Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind. Candle. Des. 63,876; Feb. 5.
Conley, Garner L., Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind. Candle. Des. 63,877; Feb. 5.
Converse, Francis B., Norwalk, Conn. Instrument for tipping shoe laces. 1,482,888; Feb. 5.
Converse, Leroy S., assignor to Atlas Powder Company, Wilmington, Del. Manufacturing artificial-silk threads or other cellulose fibers. 1,482,386; Feb. 5.
Coolidge, Charles R., Helena, Ark. Cotton-boll-weevil exterminator. 1,482,785; Feb. 5.
Coombs, Arthur H., Atascadero, Calif., assignor of one-fourth to W. C. Hill, Washington, D. C. Building construction. 1,483,042; Feb. 5.
Cooper, Abraham, Brooklyn, N. Y. Electric chandelier. Des. 63,878; Feb. 5.
Cooper, Abraham, Brooklyn, N. Y. Electric chandelier. Des. 63,879; Feb. 5.
Costmeter Company. (See Quigley, John T., assignor.)
Cotton, Walter H., Chicago, Ill. Laundering machine. 1,482,839; Feb. 5.
Cragin, George P., Spokane, Wash. Shirt and cuffs therefor. 1,482,970; Feb. 5.
Cramer, Carl B., Los Angeles, Calif. Low-gear attachment for Fords. 1,482,973; Feb. 5.
Crankless Engines, (Aus) Proprietary Limited. (See Michell, Anthony G. M., assignor.)
Creamery Package Mfg. Company, The. (See Phillips, Everett A., assignor.)
Creamery Package Mfg. Company. (See Valerius, T. L., and Larsen, assignors.)
Crollus, Frederick J., Munhall, Pa. Steam-boiler furnace. 1,482,840; Feb. 5.
Crook, Jacob L., Topeka, Kans. Sliding door for cars. 1,482,841; Feb. 5.
Crosby, John A. (See Smith, E. R., and Crosby.)
Crotto, Frank E., assignor to Western Supply Company, Tulsa, Okla. Wire-line clamp. 1,482,460; Feb. 5.
Cullen, Peter M., Pittsburgh, Pa. Antispreading device. 1,482,676; Feb. 5.
Cuming, James S., St. Louis, Mo. Plural-socket plug. Des. 63,880; Feb. 5.
Cuming, James S., St. Louis, Mo. Plural-socket plug. Des. 63,881; Feb. 5.
Cummings, Charles A., assignor to Battle Creek Box Co., Battle Creek, Mich. Wirebound box. 1,482,971; Feb. 5.
Cureton, Edward H. (See Huntington, H. H., and Cureton.)
Curioni, Aldo, New York, assignor to Maurice Levy, New Rochelle, N. Y. Machine for making powder puffs. 1,482,630; Feb. 5.
Curtis, Frank C., Troy, N. Y. Lathering utensil. 1,482,546; Feb. 5.
Curtis, George W., assignor to The Timken Roller Bearing Company, Canton, Ohio. Power-transmitting gearing. 1,482,599; Feb. 5.
Curtis, Lewis E., Warren, Ohio, assignor to Milwaukee Corrugating Company, Greenfield, Wis. Method of and machine for producing expanded sheet-metal articles. 1,482,600; Feb. 5.
Curtiss, George E., assignor to Landers, Frary and Clark, New Britain, Conn. Coffeepot or similar article. Des. 63,882; Feb. 5.
Daele, Ernest, New York, N. Y. Lock. 1,482,974; Feb. 5.
Dahl-Rode, Svein, Brooklyn, N. Y. Making water-softening material. 1,482,601; Feb. 5.
Daigle, Joseph J., Robertsville, New Brunswick, Canada. Can opener. 1,482,914; Feb. 5.
Dalton Adding Machine Company, The. (See Landsiedel, Walter W., assignor.)
Damschroeder, Frederick A. (See Grimes, Eugene E., assignor.)
Daniels, L. (See Buchanan, Corrinne N., assignor.)
Daum, Charles, Forest Hills, N. Y., assignor to American Fibre Chair Seat Corp., Long Island City, N. Y. Chair seat. Des. 63,883; Feb. 5.
Daum, George W., assignor to Pennsylvania Rubber Company, Jeannette, Pa. Vehicle tire. Des. 63,884; Feb. 5.
Davis, Burwell M., Raleigh, N. C. Shade bracket. 1,482,975; Feb. 5.
Davis, Cloyd, Mineola, N. Y. Dumping device for scrapers. 1,482,509; Feb. 5.
Davis, Elizabeth T., Long Beach, Calif. Lady's bag. Des. 63,885; Feb. 5.
Davis, Louis. (See Lord, W. S., and Davis.)
Daylight Film Corporation. (See John, Robert, assignor.)
Dayton Manufacturing Company, The. (See Kirby, John, jr., assignor.)
De Coninck, Marcel, Le Havre, France. Steam turbine. 1,482,602; Feb. 5.
Deere & Company. (See Stone, Charles N., assignor.)
Deere & Company. (See White, Charles H., assignor.)
Delaney, John F., Boston, Mass. Pipe wrench. 1,482,889; Feb. 5.
De Linieres, Louis, assignor by mesne assignments, to The Woodworker Manufacturing Co., Inc., Detroit, Mich. Woodworking machine. 1,482,631; Feb. 5.
Dell, Bradford A., assignor to Monarch Governor Company, Detroit, Mich. Governor for internal-combustion engines. 1,482,547; Feb. 5.
Dennis, Oliver C. (See Juline, Arthur, assignor.)
Diamond State Fibre Company. (See McIntosh, James, assignor.)
Dickerson, Adolph F., Schenectady, N. Y., assignor to General Electric Company. Lamp globe. Des. 63,886; Feb. 5.
Dickerson, Adolph F., Schenectady, N. Y., assignor to General Electric Company. Lamp globe. Des. 63,887; Feb. 5.
Diehl, Frederick, assignor to Diehl Manufacturing Company, Elizabeth, N. J. Belt coupling. 1,482,461; Feb. 5.
Diehl Manufacturing Company. (See Diehl, Frederick, assignor.)
Dinkela, Gottlieb, Charlottenburg, near Berlin, Germany. Means for preventing self ignition of airships and the like. 1,482,642; Feb. 5.
Dodd Company, The. (See Goldrick, Albert R., assignor.)
Dodson, Carroll E., Kansas City, Mo. Vanity box. 1,482,786; Feb. 5.
Dolezal, Robert F., assignor of one-half to F. C. Whippey, Chicago, Ill. Window ventilator. 1,482,915; Feb. 5.
Donaldson, William J., assignor to The Visualatone Corporation, Philadelphia, Pa. Talking-machine picture exhibitor. 1,482,387; Feb. 5.
Dooley, Arthur F., Philadelphia, Pa. Windshield wiper. 1,482,428; Feb. 5.
Dorward, John G., San Francisco, Calif. Combination pump-rod guide, coupling, and valve cage. 1,482,842; Feb. 5.
Douglas, Henderson B., et al. (See Orr, Herbert P., assignor.)
Downer, Moses M., assignor to La Resista Corset Co., Bridgeport, Conn. Corset. 1,482,548; Feb. 5.
Downey, William H. J., Wilmington, Del. Toy. 1,482,976; Feb. 5.
Downey, William H. J., Wilmington, Del. Antiglare headlight for automobiles. 1,482,977; Feb. 5.
Doxford, Robert P. (See Keller, Karl O., assignor.)
Draper Corporation. (See Rhoades, Alonzo E., assignor.)
Dubsky, Francis, Pittsfield, Mass., assignor to General Electric Company. Electrical testing device. 1,482,462; Feb. 5.
Duckworth Chain & Manufacturing Company. (See Boutin, Stanley.)
Duckworth, Harold, et al, trustees. (See Boutin, Stanley, assignor.)
Dudley, Edward F., Oak Park, assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill. Chase mounting. 1,482,738; Feb. 5.
Dugar, Delano H., Cleveland, Ohio. Tool holder. 1,482,916; Feb. 5.
Duket, John J., Toledo, Ohio. Clothesline lock. 1,482,388; Feb. 5.
Dunten, Charles J., Orcutt, Calif. Shale retort. 1,482,677; Feb. 5.
Du Paul, George H., assignor to Du Paul Young Optical Co., Southbridge, Mass. Temple for spectacles and the like. 1,482,739; Feb. 5.
Du Paul Young Optical Co. (See Du Paul, George H., assignor.)
Du Pont, E. I., de Nemours & Company. (See Kessler, Johannes M., assignor.)
Durno, John H., Rochester, N. Y. Motion-checking device. 1,482,917; Feb. 5.
Dutcher, Frank, Versailles, Pa. Compressible spring. 1,482,918; Feb. 5.
Dutchess Tool Company. (See Van Houten, Frank H., assignor.)
Duval D'Adrian, Alexander L., Washington, Pa. Process of and mixture for making glass. 1,482,389; Feb. 5.
Easter, Henry F., Hayden, Ariz., assignor to American Smelting and Refining Company, New York, N. Y. Distribution of fuel. 1,482,549; Feb. 5.
Eastern Finishing Works, Incorporated. (See Adams, William H., assignor.)
Eastman Kodak Company. (See Sulzer, Albert F., assignor.)
Eden, James A., jr., Springfield, Mass., assignor to W. H. Foster, New York, N. Y. Feed mechanism for boltturning and other machines. 1,482,390; Feb. 5.
Edwards, Josiah P., Spiceland, Ind. Window shade. 1,482,978; Feb. 5.
Edwards, Maurice F., Bolton, England. Tipping gear for motor road vehicles. 1,482,510; Feb. 5.
Eidmann, Frank L., assignor to J. L. Wyckoff, E. N. White, and G. F. Jenks, Holyoke, Mass., trustees. Elevating truck. 1,482,429; Feb. 5.
Elliott-Fisher Company. (See Foothorap, Harry A., assignor.)
Ellis, Carleton, Montclair, N. J. Catalyzer and making same. 1,482,740; Feb. 5.

Ellis, Carleton, Montclair, and H. M. Weber, Bloomfield, N. J., assignors to Ellis-Foster Company. Making resinous materials. 1,482,919; Feb. 5.
Ellis, Carleton. (See Huxham, Trevor S., assignor.)
Ellis-Foster Company. (See Ellis, C., and Weber, assignors.)
Ellis, John A., Iberville, Quebec, Canada. Ice breaker. 1,482,511; Feb. 5.
Empsall, George H., et al, trustees. (See Boutin, Stanley, assignor.)
Emrick, Frank C., Kalamazoo, Mich. Control valve for hydraulic apparatus. 1,482,463; Feb. 5.
English, Fred L., New London, Conn. Cutting and creasing press. 1,482,391; Feb. 5.
Erving, Andrew V., Detroit, Mich. Birdcage stand. Des. 63,888; Feb. 5.
Esoph, George, jr., Tennis, S. Dak. Valve. 1,482,550; Feb. 5.
Etheridge, Harry C., Waco, Tex. Door hook. 1,482,643; Feb. 5.
Eurich, Harry E. (See Sisson, C. F., and Eurich.)
Ewan, Virgil L., Flemingsburg, Ky. Traction attachment for tractor wheels. 1,482,430; Feb. 5.
Fagan, George H., Bloomfield, N. J. Turning and drilling machine. 1,482,979; Feb. 5.
Fahnestock, Charles M., assignor to The "Save-M" Fire Extinguisher Company, Cincinnati, Ohio. Fire extinguisher. 1,481,043; Feb. 5.
Farrell, Ernest, Salford, Manchester, England. Apparatus for impregnating fabrics with a mercerizing or other liquid. 1,483,000; Feb. 5.
Faulhaber, Frederick A., jr., East Orange, N. J. Electric-lamp socket. 1,482,603; Feb. 5.
Fay, Richard D., Nahant, Mass., assignor to Submarine Signal Company, Portland, Me. Direction detector for submarine sounds. 1,482,980; Feb. 5.
Feck, Frank E., Morgantown, W. Va. Pitcher or similar article. Des. 63,889; Feb. 5.
Federal Electric Company. (See Gilchrist, John F., assignor.)
Feiser, Rudolf. (See Catsules, James, assignor.)
Fergusson, Alan R. (See Fergusson, Constance T. and A. R.)
Fergusson, Alan R., Buffalo, N. Y. Toy railway cross over. 1,482,632; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway switch. 1,482,633; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy switch. 1,482,634; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway. 1,482,635; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway. 1,482,636; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway. 1,482,637; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway. 1,482,638; Feb. 5.
Fergusson, Alan R., Buffalo, N. Y. Toy railway cross-over. 1,482,639; Feb. 5.
Fergusson, Alan R., and C. T., Buffalo, N. Y. Switch mechanism for toy railways. 1,482,640; Feb. 5.
Fergusson, Constance T. (See Fergusson, Alan R., and C. T.)
Fergusson, Constance T. and A. R., Buffalo, N. Y. Toy or miniature railway. 1,482,641; Feb. 5.
Ferris, Walter. (See Young, L. F., and Ferris.)
Fiedler, Louis, assignor to Benjamin Gross Company, Inc., New York, N. Y. Finger ring or article of similar nature. Des. 63,890; Feb. 5.
Fields, William W. (See Johnson, C. E., and Fields.)
Figley, Newton C., Los Angeles, Calif. Fisherman's dry flyleaf book. 1,482,678; Feb. 5.
Firestone Tire & Rubber Company, The. (See Stevens, Horace D., assignor.)
Fish, Edward H., Spokane, Wash. Railway-tie puller. 1,482,981; Feb. 5.
Fish, Job, jr. (See Zederbaum, M. C., Fish, and Kirchenbauer.)
Fitch, Benjamin F., Evanston, Ill. Removable automobile body. 1,482,604; Feb. 5.
Fjeldstrom, Walton, Kenaston, Saskatchewan, Canada. Lubricant container. 1,482,843; Feb. 5.
Flauder, Alfred J., Bridgeport, Conn. Salt and pepper shaker. Des. 63,891; Feb. 5.
Flegel, Harrison D., Racine, Wis. Sewing-machine-motor bracket. 1,482,464; Feb. 5.
Fletcher, Harold W., assignor to Hughes Tool Company, Houston, Tex. Earth-boring drill. 1,482,787; Feb. 5.
Flinchbaugh, Frederick T., York, Pa. Cylinder-reboring machine. 1,483,061; Feb. 5.
Foothorap, Harry A., Harrisburg, Pa., assignor to Elliott-Fisher Company. Carriage brake mechanism for typewriting machines. 1,482,512; Feb. 5.
Forestier, Edward H. (See Lang, A., and Forestier.)
Forsyth, Roy M., assignor of one-half to O. F. Pattberg, Gouverneur, N. Y. Motion-picture apparatus. 1,482,844; Feb. 5.
Foster, Walter H. (See Eden, James A., jr., assignor.)
Fowler, Oliver R., Baldwin, Ga. Combination tool. 1,482,982; Feb. 5.
Frank, Harrison L., assignor to Mutual Electric and Machine Company, Detroit, Mich. Switch-control device. 1,482,920; Feb. 5.
Frank, Harry S., Woodmere, N. Y. Measuring piston rings. 1,482,392; Feb. 5.
Frank, Paul M., New York, N. Y. Dress separator. 1,483,058; Feb. 5.
Free, John W., Woodlawn, Pa. Transfer apparatus. 1,482,921; Feb. 5.
Freeman-Daughaday Co. (See Roberts, George H., assignor.)
Freysinger, John B., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock. 1,482,788; Feb. 5.
Friesell, Frank M., San Francisco, Calif. Box-car-door hanger. 1,482,431; Feb. 5.
Fulper, William H., Flemington, N. J. Bell. Des. 63,892; Feb. 5.
Furste, Henry, assignor to The United States Printing and Lithographing Company, Cincinnati, Ohio. Carton. 1,482,890; Feb. 5.
Gallagher, George D., assignor to J. F. Cissel, Washington, D. C. Savings bank. 1,482,983; Feb. 5.
Gallagher, Peter J., Jersey City, N. J. Cigarette-rolling apparatus. 1,482,644; Feb. 5.
Gallagher, Thomas H., Crafton, assignor to Twin Packer Oil and Gas Company, Pittsburgh, Pa. Oil-well agitator. 1,482,845; Feb. 5.
García, José D., Buenos Aires, Argentina. Cigarette holder or the like. 1,482,984; Feb. 5.
Gardner, Frederic E., Beloit, Wis. Grinding machine. 1,482,465; Feb. 5.
Geskins, Palemon H., Jacksonville, Fla. Lubricating system. 1,482,645; Feb. 5.
Gates, Major E., Terra Cotta, Ill. Machine for making terra-cotta blocks. 1,482,646; Feb. 5.
Gathright, Eldridge M. (See Klingon, L. E., and Gathright.)
Geib, William, assignor to International Silver Company, Meriden, Conn. Bowl or similar article. Des. 63,893; Feb. 5.
Gehrke Knitting Mills, et al. (See Gilardone, Joseph C., assignor.)
Gellenbeck, John W. (See Germain, G. A., and Gellenbeck.)
General Electric Company. (See Berry, Edward R., assignor.)
General Electric Company. (See Dickerson, Adolph F., assignor.)
Ghegan, John J., East Orange, N. J. Faradic medical apparatus. 1,482,891; Feb. 5.
Giant Resilient Wheel Company. (See Wack, Arthur D., assignor.)
Giesy, Paul M., Plainfield, N. J., assignor to E. R. Squibb and Sons, New York, N. Y. Dentifrice material. 1,482,741; Feb. 5.
General Electric Company. (See Dubsky, Francis, assignor.)
Gilardone, Joseph C., assignor of one-third to S. S. Miller and one-third to Gehrke Knitting Mills, Reading, Pa. Embroidering machines. 1,482,679; Feb. 5.
General Motors Corporation. (See Richard, Eugene C., assignor.)
Gilardone, Joseph C., Reading, Pa., assignor of one-third to S. S. Miller and one-third to Gehrke Knitting Mills, Reading, Pa. Stock-holding frame for embroidering machines. 1,482,680; Feb. 5.
Gilbert, William E., et al., trustees. (See Boutin, Stanley, assignor.)
Gilchrist, John F., assignor to Federal Electric Company, Chicago, Ill. Combination washing machine and table. 1,482,742; Feb. 5.
Germain, George A., and J. W. Gellenbeck, St. Paul, Minn. Hot-air furnace. 1,482,551; Feb. 5.
Gise, Allison D., Coffeyville, Kans. Pencil holder. 1,482,647; Feb. 5.
Glaser, Roy W., Burlington, Wis. Drinking fountain. 1,482,466; Feb. 5.
Glenn, John C., assignor to Skinner Engine Company, Erie, Pa. Engine-valve mechanism. 1,482,393; Feb. 5.
Gmelin, Eugene C., Chicago, Ill. Making glass letters. 1,482,789; Feb. 5.
Gmelin, Eugene C., Chicago, Ill. Illuminated sign. 1,482,790; Feb. 5.
Goben, Edward G., assignor to The E. V. Benjamin Company, Inc., New Orleans, La. Folding machine. 1,482,605; Feb. 5.
Godwin, Oby A., Birmingham, Ala. Spark plug. 1,482,552; Feb. 5.
Goebner, Frederick R., Utica, N. Y. Cover for tires. 1,482,892; Feb. 5.
Goke, Paul J., and G. L. Kemper, assignors to The Cincinnati Coffin Company, Cincinnati, Ohio. Device for burnishing metallic articles. 1,482,923; Feb. 5.
Goldrick, Albert R., assignor to The Dodd Company, Cleveland, Ohio. Drafting instruments. 1,482,606; Feb. 5.
Goodchild, Euclid P., Spokane, Wash. Music-leaf turner. 1,482,682; Feb. 5.
Goodyear Tire & Rubber Company, The. (See Howes, Robert T., assignor.)
Goulet, Omer C., assignor of one-half to A. E. Perron, Fall River, Mass. Lever chock. 1,482,985; Feb. 5.
Gow, Alexander M., deceased, Duluth, Minn.; American Exchange National Bank of Duluth, executor. Agitation separator. 1,482,607; Feb. 5.
Grabill, Clarence A., El Paso, Tex., assignor to American Smelting & Refining Company. Furnace oil blast. 1,482,553; Feb. 5.

Grasberger, Boniface A., Richmond, Va. Dish. Des. 63,894; Feb. 5.
Grasberger, Boniface A., Richmond, Va. Dish. Des. 63,895; Feb. 5.
Gredell, Otto N., East Kansas City, Mo. Acetylene generator. 1,482,513; Feb. 5.
Green Engineering Company. (See Marsh, Thomas A., assignor.)
Green, Hannes, Racine, Wis. Toy davenport. 1,482,922; Feb. 5.
Greenawalt, William E., Denver, Colo. Metallurgical process. 1,483,056; Feb. 5.
Greene Mfg. Co. (See Albert, Carl P., assignor.)
Greenfield Tap and Die Corporation. (See Morgan, Ralph L., assignor.)
Griffin, Leonard F., Binghamton, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for and method of shaping uppers. 1,482,394; Feb. 5.
Grijalva, Joseph, Los Angeles, Calif. Shock absorber. 1,482,681; Feb. 5.
Grimes, Eugene E., assignor to F. A. Damschroeder, Tiffin, Ohio. Drain gate. 1,482,986; Feb. 5.
Grover, Charles R., Nashua, N. H. Safety pedestal. 1,482,743; Feb. 5.
Guérin, Maurice, Paris, France. Commercial preparation of aminophenylarsonic acids. 1,482,514; Feb. 5.
Gulf Refining Company. (See McAfee, Almer M., assignor.)
Gundlach, Ernest T., Chicago, Ill. Amusement device. 1,482,554; Feb. 5.
Gustavsen, Oscar P., et al. (See Nesbitt, Herbert S., assignor.)
Haaga, Emil, Stuttgart, Germany. Sinker guide for knitting frames. 1,482,395; Feb. 5.
Hafer, Guy M., assignor to Hoskins Manufacturing Company, Detroit, Mich. Regulator. 1,482,791; Feb. 5.
Hainline, Herbert M., Sciota, Ill. Combination lock. 1,482,515; Feb. 5.
Hall, Allen E., assignor to Hall Wheel Corporation, Philadelphia, Pa. Mold for making fabric disks for vehicle wheels. 1,482,555; Feb. 5.
Hall, John A., Lebanon, Ohio. Device for controlling drawn implements from the seat of a tractor. 1,482,556; Feb. 5.
Hall Wheel Corporation. (See Hall, Allen E., assignor.)
Hamilton, Baxter P., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Composite signaling system. 1,482,557; Feb. 5.
Hamilton, Baxter P., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Alternating-current signaling apparatus. 1,482,558; Feb. 5.
Hamshaw, Clarence M., Santa Clara, Calif. Transmission mechanism. 1,482,608; Feb. 5.
Hannaford, Cleon M., Richmond, Va. Angle-clock holder and train-pipe clamp. 1,482,987; Feb. 5.
Hannaford, Cleon M., Richmond, Va. Holder for angle cocks. 1,482,988; Feb. 5.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Apparatus for channeling rock. 1,482,396; Feb. 5.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Core breaker. 1,482,397; Feb. 5.
Harrah, Philip J., Bloomfield, Ind. Pole pusher. 1,482,846; Feb. 5.
Harrington, Bertie S., Fort Worth, Tex. Measuring and filling machine. 1,482,467; Feb. 5.
Harshberger, Kathleen W., Wauwatosa, Wis. Doll. Des. 63,896; Feb. 5.
Hart, Edwin, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Lens mount for optical instruments. 1,482,893; Feb. 5.
Hart, Harry S., Chicago, Ill. Hopper car. 1,482,559; Feb. 5.
Hartman-Spreng Company, The. (See Taylor, John R., assignor.)
Hartmann, Miner L., assignor to The Carborundum Company, Niagara Falls, N. Y. Treating the surfaces of crystalline mineral materials. 1,482,792; Feb. 5.
Hartmann, Miner L., assignor to The Carborundum Company, Niagara Falls, N. Y. Treating the surfaces of crystalline mineral materials. 1,482,793; Feb. 5.
Harvey, George B. (See Brooks, William J., assignor.)
Haskell, Broderick, Franklin, Pa. Brake head. 1,482,609; Feb. 5.
Haskell, Broderick, Franklin, Pa. Brake support. 1,482,610; Feb. 5.
Hathaway, Edgar F., and C. Lea, Dorchester, Mass., assignors, by mesne assignments, to Barber-Colman Company, Rockford, Ill. Textile machine. 1,482,648; Feb. 5.
Hauser, Reuben E. (See Butterbaugh, Ralph B., assignor.)
Haviland, Theodore, & Co. (See Haviland, William D., assignor.)
Haviland, William D., Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y. Plate or similar article. Des. 63,897; Feb. 5.
Haviland, William D., Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y. Bowl or similar article. Des. 63,898; Feb. 5.
Hayden, Esther, East Jordon, Mich. Seed-corn rack. 1,482,649; Feb. 5.
Hebb, John I. C., Bridgewater, Nova Scotia, Canada. Internal-combustion engine. 1,482,650; Feb. 5.
Heffernan Brush Company. (See Heffernan, William H., assignor.)
Heffernan, William H., North Adams, Mass., assignor to Heffernan Brush Company, Inc., Adams, Mass. Brush. 1,482,744; Feb. 5.
Heid, Gilliman A., Goble, Oreg. Pole-setting device. 1,482,745; Feb. 5.
Heinicke, Milton H., Port Ivory, N. Y. Spring wheel. 1,482,746; Feb. 5.
Heinrichs, Berg, assignor to Mid-West Box Company, Anderson, Ind. Machine for making corrugated board. 1,482,894; Feb. 5.
Hendrichsen, Christ, jr., Wilmette, and E. A. Luney, Evanston, Ill. Gas regulator. 1,482,895; Feb. 5.
Hering, Leslie F., Launceston, Tasmania. Appliance for clamps or cramps and the like. 1,482,989; Feb. 5.
Hershiser, Orel L., Kenmore, N. Y. Cage for transporting and introducing bees. 1,482,468; Feb. 5.
Hescock, Ethan N., Westfield, N. J., assignor to New Jersey Foundry and Machine Company. Portable elevator. 1,482,924; Feb. 5.
Hess, Louis F., Ansted, W. Va., assignor to Daniel Boone Mining Machine Company. Auger. 1,482,900; Feb. 5.
Hewes, James A., Melrose, assignor to Hewes & Potter, Boston, Mass. Man's neckwear. 1,482,560; Feb. 5.
Hewes & Potter. (See Hewes, James A., assignor.)
Hibbard Process Corporation. (See Pulliam, Oswald S., assignor.)
Hickok Manufacturing Company. (See Shields, Lowell W., assignor.)
High, Matthew A., Anderson, Ind. Sanitary waiter. 1,482,925; Feb. 5.
Hileman, Albert T., Newark, Del. Stock regulator. 1,482,991; Feb. 5.
Hildebrand, Frank F., Richmond, Va. Attachment for lawn mowers. 1,482,432; Feb. 5.
Hill, Wendell C. (See Coombs, Arthur H., assignor.)
Hillyard, Newton S., St. Joseph, Mo. Refuse receptacle. 1,482,926; Feb. 5.
Hintze, Raymond S. (See Hoffman, W. G., and Hintze.)
Hobart Manufacturing Company, The. (See Johnston, Herbert L., assignor.)
Hodgkin, Bertha E., Russellville, Ind. Cup. 1,482,561; Feb. 5.
Hoffbauer, August, Brooklyn, N. Y. Insect trap. 1,482,992; Feb. 5.
Hoffman, Leon F., and H. C. Wasson, Franklin, Pa. Water-regulating system for air compressors. 1,483,044; Feb. 5.
Hoffman, William G., and R. S. Hintze, Chicago, Ill. Coin-mailing card. 1,482,433; Feb. 5.
Hofmann, J. Emil, assignor of one-half to H. J. Reha, Orient, Iowa. Attachment for corn shellers. 1,482,516; Feb. 5.
Holtsinger, Francis A., Ottumway, Iowa. Headlight shade. 1,482,794; Feb. 5.
Homer, Corrine. (See Homer, Joseph, assignor.)
Homer, Joseph, Boston, assignor to C. Homer, Brookline, Mass. Dental articulator or relator. 1482,993; Feb. 5.
Hopedale Manufacturing Company. (See Northrop, Jonas, assignor.)
Hopkins, Stiles. (See Wells, Ernest D., assignor.)
Hortvet, Julius, Minneapolis, Minn. Sublimator. 1,482,684; Feb. 5.
Hoskins Manufacturing Company. (See Hafer, Guy M., assignor.)
Hotchkiss, Mark S., Johnson City, N. Y. Concrete-wall form. 1,482,434; Feb. 5.
Howe, Frank M., New York, N. Y. Spraying outfit. 1,482,747; Feb. 5.
Howes, George W., assignor to The Beckwith Company, Dowagiac, Mich. Gas stove. 1,482,897; Feb. 5.
Howes, Robert T., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Tire. Des. 63,899; Feb. 5.
Hoyt, Homer J., assignor to Morgan & Wright, Detroit, Mich. Tire. Des. 63,900; Feb. 5.
Huber, John, Bellwood, Pa. Sheet-metal-bending dies. 1,482,927; Feb. 5.
Hudnut, Richard. (See Pennock, Charles A., assignor.)
Huebner-Bleistein Patents Company. (See Huebner, William C., assignor.)
Huebner, William C., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Adjustment-indicating means for photographic-printing apparatus and other apparatus. 1,482,562; Feb. 5.
Hughes, Ora C., Villa Ridge, Ill. Dirigible-headlight construction for motor vehicles. 1,482,683; Feb. 5.
Hughes Tool Company. (See Fletcher, Harold W., assignor.)
Hultgren, Axel G. E., Gottenborg, Sweden. Superhardened steel and producing the same. 1,482,563; Feb. 5.
Hunt, Seth B., trustee. (See Mann, Matthew D., jr., assignor.)
Huntington, Hiram H., and E. H. Cureton, Richmond, Ind. Sprocket wheel. 1,482,896; Feb. 5.
Hutter, Franz, New York, N. Y., assignor to The McCall Company. Cover for magazines and the like. 1,482,928; Feb. 5.
Huxham, Trevor S., Bloomfield, assignor, by mesne assignments, to C. Ellis, Montclair, N. J. Ketonic resin and making same. 1,482,929; Feb. 5.
Ilg Electric Ventilating Company. (See Ilg, Robert A., assignor.)

Ilg, Robert A., assignor to Ilg Electric Ventilating Company, Chicago, Ill. Shutter mechanism. 1,482,398; Feb. 5.
Industrial Products Company. (See Unger, Chester E., assignor.)
Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)
Inglis, William B., Pawtucket, R. I. Mat holder. 1,482,309; Feb. 5.
International Silver Company. (See Gelb, William, assignor.)
Iroquois China Company, The. (See Lukens, Randolph E., assignor.)
Irvine, Samuel C., Belfast, Ireland. Flax and like pulling or harvesting machine. 1,482,994; Feb. 5.
Isachson, Norman, Albion, Idaho. Hose clamp. 1,482,564; Feb. 5.
Jackson, Arthur C., assignor to The Miller Lock Company, Philadelphia, Pa. Shoe-tree. 1,482,995; Feb. 5.
Jackson, Charles B. (See Terrell, Sam, assignor.)
Jackson, Joseph. (See Chambers, R. M., and Jackson.)
Jaffe, Samuel, and S. Kanner, New York, N. Y. Hat pad. 1,482,685; Feb. 5.
Jefferson, Eugene D., Boston, Mass. Vomiting kier. 1,482,795; Feb. 5.
Jenckes Knitting Machine Company. (See Miller, Max C., assignor.)
Jenkins, Thomas A., Jersey City, N. J. Ventilator. 1,482,435; Feb. 5.
Jenkins, Thomas A., Jersey City, N. J. Glass ventilator. 1,482,996; Feb. 5.
Jenks, George F., et al., trustees. (See Eidmann, Frank L., assignor.)
Jensen, Nels, Berlin, Wis. Spare-rim carrier. 1,482,997; Feb. 5.
Jespersen, Jasper C., Freeland, Wash. Automatic trolling winch. 1,482,469; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Thin, mounted, sensitized emulsion. 1,482,611; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Potassium-bichromate process of photographic reproduction. 1,482,612; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Potassium iodide composition of matter for photographic processes. 1,482,613; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Composition of matter for photographic processes. 1,482,614; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Photographic reproduction directly from a negative. 1,482,615; Feb. 5.
John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Double process of photographic reproduction. 1,482,616; Feb. 5.
Johnayedon Corporation. (See Johnson, Charles E., assignor.)
Johnson, Charles E., and W. W. Fields, Cleveland, Ohio. Mold for concrete structures. 1,482,565; Feb. 5.
Johnson, Charles E., Ridgefield Park, N. J., assignor to Johnayedon Corporation, New York, N. Y. Parallel ruler. 1,482,930; Feb. 5.
Johnson, John F., Eketahuna, Wellington, New Zealand. Cut-off device for vacuum pipe lines. 1,482,848; Feb. 5.
Johnston, Alvin R., Napoleon, Ohio. Poultry perch. 1,482,436; Feb. 5.
Johnston, Frank B., New York, N. Y., assignor to American Safety Device Company. Scaffold. 1,482,898; Feb. 5.
Johnston, Herbert L., assignor to The Hobart Manufacturing Company, Troy, Ohio. Composition for non-metallic gears. 1,482,847; Feb. 5.
Johnston, James G., jr., Chicago, Ill., assignor to Warren Featherbone Company, Three Oaks, Mich. Display stand for belting and like material. 1,482,748; Feb. 5.
Jones, George E., Jr. (See Sanford, H. W., and Jones.)
Joyce, Bryan P., Davenport, Iowa. Spade. 1,482,400; Feb. 5.
Juline, Arthur, Chicago, assignor of one-half to O. C. Dennis, Wilmette, Ill. Toilet-seat cover. 1,482,749; Feb. 5.
Julson, Frederick, Willmar, Minn., assignor of one-half to M. O. Swerven, Danube, Minn. Timer for internal-combustion-engines. 1,482,686; Feb. 5.
Kanner, Samuel. (See Jaffe, S., and Kanner.)
Kay County Gas Company. (See Kygar, Daniel W., assignor.)
Keehn, Clarence C., assignor of one half to The Lisk Manufacturing Company, Ltd., Canandaigua, N. Y. Covered receptacle. 1,482,931; Feb. 5.
Keiner, Henry A., Richmond Hill, N. Y., assignor to Keiner-Williams Stamping Company. Sheet-metal container. 1,482,932; Feb. 5.
Keiner-Williams Stamping Company. (See Keiner, Henry A., assignor.)
Keller, Jeremiah, assignor to The Timken Roller Bearing Company, Canton, Ohio. Chuck. 1,482,566; Feb. 5.
Keller, Karl O., assignor of one-half to R. P. Doxford, Sunderland, England. Engine. 1,482,796; Feb. 5.
Kelley, Harriett L., Oakland, Calif. Sleeve form. 1,482,797; Feb. 5.
Kelsey, Frank F., assignor of one-half to P. C. Swole, New Haven, Conn. Signal valve. 1,482,517; Feb. 5.
Kemper, Gilbert L. (See Goke, P. J., and Kemper.)
Kenfield, William L., Royal Oak, Mich. Automatic stopping mechanism for machine tools. 1,482,401; Feb. 5.
Kennedy, Gibson H., Cedartown, Ga., assignor to Sonoco Products Company, Hartsville, S. C. Cone-winding mandrel. 1,482,849; Feb. 5.
Kenney, John J., Pittsburgh, Pa., assignor to Lawson Manufacturing Company. Valve. 1,482,798; Feb. 5.
Kent, James W., assignor to Kent Machine Works, Inc., Brooklyn, N. Y. Agitating apparatus. 1,482,998; Feb. 5.
Kent Machine Works, Inc. (See Kent, James W., assignor.)
Kerr, Arthur N., Bellevue, Pa. Treating natural-gas gasoline and of making gas therefrom. 1,482,933; Feb. 5.
Kerr, Robert S., assignor to C. H. Ueberroth, Chicago, Ill. Plate or similar article. Des. 63,901; Feb. 5.
Kessinger, A. J. (See Kloepper, Valentine C., assignor.)
Kessler, Johannes M., West Orange, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Purifying crude synthetic camphor. 1,482,899; Feb. 5.
Kiesel, William F., jr., Altoona, Pa. Six-wheel truck. 1,482,750; Feb. 5.
Kinne, Edmund P., Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill. Coupler. 1,482,751; Feb. 5.
Kirby, John, jr., assignor to The Dayton Manufacturing Company, Dayton, Ohio. Car basket rack. 1,482,900; Feb. 5.
Kirchenbauer, Louis J. (See Zederbaum, M. C., Fish, and Kerchenbauer.)
Kircher, Carl. (See Mittasch, A., and Kircher.)
Kirchhofer, August, Nashville, Tenn. Automatic air-cylinder pump oiler. 1,482,651; Feb. 5.
Kirk, Volney E., Los Angeles, Calif. Hair holder. 1,482,567; Feb. 5.
Klepper, Frank J., Earling, Iowa. Closure latch. 1,482,652; Feb. 5.
Kling, Fred E., Youngstown, Ohio. Dust catcher. 1,482,850; Feb. 5.
Klingon, Louis E., and E. M. Gathright, Bridgeport, Conn. Dredge. 1,482,851; Feb. 5.
Kloepper, Valentine C., St. Louis, Mo., assignor of one-half to A. J. Kessinger, Detroit, Mich. Combined hydrometer and liquid-level gauge. 1,482,852; Feb. 5.
Koegel, Charles, F. W., and H. I., Holyoke, Mass. Rotary slitting cutter. 1,482,437; Feb. 5.
Koegel, Frederick W. (See Koegel, Charles, F. W., and H. I.)
Koegel, Herman I. (See Koegel, Charles, F. W., and H. I.)
Koehler, Libbie M., Seattle, Wash. Bodkin. 1,482,470; Feb. 5.
Kohnen, Edward H., Cincinnati, Ohio. Syringe. 1,482,999; Feb. 5.
Korhummel, Otto J., assignor to C. J. Bates & Son, Chester, Conn. Display rack. 1,482,799; Feb. 5.
Korrectolite Company. (See Oliver, Eben F., assignor.)
Kraft, Henry P., Ridgewood, N. J. Machine for assembling valve parts. 1,482,687; Feb. 5.
Kritikson Bros., Inc. (See Kritikson, John H., assignor.)
Kritikson, John H., assignor, by mesne assignments, to Kritikson Bros., Inc., Chicago, Ill. Fountain pen. 1,482,568; Feb. 5.
Kronburger, Stephen, Hoboken, N. J., assignor to Melita White Metal Casting Co., New York, N. Y. Combined lamp stand and clock. Des. 63,902; Feb. 5.
Kruesheld, Henry, assignor to The Perfection Electric Products Co., New Washington, Ohio. Electric cooking utensil. 1,483,000; Feb. 5.
Kurre, August, Brooklyn, N. Y. Curb cock. 1,483,001; Feb. 5.
Kygar, Daniel W., assignor to Kay County Gas Company, Ponca City, Okla. Gas trap. 1,482,688; Feb. 5.
La Bombard, Leon E., Chelsea, and M. H. Sidebotham, Cliftondale, assignors to Specialty Automatic Machine Company, Chelsea, Mass. Blank feeder. 1,482,752; Feb. 5.
La Resista Corset Co. (See Downer, Moses M., assignor.)
Lamb, Joseph F., assignor to Landers, Frary & Clark, New Britain, Conn. Friction clutch. 1,482,402; Feb. 5.
Lance, Benjamin W., and A. E. Olson, Geneva, Ill. Illuminated license tag and case. 1,482,934; Feb. 5.
Landers, Frary and Clark. (See Curtiss, George E., assignor.)
Landers, Frary & Clark. (See Lamb, Joseph F., assignor.)
Landes, J. Herbert, Norristown, Pa. Tire pump. 1,482,689; Feb. 5.
Landsiedel, Walter W., Norwood, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio. Adding and calculating machine. 1,482,471; Feb. 5.
Lane Brothers Company. (See Lane, George, assignor.)
Lane, George, assignor to Lane Brothers Company, Poughkeepsie, N. Y. Lifting jack. 1,483,002; Feb. 5.
Lang, Alvin, San Francisco, and E. H. Forestier, San Mateo, Calif. Locket or similar article of jewelry. Des. 63,903; Feb. 5.
Lange, Berthold A., St. Louis, Mo. Box corner. 1,482,569; Feb. 5.
Lange, Stephen O., St. Louis, Mo. Mailing package. 1,482,472; Feb. 5.
Lanzius, Evelyn F. F., executrix. (See Lanzius, George.)
Lanzius, George, deceased, New York, N. Y.; E. E. F. Lanzius, executrix. Aeroplane propeller. 1,482,690; Feb. 5.

Larin, Arthur T., Waltham, Mass. Shuttle check and binder. 1,482,800; Feb. 5.
Larsen, Mary L. (See Blodgett, Charles L., assignor.)
Larsen, Olaf. (See Valerius, T. L., and Larsen.)
Laserson, Frederick M., Brooklyn, N. Y. Sewing-machine motor. 1,482,518; Feb. 5.
Lasker, William W., Brooklyn, assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y. Endless-ribbon carrier and feed mechanism. 1,482,753; Feb. 5.
Laughlin, Myron P., Lowell, Mass. Liquid-feed regulator. 1,482,754; Feb. 5.
Lawrence, E. E. (See Raus, Charles, assignor.)
Lawson Manufacturing Company. (See Kenney, John J., assignor.)
Lawson, Robert H. Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Driving and stopping mechanism. 1,482,801; Feb. 5.
Lea, Charles. (See Hathaway, E. F., and Lea.)
Leech, Edward W., jr., Baltimore, Md. Lubricating system for automobiles. 1,482,755; Feb. 5.
Leitzell, Samuel B., Butler, Pa. Brake shoe or drum. 1,482,853; Feb. 5.
Leonard, Linnie E., Cleveland, Ohio. Hair-waving implement. 1,482,403; Feb. 5.
Levin, Abraham I., Far Rockaway, N. Y. Rim liner. 1,482,901; Feb. 5.
Levy, Maurice. (See Curioni, Aldo, assignor.)
Lewis, Edmund W., London, England. Feed mechanism for moving strip charts. 1,482,802; Feb. 5.
Liebowits, Benjamin, New Rochelle, N. Y. Ball-and-socket joint. 1,482,756; Feb. 5.
Liefring, Peter, Wathena, Kans. Apparatus for feeding hogs. 1,482,691; Feb. 5.
Lillie, Ernest A., Leicester, England. Fastening stud or button. Des. 63,904; Feb. 5.
Lilly, William E., Lillybrook, W. Va. Gripping device. 1,482,653; Feb. 5.
Link, Vincent, Detroit, Mich., assignor to Studebaker Corporation. Combination spring end and bumper support. 1,482,935; Feb. 5.
Lisk Manufacturing Company, The. (See Keehn, Clarence C., assignor.)
Little, A. E., Company. (See Reed, James H., assignor.)
Little, Arthur D., Inc. (See Stevens, John, 3d, assignor.)
Long, Lewis R. (See White, Fred G., assignor.)
Lord, William S., Evanston, Ill., and L. Davis, Brooklyn, N. Y., assignors to Williamson Candy Company, Chicago, Ill. Machine for coating confection centers with nuts. 1,482,473; Feb. 5.
Lougheed, Randle O., Montpelier, Ohio. Auxiliary air valve for automobiles. 1,482,803; Feb. 5.
Lournay, Inc. (See Blakney, John H., assignor.)
Lovejoy, Ralph M., Meredith, N. H. Steering knuckle construction for vehicles. 1,483,003; Feb. 5.
Lovett, O. C. (See Buck, David D., assignor.)
Luce, Louis L., and L. Mattson, Portland, Oreg. Internal-combustion engine. 1,482,519; Feb. 5.
Lukens, Randolph E., assignor to The Iroquois China Company, Syracuse, N. Y. Plate or similar article. Des. 63,905; Feb. 5.
Luney, Edmund A. (See Henrichsen, C., jr., and Luney.)
Lyon, Kyle, Spencer, assignor of one-third to T. W. Smith and one-third to A. J. Clement, Rowan County, N. C. Aeroplane. 1,482,520; Feb. 5.
Macdonald, Harry P., Montclair, N. J., assignor to Snead & Company. Flexible disk. 1,482,570; Feb. 5.
Macdonald, Harry P., Montclair, N. J., assignor to Snead & Company. Flexible joint. 1,482,571; Feb. 5.
MacDow, John W., Newark, N. J. Construction jack. 1,483,004; Feb. 5.
Maciejko, Michael, Meriden, Conn. Shade-roller holder. 1,482,936; Feb. 5.
Mack, Carl, assignor to Mack Lock Company, Inc., Long Island City, N. Y. Vehicle door-lock casing and cover. 1,482,757; Feb. 5.
Mack Lock Company. (See Mack, Carl, assignor.)
Malocsay, Francis X., Saddle River, N. J., assignor to William Steiner Sons & Company. Banding machine. 1,482,572; Feb. 5.
Manierre, George, Milwaukee, Wis. Machine for unloading railway cars. 1,482,474; Feb. 5.
Mann, Matthew D., jr., Roselle, N. J., assignor to S. B. Hunt, trustee, Mount Kisco, N. Y. Manufacturing isopropyl ether. 1,482,804; Feb. 5.
Mann, William, Company. (See Prizer, Harry A., assignor.)
Marburg Brothers, Inc., et al. (See Schmidt, Carl, assignor.)
Marcus, Samuel, Brooklyn, N. Y. Sounding device for dolls and other toys. 1,482,475; Feb. 5.
Marino, Ignasio, Washington, D. C. Automobile turntable. 1,482,937; Feb. 5.
Marsden, John E. (See Milliken, John A., assignor.)
Marsh, Clifford W., Bridgeport, Conn. Paper separator for typewriters. 1,482,602; Feb. 5.
Marsh, Thomas A., Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind. Furnace. 1,482,573; Feb. 5.
Martinson, John, Wrenshall, Minn. Cable clamp. 1,482,902; Feb. 5.
Mather, Gurdon C., Detroit, Mich. Gear-shift lock. 1,482,476; Feb. 5.
Matson, Carl A., Lynnfield, assignor to Matson Lace Tipping Machine Company, Boston, Mass. Making a nonmetallic lace tip. 1,483,052; Feb. 5.
Matson Lace Tipping Machine Company. See Matson, Carl A., assignor.)
Matthies, William H. (See Polinkowsky, L., and Matthies.)
Mattson, Leroy. (See Luce, L. L., and Mattson.)
Maxim, Hiram P., Hartford, Conn. Silencer for guns. 1,482,805; Feb. 5.
May, Solomon, Chicago, Ill. Casing and making same. 1,482,477; Feb. 5.
McAfee, Almer M., Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa. Converting oils. 1,482,438; Feb. 5.
McArthur, John O., Philadelphia, Pa. Crosshead. 1,482,938; Feb. 5.
McCall Company, The. (See Hutter, Franz, assignor.)
McCollough, William A., Webster City, Iowa. Invalid's bed. 1,482,439; Feb. 5.
McElwain, Henry E., Holyoke, Mass. Machine for joining film strips. 1,482,521; Feb. 5.
McFarland, James E., Lamont, Nebr. Mitten and making same. 1,482,758; Feb. 5.
McGillicuddy, Patrick J., Denver, Colo. Cigarette holder. 1,482,654; Feb. 5.
McIntosh, James, Norristown, Pa., assignor to Diamond State Fibre Company, Elsmere, Del. Making carbon. 1,482,939; Feb. 5.
McIntyre, Stanley M., Cincinnati, Ohio. Corner piece for milk crates and the like. 1,482,854; Feb. 5.
McMahon, Thomas D., et al. (See Nesbitt, Herbert S., assignor.)
McMinn, John E., assignor to Peerless Manufacturing Company, Louisville, Ky. Heater. Des. 63,906; Feb. 5.
McNair, Albert D., Fayetteville, Ark. Electric fence. 1,483,005; Feb. 5.
Melita White Metal Casting Co. (See Kronburger, Stephen, assignor.)
Melland, William. (See Nield, William H., assignor.)
Melius, Grover B., Los Angeles, Calif. Hose. 1,483,006; Feb. 5.
Mengel Company, The. (See Moore, John A., assignor.)
Meyer, Starke L., Milwaukee, Wis. Electrical heater for auto radiator systems. 1,482,574; Feb. 5.
Meyers, Sidney E., assignor to G. W. Smith, Buffalo, N. Y. Apparatus for burning oil. 1,482,759; Feb. 5.
Michell, Anthony G. M., assignor to Crankless Engines, (Aus) Proprietary Limited, Melbourns, Victoria, Australia. Mechanism for the interconversion of reciprocating and rotary motion. Re15,756; Feb. 5.
Mid-West Box Company. (See Heinrichs, Berg, assignor.)
Miehle Printing Press & Manufacturing Company. (See Dudley, Edward F., assignor.)
Milford Iron Foundry. (See Braisted, Le Roy, assignor.)
Miller Lock Company, The. (See Jackson, Arthur C., assignor.)
Miller, Max C., Cumberland Hill, assignor to Jenckes Knitting Machine Company, Pawtucket, R. I. Knitting machine. 1,482,806; Feb. 5.
Miller, Richard, Appleton, Wis. Die block. 1,482,404; Feb. 5.
Miller, Robert L., assignor to Otis Automatic Train Control, Inc., Spokane, Wash. Automatic train-control mechanism. 1,482,655; Feb. 5.
Miller, Solomon S., et al. (See Gilardone, Joseph C., assignor.)
Milligan, Walker M., Huntington Beach, Calif. Lubricating system for internal-combustion engines. 1,482,478; Feb. 5.
Milliken, John A., Bayonne, N. J., assignor to J. E. Marsden, Philadelphia, Pa. Molding glassware. 1,482,760; Feb. 5.
Mills Novelty Company. (See Sandell, Henry K., assignor.)
Milwaukee Corrugating Company. (See Curtis, Lewis E., assignor.)
Mittasch, Alwin, and C. Kircher, assignors, by mesne assignments, to Badische, Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany. Manufacture of a nonhygroscopic fertilizer. 1,482,479; Feb. 5.
Mollenberg, George W., Huntington Beach, Calif. Drill-pipe slip. 1,482,693; Feb. 5.
Moller, Edward M. (See Benedict, H. A., and Moller.)
Monarch Governor Company. (See Dell, Bradford A., assignor.)
Montgomery Ward & Co. (See Robertson, Charles A., assignor.)
Moody, Charles L. (See Arthur, J. E., and Moody.)
Moody, Lewis F., Philadelphia, Pa. Operating mechanism for hydraulic turbines. 1,482,405; Feb. 5.
Moore, Arlington, Boston, Mass. Paper container. 1,482,761; Feb. 5.
Moore, James R. and T. B., Wichita, Kans. Road-surfacing machine. 1,482,904; Feb. 5.
Moore, John A., assignor to The Mengel Company, Louisville, Ky. Box or container. 1,482,857; Feb. 5.
Moore, Thomas, Westerly, R. I. Elastic woven fabric. Des. 63,907; Feb. 5.
Moore, Thomas B. (See Moore, James R. and T. B.)
Moore, William, Michigamme, Mich. Tilting headlight. 1,482,656; Feb. 5.
Moorshead, Thomas C., Alton, Ill. Glass-shaping machine. 1,482,762; Feb. 5.

Morgan & Wright. (See Hoyt, Homer J., assignor.)
Morgan, Ralph L., Worcester, assignor, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass. Mechanism for supplying liquid to grinding machines. 1,482,855; Feb. 5.
Morgan, Ralph L., Worcester, assignor of one-half to Greenfield Tap & Die Corporation, Greenfield, Mass. Bearing for grinding spindles. 1,482,856; Feb. 5.
Morgan, William R., Jackson, Mich. Machine tool and manufacturing nuts and the like. 1,482,908; Feb. 5.
Morrison, Fred H., Marion, Ohio. Block mold. 1,483,007; Feb. 5.
Morriss, William N., Waterloo, Iowa. Fire extinguisher. 1,482,522; Feb. 5.
Mowery, Harold W., Mahwah, N. J., assignor to American Abrasive Metals Company. Lining plate for bank vaults and similar structures. 1,482,480; Feb. 5.
Manning, A. P. & Co. (See Taylor, Floyd T., assignor.)
Munser, Henry, New York, N. Y. Shoe-button cap. 1,482,940; Feb. 5.
Murphey, Thomas B., Chicago, Ill. Shoe protector. 1,482,575; Feb. 5.
Murphy, P. H., Company. (See Bonsall, Charles D., assignor.)
Mutual Electric and Machine Company. (See Frank, Harrison J. L., assignor.)
Myers, William C., Des Moines, Iowa. Sectional grain spout. 1,482,576; Feb. 5.
Nacker, Owen M., assignor of one-half to A. P. Brush, Detroit, Mich. Rear axle. 1,482,577; Feb. 5.
Nash Auto Accessory Manufacturing Company. (See Nash, Frank H., assignor.)
Nash, Frank H., assignor to Nash Auto Accessory Manufacturing Company, La Fayette, Ga. Protector for automobile tops. 1,482,578; Feb. 5.
National Differential Manufacturing Company. (See Casale, A. J., and Simpson, assignors.)
Neill, Percy G., Bonners Ferry, Idaho. Wheel puller. 1,482,694; Feb. 5.
Nelson, Walter, Oberon, N. Dak. Map and holder. 1,482,695; Feb. 5.
Nesbitt, Herbert S., assignor of one-third to O. P. Gustavsen, Minneapolis, and one-third to T. D. McMahon, St. Paul, Minn. Grain door for cars. 1,482,941; Feb. 5.
Neudorff, Frederick. (See Reid, R. R., and Neudorff.)
Newberg, Hugh W., Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company. Regulator for rotary pumps and motors. 1,482,807; Feb. 5.
Newberry, Sidney H., Chester, Pa. Device for operating and locking a swinging window sash. 1,482,696; Feb. 5.
New Jersey Foundry and Machine Company. (See Hescock, Ethan N., assignor.)
New York Trust Company et al., executors. (See Wylde, Edward.)
Nice, Budd G., Oxnuts, Pa. Ball-bearing wheel. 1,482,579; Feb. 5.
Nield, William H., Stockport, assignor of one-half to W. Meiland, Manchester, England. Power-producing system. 1,482,942; Feb. 5.
Nigh, William K., and B. H. Schaff, Hagerstown, Md. Handle-bar grip for motor cycles. 1,482,858; Feb. 5.
Norman, Roy, St. Louis, Mo., assignor to Sullivan Machinery Company. Mining-machine truck. 1,483,053; Feb. 5.
Northrop, Jonas, Hopedale, assignor to Hopedale Manufacturing Company, Milford, Mass. Thread-parting mechanism. 1,482,908; Feb. 5.
Norton, James D., Eltingville, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J. Skiving machine. 1,482,406; Feb. 5.
O & J Machine Company, The. (See Oslund, Charles H., assignor.)
Occhipinti, Giovanni, and A. Bianchi, New York, N. Y. Safety pin. 1,482,657; Feb. 5.
Ogden, John E. (See Smith, Ezra B., assignor.)
Ohio Brass Company, The. (See Averill, Rex G., assignor.)
Olcott, Frank A., Columbus, Nebr. Combined bumper and fender brace. 1,482,658; Feb. 5.
Oliver, Eben F., Jersey City, N. J., assignor to Korrectolite Company, Inc., New York, N. Y. Shade-supporting means. 1,482,580; Feb. 5.
Olson, Arthur E. (See Lance, B. W., and Olson.)
O'Neill, John E., Bronxville, N. Y. Fastener. 1,482,763; Feb. 5.
Orr, Herbert P., Indiana, assignor of one-fourth to H. B. Douglas, Pittsburgh, and one-fourth to A. Christianson, Butler, Pa. Forming drawbar yokes. 1,482,697; Feb. 5.
Oslund, Charles H., Worcester, Mass., assignor to The O & J Machine Company. Stringing-up or drawing-through device for wire-drawing drums. 1,482,859; Feb. 5.
Oslund, Charles H., Worcester, Mass., assignor to The O & J Machine Company. Stringing-up device for wire-drawing drums. 1,482,860; Feb. 5.
Oslund, Charles H., Worcester, Mass., assignor to The O & J Machine Company. Slow-starting wire-drawing block. 1,482,861; Feb. 5.
Ost, Frederick A., Minneapolis, assignor, by mesne assignments, of forty-nine fiftieths to L. F. Young, St. Paul, Minn. Machine for molding and baking pastry cones. 1,482,862; Feb. 5.
Oswald, Edith, Independence, Iowa. Tablet holder. 1,482,659; Feb. 5.
Otis Automatic Train Control, Inc. (See Miller, Robert L., assignor.)
Otis Elevator Company. (See Zederbaum, M. C., Fish, and Kirchenbauer, assignors.)
Overmyer, Charles G., Hartford City, Ind. Glass caster. 1,482,660; Feb. 5.
Ozanne, Harold H., assignor of one-third to L. Vaughan and one-third to L. D. Potter, Emmetsburg, Iowa. Dental handpiece for drills. 1,483,008; Feb. 5.
Paasche, Jens A., Chicago, Ill. Pneumatic coating apparatus. 1,482,617; Feb. 5.
Packard Motor Car Company. (See Tibbetts, Milton, assignor.)
Page, Albert E., Flatbush, Brooklyn, assignor to Scott and Williams, Inc., New York, N. Y. Knitting-machine needle. 1,483,009; Feb. 5.
Pattberg, Otto F. (See Forsyth, Roy M., assignor.)
Peden, Samuel E., St. Louis, Mo. Electrical therapeutic device. 1,483,010; Feb. 5.
Pedersen, Johannes T., Flushing, assignor to A. M. Sloss, New York, N. Y. Automatic power-shut-off mechanism. 1,482,581; Feb. 5.
Peerless Manufacturing Company. (See McMinn, John E., assignor.)
Perron, Albert E. (See Goulet, Omer C., assignor.)
Peterson, Andrew, Brooklyn, N. Y. Pump agitator. 1,482,698; Feb. 5.
Pennock, Charles A., East Orange, N. J., assignor to Richard Hudnut, New York, N. Y. Cosmetic-pencil case. 1,482,407; Feb. 5.
Pennsylvania Rubber Company. (See Daum, George W., assignor.)
Perfection Electric Products Co., The. (See Kruesheld, Henry, assignor.)
Phillips, Everett A., Summit, N. J., assignor, by mesne assignments, to The Creamery Packing Mfg. Company, Chicago, Ill. Ice-cream-brick cave. 1,482,481; Feb. 5.
Picard, Richard A., New York, N. Y. Card index. 1,482,699; Feb. 5.
Pickup, George E., assignor to The Wehrle Company, Newark, Ohio. Radiant for open-fire gas heaters. Des. 63,908; Feb. 5.
Pioneer Production Company. (See Yeomans, Lucien I., assignor.)
Piorkowski, Antoni, Somers, Conn. Inkwell. 1,482,863; Feb. 5.
Piron Coal Distillation Systems, Inc. (See Piron, Emil, assignor.)
Piron, Emil, assignor to Piron Coal Distillation Systems, Inc., New York, N. Y. Absorption device. 1,482,408; Feb. 5.
Pitcairn, William S., Corporation. (See Pitcairn, William S., assignor.)
Pitcairn, William S., East Orange, N. J., assignor to William S. Pitcairn Corporation, New York, N. Y. Plate or similar article. Des. 63,909; Feb. 5.
Pitcairn, William S., East Orange, N. J., assignor to William S. Pitcairn Corporation, New York, N. Y. Covered dish or similar article. Des. 63,910; Feb. 5.
Pleasants, Arthur H., Baltimore, Md. Locating device. 1,482,440; Feb. 5.
Polinkowsky, Lipa, New York, N. Y., and W. H. Matthies, Hackensack, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,482,618; Feb. 5.
Pool, Elmer C., New Castle, Pa. Deflector for plate-feeding mechanisms. 1,483,059; Feb. 5.
Poorman, John G., Tinley Park, Ill. Poultry hover. 1,482,809; Feb. 5.
Post, Georgia A., Forest Hills, N. Y. Statuette or similar miniature figure. Des. 63,911; Feb. 5.
Postcraft Company, Inc. (See Burr, Harry J., assignor.)
Potemkin, Louis, Brooklyn, N. Y. Hair waver. 1,482,810; Feb. 5.
Potter, Laurens D., et al. (See Ozanne, Harold H., assignor.)
Potter, Thomas R. F., Brooklyn, N. Y. Sales-check holder. 1,482,943; Feb. 5.
Powers Accounting Machine Corporation. (See Lasker, William W., assignor.)
Pratt, Arthur D., Short Hills, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Steam boiler and setting therefor. 1,482,864; Feb. 5.
Prizer, Harry A., assignor to William Mann Company, Philadelphia, Pa. Safety paper. Des. 63,912; Feb. 5.
Providence Collar Button Company. (See Roberts, George H.)
Pugh, Richard H. (See Workman, Ansel E., assignor.)
Pulliam, Oswald S., assignor to Hibbard Process Corporation, New York, N. Y. Metal-working furnace. 1,483,062; Feb. 5.
Purcell, Isaac T., Wakeeney, Kans. Method of making and exhibiting moving pictures. 1,482,482; Feb. 5.
Pym, Arthur F. (See Pym, Charles F., and A. F.)
Pym, Charles F. and A. F., Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J. Machine for use in the lasting of boots and shoes. 1,482,401; Feb. 5.
Pym, Charles F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers over lasts. 1,482,410; Feb. 5.

Pym, Charles F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. End-lasting mechanism. 1,482,411; Feb. 5.
Quick, Arthur S., London, England. Refining oils. 1,482,483; Feb. 5.
Quigley, John T., assignor to Costmeter Company, Boston, Mass. Filing and indexing equipment. 1,482,905; Feb. 5.
Rasey, Elijah, Los Angeles, Calif. Safety attachment for elevators. 1,482,523; Feb. 5.
Ratzesberger, John, Altoona, Pa. Mold for concrete curbing. 1,482,700; Feb. 5.
Raus, Charles, Cleveland, assignor, by mesne assignments, to E. E. Laurence, Fairport Harbor, Ohio, trading as Standard Electrical Manufacturing Company. Switch box. 1,482,865; Feb. 5.
Read, William G., Prescot, England. Hatch covering for navigable vessels, applicable to other similar purposes. 1,483,011; Feb. 5.
Reed, James H., Swampscott, assignor to A. E. Little Company, Lynn, Mass. Shoe-sewing machine. 1,482,610; Feb. 5.
Reedy, Alfred J., assignor to A-B Stove Company, Battle Creek, Mich. Oven. 1,482,866; Feb. 5.
Reedy, Alfred J., assignor to A-B Stove Company, Battle Creek, Mich. Stove. 1,482,867; Feb. 5.
Reha, H. J. (See Hofmann, J. Emil, assignor.)
Reid, Remer R., and F. Neudorff, Atlanta, Ga. Combined freezer and cooler. 1,482,811; Feb. 5.
Reineke, Charles, New York, N. Y. Reduction and multi-stroke power-transmitting mechanism. 1,483,012; Feb. 5.
Reinhardt, William A., Ashland, Wis. Tubular stud. 1,483,045; Feb. 5.
Reliance Gauge Column Company, The. (See Brown, John R., assignor.)
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Hopper mechanism for automatic filling-replenishing looms. 1,482,412; Feb. 5.
Richard, Eugene C., Flint, assignor to General Motors Corporation, Detroit, Mich. Piston. 1,482,868; Feb. 5.
Rigaumont, Victor A., Pittsburgh, Pa. Movable-seat construction. 1,482,701; Feb. 5.
Ritter, George, Perth Amboy, N. J., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa. Package-binding machine. 1,482,764; Feb. 5.
Ritter, George, Perth Amboy, N. J., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa. Roof covering. 1,483,046; Feb. 5.
Roberts Brass Manufacturing Company. (See Roberts, Thomas H., assignor.)
Roberts, George H., Providence, R. I., assignor to Freeman-Daughaday Co., Chartley, Mass., also doing business as Providence Collar Button Company, Providence, R. I. Statuette. Des. 63,913; Feb. 5.
Roberts, Spurgeon, Corsicana, Tex. Extractor. 1,483,013; Feb. 5.
Roberts, Thomas H., assignor to Roberts Brass Manufacturing Company, Detroit, Mich. Bib cock. 1,482,484; Feb. 5.
Roberts, William E., Lompoc, Calif. Apparatus for drying divided materials. 1,482,812; Feb. 5.
Robertson, Charles A., Springfield, assignor to Montgomery Ward & Co., Inc., Chicago, Ill. Explosive engine. 1,482,485; Feb. 5.
Robinson, Fred, Duluth, Minn. Bin shoveler. 1,482,524; Feb. 5.
Rodess, Samuel C., New York, N. Y. Signal bell. 1,482,582; Feb. 5.
Rodess, Samuel C., New York, N. Y. Signal bell. 1,482,583; Feb. 5.
Rogers, Charles B. (See Scruby, H. F., and Rogers.)
Rogers, John, Devon, Conn. Flushometer. 1,482,869; Feb. 5.
Roppe, Walter M., Milwaukee, Wis. Needle sharpener. 1,482,486; Feb. 5.
Rosenband M'f'g Co. (See Walker, W., and Weber, assignors.)
Rothschild, Max, New York, N. Y., assignor to Susquehanna Silk Mills. Textile fabric. Des. 63,914; Feb. 5.
Royal Worcester Corset Company. (See Brooks, W. L., and Smith, assignors.)
Rubereid Company, The. (See Abraham, Herbert, assignor.)
Ruud, Edwin, Pittsburgh, Pa., assignor to Ruud Manufacturing Company, Camden, N. J. Water heater. Re15,753; Feb. 5.
Ruud Manufacturing Company. (See Ruud, Edwin, assignor.)
Russ, John D., assignor of one-half to W. N. Russ, Spencer, W. Va. Releasable wire-rope socket. 1,482,644; Feb. 5.
Russ, Wirt N. (See Russ, John D., assignor.)
Ruttenberg, Edward C., Chicago, Ill. Lamp-shade support. Des. 63,915; Feb. 5.
Ryder, Elmer Argo, Ill. End plate for cut-out valves. 1,482,418; Feb. 5.
Samaha, Mansour, Atlantic City, N. J. Reenforcing frame for concrete building structures. 1,482,813; Feb. 5.
Sampson, Henry M., Tonkawa, Okla. Doll. Des. 63,916; Feb. 5.
Sanborn, John B., Evanston, Ill., assignor to Associated Trading Corporation, Milwaukee, Wis. Molded article. 1,482,765; Feb. 5.
Sandell, Henry K., Evanston, assignor to Mills Novelty Company, Chicago, Ill. Bowing mechanism for self-playing stringed instruments. 1,482,620; Feb. 5.
Sanford-Day Iron Works. (See Sanford, H. W., and Jones, assignors.)
Sanford, Hugh W., and G. E. Jones, jr., assignors to Sanford-Day Iron Works, Knoxville, Tenn. Railway car. 1,482,814; Feb. 5.
Sather, Peter, East Stanwood, Wash. Vehicle headlight. 1,482,815; Feb. 5.
Saunders, John L., Washington, D. C. Adjustable support. 1,483,051; Feb. 5.
"Save-M" Fire Extinguisher Company. (See Fahnestock, Charles M., assignor.)
Schaefer, Henry J., Ashtabula, Ohio. Pressure draft gear. 1,483,014; Feb. 5.
Schaff, Benjamin H. (See Nigh, W. K., and Schaff.)
Schall, David H., Canton, Ohio. Brake mechanism for motor vehicles. 1,482,816; Feb. 5.
Scharpenberg, Charles C., Bakersfield, Calif. Fluid-operated well-drilling apparatus. 1,482,702; Feb. 5.
Schevitz, Carl, Jacksonville, Fla. Expansible shoe last. 1,482,684; Feb. 5.
Schimanek, Emil, Budapest, Hungary. Indicator for determining the average pressure in the cylinders of piston machines. 1,482,525; Feb. 5.
Schlichter, Wilhelm, Freiburg i. Breisgau, Germany. Photographic photometer. 1,482,441; Feb. 5.
Schlumpf, Edwin, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Turbine utilizing elastic motive fluids. 1,482,526; Feb. 5.
Schmick, Henry J., Williamsport, Pa. Screw and gear making machine. 1,482,621; Feb. 5.
Schmick, Henry J., Williamsport, Pa. Gearing and making the same. 1,482,622; Feb. 5.
Schmick, Henry J., Williamsport, Pa. Mechanical element and making the same. 1,482,623; Feb. 5.
Schmidt, Carl, Berlin-Tegel, assignor of two-thirds to Sparlager G. m. b. H., Berlin, Germany, and one-third to Marburg Brothers, Inc., New York, N. Y. Manufacturing antifriction bearings and compounds. 1,482,414; Feb. 5.
Schnackenberg, Henry, Stroudsburg, Pa. Outfit for producing drinks. 1,483,015; Feb. 5.
Schnelling, Samuel, Chicago, Ill. Finger ring. Des. 63,917; Feb. 5.
Schutz, Bernard W., Haledon, N. J. Picker stick. 1,482,703; Feb. 5.
Schwartz, Morris, Chicago, Ill. Door hanger. 1,482,704; Feb. 5.
Scott and Williams, Inc. (See Page, Albert E., assignor.)
Scott, Walter B., Marblehead, Mass. Toy animal. Des. 63,918; Feb. 5.
Scruby, Horace F., Miami, Okla., and C. B. Rogers, Joplin, Mo. Fluid-pressure brake. 1,482,661; Feb. 5.
Seaboyer, George E., and P. H. Anderson, Wooster, Ohio. Constructing brushes. 1,482,415; Feb. 5.
Seckinger, John F., Humboldt, Saskatchewan, Canada. Heating attachment for cookstoves. 1,483,016; Feb. 5.
Segal Metal Products Company. (See Segal, Samuel, assignor.)
Segal, Samuel, assignor to Segal Metal Products Company, Inc., New York, N. Y. Adjustable lock casing. 1,482,766; Feb. 5.
Selden, Arthur R., Rochester, N. Y. Loose-leaf binder. 1,482,945; Feb. 5.
Serra, Augustin, Essomes-sur-Marne, France. Warp knit fabric and making same. 1,482,705; Feb. 5.
Serva, Adam A., and W. S. Simpson, assignors to The United Electric Company, Canton, Ohio. Caster. 1,482,946; Feb. 5.
Service Bag Co. (See Bunker, J. W., and Boney, assignors.)
Shamberger, John P., Baltimore, Md. Internal-combustion engine. 1,482,442; Feb. 5.
Shamberger, John P., Clarendon, Va. Internal-combustion engine. 1,482,443; Feb. 5.
Shampay, Pascal J., Chicago, Ill. Drying machine. 1,482,624; Feb. 5.
Shaw, George H., Los Angeles, Calif. Milk-can-identifying means. 1,482,817; Feb. 5.
Shaw, Nelson T. (See Woods, W. G., and Shaw.)
Sheets, Jesse T., Covington, Ky. Stretcher. 1,482,487; Feb. 5.
Sheldon, Alfred, New Orleans, La. Fuel pump. 1,482,444; Feb. 5.
Sheppard, Teaford C., South Richmond, Va. Mail-bag fastener. 1,482,062; Feb. 5.
Shields, Lowell W., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Display stand. Des. 63,919; Feb. 5.
Shields, Robert, Brooklyn, N. Y. Adjustable chute spring for typesetting machines. 1,483,017; Feb. 5.
Shipman, William P., assignor to Blaw-Knox Company, Pittsburgh, Pa. Method and apparatus for welding. 1,482,818; Feb. 5.
Shlisky, Joseph, Haverhill, Mass. Tack-feeding apparatus. 1,482,767; Feb. 5.
Shoemaker, George A., Philadelphia, Pa., assignor to Bound Brook Oil-Less Bearing Company. Producing composite bearings. 1,483,018; Feb. 5.
Short, Ira, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company. Method of and apparatus for testing gears. 1,482,706; Feb. 5.

Shorts, Nelson T., Fern, Pa. Combination valve stem and pressure gauge. 1,482,947; Feb. 5.
Shouldice, Frederic A., Trucksville, Pa. Stone gatherer. 1,482,663; Feb. 5.
Sicard, Hugh C., Niagara Falls, assignor to United States Ferro Alloys Corporation, New York, N. Y. Decarbonizing ferro alloys. 1,482,585; Feb. 5.
Sidebotham, Melvin H. (See La Bombard, L. E., and Sidebotham.)
Signode System, Inc. (See Treat, Sidney W., assignor.)
Simonson, Leo B., New York, N. Y. Hair dressing, washing, and shampooing equipment. 1,482,819; Feb. 5.
Simonson, Leo B., New York, N. Y. Advertising manikin. 1,482,820; Feb. 5.
Simpson, Joseph B. (See Casale, A. J., and Simpson.)
Simpson, Walter S., assignor to The United Electric Company, Canton, Ohio. Caster. 1,482,527; Feb. 5.
Simpson, Walter S. (See Serva, A. A., and Simpson.)
Singer Manufacturing Company, The. (See Allen, Edward B., assignor.)
Sisson, Clement F., and H. E. Eurich, White Pigeon, Mich. Recovery of stock. 1,482,488; Feb. 5.
Sixt, Eugene, Springville, N. Y. Collar pin. 1,482,821; Feb. 5.
Skinner Engine Company. (See Glenn, John C., assignor.)
Skinner, Frank W., Minneapolis, Minn. Machine for and process of making hollow rubber articles. 1,482,707; Feb. 5.
Skinner, Lee B., assignor to Skinner Machinery Company, Dunedin, Fla. Orchard heater. 1,482,586; Feb. 5.
Skinner Machinery Company. (See Skinner, Lee B., assignor.)
Skinner Machinery Company. (See Smith, Henry L., assignor.)
Slade, Budd E., Cheyenne Wells, Colo. Pedal attachment. 1,482,768; Feb. 5.
Slawienski, Mike, Camden, N. J. Street or station indicator. 1,482,870; Feb. 5.
Sloss, Aaron M. (See Pedersen, Johannes T., assignor.)
Small, Eugene W., New York, N. Y. Game. 1,482,708; Feb. 5.
Smith, Daniel D., Valdosta, Ga. Powder duster. 1,482,709; Feb. 5.
Smith, Daniel D., Valdosta, Ga. Powder-dusting machine. 1,482,710; Feb. 5.
Smith, Edwin E., and J. A. Crosby, Willacoochee, Ga. Wrench. 1,483,019; Feb. 5.
Smith, Ezra S., Ravenswood, Ill., assignor to J. E. Ogden, Mountainville, N. Y. Control mechanism for doors. 1,482,949; Feb. 5.
Smith, George W. (See Meyers, Sidney E., assignor.)
Smith, Henry L., assignor to Skinner Machinery Company, Dunedin, Fla. Safety ring. 1,482,587; Feb. 5.
Smith, James J., Philadelphia, Pa. Valve fitting. 1,482,948; Feb. 5.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Process and apparatus for producing multiple-ply webs. 1,483,047; Feb. 5.
Smith, John H., Denton, Nebr. Chain connecter. 1,482,664; Feb. 5.
Smith, Lulu T., Waterloo, Iowa. Child's music rack. 1,482,871; Feb. 5.
Smith, Thomas W., et al. (See Lyon, Kyle, assignor.)
Smith, William M. (See Brooks, W. L., and Smith.)
Snapp Foundry, Inc. (See Theis, George R., assignor.)
Snead & Company. (See Macdonald, Harry P., assignor.)
Snelling, Walter O., Allentown, Pa. Preservative composition. 1,482,416; Feb. 5.
Societe Blot-Garnier & Chevalier. (See Blot, Paul, assignor.)
Sonoco Products Company. (See Kennedy, Gibson H., assignor.)
Sorenson, John, Rhinelander, Wis. Adjusting mechanism for resawing machines. 1,482,711; Feb. 5.
Sparks, William, assignor to The Sparks-Withington Company, Jackson, Mich. Radiator. 1,482,445; Feb. 5.
Sparks-Withington Company, The. (See Sparks, William, assignor.)
Sparlager, G. m. b. H., et al. (See Schmidt, Carl, assignor.)
Specialty Automatic Machine Company. (See La Bombard, L. E., and Sidebotham, assignors.)
Sperling, Edward, New York, N. Y. Change purse and bill fold. 1,483,020; Feb. 5.
Squibb, E. R., and Sons. (See Giesy, Paul M., assignor.)
Stanage, David U., Oakland, Calif. Direction indicator for automobiles or other vehicles. 1,482,822; Feb. 5.
Standard Electrical Manufacturing Company. (See Raus, Charles, assignor.)
Standard Four Wire Company. (See Bierman, Edwin W., assignor.)
Standard Oil Company. (See Conley, Gardner L., assignor.)
Stanyo, Gabriel. (See Alter, L., and Stanyo.)
Star Watch Case Co. (See Starke, Otto A., assignor.)
Starke, Otto A., assignor to Star Watch Case Co., Ludington, Mich., Watchcase. Des. 63,920; Feb. 5.
Stattman, Walter A., Chicago, assignor to H. R. Adams, Oak Park, and H. B. Wilcox, Glencoe, Ill. Seal for bottles. 1,482,823; Feb. 5.
Stead, Harold J., Geneva, N. Y. Bifocal-lens blank. 1,482,950; Feb. 5.
Stead, Harold J., Geneva, N. Y. Bifocal-lens blank. 1,482,951; Feb. 5.
Stearn, Franklin A., Paterson, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Testing system for automatic exchanges. 1,482,712; Feb. 5.
Stebler, Fred, assignor to Stebler Parker Co., Riverside, Calif. Sizing apparatus. 1,482,824; Feb. 5.
Stebler Parker Co. (See Stebler, Fred, assignor.)
Stecker, Louis G., Philadelphia, Pa. Storage battery. 1,482,872; Feb. 5.
Stedman, James H., Braintree, Mass. Reenforced-rubber flooring and making the same. 1,482,952; Feb. 5.
Stein, Samuel P., Newark, N. J. Apparatus for recovering power from tides and waves. 1,482,713; Feb. 5.
Steiner, William, Sons & Company. (See Malocsay, Francis X., assignor.)
Stevens, Horace D., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Apparatus for handling air bags in the manufacture of tires. 1,482,446; Feb. 5.
Stevens, John, 3d, Boston, assignor to Arthur D. Little, Inc., Cambridge, Mass. Apparatus for treatment of waste paper. 1,482,825; Feb. 5.
Stevens, Robert C., Erie, Pa. Governor. 1,482,447; Feb. 5.
Stevenson, Ashton G., Chicago, Ill. Casting machine. 1,483,021; Feb. 5.
Stewart, John W., Martinsburg, W. Va. Pump plunger and crosshead. 1,483,022; Feb. 5.
Stilliger, Edward C., Burlington, Colo. Automobile circuit tester. 1,482,714; Feb. 5.
Stolstedt, Karl H., Centralia, Wash. Safety hook. 1,482,826; Feb. 5.
Stone, Charles N., assignor to Deere & Company, Moline, Ill. Chain or belt tightener. 1,482,528; Feb. 5.
Strand, Clarence, Mahnomen, Minn. Expanding ring clutch. 1,482,715; Feb. 5.
Stratton, George M., Salt Lake City, Utah. Telephone receiver. 1,482,588; Feb. 5.
Strong, Henry, Millinocket, Me. Generator. 1,482,665; Feb. 5.
Studebaker Corporation. (See Link, Vincent, assignor.)
Sturtevant Mill Company. (See Sturtevant, Thomas J., assignor.)
Sturtevant, Thomas J., Wellesley, assignor to Sturtevant Mill Company, Boston, Mass. Apparatus for measuring and mixing materials. 1,483,048; Feb. 5.
Sturtevant, Thomas J., Wellesley, assignor to Sturtevant Mill Company, Boston, Mass. Machine for fluffing fibers. 1,483,049; Feb. 5.
Submarine Signal Company. (See Fay, Richard D., assignor.)
Sudekum, William, Nashville, Tenn. Piston-rod packing. 1,482,716; Feb. 5.
Sullivan, Jerry J., Spokane, Wash. Windshield wiper. 1,482,448; Feb. 5.
Sullivan Machinery Company. (See Norman, Roy, assignor.)
Sulzer, Albert F., assignor to Eastman Kodak Company, Rochester, N. Y. Preparing films. 1,482,717; Feb. 5.
Susquehanna Silk Mills. (See Rothschild, Max, assignor.)
Sutton, William H., Eugene, Oreg. Mud-guard light. 1,482,769; Feb. 5.
Swelven, Martin O. (See Julson, Frederick, assignor.)
Swole, Paul C. (See Kelsey, Frank N., assignor.)
Taylor, Floyd T., Matawan, assignor to A. P. Munning & Co., Newark, N. J. Conveying mechanism. Re15,754; Feb. 5.
Taylor, John R., assignor to The Hartman-Spreng Company, Mansfield, Ohio. Gas burner. 1,482,529; Feb. 5.
Taylor, Rex H., Rochester, N. Y. Inflatable ball. Re15,755; Feb. 5.
Taylor, Richardson H., Meeker, Colo. Dentimeter. 1,482,530; Feb. 5.
Taylor-Wilson Manufacturing Company. (See Wilson, Edgar H., assignor.)
Terrell, Sam, assignor of one-third to C. B. Jackson, Detroit, Mich. Luggage carrier for motor vehicles. 1,482,770; Feb. 5.
Theis, George R., assignor to Snapp Foundry, Inc., Winchester, Va. Automatic ice-scoring machine. 1,483,023; Feb. 5.
Thiemann, Jacob. (See Banitt, J. N., and Thiemann.)
Thomas, Pacific J., Pittston, Pa. Thread spreader for doubling machines. 1,482,589; Feb. 5.
Thomas, Pacific J., Pittston, Pa. Thread spreader for doubling machines. 1,482,590; Feb. 5.
Thompson, George, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y. Distributing switch. 1,482,625; Feb. 5.
Thompson, Osceola C., Rockaway, N. J., assignor to Wirebounds Patents Company. Machine for use in making boxes. 1,482,771; Feb. 5.
Thompson, W. L. (See Young, L. F., and Ferris, assignors.)
Thordarson, Chester H., Chicago, Ill. Making polysided coils. 1,482,531; Feb. 5.
Thordarson, Chester H., Chicago, Ill. Machine for winding coils. 1,482,532; Feb. 5.
Thorn, Lawrence T., Harrisburg, Ark. License plate. 1,482,531; Feb. 5.
Tibbetts, Milton, assignor to Packard Motor Car Company, Detroit, Mich. Hydrocarbon motor. 1,482,666; Feb. 5.
Tideman, William J., assignor to The United Electric Company, Canton, Ohio. Adjustable caster. 1,482,953; Feb. 5.

Tideman, William J., assignor to The United Electric Company, Canton, Ohio. Adjustable caster. 1,482,954; Feb. 5.
Tideman, William J., assignor to The United Electric Company, Canton, Ohio. Adjustable caster. 1,482,955; Feb. 5.
Tideman, William J., assignor to The United Electric Company, Canton, Ohio. Adjustable caster. 1,482,956; Feb. 5.
Timken Roller Bearing Company, The. (See Curtis, George W., assignor.)
Timken Roller Bearing Company, The. (See Keller, Jeremiah, assignor.)
Tisley, Arthur J., Brooklyn, N. Y. Shade holder. 1,482,957; Feb. 5.
Tratsch, Walter A. (See Bechtol, A. H., and Tratsch.)
Travis, Paul J. (See Travis, William T. and P. J.)
Travis, William T. and P. J., Oyster, Va. Potato harvester. 1,483,024; Feb. 5.
Treat, Sidney W., assignor to Signode System, Inc., Chicago, Ill. Reenforcement for boxes and packages. 1,482,417; Feb. 5.
Tschirgi, Harold M., Independence, Iowa. Concrete-pipe joint. 1,482,772; Feb. 5.
Tucker, Gilbert M., jr., Glenmont, N. Y. Projecting machine. 1,483,025; Feb. 5.
Twin Packer Oil and Gas Company. (See Gallagher, Thomas H., assignor.)
Tyminski, Walter, Duluth, Minn. Stamping hammer. 1,482,532; Feb. 5.
Ueberroth, Christopher H. (See Kerr, Robert S., assignor.)
Ulirich, Alice, executrix. (See Ulirich, George J.)
Ulirich, Emil H. W., New York, N. Y., assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. 1,482,958; Feb. 5.
Ulirich, George J., deceased, by A. Ulirich, executrix, assignor, by mesne assignments, to Ulirich Tinware Company, Chicago, Ill. Sifter. 1,482,873; Feb. 5.
Ulirich Tinware Company. (See Ulirich, George J., assignor.)
Underwood Typewriter Company. (See Campbell, George W., assignor.)
Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)
Unger, Chester E., assignor to Industrial Products Company, Goshen, Ind. Centrifugal machine. 1,482,418; Feb. 5.
United Electric Company, The. (See Serva, A. A., and Simpson, assignors.)
United Electric Company, The. (See Simpson, Walter S., assignor.)
United Electric Company, The. (See Tideman, William J., assignor.)
United Shoe Machinery Corporation. (See Bertrand, Frederic E., assignor.)
United Shoe Machinery Corporation. (See Griffin, Leonard F., assignor.)
United Shoe Machinery Corporation. (See Lawson, Robert H., assignor.)
United Shoe Machinery Corporation. (See Norton, James G., assignor.)
United Shoe Machinery Corporation. (See Pym, Charles F., assignor.)
United Shoe Machinery Corporation. (See Pym, Charles F. and A. F., assignors.)
United States Ferro Alloys Corporation. (See Sicard, Hugh C., assignor.)
United States Printing and Lithograph Company, The. (See Furste, Henry, assignor.)
Valerius, Theodore L., and O. Larsen, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill. Can washer. 1,482,489; Feb. 5.
Valerius, Theodore L., and O. Larsen, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill. Cutting machine. 1,482,490; Feb. 5.
Van Ausdal, Francis X., Pasadena, Calif. Automobile bed. 1,482,718; Feb. 5.
Van Houten, Frank H., assignor to Dutchess Tool Company, Beacon, N. Y. Spacing rectifier. 1,482,667; Feb. 5.
Vaughan, Leonard, et al. (See Osanne, Harold H., assignor.)
Vavruska, Bartlett F., Prairie du Chien, Wis. Thrust bearing for crank shafts. 1,482,827; Feb. 5.
Victor Rubber Company, The. (See Berlin, Harry S., assignor.)
Visualatone Corporation, The. (See Donaldson, William J., assignor.)
Vogel, Frank, New Washington, Ohio. Cartridge holder. 1,482,491; Feb. 5.
Wack, Arthur D., assignor to Giant Resilient Wheel Company, St. Louis, Mo. Resilient spring wheel. 1,483,026; Feb. 5.
Wagner, Walter, Chicago, Ill. Welding metal receptacles. 1,483,027; Feb. 5.
Wait, Thaddeus S., Sturgis, Mich. Shade pull. 1,482,874; Feb. 5.
Walker, Edmund H., New York, N. Y. Draft gear. 1,482,492; Feb. 5.
Walker, Ernest A., Newark, N. J. Two-light arm for lighting fixtures. Des. 63,921; Feb. 5.
Walker, Ernest A., Newark, N. J. Ring for lighting fixtures. Des. 63,922; Feb. 5.
Walker, William, and H. H. Weber, assignors to Rosenband M'f'g. Co., Newark, N. J. Catch. 1,482,875; Feb. 5.
Wallace, R., & Sons Mfg. Co. (See Warren, William S., assignor.)
Walsh Automatic Coupling Company. (See Walsh, Harry R., assignor.)
Walsh Harness Company. (See Walsh, James M., assignor.)
Walsh, Harry R., San Pedro, assignor to Walsh Automatic Coupling Company, Los Angeles, Calif. Coupling for hose, pipe, and the like. 1,483,028; Feb. 5.
Walsh, James M., Milwaukee, Wis., assignor to Walsh Harness Company, Wilmington, Del. Hame. 1,482,668; Feb. 5.
Walters, Eliza L., Anderson, Ind. Carburetor. 1,482,773; Feb. 5.
Warr, Harry, Montreal, Quebec, Canada. Ironing board. 1,482,876; Feb. 5.
Warren Featherbone Company. (See Johnston, James G., jr., assignor.)
Warren, William S., Meriden, assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn. Spoon or similar article. Des. 63,923; Feb. 5.
Warsen, August W., Brooklyn, N. Y. Gripper for printing presses. 1,483,057; Feb. 5.
Wasson, Harry C. (See Hoffman, L. F., and Wasson.)
Waterbury Farrel Foundry and Machine Company, The. (See Wilcox, Richard L., assignor.)
Watson Company, The. (See Woodward, Frederick R., assingor.)
Watson, Strother, Gallatin, Tenn. Pulverizing attachment for plows. 1,482,828; Feb. 5.
Weaver, Elverton W., Cleveland, Ohio. Fuel system for motor vehicles. 1,482,493; Feb. 5.
Weber, Harry M. (See Ellis, C., and Weber.)
Weber, Henry H. (See Walker, W., and Weber.)
Wehrle Company, The. (See Pickup, George E., assignor.)
Weiss, Max L., Brooklyn, N. Y. Automobile hood catch or fastening thereof. 1,482,494; Feb. 5.
Wells, Charles L. (See Childers, William L., assignor.)
Wells, Ernest D., assignor of one-half to S. Hopkins, Atlanta, Ga. Hose clamp. 1,483,050; Feb. 5.
Western Electric Company. (See Polinkowsky, L., and Matthies, assignors.)
Western Electric Company. (See Stearn, Franklin A., assignor.)
Western Electric Company. (See Thompson, George, assignor.)
Western Supply Company. (See Crotto, Frank E., assignor.)
Westhaver, Robert B., Mahone Bay, Nova Scotia, Canada. Power dusting machine. 1,482,495; Feb. 5.
Westinghouse Electric and Manufacturing Company. (See Newberg, Hugh W., assignor.)
Westinghouse Gear and Dynamometer Company. (See Short, Ira, assignor.)
Whippey, Frederick C. (See Dolezal, Robert F., assignor.)
White, Charles H., assignor to Deere & Company, Moline, Ill. Disk-harrow mechanism. 1,482,496; Feb. 5.
White, Edward N., et al., trustees. (See Eidmann, Frank L., assignor.)
White, Fred G., assignor to L. R. Long, Kansas City, Mo. Power-transmission gearing. 1,482,449; Feb. 5.
White, Fred G., assignor to L. R. Long, Kansas City, Mo. Power-transmission mechanism. 1,482,450; Feb. 5.
White, Ira F., Oakwood, Ill. Sanding device for mine motors. 1,483,029; Feb. 5.
Whited, John C., Crede, Colo. Nut lock. 1,482,669; Feb. 5.
Whitehead, Thomas C. (See Clark, J. H., and Whitehead.)
Whiting, Jasper, Boston, Mass. Desiccating apparatus. 1,482,626; Feb. 5.
Whyel, James, Pittsburgh, Pa. Tractor brake. 1,482,877; Feb. 5.
Wiegand, Edwin L., Pittsburgh, Pa. One-way transmission mechanism. 1,482,451; Feb. 5.
Wilcox, Hollis B., et al. (See Stattmann, Walter A., assignor.)
Wilcox, Richard L., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn. Dial mechanism. 1,482,497; Feb. 5.
Wilke, Louis, Morsemere, N. J. Theftproof receiver box. 1,482,719; Feb. 5.
Wilke, Louis, Morsemere, N. J. Theftproof receiver box. 1,482,720; Feb. 5.
Wilkinson, Henry B., Pontiac, Mich. Automobile signal. 1,482,419; Feb. 5.
Williams, James H., Baltimore, Md. Grand piano. 1,482,670; Feb. 5.
Williams, Jesse C., Marshalltown, Iowa. Plasterer's hawk. 1,482,452; Feb. 5.
Williamson Candy Company. (See Lord, W. S., and Davis, assignors.)
Wills, Childe H., Marysville, Mich. Fan for hydrocarbon motors. 1,482,498; Feb. 5.
Wills, Childe H., Marysville, Mich. Valve mounting. 1,482,774; Feb. 5.
Wilson, Arthur, Glendora, Miss. Boll-weevil trap. 1,482,420; Feb. 5.
Wilson, Edgar H., Chartiers Township, Allegheny County, assignor to Taylor-Wilson Manufacturing Company, McKees Rocks, Pa. Threading machine. 1,482,829; Feb. 5.

Wilson, Herbert W. V., Meols, England. Furnace for melting stereo and similar metals and other materials. 1,483,030; Feb. 5.
Wilson Process, Incorporated. (See Wilson, Sidney C., assignor.)
Wilson, Sidney C., Rochester, assignor to Wilson Process, Incorporated, New York, N. Y. Inside lip-turning machine. 1,483,054; Feb. 5.
Winans, Daniel M., Binghamton, assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Rope-guide device. 1,483,031; Feb. 5.
Windsor, Lonzo A., Pittsburg, Kans. Foldable tourist bed. 1,482,721; Feb. 5.
Winkler, Joseph F., Philadelphia, Pa. Ice-making apparatus. 1,483,032; Feb. 5.
Wirebounds Patents Company. (See Thompson, Osceola C., assignor.)
Wise, William K., Tulsa, Okla. Combined bumper support, tire-carrier support, and spring-attaching device. 1,482,533; Feb. 5.
Wisman, Philip H., Washington, D. C. Scooter. 1,483,033; Feb. 5.
Woelffel, Ernest H., Point Pleasant, W. Va. Corner riser for bed springs. 1,482,421; Feb. 5.
Wolfe, William E., Wilder, Va. First-aid-package attachment for dinner pails. 1,482,499; Feb. 5.
Wood, Andrew C., Chicago, Ill. Motometer. 1,482,593; Feb. 5.
Woodbridge, Joseph L., Philadelphia, Pa. Closure for storage-battery cells. 1,482,534; Feb. 5.
Woods, Virgil L., Williams, Calif. Fountain brush. 1,482,535; Feb. 5.
Woods, William G., and N. T. Shaw, Los Angeles, Calif. Dispensing device. 1,482,830; Feb. 5.
Woodward, Frederick R., assignor to The Watson Company, Attleboro, Mass. Spoon or similar article. Des. 63,924; Feb. 5.
Woodworker Manufacturing Co., The. (See de Linieres, Louis, assignor.)
Wootton, Lucius B., Jacksonville, Fla. Hackling machine. 1,483,034; Feb. 5.
Worcester Electric Supply Company. (See Batcheller, Hugh W., assignor.)
Workman, Ansel E., Gales Ferry, assignor of one-half to R. H. Pugh, New London, Conn. Spark plug. 1,482,422; Feb. 5.
Wyatt, William E., Toronto, Ontario, Canada. Toilet device. 1,483,035; Feb. 5.
Wyckoff, J. Lewis, et al., trustees. (See Eidmann, Frank L., assignor.)
Wyckoff, Robert L., Independence, Kans. Valve extractor for wells. 1,483,036; Feb. 5.
Wylde, Edward, deceased, by E. W. Wylde, New York, N. Y., and New York Trust Company, executors. Mechanism for controlling elevators. 1,482,453; Feb. 5.
Wylde, Elizabeth W., et al., executors. (See Wylde, Edward.)
Yale Corporation. (See Ackerman, Walter L., assignor.)
Yale & Towne Manufacturing Company, The. (See Freysinger, John B., assignor.)
Yeomans, Lucien I., assignor to Pioneer Production Company, Chicago, Ill. Shafting cleaner. 1,482,775; Feb. 5.
Young, L. F. (See Ost, Frederick A., assignor.)
Young, Lawrence F., and W. Ferris, Milwaukee, Wis., assignors to W. L. Thompson, Greenville, Miss. Dumping vehicle. 1,482,423; Feb. 5.
Zollinger, Friedrich, Merseburg, Germany. Means of manufacturing space-covering structures such as roofs, frame walls, and the like. 1,483,037; Feb. 5.
Zederbaum, Michel C., J. Fish, jr., and L. J. Kirchenbauer, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J. Swaging machine. 1,483,038; Feb. 5.
Zimmerman, Harry C., Washington, D. C. Elevating mechanism. 1,482,424; Feb. 5.
Ziony, Raphael, Brooklyn, N. Y. Collapsible drinking cup. 1,482,425; Feb. 5.
Zusulin, Nicholas J., Minot, N. Dak. Agitator or shaker for stoves or furnaces. 1,482,500; Feb. 5.
Zusulin, Nicholas J., Minot, N. Dak. Attachment for grates. 1,482,501; Feb. 5.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 5TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Absorption device. E. Piron. 1,482,408; Feb. 5.
Acetylene generator. O. N. Gredell. 1,482,513; Feb. 5.
Acids, Commercial preparation of animophenylarsonic. M. Guérin. 1,482,514; Feb. 5.
Adding and calculating machine. W. W. Landsiedel. 1,482,471; Feb. 5.
Aeroplane. K. Lyon. 1,482,520; Feb. 5.
Aeroplane propeller. G. Lanzius. 1,482,690; Feb. 5.
Agitating apparatus. J. W. Kent. 1,482,998; Feb. 5.
Agitation separator. A. M. Gow. 1,482,607; Feb. 5.
Airships and the like, Means for preventing self ignition of. G. Dinkela. 1,482,642; Feb. 5.
Alarm: *See*—
Tire alarm.
Alloys, Decarbonizing ferro. H. C. Sicard. 1,482,585; Feb. 5.
Amusement device. E. T. Gundlach. 1,482,554; Feb. 5.
Amusement device, Target for. A. H. Bechtol and W. A. Tratsch. 1,482,725; Feb. 5.
Anchor. H. A. Benedict and E. M. Moller. 1,482,964; Feb. 5.
Antispreading device. P. M. Cullen. 1,482,676; Feb. 5.
Apron. I. M. Becton. 1,482,777; Feb. 5.
Auger. L. F. Hess. 1,482,990; Feb. 5.
Auto radiator systems, Electrical heater for. S. L. Meyer. 1,482,574; Feb. 5.
Automobile body, Removable. B. F. Fitch. 1,482,604; Feb. 5.
Automobile circuit tester. E. C. Stiliger. 1,482,714; Feb. 5.
Automobile curtain. W. J. Brunsman. 1,482,458; Feb. 5.
Automobile hood catch or fastening thereof. M. L. Weiss. 1,482,494; Feb. 5.
Automobile hoods, Lamp holder for. H. W. Batcheller. 1,482,454; Feb. 5.
Automobile lubricating system. E. W. Leech, jr. 1,482,755; Feb. 5.
Automobile signal. H. B. Wilkinson. 1,482,419; Feb. 5.
Automobile signal device. R. B. Benjamin. 1,482,540; Feb. 5.
Automobile tops, Protector for. F. H. Nash. 1,482,578; Feb. 5.
Automobile turntable. I. Marino. 1,482,937; Feb. 5.
Automobiles, Auxiliary air vave for. R. O. Lougheed. 1,482,803; Feb. 5.
Automobiles or other vehicles, Direction indicator for. D. U. Stanage. 1,482,822; Feb. 5.
Axle construction, Rear-. A. J. Casale and J. B. Simpson. 1,482,838; Feb. 5.
Axle, Rear. O. M. Nacker. 1,482,577; Feb. 5.
Bacteriological test apparatus. L. E. W. Bevan. 1,482,966; Feb. 5.
Bag: *See*—
Paper bag.
Bag-turning machine. B. C. Batcheller. 1,482,877; Feb. 5.
Ball-and-socket joint. B. Liebowitz. 1,482,756; Feb. 5.
Ball-bearing wheel. B. G. Nice. 1,482,579; Feb. 5.
Ball, Inflatable. R. H. Taylor. Re15,755; Feb. 5.
Bauding machine. F. X. Maloczay. 1,482,572; Feb. 5.
Bank, Savings, G. D. Gallagher. 1,482,983; Feb. 5.
Bathing cap. L. and M. Auster. 1,482,723; Feb. 5.
Battery: *See*—
Storage battery.
Battery storage-cells, Closure for. J. L. Woodbridge. 1,482,584; Feb. 5.
Bearing for crank shafts, Thrust. B. F. Vavruska. 1,482,827; Feb. 5.
Bearing for grinding spindles. R. L. Morgan. 1,482,856; Feb. 5.
Bearings and compounds, Manufacturing antifriction. C. Schmidt. 1,482,414; Feb. 5.
Bearings, Producing composite. G. A. Shoemaker. 1,483,018; Feb. 5.
Bed, Automobile. F. X. Van Ausdal. 1,482,718; Feb. 5.
Bed, Foldable tourist. L. A. Windsor. 1,482,721; Feb. 5.
Bed, Invalid's. W. A. McCollough. 1,482,439; Feb. 5.
Bedsprings, Corner riser for. E. H. Woelffel. 1,482,421; Feb. 5.
Bees, Cage for transporting and introducing. O. L. Hershiser. 1,482,468; Feb. 5.
Bell. W. H. Fulper. Des. 63,892; Feb. 5.
Bell, Signal. S. C. Rodess. 1,482,582–3; Feb. 5.
Felt coupling. F. Diehl. 1,482,461; Feb. 5.
Billiard and pool tables, Bridge for. W. W. Banks. 1,482,962; Feb. 5.
Binder, Loose-leaf. A. R. Seiden. 1,482,945; Feb. 5.
Birdcage stand, A. V. Erving. Des. 63,888; Feb. 5.
Biscuits, cup wafers, and similar articles from liquid, Machinery for making wafer. T. O. Bates. 1,482,963; Feb. 5.
Blank feeder. L. E. La Bombard and M. H. Sidebotham. 1,482,752; Feb. 5.
Block: *See*—
Die block.
Block mold. F. H. Morrison. 1,483,007; Feb. 5.
Block mounting, Follower-. H. L. Atkinson. 1,482,832; Feb. 5.
Blocks, Machine for making terra-cotta. M. E. Gates. 1,482,646; Feb. 5.
Board: *See*—
Ironing board.
Bodkin. L. M. Koehler. 1,482,470; Feb. 5.
Boiler and setting therefor, Steam. A. D. Pratt. 1,482,864; Feb. 5.
Boiler furnace, Steam-. F. J. Crolius. 1,482,840; Feb. 5.
Boll-weevil exterminator, Cotton-. C. R. Coolidge. 1,482,735; Feb. 5.
Boll-weevil trap. A. Wilson. 1,482,420; Feb. 5.
Bolt-turning and other machines, Feed mechanism for. J. A. Eden, jr. 1,482,390; Feb. 5.
Book, Fisherman's dry flyleaf. N. C. Figley. 1,482,678; Feb. 5.
Book-locking device. C. L. Blodgett. 1,482,781; Feb. 5.
Boots and shoes, Machine for use in lasting of. C. F. and A. F. Pym. 1,482,409; Feb. 5.
Boring drill, Earth-. H. W. Fletcher. 1,482,787; Feb. 5.
Boring machine. J. E. Arthur and C. L. Moody. 1,482,879; Feb. 5.
Bottle, Cologne. J. H. Blakney. Des. 63,871; Feb. 5.
Bottle seal. W. A. Stattmann. 1,482,823; Feb. 5.
Bottles, Deposit and collection receptacle for milk. W. N. Batchelor. 1,482,378; Feb. 5.
Bowl or similar article. W. Gelb. Des. 63,893; Feb. 5.
Bowl or similar article. W. D. Haviland. Des. 63,898; Feb. 5.
Box: *See*—
Receiver box.
Switch box.
Vanity box.
Wirebound box.
Box and making the same. J. Borchers. 1,482,727; Feb. 5.
Box corner. B. A. Lange. 1,482,569; Feb. 5.
Box-making machine. O. C. Thompson. 1,482,771; Feb. 5.
Box or container. J. A. Moore. 1,482,857; Feb. 5.
Boxes and packages, Reenforcement for. S. W. Treat. 1,482,417; Feb. 5.
Bracket: *See*—
Shade bracket.
Brake: *See*—
Fluid-pressure brake.
Tractor brake.
Brake head. B. Haskell. 1,482,609; Feb. 5.
Brake shoe or drum. S. B. Leitsell. 1,482,853; Feb. 5.
Brake support. B. Haskell. 1,482,610; Feb. 5.
Brush. W. H. Heffernan. 1,482,744; Feb. 5.
Brush, Fountain. V. L. Woods. 1,482,535; Feb. 5.
Brushes, Constructing. G. E. Seaboyer and P. H. Anderson. 1,482,415; Feb. 5.
Building construction. A. H. Coombs. 1,483,042; Feb. 5.
Bumper and fender brace, Combined. F. A. Olcott. 1,482,658; Feb. 5.
Bumper support, tire-carrier support, and spring-attaching device, Combined. W. K. Wise. 1,482,533; Feb. 5.
Burner: *See*—
Gas burner.
Burnishing metallic articles, Device for. P. J. Goke and G. L. Kemper. 1,482,923; Feb. 5.
Button cap, Shoe-. H. Munzer. 1,482,940; Feb. 5.
Cabinet, Pool-ball. E. A. Black. 1,482,965; Feb. 5.
Cable clamp. J. Martinson. 1,482,902; Feb. 5.
Camphor, Purifying crude synthetic. J. M. Kessler. 1,482,899; Feb. 5.
Can-identifying means, Milk-. G. H. Shaw. 1,482,817; Feb. 5.
Can opener. J. J. Daigle. 1,482,914; Feb. 5.
Can washer. T. L. Valerius and O. Larsen. 1,482,489; Feb. 5.
Candle. G. L. Conley. Des. 63,875–7; Feb. 5.
Caps, Apparatus for forming sheet-metal. A. Calleson. 1,482,732; Feb. 5.
Car-basket rack. J. Kirby, jr. 1,482,900; Feb. 5.
Car-door hanger, Box-. F. M. Friesell. 1,482,431; Feb. 5.
Car, Hopper. H. S. Hart. 1,482,550; Feb. 5.

Car, Railway. H. W. Sanford and G. E. Jones, jr. 1,482,814; Feb. 5.
Car roof. C. L. Bonsall. 1,482,782; Feb. 5.
Cars, Grain door for. H. S. Nesbitt. 1,482,941; Feb. 5.
Cars, Machine for unloading railway. G. Manierre. 1,482,474; Feb. 5.
Cars, Sliding door for. J. L. Crook. 1,482,841; Feb. 5.
Carbon, Making. J. McIntosh. 1,482,939; Feb. 5.
Carburetor. E. L. Walters. 1,482,773; Feb. 5.
Card, Coin-mailing. W. G. Hoffman and R. S. Hintze. 1,482,433; Feb. 5.
Card index. R. A. Picard. 1,482,699; Feb. 5.
Carrier: *See*—
Rim carrier.
Carton. H. Furste. 1,482,890; Feb. 5.
Cart, Child's. T. R. Bradford. 1,482,506; Feb. 5.
Cartridge holder. F. Vogel. 1,482,491; Feb. 5.
Case: *See*—
Pencil case.
Casing and making same. S. May. 1,482,477; Feb. 5.
Caster. A. A. Serva and W. S. Simpson. 1,482,946; Feb. 5.
Caster. W. S. Simpson. 1,482,527; Feb. 5.
Caster, Adjustable. W. J. Tideman. 1,482,953–6; Feb. 5.
Casting machine. A. G. Stevenson. 1,483,021; Feb. 5.
Catch. W. Walker and H. H. Weber. 1,482,875; Feb. 5.
Catch or fastener, Spring. J. A. Chambers. 1,482,384; Feb. 5.
Catcher, Dust. F. E. Kling. 1,482,850; Feb. 5.
Catalizer and making the same. C. Ellis. 1,482,740; Feb. 5.
Centrifugal machine. C. E. Unger. 1,482,418; Feb. 5.
Chain connecter. J. H. Smith. 1,482,664; Feb. 5.
Chain or belt tightener. C. N. Stone. 1,482,528; Feb. 5.
Chair seat. C. Daum. Des. 63,883; Feb. 5.
Chandelier, Electric. A. Cooper. Des. 63,878–9; Feb. 5.
Channeling machine. F. E. Bertrand. 1,482,379; Feb. 5.
Charts, Feed mechanism for moving strip. E. W. Lewis. 1,482,802; Feb. 5.
Chase mounting. E. F. Dudley. 1,482,738; Feb. 5.
Chuck. J. Keller. 1,482,566; Feb. 5.
Cigarette holder. P. J. McGillicuddy. 1,482,654; Feb. 5.
Cigarette holder or the like. J. D. Garcia. 1,482,984; Feb. 5.
Cigarette-rolling apparatus. P. J. Gallagher. 1,482,644; Feb. 5.
Clamp: *See*—
Caule clamp.
Hose clamp.
Wire-line clamp.
Clamps or cramps and the like, Appliance for. L. F. Hering. 1,482,989; Feb. 5.
Cleaner: *See*—
Shaping cleaner.
Cleaning devices, Holder for. M. S. Colt. 1,482,836; Feb. 5.
Clip: *See*—
Satchel clip.
Clothesline lock. J. J. Duket. 1,482,388; Feb. 5.
Clutch. A. W. Capa. 1,482,544; Feb. 5.
Clutch, Expanding ring. C. Strand. 1,482,715; Feb. 5.
Clutch, Friction. J. F. Lamb. 1,482,402; Feb. 5.
Coating apparatus, Pneumatic. J. A. Paasche. 1,482,617; Feb. 5.
Cock, Bib. T. B. Roberts. 1,482,484; Feb. 5.
Cock, Curb. A. Kurre. 1,483,001; Feb. 5.
Cock holder and drain-pipe clamp, Angle-. C. M. Hannaford. 1,482,987; Feb. 5.
Cocks, Holder for angle. C. M. Hannaford. 1,482,988; Feb. 5.
Coffeepot or similar article. G. E. Curtiss. Des. 63,882; Feb. 5.
Coils, Machine for winding. C. H. Thordarson. 1,482,592; Feb. 5.
Coils, Making polysided. C. H. Thordarson. 1,482,591; Feb. 5.
Combination lock. H. M. Hainline. 1,482,515; Feb. 5.
Compressible spring. F. Dutcher. 1,482,918; Feb. 5.
Compressors, Water-regulating system for air. L. F. Hoffman and R. C. Wasson. 1,483,044; Feb. 5.
Concrete building structures, Reenforcing frame for. M. Samaha. 1,482,813; Feb. 5.
Concrete curbing, Mold for. J. Ratsesberger. 1,482,700; Feb. 5.
Concrete-pipe joint. H. M. Tschirgi. 1,482,772; Feb. 5.
Concrete structures, Mold for. C. E. Johnson and W. W. Fields. 1,482,555; Feb. 5.
Concrete-wall form. M. S. Hotchkiss. 1,482,434; Feb. 5.
Confection centers with nuts, Machine for coating. W. S. Lord and L. Davis. 1,482,473; Feb. 5.
Construction jack. J. W. MacDow. 1,483,004; Feb. 5.
Container, Sheet-metal. H. A. Keiner. 1,482,932; Feb. 5.
Conveying mechanism. F. T. Taylor. Re15,754; Feb. 5.
Cooking utensil, Electric. H. Kruesbeld. 1,483,000; Feb. 5.
Cookstoves, Heating attachment for. J. F. Seckinger. 1,483,016; Feb. 5.
Core breaker. C. C. Hansen. 1,482,397; Feb. 5.
Corn rack, Seed-. E. Hayden. 1,482,640; Feb. 5.
Corn shellers, Attachment for. J. E. Hofmann. 1,482,516; Feb. 5.
Corrugated board, Machine for making. B. Heinrichs. 1,482,894; Feb. 5.
Corset. M. M. Downer. 1,482,548; Feb. 5.
Coupler. E. P. Kinne. 1,482,751; Feb. 5.
Coupler, Electric. R. G. Averill. 1,482,833; Feb. 5.
Coupling: *See*—
Belt coupling.
Hose coupling.
Counter. J. H. Bair. 1,482,539; Feb. 5.
Crates and the like, Corner piece for milk. S. M. McIntyre. 1,482,854; Feb. 5.
Crosshead. J. O. McArthur. 1,482,938; Feb. 5.
Crucible. C. S. Collins. 1,482,887; Feb. 5.
Cup: *See*—
Drinking cup.
Cup. B. E. Hodgkin. 1,482,561; Feb. 5.
Cutter: *See*—
Glass cutter.
Slitting cutter.
Cutting and creasing press. F. S. English. 1,482,391; Feb. 5.
Cutting machine. T. L. Valerius and O. Larsen. 1,482,490; Feb. 5.
Cylinder-reboring machine. F. T. Flinchbaugh. 1,483,061; Feb. 5.
Cylinders of piston machines, Indicator for determining the average pressure in the. E. Schimanek. 1,482,525; Feb. 5.
Dental articulator or relator. J. Homer. 1,482,993; Feb. 5.

Water-softening material, Making. S. Dahl-Roda. 1,482,601; Feb. 5.
Webs, Process and apparatus for producing multiple-ply. J. A. B. Smith. 1,483,047; Feb. 5.
Welded column and making it. L. Braisted. 1,482,541; Feb. 5.
Welding metal receptacles. W. Wagner. 1,483,027; Feb. 5.
Welding, Method and apparatus for. W. P. Shipman. 1,482,818; Feb. 5.
Well agitator, Oil-. T. H. Gallagher. 1,482,845; Feb. 5.
Well-drilling apparatus, Fluid operated. C. C. Scharpenberg. 1,482,702; Feb. 5.
Wheel: *See*—
Ball-bearing wheel. Sprocket wheel.
Spring wheel. Tractor wheel.
Wheel puller. P. G. Neill. 1,482,694; Feb. 5.
Wheels, Mold for making fabric disks for vehicle. A. E. Hall. 1,482,555; Feb. 5.
Wheels, Traction attachment for tractor. V. L. Ewan. 1,482,430; Feb. 5.
Winding apparatus. J. B. Calkins. 1,482,909; Feb. 5.
Window guard, Bank-teller's. J. N. Banitt and J. Thiemann. 1,482,961; Feb. 5.
Window, Insectproof sliding sash. H. C. L. Aus. 1,482,426; Feb. 5.
Window sash, Device for operating and locking a swinging. S. H. Newberry. 1,482,696; Feb. 5.
Window, Sliding glass. R. M. Chambers and J. Jackson. 1,482,383; Feb. 5.
Window ventilator. R. F. Dolezal. 1,482,915; Feb. 5.
Windshield wiper. A. F. Dooley. 1,482,428; Feb. 5.
Windshield wiper. J. J. Sullivan. 1,482,448; Feb. 5.
Wirebound box. C. A. Cummings. 1,482,971; Feb. 5.
Wire-drawing block, Slow-starting. C. H. Oslund. 1,482,861; Feb. 5.
Wire-drawing drums, Stringing-up device for. C. H. Oslund. 1,482,860; Feb. 5.
Wire-drawing drums, Stringing-up or drawing-through device for. C. H. Oslund. 1,482,859; Feb. 5.
Wire-line clamp. F. E. Crotto. 1,482,460; Feb. 5.
Wire-rope sprocket, Releasable. J. D. Russ. 1,482,944; Feb. 5.
Woodworking machine. L. de Linieres. 1,482,631; Feb. 5.
Wreath. L. Alter and G. Stanyo. 1,482,537; Feb. 5.
Wrench: *See*—
Pipe wrench.
Wrench. T. J. Colihan. 1,482,508; Feb. 5.
Wrench. E. R. Smith and J. A. Crosby. 1,483,019; Feb. 5.
Yokes, Forming drawbar. H. P. Orr. 1,482,697; Feb. 5.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 5, 1924.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 6: 1,482,767
8.3: 1,482,771
2— 11: 1,482,560
23: 1,483,008
32: 1,482,685
54: 1,482,777
74: 1,482,548
79: 1,482,970
105: 1,482,723
4— 243: 1,482,749
5— 29: 1,482,922
77: 1,482,420
114: 1,482,457
119: 1,482,718
1,482,721
205: 1,482,421
6— 10: 1,482,466
7— 13: 1,482,962
8— 18: 1,482,795
20: 1,483,060
10— 6: 1,482,497
77: 1,482,903
89: 1,482,839
12— 4: 1,482,409
14: 1,482,410
1,482,411
27: 1,482,379
29: 1,483,054
97: 1,482,304
128.1: 1,482,905
128.3: 1,482,584
15— 110: 1,482,548
138: 1,482,535
147: 1,482,896
179: 1,482,744
217: 1,482,309
253: 1,482,448
258: 1,482,428
16— 19: 1,482,953
1,482,954
1,482,955

CLASS 16.

Cleaning and polishing preparation, Combined. S. P. Story. 188,645; Feb. 12.
Paint. L. Miller. 188,921; Feb. 12.
Paint and varnish remover. Phelan-Faust Paint Manufacturing Company. 190,177; Feb. 12.
Paint enamel. H. Slatkin. 179,829; Feb. 12.
Paint for metals, Enamel. J. F. Kurfees Paint Company. 190,106; Feb. 12.
Paint, Metallic enamel. J. F. Kurfees Paint Company. 190,105; Feb. 12.
Paint, Prepared liquid. J. F. Kurfees Paint Company. 190,102–3; Feb. 12.
Paint, varnishes, paint enamels, and stains. G. A. Combs. 184,325; Feb. 12.
Paints. Paraffine Companies. 190,125; Feb. 12.
Paints and enamels. Debevoise Company. 189,844; Feb. 12.
Paints, etc., Bituminous. National Bituminous Enamel and Paint Corporation. 187,834; Feb. 12.
Pigments. F. G. Lasher Color Co. 172,542; Feb. 12.
Polishing compound. J. Shanks. 188,221; Feb. 12.
Sizes, Wall. G. Whigelt. 186,489; Feb. 12.
Varnish, enamel, enamel underbody, and cement coating, Floor. J. C. Licht Company. 187,321; Feb. 12.

CLASS 17.

Cigars. R. G. Sullivan Estate. 181,320; Feb. 12.
Cigars. R. G. Sullivan Estate. 181,322; Feb. 12.
Tobacco. Steacy-Shaeffer Tobacco Co. 181,224; Feb. 12.

CLASS 19.

Airplanes and parts and accessories thereto. Boeing Airplane Company. 154,481; Feb. 12.
Automobile curtains. W. C. Loud. 188,316; Feb. 12.
Automobile fender braces. K. & B. Fender Brace Company. 188,246; Feb. 12.
Automobile mirrors. Britton Auto Equipment Co. 189,031–2;
Automobiles and constructive parts thereof. Star Motors Incorporated. 188,280; Feb. 12.
Bumpers. C. G. Spring Company. 187,506; Feb. 12.
Cab bodies, Commercial. McCrea Mfg. Co. 173,573; Feb. 12.
Propellers. A. Grilli. 158,308; Feb. 12.
Vehicle exhaust heater. Indianapolis Pump and Tube Co. 188,909; Feb. 12.
Vehicles. Mototeria Company. 186,604; Feb. 12.

CLASS 21.

Batteries, Dry. De Lancey, Felch & Company. 182,703; Feb. 12.
Batteries, Storage. Am-Plus Storage Battery Company. 184,928; Feb. 12.
Electric-current rectifiers. Leich Electric Company. 175,252; Feb. 12.
Electrical wires, Flexible armored cables, cords, etc., for. Tubular Woven Fabric Company. 188,284; Feb. 12.
Insulated electrical conductors, and especially asbestos-covered conductors. General Electric Company. 172,875; Feb. 12.
Lighting-fixture units and parts thereof. American Brass & Electric Supply Company. 184,487; Feb. 12.
Loud speakers, and radio supplies and wireless and electrical equipment. Perfectone Radio Corporation. 186,609; Feb. 12.
Motors, generators, rotary converters, etc., Electric. Louis Allis Company. 172,854; Feb. 12.
Radio loud speakers. Stentorphone Company. 173,684; Feb. 12.
Radio loud speakers and electrical announcing and calling devices. J. S. Timmons. 175,822; Feb. 12.
Radio receiving sets, etc. Mercury Radio Products Company. 169,912; Feb. 12.
Switches, Electrical or electrically-operated. Tork Company. 178,940; Feb. 12.
Wheels, Electric trolley. L. E. Harmon. 188,048; Feb. 12.

CLASS 22.

Balls and rubber bladders therefor, Game. Pioneer Rubber Company. 187,958; Feb. 12.
Fishing reels and rods, artificial fishing baits, etc. South Bend Bait Co. 172,908; Feb. 12.
Games, toys, and sporting goods. C. W. McClure. 182,163; Feb. 12.
Ornaments and tinsel light reflectors, Christmas-tree. George Franke Sons Company. 189,244; Feb. 12.
Ornaments, Christmas-tree. George Franke Sons Company. 189,246; Feb. 12.

CLASS 23.

Concrete machinery, etc. Ideal Concrete Machinery Company. 170,528; Feb. 12.
Concrete-marker molds. Glatz Bros. 157,664; Feb. 12.
Engines, Mufflers for internal-combustion. Gray-Hawley Mfg. Co. 176,965; Feb. 12.
Insecticide-applying devices. E. M. Howard. 186,842; Feb. 12.
Tire pumps and piston-ring expanders. Trexler Company of America. 178,781; Feb. 12.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

CLASS 26.

Automobile radiators and pressure tanks, Pressure-indicating signal for. N. F. Kempel. 182,247; Feb. 12.
Binoculars, opera glasses, and field glasses. F. C. Mensing. 190,001–3; Feb. 12.
Scales, Weighing. Hanson Brothers Scale Company. 175,864; Feb. 12.
Screens, light transmitting and reflecting devices, etc., Light and color. Photo Improvements Inc. 188,862; Feb. 12.

CLASS 27.

Watches. American Watch Import Company. 181,161; Feb. 12.
Watches. J. Flashner. 188,474; Feb. 12.
Watches and parts of watches. Fabrique d'Horlogerie Recta S. A. 184,442; Feb. 12.
Watches, watch movements, and parts thereof. Optima Societe Anonyme. 187,383; Feb. 12.
Watches, watchcases, watch movements, and parts. R. Gsell & Co. 187,943; Feb. 12.

CLASS 28.

Jewelry. Cohn & Rosenberger, Inc. 185,812–3; Feb. 12.
Jewelry, tableware, etc., Gold and silver. Lansburgh & Bro., Inc. 173,895; Feb. 12.
Key chains, buckles, collar buttons and fasteners, eyeglass holders, etc. Forstner Chain Corporation. 187,305; Feb. 12.
Knives, forks, and spoons, Infants'. P. A. Brouillette. 184,958; Feb. 12.
Lingerie clasps. Wilson Fastener Company. 188,649; Feb. 12.
Mesh bags. Whiting & Davis Company. 186,490; Feb. 12.
Silver flatware and hollow ware, Sterling. International Silver Co. 187,678; Feb. 12.

CLASS 30.

China sets and vases, picture plaques, flowerpots, and serving trays. Fred A. Wish, Incorporated. 188,981; Feb. 12.
Crockery, earthenware, and porcelain. Porzellanfabrik Ph. Rosenthal & Co. A. G. 178,190; Feb. 12.

CLASS 34.

Boilers, Steel. General Boilers Company. 170,576; Feb. 12.
Furnaces. A. Anderson. 188,735; Feb. 12.
Furnaces, parts and appliances. Stephens Engineering Company. 187,204; Feb. 12.
Heaters, Automatic gas. Triangle Water Heater Co. 173,865; Feb. 12.
Radiator covers. Art Metal Radiator Cover Co. 187,280; Feb. 12.

CLASS 35.

Tires and tubes, Automobile. Union Rubber Company. 188,979; Feb. 12.

CLASS 36.

Horns for automobiles and motor cycles. Standard Metal Manufacturing Company. 136,096; Feb. 12.
Phonographs. Peters & Herron Co. 149,147; Feb. 12.
Pianos and player pianos. Bush & Lane Piano Company. 185,779; Feb. 12.
Pianos, organs, phonographs, and parts thereof. Kaufmann Department Stores, Inc. 164,440; Feb. 12.

CLASS 37.

Building and loan association forms, blank books, etc. O. Keclik. 173,089; Feb. 12.
Crayons, crayon holders, pencils, penholders, pens, etc. Societe Anonyme "Crayons Conte." 181,650–1; Feb. 12.
Memorandum sheets. L. A. Watkins. 188,721; Feb. 12.
Paper, paper napkins, towels, and tablecloths, Toilet. Fort Howard Paper Company. 189,613–4; Feb. 12.
Paper, paper towels and napkins, Toilet. Wortendyke Manufacturing Company. 188,356; Feb. 12.
Paper, Waxed wrapping. Wax-Wrap Paper Company of Texas. 189,022; Feb. 12.
Paper window-shade material. Springfield Glazed Paper Company. 188,386; Feb. 12.
Paper, Wrapping. Yellow Pine Paper Mill Company. 188,982; Feb. 12.

CLASS 39.

Arm bands, bloomers, belts, boudoir caps, etc. Weisman & Sons Company. 181,469; Feb. 12.
Bathing caps and water guards for same. Lew-Mar Products Company. 182,351; Feb. 12.
Bloomers. E. H. Horwood & Co. 171,995; Feb. 12.
Boots and shoes. Green Shoe Manufacturing Company. 185,292; Feb. 12.
Clothing for women and girls. B. Klappert. 188,594; Feb. 12.
Corsets, brassières, and abdominal belts. J. M. Bodenstek. 182,230; Feb. 12.
Dresses and suits for boys and girls. Milton G. Cooper Dry Goods Co. 186,107; Feb. 12.
Gloves, Men's. Illinois Glove Co. 182,972; Feb. 12.
Hats, Children's. Little Queen Hat Company. 184,188; Feb. 12.

Overalls, jackets, pants, coats, etc. Bender Company. 187,603; Feb. 12.
Shirts, Dress. A. Fisher Shirt Co. 175,984; Feb. 12.
Shoes. Smaltz-Goodwin Company. 181,622; Feb. 12.
Shoes, Leather. D. W. Brill. 171,525; Feb. 12.
Shoes, Leather. Doerman & Herbst Shoe Mfg. Co. 185,962; Feb. 12.
Suits, Union. E. H. Horwood & Co. 171,993; Feb. 12.
Trousers. Randel & Grusky. 179,958–9; Feb. 12.

CLASS 42.

Bedspreads, Cotton. Italian Bed Spread Co. 189,623; Feb. 12.
Cotton goods. Farish Company. 188,299; Feb. 12.
Cotton piece goods. Smith-McCord-Townsend Dry Goods Co. 186,394; Feb. 12.
Cotton piece goods. Terry Textile Corporation. 182,551; Feb. 12.
Cottons, cambrics, and nainsooks in the piece, Bleached. Quinn Marshall Company. 187,125; Feb. 12.
Fabrics, Worsted and woolen textile. Holden-Leonard Company. 186,368; Feb. 12.
Fabrics, Worsted and woolen textile. Holden-Leonard Company. 186,373; Feb. 12.
Hair nets. Rieser Company. 189,690; Feb. 12.
Hair nets, Human-. Beatyette Trading Corp. 186,409; Feb. 12.
Knitted and woven fabrics of silk in the piece. M. H. Levine. 187,259; Feb. 12.
Silk and cotton piece goods. Clarence Whitman & Son, Inc. 158,548; Feb. 12.
Textile fabrics. S. Liebovitz & Sons, Inc. 189,681; Feb. 12.
Wool and worsted piece goods. Federal Woolen Co. 184,238; Feb. 12.
Woolen, cotton, etc. piece goods. Atlantic Mills. 188,086; Feb. 12.
Woolen piece goods. Dormeuil Freres. 187,513; Feb. 12.
Woolen piece goods. Morris W. Haft & Bros. Inc. 189,126; Feb. 12.
Worsted suitings in the piece. Samuel Hird & Sons, Inc. 187,624; Feb. 12.

CLASS 44.

Alloy for inlay models, Amalgam. J. M. Ney Company. 189,686; Feb. 12.
Sanitary napkins, aprons, and step-ins. O. Eisenkramer. 188,749; Feb. 12.

CLASS 45.

Apple juice. Conservenfabrik Rorschach A. G. 187,044; Feb. 12.
Beverage flavors and beverages made therefrom, Maltless-. Citrus Products Company. 189,389; Feb. 12.
Beverages. J. B. White. 188,942; Feb. 12.
Beverages sold as soft drinks. Schoneberger & Noble, Inc. 189,587; Feb. 12.
Beverages sold as soft drinks. Southwestern Coca-Cola Bottling Co. 189,591; Feb. 12.
Flavoring base for beverages, Maltless. W. E. Brobst, jr. 181,511; Feb. 12.
Grape juice, Hawaiian. C. E. Van Landingham. 189,873; Feb. 12.
Water, Table. California Bottling Association. 188,948; Feb. 12.

CLASS 46.

Berries, Fresh. North Pacific Co-Operative Berry Growers. 186,148; Feb. 12.
Blueberries, Fresh and canned. Washington County Company. 189,081; Feb. 12.
Bread. Advance Milling Co. 186,097; Feb. 12.
Bread. Petersen & Pegau Baking Co. 185,986; Feb. 12.
Bread, Loaf. Ward Baking Company. 159,230; Feb. 12.
Bread, rolls, and pastry. Stude Baking Company. 182,940; Feb. 12.
Butter. W. H. Hubbard. 168,644; Feb. 12.
Cakes, biscuits, crackers. American Biscuit Company. 159,485; Feb. 12.
Candies. J. N. Collins Company. 188,742; Feb. 12.
Candies. Old Colony Candy Company. 186,606; Feb. 12.
Candy. Cassidy Candy Company. 188,889; Feb. 12.
Candy. J. M. Garver. 188,301; Feb. 12.
Candy. Shoot Chocolate Co. 188,500; Feb. 12.
Candy. G. H. Thompson, Inc. 188,719; Feb. 12.
Candy. Touraine Company. 179,496; Feb. 12.
Candy. Weinstein & Smith. 188,035; Feb. 12.
Canned Chili meat. Gebhardt Chili Powder Co. 154,558; Feb. 12.
Canned fish. Universal Importing Company. 179,245; Feb. 12.
Canned fruit. Danville Wholesale Grocery Co. 173,408; Feb. 12.
Canned fruits, vegetables, and dried beef, spices, etc. United Wholesale Grocery Company. 185,036; Feb. 12.

Flour, Wheat. Hecker-Jones-Jewell Milling Company. 183,029; Feb. 12.
Flour, Wheat. Hecker-Jones-Jewell Milling Company. 183,289; Feb. 12.
Flour, Wheat. Hecker-Jones-Jewell Milling Company. 183,292; Feb. 12.
Flour, Wheat. Hecker-Jones-Jewell Milling Company. 183,479; Feb. 12.
Flour, Wheat. J. C. Lysle Milling Company. 173,097; Feb. 12.
Flour, Wheat. Seattle Flour Mills. 170,998; Feb. 12.
Food beverage and sirup for making same. "400" Products Company. 170,060; Feb. 12.
Food products. Bailiño Hermanos y Compañia. 176,814; Feb. 12.
Fruits, Dried. C. C. Hall, Inc. 173,420; Feb. 12.
Fruits, Fresh citrous. Lindsay District Orange Co. 189,366; Feb. 12.
Fudge. J. G. Patton. 169,052; Feb. 12.
Grapes, Fresh. M. Ruano. 186,672; Feb. 12.
Ice cream. Abbott's Alderney Dairies, Inc. 182,694; Feb. 12.
Ice or sherbet, Flavored. L. J. Lea. 184,792; Feb. 12.
Macaroni and spaghetti. Federico Macaroni Mfg. Co., Inc. 187,101; Feb. 12.
Malt extract. Pabst Corporation. 181,213; Feb. 12.
Milk. Rio Grande Valley Dairy Association. 188,640; Feb. 12.
Milk, buttermilk, cream, cream cottage cheese. Rio Grande Dairy Association. 188,641; Feb. 12.
Nuts, Pistachio. Zaloom Brothers Company. 181,802–3; Feb. 12.
Oil, Olive. M. L. Belden. 153,495; Feb. 12.
Oils, Edible. Standard Oil Company of New York. 188,388; Feb. 12.
Peanuts, peanut butter, pop-corn confection, and dates, Salted. Wm. T. Mullikin Co. 176,566; Feb. 12.
Rice. Connell Rice Company. 183,137; Feb. 12.
Sausage, ham, and bacon. Northern Packing Company. 182,668; Feb. 12.
Seeds, Bird. F. S. Radway. 186,071; Feb. 12.
Tea and corn meal. H. G. Hill Company. 166,688; Feb. 12.
Vinegar. Osaka Zosu Kabushiki Kaisha. 184,562; Feb. 12.
Vinegar, canned goods, cereals, etc. B. A. Railton Company. 169,548; Feb. 12.

CLASS 50.

Bottle and jar closures or caps. Phoenix Hermetic Company. 188,610; Feb. 12.
Leather and cutting and plaiting implements. L. B. Griswold. 188,365; Feb. 12.
Mats, Table. F. F. Dell. 181,515; Feb. 12.
Vehicles. Prevention-of-theft device for. F. Hood. 184,667; Feb. 12.
Waterproof and water repellent knitted, etc. fabrics. Fred S. Bennett, Inc. 187,981–3; Feb. 12.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 12TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abreo, Albert F. (See Robinson, E., and Abreo.)
Acheson, Thomas F. (See Parker, Fred J., assignor.)
Adams, Raleigh B., Newton, assignor to Stowe & Woodward Company, Newton Upper Falls, Mass. Device for testing hardness. 1,483,565; Feb. 12.
Add-Index Corporation. (See Broman, Charles E., assignor.)
Adjusta Company, The. (See Hirsh, Fred, assignor.)
Aeromarine Plane & Motor Company. (See Chilton, Roland, assignor.)
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Motor-controlling device. 1,483,064; Feb. 12.
Aktiebolaget Cellulosa. (See Rinman, E. L., and Magnuson, assignors.)
Aktiebolaget Karlstads Mekaniska Verkstad. (See Wagner, Rudolf E., assignor.)
Aktiebolaget Separator. (See Julin, A. T., and Fröding, assignors.)
Aktiebolaget Svenska Kullagerfabriken. (See Svensson, Victor A., assignor.)
Alcorn, Joseph, Coatesville, Ind. Propeller for boats. 1,483,762; Feb. 12.
Allcutt, Chester T., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Lightning arrester. 1,483,538; Feb. 12.
Allcutt, Chester T., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Lightning arrester. 1,483,539; Feb. 12.
Allcutt, Chester T., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Lightning arrester. 1,483,540; Feb. 12.
Allee, David A., Schenectady, N. Y., assignor to General Electric Company. Pipe connection. 1,483,499; Feb. 12.
Allen, Edward, Chicago, Ill. Dyeing machine. 1,483,263; Feb. 12.
Allen Iron & Steel Company, The. (See Moulton, Albion, assignor.)
Alpern, Maxwell, assignor to American Engineering Company, Philadelphia, Pa. Furnace lining. 1,483,706; Feb. 12.
Altwegg, Jean, Lyon, assignor to Societe Chimique des Usines du Rhone, Paris, France. Production of solutions of volatile oils. 1,483,152; Feb. 12.
American Cotton Oil Company, The. (See Boyce, James, assignor.)
American Engineering Company. (See Alpern, Maxwell, assignor.)
American Fabrics Company, The. (See Page, Samuel H., assignor.)
American Gasaccumulator Company. (See Medén, Elof H., assignor.)
American Laundry Machinery Company, The. (See McCarthy, James P., assignor.)
American Narrow Fabric Company. (See Haselton, Carl J., assignor.)
American Optical Company. (See Hill, Harry W., assignor.)
American Optical Company. (See Propson, Carl F., assignor.)
American Steel Foundries. (See Hedgcock, William C., assignor.)
American Steel Foundries. (See Lamont, John A., assignor.)
American Telephone and Telegraph Company. (See Gannett, Danforth K., assignor.)
American Telephone and Telegraph Company. (See Toomey, J. F., and Crisson, assignors.)
Andersen, Lauritz W., Waterbury, Conn. Shade holder. 1,483,264; Feb. 12.
Anderson, Andrew R., deceased, North Arlington, N. J.; A. R. Anderson, executor. Shoe-tree. 1,483,065; Feb. 12.
Anderson, Arthur R., executor. (See Anderson, Andrew R., assignor.)
Anderson, Charles H., Walworth, Wis. Glare eliminator. 1,483,763; Feb. 12.
Anderson, Harvey S., Germantown, Ohio. Adjusting device for crushers. 1,483,566; Feb. 12.
Anderson, Oscar T., assignor to Chamberlain Machine Works, Waterloo, Iowa. Wringer. 1,483,265; Feb. 12.
Anderson, Raymond M., assignor to G. M. Holley, Detroit, Mich. Carburetor. 1,483,323; Feb. 12.
Anderson, William E., Jamestown, N. Y. Paring knife. 1,483,063; Feb. 12.
Angus, Arthur R., Minehead, England. Railway safe-running device. 1,483,066; Feb. 12.
Anjow, Koji, Tokyo-fu, assignor to Mitsubishi Kogyo Kabushiki Kaisha, Tokyo, Japan. Producing tungsten oxide from tungsten ores. 1,483,567; Feb. 12.
Archambault, Louis J., Chicago, Ill. Apparatus for clarifying liquids. 1,483,266; Feb. 12.
Armstrong, Samuel E., Washington, D. C. Spring attachment for accelerator pedals. 1,483,625; Feb. 12.
Arnold, Frank K. (See Sevigne, H. A., and Arnold.)
Ashtabula Bow Socket Company, The. (See Cloyes, James H., assignor.)
Asplund, Axel A., Auburn, N. Y. Cam-lever timing block with connections. 1,483,267; Feb. 12.
Atherton, Stanley E., Cleveland, Ohio. Grab bucket. 1,483,707; Feb. 12.
Atlas Powder Company. (See Hill, Roy L., assignor.)
Automatic Electric Company. (See Wicks, John, assignor.)
Automatic Electrical Machine Co. (See Lundgren, Harry G., assignor.)
Automatic Telephone Manufacturing Company Limited. (See Hudd, Alfred E., assignor.)
Bailey, Banks & Biddle Company. (See Bailey, Charles W., assignor.)
Bailey, Charles W., assignor to The Bailey, Banks & Biddle Company, Philadelphia, Pa. Ring. Des. 63,925; Feb. 12.
Baker, Chester A., Omaha, Nebr. Valve mechanism. 1,483,158; Feb. 12.
Baldauf, John F., Casper, Wyo. Grease gun. 1,483,268; Feb. 12.
Balding, Harry. (See Harrison, John W., assignor.)
Baldwin, Harry J., Colorado Springs, Colo. Automatic display apparatus. 1,483,324; Feb. 12.
Bales, Ivan. (See Pearce, O., and Bales.)
Barker, William G., and F. O. Read, London, England. Advertising apparatus. 1,483,269; Feb. 12.
Barnes, Clarence, Stillwater, Okla. Condenser for automobile radiators. 1,483,764; Feb. 12.
Barnum, Thomas E., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Lockout switch. 1,483,407; Feb. 12.
Barr, John H., New York, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,483,500; Feb. 12.
Barrile, Salvador, Medford, Mass. Convertible sofa. 1,483,501; Feb. 12.
Barrows, Frank E., Upper Montclair, N. J. Combined sulphidation and flotation of ores, etc. 1,483,270; Feb. 12.
Barth, Champ J., and J. E. Pierce, Minneapolis, Minn. Ring. Des. 63,926; Feb. 12.
Baruch, Samuel, New York, N. Y. Spring oiler. 1,483,208; Feb. 12.
Basart, Antonius H. M., The Hague, Netherlands. Door fastening for safes and the like. 1,483,541; Feb. 12.
Basseick Manufacturing Company, The. (See Crevelling, John L., assignor.)
Bastian, Arthur J., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Timing device. 1,483,502; Feb. 12.
Bausch, Michael A. (See Larsen, Mads M., assignor.)
Bayley, William Co., The. (See Perry, Eugene R., assignor.)
Beaudin, James W. (See Hartogh, Arthur A., assignor.)
Beavers, Dalridge B., Washington, D. C. Wire reel. 1,483,765; Feb. 21.
Beavers, Dalridge B. and P. D., Washington, D. C. Wire reel. 1,483,766; Feb. 12.
Beavers, Patrick D. (See Beavers, Dalridge B., and P. D.)
Beck, John T., Embry, Miss. Planter attachment for walking cultivators. 1,483,271; Feb. 12.
Becktel, Oliver H., and W. E. O'Brien, Chicago, Ill. Furniture. 1,483,767; Feb. 12.
Beebe, Paul, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Manufacturing rubberized fiber composition. 1,483,856; Feb. 12.
Belais, David, assignor to David Belais, Inc., New York, N. Y. Finger ring. Des. 63,927; Feb. 12.
Belais, David, Inc. (See Belais, David, assignor.)
Belknap, Reginald R., U. S. Navy. Net. 1,483,542; Feb. 12.
Bell Register Corporation. (See Bell, Samuel J., assignor.)

Bell, Samuel J., assignor to Bell Register Corporation, Springfield, Mass. Telltale. 1,483,708; Feb. 12.
Benjamin Gross Company. (See Fiedler, Louis, assignor.)
Benson, Charles D., jr. (See Tausz, Ferdinand, assignor.)
Berg, Richard O., assignor to Michigan Steel Tube Products Co., Detroit, Mich. Tube welding. 1,483,272; Feb. 12.
Bernstein, Isaac, San Francisco, Calif. Card holder. 1,483,408; Feb. 12.
Berry, Cullye T., Montgomery County, near Dayton, Ohio. Interchangeable and adjustable sign. 1,483,067; Feb. 12.
Best, Ivan, Morland, Kans. Tire alarm. 1,483,543; Feb. 12.
Bibb, Thomas W., Ellensburg, Wash. Automobile jack. 1,483,603; Feb. 12.
Bickerton, Ralph, Brooklyn, N. Y. Silent-alarm wrist watch. 1,483,768; Feb. 12.
Biddison, Samuel, Los Angeles, Calif. Gas generator and burner. 1,483,709; Feb. 12.
Billings, Frank, and R. P. Greenleaf, Cleveland, Ohio; said Greenleaf assignor to said Billings. Loading machine. Re15,764; Feb. 12.
Billington, Theophilus, Clearwater, Fla. Clamp. 1,483,769; Feb. 12.
Bills, John H., deceased, by M. R. Bills, administratrix, Denver, Colo. Apparatus for blasting by the use of electricity. 1,483,209; Feb. 12.
Bills, Mollie R., administratrix. (See Bills, John H.)
Bishop, George T., and W. R. Hagerman, Chehalis, Wash. Sterilizing apparatus. 1,483,325; Feb. 12.
Black, George L., San Bernardino, Calif. Electrical varied-light apparatus. 1,483,710; Feb. 12.
Black, Joseph J., assignor to The Master Tire & Rubber Company, Dayton, Ohio. Tire. Des. 63,928; Feb. 12.
Blackwell, William W., Marblehill, Ga. Rail seat or brace. 1,483,770; Feb. 12.
Blaeker, Joseph, assignor of one-half to M. Eisenstein, New York, N. Y. Connector for chain links. 1,483,210; Feb. 12.
Blair, F. R., & Co. (See Ungar, Gustave A., assignor.)
Blanton, William. (See Thomas, Charles B., assignor.)
Blattner, David G., Bogota, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Circuit for heating the filaments of audions. 1,483,273; Feb. 12.
Blaser, Almer T., Mescalero, N. Mex. Pressure generator. 1,483,609; Feb. 12.
Bliss, William L., Niagara Falls, N. Y., assignor to Vapor Car Heating Company, Inc., Chicago, Ill. Valve-operating mechanism. 1,483,568; Feb. 12.
Bloss, Richard R., and W. Schwemlein, assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va. Derrick fitting. 1,483,602; Feb. 12.
Blumenthal, Maurice, Brooklyn, N. Y. Roofing paper. 1,483,711; Feb. 12.
Bock Laundry Machine Company. (See Bock, William E., assignor.)
Bock, William E., Eagle Point Colony, assignor to Bock Laundry Machine Company, Toledo, Ohio. Centrifugal machine. 1,483,326; Feb. 12.
Bolns, William G., Rhinelander, Wis. Alloy flux for soldering aluminum and forming same. 1,483,327; Feb. 12.
Booker, Richard A., Richmond, Ind. Electric peening machine. 1,483,328; Feb. 12.
Borden, William A., U. S. Army. Safety device for bomb fuses. 1,483,068; Feb. 12.
Borcsko, Albin F., Toledo, Ohio. Cigar holder. 1,483,503; Feb. 12.
Borland, Bruce, Chicago, Ill. Car seal. 1,483,504; Feb. 12.
Bormann, Frederic, Ipswich, S. Dak. Burner. 1,483,712; Feb. 12.
Bostaph Engineering Corporation. (See Ramage, Alexander S., assignor.)
Boston Scale & Machine Company. (See Greensmith, James E., assignor.)
Bottome, Edgar M., assignor to Fostoria Glass Company, Moundsville, W. Va. Goblet or similar article. Des. 63,929; Feb. 12.
Bottome, Edgar M., assignor to Fostoria Glass Company, Moundsville, W. Va. Goblet or similar article. Des. 63,930; Feb. 12.
Bouchard, Joseph, Lachine, Quebec, Canada. Plow. 1,483,771; Feb. 12.
Bourgeois, Albert, Paris, France. Transformation-making machine. 1,483,713; Feb. 12.
Bouschor, Henry A., Victoria, British Columbia, Canada, assignor of one-half to W. E. Bouschor, Seattle, Wash. Connecting means for lines. 1,483,274; Feb. 12.
Bouschor, William E. (See Bouschor, Henry A., assignor.)
Bovee, Ransom Y., Maywood, Ill. Spring suspension for vehicles. 1,483,154; Feb. 12.
Bowden, Gardiner S., Brooklyn, assignor to J. B. Bowden & Co., New York, N. Y. Ring. Des. 63,931; Feb. 12.
Bowden, J. B., & Co. (See Bowden, Gardiner S., assignor.)
Bowne, Frank E. (See Rose, J., and Bowne.)
Boyce, James, Holland, Mich., assignor to The American Cotton Oil Company, New York, N. Y. Food product and manufacture thereof. 1,483,155; Feb. 12.
Boyle, James C. (See Kridler, B. C., and Boyle.)
Bradshaw, James R., Manchester, Tenn. Water-power device. 1,483,505; Feb. 12.
Brady, Henry, Bloomfield, N. J., assignor to Henry Brady, Inc. Tray-making machine. 1,483,211; Feb. 12.
Brady, Henry, Inc. (See Brady, Henry, assignor.)
Brainard, George C. (See Foster H. J., Gruenfeldt, and Brainard.)
Braman, Harold A., Providence, R. I. Fire extinguisher. 1,483,329; Feb. 12.
Brandewie, Leo P., Houston, Ohio. Cow-tail holder. 1,483,772; Feb. 12.
Brandriff, Daniel, Short Beach, assignor to Malleable Iron Fittings Company, Branford, Conn. Lubricating attachment for percussion tools. 1,483,569; Feb. 12.
Brandt, Edward J., Watertown, Wis. Resilient wheel. 1,483,275; Feb. 12.
Brenton, Harry V., et al. (See Moffett, Henry C., assignor.)
Brewster, Rufus C., Lewisburg, W. Va. Fly chaser and catcher. 1,483,506; Feb. 12.
Brbel, John W. (See Palmer, H. D., and Brbel.)
Brickell, Emma D. (See Brickell, Harry S., assignor.)
Brickell, Emma D., executrix. (See Brickell, Harry S.)
Brickell, Harry S., deceased, by E. D. Brickell, executrix, assignor to said E. D. Brickell, Pittsburgh, Pa. Antiskid wear-resisting armor for tires. 1,483,773; Feb. 12.
British Dyestuffs Corporation Limited. (See Green, A. G., and Saunders, assignors.)
Brockbank, Clarence J., assignor to Ross-Tacony Crucible Company, Philadelphia, Pa. Refractory article and making the same. 1,483,507; Feb. 12.
Broman, Charles E., Grand Rapids, Mich., assignor, by mesne assignments, to Add-Index Corporation. Paper carriage for adding machines. 1,483,330; Feb. 12.
Brookins, Andrew J., Chicago, Ill. Selective application valve for automatic train-control apparatus. 1,483,276; Feb. 12.
Brookman, John H., et al. (See Slauson, Stephen A., assignor.)
Brooks, Edward. (See Sebring, C. L., and Brooks.)
Brooks, Edward J., East Orange, N. J. Method and means for sealing strapping. 1,483,714; Feb. 12.
Brooks, Omer, Stanton, Nebr. Tractor sweep hitch. 1,483,774; Feb. 12.
Brooks, Stephen H., Muskogee, Okla., assignor to Oil Conservation Engineering Company, Cleveland, Ohio. Vapor-conservation system. 1,483,212; Feb. 12.
Broome, Stockton, Jacksonville, Fla. Sprinkler head. 1,483,277; Feb. 12.
Brown Bag Filling Machine Company. (See Syme, James M., assignor.)
Brown, Eugene S., Oak Station, Pa. Gas-log heater. 1,483,570; Feb. 12.
Brown Hoisting Machinery Company, The. (See Monroe, Will K., assignor.)
Brown Instrument Company. (See Wilhjelm, Christian, assignor.)
Browne, Gouverneur G., Oakmont, Pa. Press. 1,483,156 Feb. 12.
Browne, Gouverneur G., Winchester, N. H. Ring-rolling machine. 1,483,069; Feb. 12.
Bruback, Theodore M. (See Linaker, F. W., and Bruback.)
Brunner, Hans, Ouder Amstel, Netherlands. Plug cock. 1,483,508; Feb. 12.
Buchanan, Frank, Syracuse, N. Y. Headlight. 1,483,070; Feb. 12.
Buckham, George T. (See Dawson, A. T., Buckham, and Purvis.)
Bugbee, Lucian W., assignor to Franklin Optical Company, Indianapolis, Ind. Making fused bifocal lenses. 1,483,509; Feb. 12.
Bugbee, Lucian W., assignor to Franklin Optical Company, Indianapolis, Ind. Achromatic bifocal lens made of two pieces of glass. 1,483,510; Feb. 12.
Bullis, John R., Winston-Salem, N. C. Clamp for tie wires. 1,483,213; Feb. 12.
Bunting, James H., Clifton, N. J., assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. Des. 63,932; Feb. 12.
Burlington Blanket Company. (See Wagner, William H., assignor.)
Burnham, George A., Saugus, assignor to S. B. Condit, jr., Brookline, Mass. Electric switch. 1,483,839; Feb. 12.
Burnham, George A., Saugus, assignor to S. B. Condit, Brookline, Mass. Electric switch. 1,483,840; Feb. 12.
Burns, James F., assignor to V. V. Fittings Company, Philadelphia, Pa. Switch-controlling mechanism. 1,483,715; Feb. 12.
Burtnett, Charles A. (See Burtnett, Everett R., assignor.)
Burtnett, Everett R., assignor of one-half to C. A. Burtnett, Los Angeles, Calif. Internal-combustion engine. 1,483,331; Feb. 12.
Busse, Carter F., Chamois, Mo. Corn harvester. 1,483,775; Feb. 12.
Butchart, William A. (See Rork, C. E., and Sandberg, assignors.)
Byler, Claude, Sheridan, Wyo. Spooling device. 1,483,332; Feb. 12.
Cadenhead, Robert H., Brownwood, Tex. Plow. 1,483,776; Feb. 12.
Calder, John A., assignor to The Torrington Company, Torrington, Conn. Riveting machine. 1,483,071; Feb. 12.
Calder, John A., assignor to The Torrington Company, Torrington, Conn. Rivet-cutting device. 1,483,072; Feb. 12.

Calder, John A., assignor to The Torrington Company, Torrington, Conn. Rivet-cutting machine. 1,483,073; Feb. 12.
Callahan, Charles F., Memphis, Tenn. Refrigerating vending machine. 1,483,777; Feb. 12.
Cameron, John A. H., et al., trustees. (See Remillard, Joseph O., assignor.)
Campbell, Colin J., East Orange, assignor to Standard Auto Parts Company of America, Newark, N. J. Guide. 1,483,778; Feb. 12.
Campbell, George L., Philadelphia, Pa. Incinerator. 1,483,571; Feb. 12.
Capece, Joseph N., Astoria, N. Y. Combined door-lock-mounting unit. 1,483,333; Feb. 12.
Carey, John N., Oakmont, Pa. Charging device. 1,483,278; Feb. 12.
Carlson, Carl E., et al. (See Fisher, Charles, assignor.)
Carroll, Dallas C., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Rim tool. 1,483,841; Feb. 12.
Carrow, Walter D., Chicopee Falls, Mass. Valve tool. 1,483,074; Feb. 12.
Carson, John A., Huntington, N. Y. Headlight attachment. 1,483,779; Feb. 12.
Carter, Thomas J., assignor to Carter's Bestever Bait Company, Indianapolis, Ind. Artificial casting bait. 1,483,842; Feb. 12.
Carter, William Company. (See Drumheller, William P., assignor.)
Carter's Bestever Bait Company. (See Carter, Thomas J., assignor.)
Cash, A. W., Company. (See De Coster, Charles J., assignor.)
Catala, Tiburce, Englewood Cliffs, N. J. Gilding apparatus. 1,483,780; Feb. 12.
Cavallaro, Frank, San Jose, Calif. Fire hydrant. 1,483,410; Feb. 12.
Cavin, Frank T. (See Hand, K. F., and Cavin.)
Centrone, Rocco, assignor of one-half to F. Napoli, Brooklyn, N. Y. Shoe vamp. Des. 63,933; Feb. 12.
Chabbert, Paul E. J., Castres, France. Couch or bed pan. 1,483,157; Feb. 12.
Chalfant, Cotter S., Chicago, Ill. Spark arrester for locomotives. Re15,765; Feb. 12.
Chamberlain Machine Works. (See Anderson, Oscar T., assignor.)
Champion Manufacturing Company. (See Dunbaugh, George J., jr., assignor.)
Cheney, Charles C., Charlestown, Mass. Bill folder. 1,483,279; Feb. 12.
Cherniavsky, Abraham, Los Angeles, Calif. Mute holder. 1,483,334; Feb. 12.
Chero-Cola Company. (See Sears, Claud A., assignor.)
Cherry, Floyd H., Berkeley, Calif. Self-controlling heater. 1,483,280; Feb. 12.
Chesebrough Manufacturing Company (Consolidated). (See Dobbins, Thomas J., assignor.)
Chilton, Roland, Keyport, N. J., assignor to Aeromarine Plane & Motor Company. Motor-testing apparatus. 1,483,075; Feb. 12.
Choinski, Bruno B., assignor of forty-nine one-hundredths to S. A. Lange, Milwaukee, Wis. Electric-lamp globe. 1,483,716; Feb. 12.
Chott, Edward L., Chicago, Ill. Teeth-cleaning instrument. 1,483,158; Feb. 12.
Christman, Duvillo G., Endicott, N. Y. Guard for accelerator pedals. 1,483,717; Feb. 12.
Churchill, Arthur H., Yarmouth, Nova Scotia, Canada. Mounting for false teeth. 1,483,781; Feb. 12.
Citizens of the United States. (See Mains, Gerald H.)
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Ammonia synthesis and means for effecting the same. 1,483,411; Feb. 12.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Ammonia-synthesis catalyst. 1,483,412; Feb. 12.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Synthetic production of ammonia. 1,483,413; Feb. 12.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Regenerating ammonia-synthesis catalysts. 1,483,414; Feb. 12.
Clark, Frank I., Baltimore, Md. Inhaler. 1,483,572; Feb. 12.
Clark, George A., Seattle, Wash. Cast-off for suspenders. 1,483,649; Feb. 12.
Clark, Harry A., Wichita Falls, Tex. Eccentric drilling attachment. 1,483,335; Feb. 12.
Clingestein, Heinrich, Cologne, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Azo dye. 1,483,415; Feb. 12.
Cloyes, James H., Chicago, Ill., assignor, by mesne assignments, to The Ashtabula Bow Socket Company, Ashtabula, Ohio. Folding top for vehicles and other structures. 1,483,076; Feb. 12.
Cole, Joseph E., Dacre, Ontario, Canada. Rural mail box. 1,483,077; Feb. 12.
Cole, William C., Canonsburg, Pa. Storm gaiter. 1,483,782; Feb. 12.
Coleman, George B., assignor to Coleman X-Ray Company, San Francisco, Calif. Method and apparatus for transforming direct current. 1,483,281; Feb. 12.
Coleman, William C., Wichita, Kans. Portable stove. 1,483,159; Feb. 12.
Coleman X-Ray Company. (See Coleman, George B., assignor.)
Collins, Ulysses L., San Diego, Calif. Electric clock. 1,483,783; Feb. 12.
Colliver, William A., Marshfield, Oreg. Movable cap for smokestacks. 1,483,784; Feb. 12.
Compagnie des Forges et Acieries de la Marine et d'Hornecourt, The. (See Rimailho, Emile, assignor.)
Condit, Sears B., jr. (See Burnham, George A., assignor.)
Cook, Adoniram J., Westerlo, N. Y. Boltless anticreeping device for railway rails. 1,483,416; Feb. 12.
Cook, Harmon J., assignor to The Torrington Company, Torrington, Conn. Spoke connection. 1,483,078; Feb. 12.
Cooper, Abraham, Brooklyn, N. Y. Arm for lighting fixtures. Des. 63,934; Feb. 12.
Cooper, Sidney R. (See Diesk, J. jr., and Cooper.)
Corbin, Elbert A., jr., Swarthmore, Pa. Vehicle body. 1,483,650; Feb. 12.
Corl, Robert M., Maumee, assignor, by mesne assignments, to Erie Glass Company, Toledo, Ohio. Method and apparatus for forming glass. 1,483,336; Feb. 12.
Corn Exchange National Bank, The, et al., administrators. (See Halkett, William G.)
Corning Glass Works. (See Littleton, Jesse T., jr., assignor.)
Corrubia, Paul E., St. Louis, Mo. Toy doll. 1,483,718; Feb. 12.
Corsat, Marcel S., Bachet de Pesay, Carouge, Switzerland. Device for soldering aluminum. 1,483,337; Feb. 12.
Costello, William J., Penn Township, Allegheny County, assignor of one-half to J. E. Katz, Verona, Pa. Lifting jack. 1,483,843; Feb. 12.
Costmeter Company. (See Quigley, John T., assignor.)
Coston, Edward C., near Skidmore, Mo. Bolt sleeve. 1,483,282; Feb. 12.
Couch, Thomas B., Wichita Falls, Tex. Fishing tool. 1,483,079; Feb. 12.
Creighton, Maynard J., assignor to Darco Corporation, Wilmington, Del. Recovering soda and active carbon. 1,483,160; Feb. 12.
Cressler, Will T., Cincinnati, Ohio. Hand stamp. 1,483,283; Feb. 12.
Creveling, John L., Oracle, Ariz., assignor to The Bassick Manufacturing Company, Chicago, Ill. Lubricating system. 1,483,651; Feb. 12.
Crisson, George. (See Toomey, J. F., and Crisson.)
Critchelow, Walter G., et al. (See Cunningham, Edward J., assignor.)
Crockett, Charles H., Troy, N. Y. Vehicle spring. 1,483,214; Feb. 12.
Cullen, John T., jr., Clinton, Iowa. Automatic stoker for furnaces. 1,483,785; Feb. 12.
Cunningham, Edward J., assignor to W. G. Critchlow and H. M. Valentine, Chicago, Ill. Humidifier for motors. 1,483,604; Feb. 12.
Cunningham, James. (See Quigley, R., and Cunningham.)
Currie, Frank S., Webster City, Iowa. Snowplow. 1,483,080; Feb. 12.
Currie, Hugh A., Chicago, Ill. Caster. 1,483,284; Feb. 12.
Curtis, George V., West Springfield, and W. H. Miner, Springfield, Mass.; said Miner assignor to said Curtis. Variable-feed mechanism. 1,483,719; Feb. 12.
Cutler-Hammer Mfg. Co., The. (See Barnum, Thomas E., assignor.)
Darco Corporation. (See Creighton, Maynard J., assignor.)
Darrow, Fred, Cuyahoga Falls, Ohio. Phonograph appliance. 1,483,573; Feb. 12.
Davison, Allen S., Company. (See Meyer, Albert P., assignor.)
Dawson, Arthur T., G. T. B. and W. R. Purvis, assignors to Vickers Limited, Westminster, London, England. Ordnance breech mechanism. 1,483,161; Feb. 12.
Day, Thomas Company. (See Symmes, Whitman, assignor.)
Dayton Engineering Laboratories Company, The. (See Hunt, John H., assignor.)
Dayton Engineering Laboratories Company, The. (See Hunt, J. H., and Fitzsimmons, assignors.)
Dayton-Wright Company. (See Driggs, Ivan H., assignor.)
Dean, Peter P., Sound Beach, Conn. Valve. 1,483,081; Feb. 12.
De Cew, Judson A., Mount Vernon, assignor to Process Engineers Incorporated, New York, N. Y. Preserving and treating paper pulp. 1,483,630; Feb. 12.
De Coster, Charles J., assignor to A. W. Cash Company, Decatur, Ill. Liquid strainer. 1,483,285; Feb. 12.
Deere & Company. (See Kiel, Chris, assignor.)
Defiance Button Machine Co. (See Murphy, William B., assignor.)
De La Mater, Rual L., San Diego, Calif. Fuel-mixing device. 1,483,286; Feb. 12.
De Saussure, William P., jr., Englewood, N. J. Visible index. 1,483,215; Feb. 12.
Despard, Victor R., Hinsdale, Ill., assignor to McGill Manufacturing Company, Valparaiso, Ind. Mechanical movement. 1,483,162; Feb. 12.

De Zeng, Henry L., Moorestown, N. J. Optical instrument. 1,483,786; Feb. 12.
Dick, A. B., Company. (See Green, Charles F., assignor.)
Dickinson, Neville S., Glen Ridge, N. J., assignor to Elevator Supplies Company, Inc. Elevator sequence safety device. 1,483,216; Feb. 12.
Dicks, David & Heller Co. (See Minevitch, Joseph R., assignor.)
Dilling, Paul, Chicago, Ill. Apron tie. 1,483,338; Feb. 12.
Dixon, Thomas S., assignor to The Vigilant Automatic Fire Alarm Company Limited, Christchurch, New Zealand. Thermostat for electrical fire-alarm systems. 1,483,787; Feb. 12.
Diesk, John, jr., and S. R. Cooper, assignors to U. S. Ball Bearing Manufacturing Company, Chicago, Ill. Feeding mechanism for rivet machines. 1,483,720; Feb. 12.
Doane, Leroy C., Cleveland, Ohio, assignor to General Electric Company. Lighting fixture. 1,483,417; Feb. 12.
Dobbins, Thomas J., Brooklyn, assignor to Chesebrough Manufacturing Company (Consolidated), New York, N. Y. Tube cap. Des. 63,935; Feb. 12.
Dobbs, William G., Auburn, N. Y. Furnace and grate therefor. 1,483,287; Feb. 12.
Doddridge, J. M., & Sons. (See Doddridge, James M., assignor.)
Doddridge, James M., assignor to J. M. Doddridge & Sons, Milton, Ind. Grave lining. 1,483,288; Feb. 12.
Doering, Charles J. (See Doering, William M., and C. J.)
Doering, William M., and C. J., Cincinnati, Ohio. Display carton. 1,483,289; Feb. 12.
Donigan, Horn G., St. Louis, Mo. Screen for windshields. 1,483,652; Feb. 12.
Donnelly, James H., Cleveland, Ohio. Casket construction. 1,483,544; Feb. 12.
Doremus, Isaac W., West Englewood, N. J., assignor, by mesne assignments, to Doremus, Schoen & Co., Inc., New York, N. Y. Game. Re15,763; Feb. 12.
Doremus, Schoen, & Co. (See Doremus, Isaac W., assignor.)
Dosimont, Henri, Arville, assignor to Etablissements Dosimont, Societe Anonyme, Brussels, Belgium. Drill bit or auger. 1,483,082; Feb. 12.
Douglas, William, & Sons, Limited. (See Nicol, John S., assignor.)
Douglass, Edward L., Jacksboro, Tex. Temperature-regulating system for houses. 1,483,163; Feb. 12.
Douglass, Frank E. (See Townsend, W. S., and Douglass.)
Draper Corporation. (See Rhoades, Alonzo E., assignor.)
Draper Corporation. (See Stimpson, Edward S., assignor.)
Driggs, Ivan H., assignor to Dayton-Wright Company, Dayton, Ohio. Door for aircraft bodies. 1,483,164; Feb. 12.
Drumheller, William P., Springfield, assignor to William Carter Company, Needham Heights, Mass. Mechanism for lubricating the needles and needle cam tracks of knitting machines. 1,483,844; Feb. 12.
Dufaux, Charles F., Geneva, Switzerland. Permanent magnet for electric machines. 1,483,339; Feb. 12.
Dugan, Peter J., Bronx, N. Y. Safety device for electric apparatus. 1,483,653; Feb. 12.
Dunbaugh, George J., jr., assignor to Champion Manufacturing Company, Chicago, Ill. Liquid-level indicator. 1,483,413; Feb. 12.
Dunham, Delbert F., Los Angeles, Calif. Valve grinder. 1,483,721; Feb. 12.
Duplessis, Etienne, Paris, France. Hand machine for cutting out several thicknesses of fabric. 1,483,788; Feb. 12.
Durand Steel Locker Company. (See Vance, Walter N., assignor.)
Durant Motors Incorporated. (See Sturt, Alfred T., assignor.)
Durkee-Atwood Company. (See Murray, Lee, assignor.)
Dyer, Elbert, assignor of one-fourth to R. V. Leep and one-fourth to L. C. Eaton, Bandon, Oreg. Fishing-line reel. 1,483,340; Feb. 12.
Earhart, William A., East Radford, Va. Rotary cultivator. 1,483,789; Feb. 12.
Eaton, George M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Gear-inspection machine. 1,483,419; Feb. 12.
Eaton, L. C., et al. (See Dyer, Albert, assignor.)
Eaton, Washington L., Holyoke, Mass. Practice golf ball. 1,483,165; Feb. 12.
Edmunds & Jones Corporation. (See Kerwin, Thomas J., assignor.)
Edwards, George D., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method and system for detecting sources of vibration. 1,483,790; Feb. 12.
Edwards, Harley W., Thetford Mines West, Quebec, Canada. Blow-out patch. 1,483,791; Feb. 12.
Egger, Louis, Sommiswald-Grunen, Switzerland. Thread-clamping device. 1,483,166; Feb. 12.
Eggimann, Ernest, Mount Horeb, Wis. Automobile ventilator. 1,483,290; Feb. 12.
Eichner, Henry, Chicago, Ill. Burner chamber for rotary baking ovens. 1,483,167; Feb. 12.
Eisenstein, Maxwell. (See Blaeker, Joseph, assignor.)
Electric Bleaching Gas Company. (See MacMillan, John R., assignor.)
Elevator Supplies Company. (See Dickinson, Neville S., assignor.)
Elmes, Charles F., Engineering Works. (See Slater, Harvey, assignor.)
Emerson, Elmer L., Marshalltown, Iowa. Door opener. 1,483,291; Feb. 12.
Engels, William H., Rahway, N. J., assignor to Merck & Co., New York, N. Y. Analgesic compound and producing the same. 1,483,217; Feb. 12.
Erie Glass Company. (See Corl, Robert M., assignor.)
Ermilio, Dominick J., Jersey City, N. J., assignor of one-half to J. L. McDonald, Tottenville, N. Y. Method and apparatus for placing concrete sheet piles. 1,483,574; Feb. 12.
Eschwig, Albert, Seattle, Wash. Vehicle wheel. 1,483,654; Feb. 12.
Etablissements Dosimont Societe Anonyme. (See Dosimont, Henri, assignor.)
Eustis, Frederic A., Milton, Mass., assignor of one-half to C. P. Perin, New York, N. Y. Making electrolytic metal and apparatus therefor. 1,483,722; Feb. 12.
Evers, Theodore, assignor of one-half to R. S. Silvis, Rhode Island, Ill. Valve. 1,483,545; Feb. 12.
Ewing, Albert L., Seattle, Wash. Combination camp stove and cooker. 1,483,420; Feb. 12.
Fahnestock, Archie P., Long Island City, N. Y., assignor to Fahnestock Electric Company. Insulating bushing. 1,483,218; Feb. 12.
Fahnestock Electric Company. (See Fahnestock, Archie P., assignor.)
Fahrni, Otto, Blumlimatt, near Thun, assignor to G. Rieser and L. Wyler, Berne, Switzerland. Automatic-operating device for embroidery machines. 1,483,168; Feb. 12.
Fairbairn, John M. R., Montreal, Quebec, Canada. Anchor tie plate. 1,483,792; Feb. 12.
Farbenfabriken vorm. Friedr. Bayer and Co. (See Clingestein, Heinrich, assignor.)
Farbenfabriken vorm. Friedr. Bayer and Co. (See Huismann, Johann, assignor.)
Farnham, Helen G., Minneapolis, Minn. Bookrest. 1,483,421; Feb. 12.
Farrell, John A., assignor to Stephen Sanford & Sons, Inc., Amsterdam, N. Y. Rug. Des. 63,936; Feb. 12.
Faull, Alfred E., assignor to Right-of-Way Signal Company, Oakland, Calif. Direction indicator. 1,483,655; Feb. 12.
Fenlon, Charles E., Sandwich, Ill., assignor, by mesne assignments, to The Jahn-Fenlon Co., Wilmington, Del. Food product and preparing same. 1,483,422; Feb. 12.
Ferdon, William S., Omaha, Nebr. Clothes protector. 1,483,793; Feb. 12.
Fetters, Arthur H., Omaha, Nebr. Casing for locomotive steam pipes. 1,483,423; Feb. 12.
Fidelity Tire & Rubber Co. (See McConnell, George C., assignor.)
Fiedler, Louis, assignor to Benjamin Gross Company, Inc., New York, N. Y. Finger ring or article of similar nature. Des. 63,937; Feb. 12.
Filloux, Louis J. F., Le Havre, France. Gun carriage. 1,483,169; Feb. 12.
Finch, Francis E., New York, N. Y., and W. H. Glomb, assignors to Ruggles-Coles Engineering Company, York, Pa. Drier. 1,483,424; Feb. 12.
Fine, David L., Newton, Mass. Garment. Re15,757; Feb. 12.
Finney, James M. (See Schroeder, Anthony, assignor.)
Firestone Tire & Rubber Company, The. (See Carroll, Dallas C., assignor.)
Firestone Tire and Rubber Company, The. (See Fitzharris, James D., assignor.)
Fisher, Charles, assignor of one-third to A. C. Grunwald, one-third to C. E. Carlson, and one-third to F. H. Loescher, Chicago, Ill. Toilet-paper package. 1,483,575; Feb. 12.
Fisher, Emanuel, assignor of one-half to G. W. O'Kneel, Providence, R. I. Valve. 1,483,656; Feb. 12.
Fisher, William C., assignor to The Russell Manufacturing Company, Middletown, Conn. Tool for forming salvaged fabric. 1,483,425; Feb. 12.
Fitch, John C., Three Rivers, Mich. Grave vault. 1,483,341; Feb. 12.
Fitzgerald, Jeremiah C., Dubuque, Iowa. Cow stanchion. 1,483,292; Feb. 12.
Fitzharris, James D., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Mold. 1,483,857; Feb. 12.
Fitzsimmons, John T. (See Hunt, J. H., and Fitzsimmons.)
Flesch, Leo, assignor to the Firm G. & J. Jaeger, Kommanditgesellschaft, Elberfeld, Germany. Bearing. 1,483,170; Feb. 12.
Fletcher, Harold W., Houston, Tex., assignor to Hughes Tool Company. Weight indicator. 1,483,426; Feb. 12.
Forbes, John W., Flint, Mich. Valve-operating mechanism. 1,483,631; Feb. 12.
Forrest, Nettie. (See Forrest, Prosper J., assignor.)
Forrest, Prosper J., Alameda, assignor of one-half to N. Forrest, San Francisco, Calif. Underreamer. 1,483,219; Feb. 12.
Foster, Henry J., E. Gruenfeldt, Cleveland, and G. C. Brainard, East Cleveland, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio. Sheet-metal barrel. 1,483,293; Feb. 12.

Foster, Theodore W., & Bro. Co. (See Foster, Theodore W., assignor.)
Foster, Theodore W., assignor to Theodore W. Foster & Bro. Co., Providence, R. I. Container for toilet preparations. 1,483,220; Feb. 12.
Fostoria Glass Company. (See Bottome, Edgar M., assignor.)
Fostoria Glass Company. (See Greenan, Frank D., assignor.)
Fox, George, Lexington, Nebr. Joint or connection. 1,483,294; Feb. 12.
Franklin Optical Company. (See Bugbee, Lucian W., assignor.)
Frederick, Henry A. (See Pearce, Jesse C., assignor.)
Fredholm, Henry, Chicago, Ill. Showcase. 1,483,723; Feb. 12.
Frediani, Angelo. (See Martin, Charles H., assignor.)
French, William A., assignor to Wm. A. French Furniture Company, Minneapolis, Minn. Radio cabinet. Des. 63,938; Feb. 12.
French, Wm. A., Furniture Company. (See French, William A., assignor.)
Frey, Elmer E. (See Reavis, W. E., and Frey.)
Freyn, Brassert & Company. (See Hayes, J. C., jr., and Wetherbee, assignors.)
Frick, Otto, Herserud, Sweden. Electric induction furnace. 1,483,221; Feb. 12.
Friedman, Joseph, Brooklyn, N. Y. Kettle or similar article. Des. 63,939; Feb. 12.
Friedman, Joseph, Brooklyn, N. Y. Kettle or similar article. Des. 63,940; Feb. 12.
Fritsche, John, Merion, Pa. Valve mechanism for liquid-vending machines. 1,483,083; Feb. 12.
Fröding, Olof E. (See Julin, A. T., and Fröding.)
Fry, Albert L., Elizabeth, N. J. Knife. 1,483,632; Feb. 12.
G. & G. Fixture Co., The. (See Walker, Ernest A., assignor.)
Gale, Charles H., St. Johns, Bishopsteke, England. Indicator for reciprocating engines. 1,483,171; Feb. 12.
Galloway, Joseph W., Wilmington, Del. Automobile anti-theft device. 1,483,222; Feb. 12.
Gannett, Danforth K., Arverne, N. Y., assignor to American Telephone and Telegraph Company. Signaling system. 1,483,172; Feb. 12.
Garland, John L., Youngstown, Ohio. Changeable price tag. 1,483,794; Feb. 12.
Garner, Edward E., Jacumba, Calif. Poultry house. 1,483,295; Feb. 12.
Gaunt, Charles F., Birmingham, England. Manufacture of buttons, badges, or the like. 1,483,223; Feb. 12.
Gayeski, Joseph F., Shamokin, Pa. Miner's cap. 1,483,626; Feb. 12.
Gaynor, Edwin G., Stratford, Conn. Pipe-collar plate. 1,483,428; Feb. 12.
Gaynor, Edwin G., Stratford, and L. T. Wilson, New Haven, Conn.; said Wilson assignor to said Gaynor. Electric heating device. 1,483,427; Feb. 12.
Gelb, William, assignor to International Silver Company, Meriden, Conn. Box or similar article. Des. 63,941; Feb. 12.
Gelb, William, assignor to International Silver Company, Meriden, Conn. Plate or similar article. Des. 63,942; Feb. 12.
Gelissen, Henri C. J. H., Berlin, Germany, assignor to the Firm: Naamloose Vennootschap Industrieele Maatschappij, voorheen Noury & Van Der Lande, Deventer, Netherlands. Bleaching and improving flour and milling products. 1,483,546; Feb. 12.
General Electric Company. (See Allee, David A., assignor.)
General Electric Company. (See Doane, Leroy C., assignor.)
General Electric Company. (See Gosling, Joseph W., assignor.)
General Electric Company. (See Hall, Chester I., assignor.)
General Electric Company. (See Hedin, Fred H., assignor.)
General Electric Company. (See Hewlett, Edward M., assignor.)
General Electric Company. (See Hobart, Henry M., assignor.)
General Electric Company. (See Knoderer, Homer G., assignor.)
General Electric Company. (See Montabone, Adolph J. F., assignor.)
General Electric Company. (See Perry, Charles T., assignor.)
General Electric Company. (See Tobey, Harry W., assignor.)
General Electric Company. (See Traver, Oliver C., assignor.)
General Electric Company. (See Warren, Henry E., assignor.)
General Phonograph Corporation. (See Vassell, Anthony, assignor.)
General Railway Signal Company. (See Stephenson, James E., assignor.)
Gerner, Otto G., Minneapolis, Minn. Office indicator. 1,483,724; Feb. 12.
Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches. (See Von Bronk, Otto, assignor.)
Getchell, Benjamin E., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch. 1,483,845; Feb. 12.
Getchell, Benjamin E., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Quick-break switch. 1,483,846; Feb. 12.
Gibbons, Richard, assignor to M. A. Kenney, Brooklyn, N. Y. Airplane-receiving apparatus. Re15,758; Feb. 12.
Gibson, Allan M. (See Gibson, William H. and A. M., and Klutts.)
Gibson, William H. and A. M., and G. S. Klutts, Concord, N. C. Boll-weevil exterminator. 1,483,795; Feb. 12.
Gill, Fred A., Lebanon, Pa. Drill. 1,483,296; Feb. 12.
Gilpin, Garth G., Riverside, assignor to Union Metal Products Company, Chicago, Ill. Metal grain door. 1,483,576; Feb. 12.
Gilson, Henry R., New Rochelle, N. Y., assignor to Revere Rubber Company. Tire-building apparatus. 1,483,297; Feb. 12.
Girin, Pierre, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. New alloy comprising iron, nickel, chromium, molybdenum. 1,483,298; Feb. 12.
Gisholt Machine Company. (See Stevens, William N., assignor.)
Gitzendanner, Charles, Ridgewood, N. Y. Strut rod. 1,483,542; Feb. 12.
Gladin, Eugene L., Manchester, Ga. Slasher cylinder. 1,483,543; Feb. 12.
Gleason, James E., and A. L. Stewart, assignors to Gleason Works, Rochester, N. Y. Method of and machine for cutting gears or wheels. Re15,759; Feb. 12.
Gleason Works. (See Gleason, J. E., and Stewart, assignors.)
Glidden, Arthur R., Sultan, Wash. Controlling device for internal-combustion engines. 1,483,657; Feb. 12.
Glidden, Arthur R., Seattle, Wash. Fuel economizer for internal-combustion engines. 1,483,658; Feb. 12.
Glomb, Walter H. (See Finch, F. E., and Glomb.)
Goddard, Wilfred B., San Francisco, Calif. Lighting fixture. Des. 63,943; Feb. 12.
Golden, Thomas F., et al. (See Montgomery, James R., assignor.)
Goldsmith, Hugo, assignor, by mesne assignments, to The P. Goldsmith Sons Company, Cincinnati, Ohio. Athletic protective pad. 1,483,299; Feb. 12.
Goldsmith, P., Sons Company, The. (See Goldsmith, Hugo, assignor.)
Good Inventions Co. (See Good, John, assignor.)
Good, John, Garden City, assignor to Good Inventions Co., Brooklyn, N. Y. Engine preheater. 1,483,577; Feb. 12.
Goodall, John N., Portsmouth, N. H. Reamer. 1,483,429; Feb. 12.
Goodbar, Robert L., assignor to Goodbar Rubber Company, Minneapolis, Minn. Fan belt. 1,483,578; Feb. 12.
Goodbar Rubber Company. (See Goodbar, Robert L., assignor.)
Goodman, Charles H. (See Wickes, F. H., and Goodman.)
Goodwin, Emery M., Cleveland, Ohio. Electrical amusement device. 1,483,579; Feb. 12.
Goodyear Tire & Rubber Company, The. (See Beebe, Paul, assignor.)
Gordon, David D., Chicago, Ill., assignor, by mesne assignments, to McGill Manufacturing Company, Valparaiso, Ind. Switch-operating apparatus. 1,483,173; Feb. 12.
Gorman, Alphonsus, et al. (See Remillard, Joseph O., assignor.)
Gosling, Joseph W., Schenectady, N. Y., assignor to General Electric Company. Light fixture. Des. 63,944; Feb. 12.
Gray, James H., New York, N. Y. Melting or smelting low volatile metals. 1,483,796; Feb. 12.
Great Western Electro Chemical Company. (See Rosenstein, Ludwig, assignor.)
Green, Arthur G., and K. H. Saunders, assignors to British Dyestuffs Corporation, Limited, Manchester, England. Manufacture of N-sulphato-alkyl compounds. 1,483,084; Feb. 12.
Green, Arthur G., and K. H. Saunders, assignors to British Dyestuffs Corporation Limited, Manchester, England. Dyeing and printing acetyl silk and materials containing it. 1,483,797; Feb. 12.
Green, Arthur G., and K. H. Saunders, assignors to British Dyestuffs Corporation Limited, Manchester, England. Dye and making the same. 1,483,798; Feb. 12.
Green, Charles F., Romford, England, assignor to A. B. Dick Company, Chicago, Ill. Printing member for type-duplicating machines. 1,483,659; Feb. 12.
Greenleaf, Robert P. (See Billings, F., and Greenleaf.)
Greenan, Frank D., assignor to Fostoria Glass Company, Moundsville, W. Va. Glass goblet or similar article. Des. 63,945; Feb. 12.
Greensmith, James E., Brookline, assignor of one-half to Boston Scale & Machine Company, Boston, Mass. Reversing valve. 1,483,430; Feb. 12.
Greenstreet, Charles J., executor. (See Greenstreet, Jason H.)

Greenstreet, Jason H., deceased, Indianapolis, Ind.; J. Greenstreet, executor. Box. 1,483,174; Feb. 12.
Gronberg, Clarence O., assignor of one-third to A. M. Price, Elgin, Ill. Lead pencil. 1,483,344; Feb. 12.
Grossman, Joseph L., Chicago, Ill. Shipping and identification tag holder. 1,483,300; Feb. 12.
Grubb, Thomas, St. Louis, Mo. Egg-candling device. 1,483,660; Feb. 12.
Gruenfeldt, Emil. (See Foster, H. J., Gruenfeldt, and Brainard.)
Grunwald, Albert C., et al. (See Fisher, Charles, assignor.)
Guardian Gas Appliance Company, The. (See Nieberding, Frank A., assignor.)
Guelbaum, David, Syracuse, N. Y. Carburetor. 1,483,634; Feb. 12.
Guenther, Arthur G. G., assignor to Signode System, Inc., Chicago, Ill. Sealing device. 1,483,175; Feb. 12.
Guest, Benjamin O. (See Hosmer, J. W., and Guest.)
Hagerman, Willard R. (See Bishop, G. T., and Hagerman.)
Halkett, Elizabeth M., et al., administrators. (See Halkett, William G.)
Halkett, Joa S., et al., administrators. (See Halkett, William G.)
Halkett, Walter A., et al., administrators. (See Halkett, William G.)
Halkett, William G., deceased, Philadelphia, Pa.; E. M. Halkett, A. H. Kershaw, W. A. Halkett, J. S. Halkett, and the Corn Exchange National Bank, administrators. Hand grip for golf clubs, etc. 1,483,647; Feb. 12.
Halkias, George C., New York, N. Y. Power windmill. 1,483,301; Feb. 12.
Hall, Arthur J., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control apparatus. 1,483,431; Feb. 12.
Hall, Chester I., Fort Wayne, Ind., assignor to General Electric Company. Demand meter. 1,483,432; Feb 12.
Hall, Chester I., Fort Wayne, Ind., assignor to General Electric Company. Relay. 1,483,433; Feb. 12.
Hall, Frederick D., assignor to Hall Mfg. Co., Chicago, Ill. Reproducing needle for talking machines. 1,483,345; Feb. 12.
Hall-Lewis, P. M., et al. (See Sandstrom, Albert H., assignor.)
Hall Mfg. Co. (See Hall, Frederick D., assignor.)
Hall, Samuel J., Anniston, Ala. Can opener. 1,483,661; Feb. 12.
Hall, William, New York, N. Y. File. 1,483,799; Feb. 12.
Hamel, Charles A., Swanton, Vt. Putty powder. 1,483,224; Feb. 12.
Hamilton, William J., Chokoloskee, Fla. Trap. 1,483,800; Feb. 12.
Hammer, Hans O., Chicago, Ill. Tuning device for stringed musical instruments. 1,483,434; Feb. 12.
Hammer, Samuel, New York, assignor to United Metal Box Co., Inc., Long Island City, N. Y. Detachable handle. 1,483,435; Feb. 12.
Hammett, Harry R., Bakersfield, Calif. Liquid meter. 1,483,225; Feb. 12.
Hand, Kedlian P., and F. T. Cavin, Los Angeles, Calif.; said Hand assignor to said Cavin. Cotton picker. 1,483,848; Feb. 12.
Handley, Agnes P., Oakland, Calif. Doll. Des. 63,946; Feb. 12.
Hanna, Albert B., Denver, Colo. Caster. 1,483,302; Feb. 12.
Hansen, E. W., et al. (See Sandstrom, Albert H., assignor.)
Hardie, Robert W., Fanwood, N. J. Air humidifier. Re. 15,766; Feb. 12.
Harris, Lafe W., and M. L. Taylor, Kansas City, Mo. Arm rest. 1,483,396; Feb. 12.
Harrison, George D., North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Clasp. 1,483,801; Feb. 12.
Harrison, George D., North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Bracelet clasp. 1,483,802; Feb. 12.
Harrison, Isaac, Cresmridge, N. J. Berry-stripping machine. 1,483,225; Feb. 12.
Harrison, John W., assignor of one-half to H. Balding, Preston, Lancaster, England. Bookmarker. 1,483,347; Feb. 12.
Hart, Frederick A., New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y. Calculating machine. 1,483,580; Feb. 12.
Harjburg, Hermann L., Denver, Colo. Beet cutter. 1,483,803; Feb. 12.
Hartford Rubber Works Company, The. (See Lough, Hector V., assignor.)
Hartogh, Arthur A., assignor of one-half to J. W. Beaudin, Duluth, Minn. Wall pocket. 1,483,804; Feb. 12.
Harvey, Albert W., Sulphur Springs, Tex. Signal. 1,483,511; Feb. 12.
Hatch, L. O., et al. (See Slauson, Stephen A., assignor.)
Hawkins, Lee U., Madisonville, Ky. Journal jack. 1,483,303; Feb. 12.
Hayes, Harvey C., New London, Conn., assignor to Submarine Signal Company, Portland, Me. Determining distances. 1,483,547; Feb. 12.
Hayes, John C., jr., and H. L. Wetherbee, assignors to Freyn, Brassert & Company, Chicago, Ill. Means for cleaning and drying blast-furnace gas. 1,483,348; Feb. 12.
Hazard, George E., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Valve. 1,483,436; Feb. 12.
Haselton, Carl J., assignor to American Narrow Fabric Company, Worcester, Mass. Metal loop for garment supporters. 1,483,349; Feb. 12.
Headley, William T., Philadelphia, Pa. Railway crossing and making the same. 1,483,437; Feb. 12.
Heath, Laurence E., assignor of forty-nine per cent to J. Labbee, jr., Quantico, Va. Engine muffler. 1,483,805; Feb. 12.
Hebebrand, George H. (See Neal, B., and Hebebrand.)
Hedgcock, William C., assignor to American Steel Foundries, Chicago, Ill. Brake-beam safety means. 1,483,633; Feb. 12.
Hedin, Fred H., Willimantic, Conn., assignor to General Electric Company. Automatic reclosing-circuit-breaker system. 1,483,438; Feb. 12.
Heffner, Augustus C., Crowley, La. Toy gun. 1,483,304; Feb. 12.
Hegerman, Gustave G., Chicago, Ill. Cinematograph film. 1,483,581; Feb. 12.
Heidbrink, Jay A., Minneapolis, Minn. Surgical bone-cutting device. 1,483,085; Feb. 12.
Heinrich, Fred, Whittemore, Iowa. Chicken roost. 1,483,086; Feb. 12.
Heisey, A. H., & Company. (See Heisey, T. Clarence, assignor.)
Heisey, T. Clarence, assignor to A. H. Heisey & Company, Newark, Ohio. Plate. Des. 63,947; Feb. 12.
Heitz, Albert J., Vincennes, Ind. Automatic night-lamp fixture. 1,483,726; Feb. 12.
Hellmund, Rudolf E., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. System of control. 1,483,439; Feb. 12.
Hendley, Alma V., Kansas City, Mo. Statuette. Des. 63,948; Feb. 12.
Hendricks, Ira W. (See Kramer, William J., assignor.)
Henrikson, Herbert A., Providence, R. I. Column guide. 1,483,176; Feb. 12.
Hendrix, Cecil A., Flora, Ind. Electrical scoreboard. 1,483,806; Feb. 12.
Hepburn, George G., Chorlton-cum-Hardy, England. Water filtering and softening apparatus. 1,483,858; Feb. 12.
Herbert, Edwin B. (See Smith, G. Z., and Herbert.)
Heulings, Samuel M., Haddonfield, N. J. Filling machine. 1,483,861; Feb. 12.
Hewlett, Edward M., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,483,440; Feb. 12.
Hibbard, Lloyd J., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Motor-control system. 1,483,441; Feb. 12.
Hickok Manufacturing Company. (See Shields, Lowell W., assignor.)
Hill, Harry W., assignor to American Optical Company, Southbridge, Mass. Ophthalmic lens. 1,483,727; Feb. 12.
Hill, Roy L., Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Ammonium-nitrate explosive. 1,483,087; Feb. 12.
Hirsch, Max. (See Horak, Frank, assignor.)
Hirsh, Fred, assignor to The Adjusta Company, Inc., New York, N. Y. Fastener. 1,483,849; Feb. 12.
Hobart, Henry M., Schenectady, N. Y., assignor to General Electric Company. Means for cooling electrical apparatus. 1,483,442; Feb. 12.
Hoey, Samuel C., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Telegraph key. 1,483,444; Feb. 12.
Hoffman, Rudolph, Kankakee, assignor to Sears, Roebuck and Co., Chicago, Ill. Oil stove. 1,483,088; Feb. 12.
Hogun, George F., Chicago, Ill. Envelope. 1,483,443; Feb. 12.
Holcomb & Hoke Mfg. Co. (See Waltman, H. A., and Rossebo, assignors.)
Holley, George M. (See Anderson, Raymond M., assignor.)
Holmes, Schuyler H., Venice, Calif. Locality indicator for vehicles. 1,483,728; Feb. 12.
Holton, Rudd T., Hugo, Okla. Cotton-square picker. 1,483,445; Feb. 12.
Horak, Frank, assignor of one-half to M. Hirsch, Valparaiso, Ind. Sportsman's vest. 1,483,635; Feb. 12.
Horni, Paul P., Newark, N. J. Lens. 1,483,636; Feb. 12.
Hosmer, John W., and B. O. Guest, Crossville, Ala. Dirigible headlight. 1,483,807; Feb. 12.
Hotchkiss, Marshall. (See Shepherd, B. P., and Hotchkiss.)
Hough, Earl B., assignor to G. M. Peters, trustee, Chicago, Ill. Motion-transmitting mechanism. 1,483,089; Feb. 12.
Hough, Herbert D., Edgewood, assignor to Wightman & Hough Company, Providence, R. I. Vanity case. 1,483,350; Feb. 12.
Hoyt Metal Company. (See Thompson, George K., assignor.)
Hudd, Alfred E., assignor to Automatic Telephone Manufacturing Company Limited, Liverpool, England. Motor. 1,483,512; Feb. 12.
Huey, George W., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company. Electrical system. 1,483,446; Feb. 12.
Hughes Tool Company. (See Fletcher, Harold W., assignor.)
Hughes Tool Company. (See Scott, Floyd L., assignor.)

Hugues, Louis J., Topeka, Kans. Steering-wheel lock. 1,483,808; Feb. 12.
Huismann, Johann, Wiesdorf, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Azodyestuff. 1,483,447; Feb. 12.
Hull, Matthew R., assignor to Rex Manufacturing Company, Connersville, Ind. Weatherstrip for motor-vehicle windshields. 1,483,305; Feb. 12.
Hull, Matthew R., assignor to Rex Manufacturing Company, Connersville, Ind. Connecter for two-part automobile doors. 1,483,809; Feb. 12.
Hull, Matthew R., assignor to Rex Manufacturing Company, Connersville, Ind. Top for motor vehicles. 1,483,810; Feb. 12.
Hull, Matthew R., assignor to Rex Manufacturing Company, Connersville, Ind. Connecter for two-part automobile doors. 1,483,811; Feb. 12.
Hunt, John H., assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio. Suction burner. 1,483,178; Feb. 12.
Hunt, John H., and J. T. Fitzsimmons, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio. Suction burner. 1,483,177; Feb. 12.
Hutchins, Rufus J., Middletown, Ohio. Water heater. 1,483,090; Feb. 12.
Hydraulic Pressed Steel Company, The. (See Foster, H. J., Gruenfeldt, and Brainard, assignors.)
Imbium, Leo, Pueblo, Colo. Storage-battery casing. 1,483,091; Feb. 12.
International Nitrogen Co. (See Reid, James H., assignor.)
International Silver Company. (See Geib, William, assignor.)
Isakson, Edwin A., McKeesport, Pa. Piston packing. 1,483,812; Feb. 12.
Isted, Albert E., London, England. Domestic device for winding and holding wool. 1,483,729; Feb. 12.
Jackson, Harlie S., Philadelphia, Pa. Rocking means for baby carriages. 1,483,813; Feb. 12.
Jacobs, Grant, Des Moines, Iowa. Piston ring. 1,483,582; Feb. 12.
Jacobs, Hannah, Brooklyn, N. Y. Tube for permanent hair waving. 1,483,583; Feb. 12.
Jacobson, Edwin. (See Miller, Joseph B., assignor.)
Jaeger, Edmond, Paris, France. Indicating device for average speeds. 1,483,448; Feb. 12.
Jaeger, G. & J., Kommanditgesellschaft. (See Flesch, Leo, assignor.)
Jahn-Fenlon Co. (See Fenlon, Charles E., assignor.)
Jamar, Mitchell F., Duluth, Minn. Testing and display device. 1,483,662; Feb. 12.
Jammer, Jacob S., assignor to Western Electric Company, Incorporated, New York, N. Y. Means for controlling electrical transmission. 1,483,179; Feb. 12.
Johns-Manville, Incorporated. (See Wells, William S., assignor.)
Johnson, Albert E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Stock-fitting machine. 1,483,093; Feb. 12.
Johnson, Alphonzo G., Cardenas, N. C. Bathing cap with goggles. 1,483,226; Feb. 12.
Johnson, Bernays, Newark, N. J., assignor to Westinghouse Lamp Company. Electric lamp for projection apparatus. 1,483,449; Feb. 12.
Johnson, William, Green Point, Long Island, N. Y. Combination sink hanger and outlet fixture. 1,483,663; Feb. 12.
Jones, Griffin W., Toronto, Ontario, Canada. Sponge mounting for finger moisteners. 1,483,094; Feb. 12.
Jones, Oscar V. (See Voorhies, F. E., and Jones.)
Julin, Axel T., and O. E. Fröding, Eskilstuna, assignors to Aktiebolaget Separator, Stockholm, Sweden. Adjustable reflector for lampa and the like. 1,483,306; Feb. 12.
Juruick, Maximilian F., Allentown, Pa. Electric clock. 1,483,814; Feb. 12.
Justinian Caire Company. (See Van Meter, James W., assignor.)
Kaegi-Tremlin, Adolf, Pfaeffikon, Switzerland. Centering device for work or tool holders. 1,483,190; Feb. 12.
Kain, Charles E., Dallas, Tex. Means for collecting mud, foot scrapings, water, and the like deposited on steps. 1,483,095; Feb. 12.
Kammerdiner, James A., Los Angeles, Calif. Rotary jar. Re15,760; Feb. 12.
Karcher Company, The. (See Karcher, Lawrence C., assignor.)
Karcher, Lawrence C., Henderson, Ky., assignor to The Karcher Company, Wilmington, Del. Reverse brake control for automobiles. 1,483,096; Feb. 12.
Kasley, Alexander T., Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company. Steam-chest construction for turbines. 1,483,605; Feb. 12.
Katcher, Morris, Brooklyn, N. Y., and R. McWilliams, Montclair, N. J., assignors to Republic Fireproofing Company, Inc., New York, N. Y. Tile-making machine. 1,483,513; Feb. 12.
Katz, Joseph E. (See Costello, William J., assignor.)
Katzinger, Arthur, assignor to Edward Katzinger Company, Chicago, Ill. Peeling mechanism. 1,483,637; Feb. 12.
Katzinger, Edward, Company. (See Katzinger, Arthur, assignor.)
Kaufman, Tobias J., assignor to Teck Manufacturing Company, Chicago, Ill. Lavatory fitting. 1,483,850; Feb. 12.
Keirstead, Charles S., Andover, Mass. Suspensory bandage. 1,483,351; Feb. 12.
Keller, William H., assignor to W. H. Keller, Inc., Grand Haven, Mich. Pressure-fluid-actuated tool. 1,483,180; Feb. 12.
Keller, William H., Inc. (See Keller, William H., assignor.)
Keller, William H., Inc. (See Schinkes, Albert, assignor.)
Kellogg Manufacturing Co. (See Hazard, George E., assignor.)
Kempel, John A., Coventry Township, Summit County Ohio. Machine for removing thin rubber articles from forms. 1,483,664; Feb. 12.
Kemper-Thomas Company, The. (See Pelstring, Henry G., assignor.)
Kenney, Edward F., Bethlehem, Pa. Iron and tube making. 1,483,451; Feb. 12.
Kenney, Edward F., Philadelphia, Pa. Making iron and tubes. 1,483,450; Feb. 12.
Kenney, Mary A. (See Gibbons, Richard, assignor.)
Kershaw, Adelaide H., et al., administrators. (See Halkett, William G.)
Kerwin, Thomas J., Chicago, Ill., assignor to Edmunds & Jones Corporation. Electric pull switch. 1,483,584; Feb. 12.
Keyes, James A., New York, N. Y. Labeling machine. 1,483,181; Feb. 12.
Keyes, John J., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Molding. 1,483,452; Feb. 12.
Keystone Mfg. Co. (See Swartz, Edward M., assignor.)
Kiefer, Edward, Falls City, Nebr. Automatic cylinder ring. 1,483,352; Feb. 12.
Kiel, Chris, assignor to Deere & Company, Moline, Ill. Tractor hitch. 1,483,514; Feb. 12.
Kiewicz, John, assignor to The Reece Button Hole Machine Company, Boston, Mass. Thread trimmer for sewing machines. 1,483,307; Feb. 12.
Kiewicz, John, assignor to The Reece Button Hole Machine Company, Boston, Mass. Thread trimmer for sewing machines. 1,483,308; Feb. 12.
Kil-Nock Company. (See Rose, John F., assignor.)
Kincheloe, John, Fresno, Calif. Valve. 1,483,585; Feb. 12.
Kirby, Harry C., Macon, Ga. Ignition device for internal-combustion engines. 1,483,730; Feb. 12.
Kirk, Volney E., Los Angeles, Calif. Cuff protector. 1,483,731; Feb. 12.
Kissel Motor Car Company. (See Palmer, H. D., and Brhel, assignors.)
Klasing, Augustus F., Chicago, Ill., assignor to The Klasing Car Brake Company. Brake-operating mechanism. 1,483,665; Feb. 12.
Klasing Car Brake Company, The. (See Klasing, Augustus F., assignor.)
Klein, John F., Wilmington, N. C. Clearer or shield for tractors. 1,483,732; Feb. 12.
Kleinschmidt, Edward E., Brooklyn, N. Y., assignor to Kleinschmidt Electric Company, Inc. Tape recorder. 1,483,353; Feb. 12.
Kleinschmidt Electric Company. (See Kleinschmidt, Edward E., assignor.)
Kline, Edward S., Rochester, N. Y. Locking mechanism for automobile hoods. 1,483,097; Feb. 12.
Kluttz, George S. (See Gibson, William H. and A. M., and Kluttz.)
Knoderer, Homer G., Englewood, N. J., assignor to General Electric Company. Outlet box. 1,483,453; Feb. 12.
Kohlhass, Otto H., Calumet, Mich. Planting and marking machine. 1,483,815; Feb. 12.
Kohlmeyer, August H., Detroit, Mich. Combined water heater and steam generator. 1,483,227; Feb. 12.
Kohnstamm, H., & Co. (See Phair, Robert A., assignor.)
Kopper, Frederick, jr., Washington, D. C. Gas-engine muffler. 1,483,354; Feb. 12.
Kovarik, Edward C., New York, N. Y. Umbrella rack. 1,483,666; Feb. 12.
Kozelek, Louis, Schenectady, N. Y. Treating wood for the manufacture of musical instruments. 1,483,733; Feb. 12.
Kraft, Henry P., Ridgewood, N. J. Pipe coupling. 1,483,454; Feb. 12.
Kraft, Henry P., Ridgewood, N. J. Pipe coupling. 1,483,455; Feb. 12.
Kramer, William J., assignor of one-half to I. W. Hendricks, St. Louis, Mo. Traffic signal for automobiles and the like. 1,483,734; Feb. 12.
Kraska, Paul C., Amery, Wis. Pea separator and grader. 1,483,092; Feb. 12.
Kraus, Jules H. (See Schwartz, Chester L., assignor.)
Kridler, Bernie C., and J. C. Boyle, Flint, Mich. Constructing roofs. 1,483,735; Feb. 12.
Kritikson Bros., Inc. (See Peters, Stanley E., assignor.)
Krohn, John, Chicago, Ill. Differential gearing. 1,483,606; Feb. 12.
Kroon, Jacobus P. H., Amsterdam, Netherlands. Cracking device. 1,483,456; Feb. 14.
Kruesheld, Henry, Mansfield, Ohio, assignor to Westinghouse Electric Products Company. Stand for traveler's iron. 1,483,457; Feb. 12.

Krumpeck, Alexander J. (See Ramig, A. R., Shafer, and Krumpeck.)
Krummer, Arthur H., assignor to The Ross Gear and Tool Company, La Fayette, Ind. Steering gear. 1,483,458; Feb. 12.
Kupsche, Alexander B., Chicago, Ill. Lamp. 1,483,355; Feb. 12.
Kylar, Marie, Camden, N. J. Washtub. 1,483,816; Feb. 12.
Labbee, Joseph, jr. (See Heath, Laurence R., assignor.)
Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Six-wheel railway-car truck. 1,483,638; Feb. 12.
Landreth, Clarence P., and W. H. MacVaugh, Philadelphia, Pa.; said MacVaugh assignor to Salt Dandreth. Sewage-screening apparatus. 1,483,667; Feb. 12.
Landry, Adolphus H., Townsend, Mass. Gear wheel. 1,483,817; Feb. 12.
Lane, Horatio C., Whitehall, N. Y. Formation and storage of ice. 1,483,459; Feb. 12.
Langdale, Rupert H., Cincinnati, Ohio. Resilient wheel. 1,483,191; Feb. 12.
Lange, Stanley A. (See Choinski, Bruno B., assignor.)
Langgons, George, Brooklyn, N. Y. Elastic belt. 1,483,192; Feb. 12.
Larsen, Mads M., assignor of one-fourth to M. A. Bausch, Colton, Calif. Collapsible camp table. 1,483,736; Feb. 12.
Larson, Peter E., Orfordville, Wis. Snow remover. 1,483,586; Feb. 12.
La Rue, John B., and S. W. Scofield, Cleveland, Ohio; said La Rue assignor to said Scofield. Separating the constituents of mineral silicates. 1,483,627; Feb. 12.
Lauby, Charles W., Vincennes, Ind. Mine-car coupler. 1,483,628; Feb. 12.
Le Compte, Onesime H., St. Louis, Mo., assignor to Le Compte Standard Automatic Drawbar and Connector Company, Denver, Colo. Combined automatic car and train-line coupling. 1,483,356; Feb. 12.
Le Compte Standard Automatic Drawbar and Connector Company. (See Le Compte, Onesime H., assignor.)
Leep, R. V., et al. (See Dyer, Elbert, assignor.)
Leers, Frank A., Bogota, N. J. Vault light. 1,483,182; Feb. 12.
Leguilion, Charles W., Akron, Ohio. Loop. 1,483,357; Feb. 12.
Leibowitz, Meyer F. (See Ruttenberg, S., and Leibowitz.)
Leszkowicz, Adolf, Binghamton, N. Y. Shoe-heating device. 1,483,791; Feb. 12.
Levy, Arthur B. (See Singer, J. B., and Levy.)
Lewis, Lloyd V., Edgewood Borough, and F. H. Nicholson, Wilkinsburg, assignors to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,483,358; Feb. 12.
Library Bureau. (See Olmstrand, Enoch, assignor.)
Liedtke, Horst, Berlin-Schoneberg, Germany. Folding stretcher. 1,483,607; Feb. 12.
Lilienfeld, Leon, Vienna, Austria. Making highly etherified ethers of cellulosic bodies. 1,483,738; Feb. 12.
Linaker, Frederick W., and T. M. Brubaker, Dubois, Pa. Combined tube system and cleaner. 1,483,460; Feb. 12.
Lincoln, Ellis S., assignor to The Ohio Brass Company, Mansfield, Ohio. Current-collector support. 1,483,608; Feb. 12.
Lincoln, Ellis S., assignor to The Ohio Brass Company, Mansfield, Ohio. Current-collector support. 1,483,609; Feb. 12.
Lind, Frederick A., Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company. Lightning arrester. 1,483,548; Feb. 12.
Lindberg, Alfred E., Worcester, Mass. Sliding scooter. 1,483,183; Feb. 12.
Lippen, Jonathan K., assignor to Postum Cereal Company, Incorporated, Battle Creek, Mich. Cereal flakes and making same. 1,483,515; Feb. 12.
Little, Lucius F., Owensboro, Ky. Method of and apparatus for treating organic substances. 1,483,668; Feb. 12.
Littleton, Jesse T., jr., assignor to Corning Glass Works, Corning, N. Y. Heat treatment of glass articles. 1,483,461; Feb. 12.
Lloyd, William E., Lorain, Ohio. Bushing extractor. 1,483,818; Feb. 12.
Locke, Sylvanus D., Bridgeport, Conn. Combined ash tray, receiver, and stand. Des. 63,949; Feb. 12.
Loecher, Fred E., et al. (See Fisher, Charles, assignor.)
Loesser, Ernest W., Belleville, N. J. Compact holder for vanity cases. 1,483,639; Feb. 12.
Lonaberger, Robert F., and C. F. Sands, Reading, Pa., assignors to L. A. Unger, trustee. Liquid-fuel vaporizer for internal-combustion engines. 1,483,819; Feb. 12.
Lough, Hector W., Hartford, Conn., assignor to The Hartford Rubber Works Company. Portable mold-closing press. 1,483,359; Feb. 12.
Lundgren, Harry G., assignor to Automatic Electrical Machine Co., Inc., Oakland, Calif. Automatic time clock. 1,483,820; Feb. 12.
Lundstrom, Carl G., Cleveland, Ohio. Tire tread. Des. 63,950; Feb. 12.
Lytle, Walter S., Philadelphia, Pa. Telegraphic instrument. 1,483,469; Feb. 12.
MacDowell, Andrew S., Rochester, N. Y. Copyholder. 1,483,101; Feb. 12.
Maclachlan, Angus, Perth Amboy, N. J., assignor to Maclachlan Reduction Process Co., Inc., New York, N. Y. Deodorising apparatus. 1,483,229; Feb. 12.
Maclachlan Reduction Process Co. (See Maclachlan, Angus, assignor.)
MacMillan, John R., La Salle, assignor to Electro Bleaching Gas Company, New York, N. Y. Making bleaching liquor and apparatus therefor. 1,483,463; Feb. 12.
MacVaugh, Walter H. (See Landreth, C. P., and MacVaugh.)
Magnuson, Gunnar F. (See Reinman, E. L., and Magnuson.)
Magrady, Joseph J., Chicago, Ill. Nose iron for scales. 1,483,464; Feb. 12.
Maimin, Hyman, New York, N. Y. Motor-driving unit for sewing machines. 1,483,103; Feb. 12.
Mains, Gerald H., Detroit, Mich., dedicated, by mesne assignments, to the citizens of the United States. Varnish and paint removing composition and using the same. 1,483,587; Feb. 12.
Malleable Iron Fittings Company. (See Brandriff, Daniel, assignor.)
Malloy, James T. (See Williams, R. E., and Malloy.)
Mann, Leslie L., Cleveland, Ohio. Collar button. 1,483,363; Feb. 12.
Manning, George E., Philadelphia, Pa. Glare shield. 1,483,640; Feb. 12.
Manson, Arthur D., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Burnishing tool. 1,483,098; Feb. 12.
Maples, Hubbard E., Jackson, Tenn. Spring removing and applying tool. 1,483,821; Feb. 12.
Marchant, Rodney H., Oakland, Calif. Toy animal. Des. 63,951; Feb. 12.
Marinsky, Davis, New York, N. Y. Fastener tape. 1,483,230; Feb. 12.
Marker, Andrew, Boise, Idaho. Hide stretcher. 1,483,822; Feb. 12.
Marks, Paul J., Rochester, N. Y. Photographic shutter. 1,483,465; Feb. 12.
Marotta, Gabriel, Seattle, Wash. Statuette. Des. 63,952; Feb. 12.
Marquette Tool & Manufacturing Company. (See Strand, David, assignor.)
Marrs, Queene E., Killeen, Tex. Combined thimble and thread cutter. 1,483,823; Feb. 12.
Martens, William, Ackley, Iowa. Porous filter. 1,483,364; Feb. 12.
Martin, Charles H., assignor of one-half to A. Frediani, Los Angeles, Calif. Ventilated printing-press roller. 1,483,671; Feb. 12.
Martin, Frank C., Plattsmouth, Nebr. Fluid transmission. 1,483,824; Feb. 12.
Martin, Frederic, Columbus, Ohio. Corn-husking tool. 1,483,193; Feb. 12.
Martin, Roy V., Oakland, Calif. Transmission for motor vehicles. 1,483,099; Feb. 12.
Martinez, Albert A., New Orleans, La. Sheet piling. 1,483,825; Feb. 12.
Marx, Karl, Dessau, assignor to the Firm Tetralin Gesellschaft mit beschränkter Haftung, Berlin, Germany. Turpentine substitute. 1,483,739; Feb. 12.
Massey-Harris Company. (See Thompson, Herbert, assignor.)
Master Tire & Rubber Company, The. (See Black, Joseph J., assignor.)
Mathison, Carl J., Belmont, Mont. Tool for compressing piston rings. 1,483,826; Feb. 12.
Matthes, Samuel S., assignor to The Ohio Brass Company, Mansfield, Ohio. Current-collector support. 1,483,610; Feb. 12.
Matthes, William F., Faribault, Minn. Storm and screen sash hanger. 1,483,367; Feb. 12.
Maurer, Conrad B. and H. P., Philadelphia, Pa. Scenery-forming paper and preparing same. 1,483,466; Feb. 12.
Maurer, Howard P. (See Maurer, Conrad B. and H. P.)
Maynard, Albert A., assignor to Stewart Motor Corporation, Buffalo, N. Y. Power take-off-controlling mechanism for automobiles. 1,483,231; Feb. 12.
Mazer, Jacob, Pittsburgh, Pa. Sound-absorbing method and material. 1,483,365; Feb. 12.
Mazer, Jacob, Philadelphia, Pa. Sound-absorbing method and material. 1,483,366; Feb. 12.
McArthur, Clarence M., Detroit, Mich. Spray device. 1,483,360; Feb. 12.
McBride, Jesse E., Highland Park, assignor to Palmer-Bee Company, Detroit, Mich. Conveyer. 1,483,100; Feb. 12.
McCargar, Joseph R., assignor to Stow & Davis Furniture Company, Grand Rapids, Mich. Desk. Des. 63,953; Feb. 12.
McCann, Michael, Glenmorris, assignor to Frederick Osann Company, New York, N. Y. Buttonhole and making the same. 1,483,184; Feb. 12.
McCann, Michael, Glenmore, N. Y., assignor to Frederick Osann Company. Power-transmitting mechanism. 1,483,462; Feb. 12.
McCann, Michael, Glenmorris, assignor to Frederick Osann Company, New York, N. Y. Pull-off mechanism for buttonhole-sewing machines. 1,483,185; Feb. 12.
McCarthy, James P., Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Impregnation of waste with lubricating oil. 1,483,362; Feb. 12.
McCarthy, James P., Chicago, Ill., assignor to The American Laundry Machinery Company, Norwood, Ohio. Reclaiming waste. 1,483,361; Feb. 12.

McCommins, James W., San Diego, Calif. Vending machine. 1,483,509; Feb. 12.
McConnell, George C., Massillon, Ohio, assignor to Fidelity Tire & Rubber Co. Tire tread. Des. 63,954; Feb. 12.
McCulloch, Charles A. (See Ripken, Hugo F., assignor.)
McCullough, James A., Fresno, Calif. Dust separator. 1,483,228; Feb. 12.
McCune, Harry M., Kenmore, Ohio. Nonskid device. 1,483,102; Feb. 12.
McDonald, James L. (See Ermilio, Dominick J., assignor.)
McGill Manufacturing Company. (See Despard, Victor R., assignor.)
McGill Manufacturing Company. (See Gordon, David D., assignor.)
McKee, Ralph J., and F. Stoneberg, assignors to Zim Manufacturing Co., Chicago, Ill. Gear drift and bushing therefor. 1,483,670; Feb. 12.
McIlwrath, David, Newcastle, Ind. Damper attachment for pianos. 1,483,104; Feb. 12.
McIntosh, John D., Vancouver, British Columbia, Canada. Wire-rope-connecting means. 1,483,516; Feb. 12.
McIntosh, William J. et al. (See Montgomery, James R., assignor.)
McNiel, Kenneth H. (See Morris, Albert W., assignor.)
McWilliams, Rowland. (See Katcher, M., and McWilliams.)
Meden, Elof H., Short Hills, N. J., assignor to American Gasaccumulator Company, Elizabeth, N. J. Cutting blowpipe. 1,483,467; Feb. 12.
Mehta, Vaikunth P., assignor to D. Rai, New York, N. Y. Manufacture of resins. 1,483,368; Feb. 12.
Meitner, Elemer. (See Sperry, E. A., and Meitner.)
Merck & Co. (See Engels, William H., assignor.)
Meyer, Albert P., assignor to Allen S. Davison Company, Pittsburgh, Pa. Basic refractory and making same. 1,483,468; Feb. 12.
Meyer, Albert P., assignor to Allen S. Davison Company, Pittsburgh, Pa. Basic refractory and making same. 1,483,469; Feb. 12.
Meyers, Anthony, and H. Simmons, New York, N. Y. Electric-light-stand [illegible] 1,483,5[illegible]; Feb. [illegible]
Michaelis, Peter J., Kievenville, Wis. Hayrack or body supporting cleat for wagons and sleighs. 1,483,589; Feb. 12.
Michelin, Jules H., New Brunswick, N. J. Automobile tire. Des. 63,955; Feb. 12.
Michetti, Giorgio, Rome, Italy. Cinematographic apparatus. 1,483,105; Feb. 12.
Michigan Steel Tube Products Co. (See Berg, Richard O., assignor.)
Mielke, Frank E., Shawano, Wis. Chart. 1,483,106; Feb. 12.
Mikkola, Aate. (See Toelcke, K. L., Mikkola, and Shapiro.)
Miller, Frank J., Wichita Falls, Tex., assignor, by mesne assignments, to L. E. Trout, Oklahoma City, Okla. Reciprocating pump. 1,483,369; Feb. 12.
Miller, Frank J., Wichita Falls, Tex., assignor, by mesne assignments, to L. E. Trout, Oklahoma City, Okla. Pump. 1,483,370; Feb. 12.
Miller, Jesse P., assignor of one-half to J. H. Thatcher, Houma, La. Hydraulic expander for well drills and the like. 1,483,611; Feb. 12.
Miller, Joseph B., assignor of one-half to E. Jacobson, Portland, Oreg. Hydraulic mineral separator. 1,483,371; Feb. 12.
Miller-Peacock, Walter, San Francisco, Calif. Ventilating device. 1,483,232; Feb. 12.
Miller Saw-Trimmer Company. (See Smith, Walter H., assignor.)
Miller, William E., Gormainia, W. Va. Steel crosstie. 1,483,827; Feb. 12.
Mills Novelty Company. (See Sandell, Henry K., assignor.)
Millspaugh, William H., Sandusky, Ohio. Reenforced sand core and making same. 1,483,372; Feb. 12.
Miner, William H. (See Curtis, G. V., and Miner.)
Miner, William H. (See O'Connor, John F., assignor.)
Miner, William H. (See Williams, Keith, assignor.)
Minevitch, Joseph R., assignor to Dicks, David & Heller Co., New York, N. Y. Preparing tripbenylmethane dyes. 1,483,233; Feb. 12.
Minge, Einar, Chicago, Ill. Combination inlet valve and priming cup. 1,483,186; Feb. 12.
Mitsubishi Kogyo Kabushiki Kaisha. (See Anjow, Koji, assignor.)
Moettell, Arnold, Oberwinterthur, Switzerland. Container for the dry cooling of coke. 1,483,187; Feb. 12.
Moffett, Henry C., Hanford, assignor of one-third to J. L. Moffett, Visalia, and one-third to H. V. Brenton, Hanford, Calif. Automobile camp tent. 1,483,741; Feb. 12.
Moffett, J. L., et al. (See Moffett, Henry C., assignor.)
Moltrum, Nicholas A., Chicago Heights, Ill. Attachment for hair clippers. 1,483,310; Feb. 12.
Monroe, Will K., assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio. Retriever for ropes and like articles. 1,483,828; Feb. 12.
Montabone, Adolph J. F., Montreal, Quebec, Canada, assignor to General Electric Company. Equalising speeds of motor drives. 1,483,470; Feb. 12.
Montgomery, Claude K., and C. R. Tromley, Detroit, Mich. Disk wheel. 1,483,641; Feb. 12.
Montgomery, James R., assignor of one-fourth to T. F. Golden and one-fourth to W. J. McIntosh, Butte, Mont. Disk wheel. 1,483,740; Feb. 12.
Moore, Arthur T., Batavia, N. Y. Box-making machine. 1,483,829; Feb. 12.
Moore, Norman Y., Delanco, N. J. Oil filter. 1,483,830; Feb. 12.
Moore, Wilson M., Ontario, Calif. Dishwashing cabinet. 1,483,234; Feb. 12.
Morang, Joseph, Chicago, Ill. Game. 1,483,590; Feb. 12.
Morgan, Edmund C., deceased, Chicago, Ill.; O. E. Morgan, executrix. Mining apparatus. 1,483,649; Feb. 12.
Morgan, Olive E., executrix. (See Morgan, Edmund C.)
Morris, Albert W., Springfield, Mass., assignor to K. W. McNeil, Bridgeport, Conn. Casting machine. 1,483,550; Feb. 12.
Morse Instrument Company. (See Morse, Robert V., assignor.)
Morse, Robert V., assignor to Morse Instrument Company, Inc., Ithaca, N. Y. System for transmitting settings. 1,483,235; Feb. 12.
Morse, William J., Attleboro, Mass. Belt buckle. 1,483,236; Feb. 12.
Morton, Harry D., New York, N. Y. Apparatus for welding and operating the same. 1,483,612; Feb. 12.
Mosher, Clifford C., Lima, Ohio. Adjustable blade for mixing machines. 1,483,551; Feb. 12.
Moss, Albert C., New York, N. Y. Floating toy. 1,483,672; Feb. 12.
Moulton, Albion, assignor to The Allen Iron & Steel Company, Philadelphia, Pa. Line tapper. 1,483,237; Feb. 12.
Murphy, William B., Weehawken, N. J., assignor to Defiance Button Machine Co., New York, N. Y. Separable fastener. 1,483,188; Feb. 12.
Murray, Lee, assignor to Durkee-Atwood Company, Minneapolis, Minn. Fan belt. 1,483,591; Feb. 12.
Mutscheller, Arthur, New York, N. Y., assignor to Wappler Electric Company, Inc. Safety device for vacuum tubes. 1,483,642; Feb. 12.
Naamlooze Vennootschap Industrieele Maatschappij, voorheen Noury & Van Der Lande. (See Gelissen, Henri C. J. H., assignor.)
Napoli, Frank. (See Centrone, Rocco, assignor.)
Narrow Fabric Company, The. (See Walbrecker, Ernest, assignor.)
Nash, Archie L. and W. P., East Spencer, N. C. Oil-level tester for crank cases. 1,483,517; Feb. 12.
Nash, William P. (See Nash, Archie L. and W. P.)
National Brake & Electric Company. (See Aikman, Burton S., assignor.)
National Bread Wrapping Machine Company. (Sevigne, H. A., and Arnold, assignors.)
National Manufacturing Company, The. (See Schoenwetter, Reinhold D., assignor.)
National Tire & Rubber Company. (See Wheeler, Charles H., assignor.)
Naugle, Jacob R., Carlisle, Pa. Tool for operating upon insoles used in boots and shoes. 1,483,471; Feb. 12.
Neal, Burton, St. Louis, and G. H. Hebebrand, Kinloch, Mo. Agitator for use in bleaching flour. 1,483,107; Feb. 12.
Ness, Magnus E., Stevinson, Calif. Tractor attachment. 1,483,238; Feb. 12.
Nicholson, Frank H. (See Lewis, L. V., and Nicholson.)
Nicol, John S., Putney, London, assignor to William Douglas & Sons, Limited, London, England. Method and means for the treatment of fats and oils. 1,483,742; Feb. 12.
Nieberding, Frank A., assignor to The Guardian Gas Appliance Company, Cleveland, Ohio. Heater. Des. 63,956; Feb. 12.
Nieberding, Frank A., assignor to The Guardian Gas Appliance Company, Cleveland, Ohio. Heater. Des. 63,957; Feb. 12.
Nieberding, Frank A., assignor to The Guardian Gas Appliance Company, Cleveland, Ohio. Heater. Des. 63,958; Feb. 12.
Nitrogen Corporation, The. (See Clancy, John C., assignor.)
Norman, William W., Hiram, Ark. Gate and the like. 1,483,239; Feb. 12.
Norton, Charles H., assignor to Norton Company, Worcester, Mass. Grinding machine for forming rolls. 1,483,859; Feb. 12.
Norton Company. (See Norton, Charles H., assignor.)
Norton Company. (See Stean, Jules H., assignor.)
Norton, Frederick H., Hampton, Va. Method and means for determining light intensities. 1,483,472; Feb. 12.
Norton, Frederick H., Hampton, Va. Method and apparatus for determining photographic exposures. 1,483,473; Feb. 12.
O'Brien, John J., Leesburg, Fla. Tool for removing tires. 1,483,831; Feb. 12.
O'Brien, Michael G., Bristol, Conn. Repair plug. 1,483,311; Feb. 12.
O'Brien, William E. (See Becktel, O. H., and O'Brien.)
O'Connell, Edward, Philadelphia, Pa. Spark plug. 1,483,673; Feb. 12.
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Railway draft rigging. 1,483,108; Feb. 12.
Oesterling, Max, Cleveland, Ohio. Sash lock. 1,483,312; Feb. 12.

Ohio Brass Company, The. (See Lincoln, Ellis S., assignor.)
Ohio Brass Company, The. (See Matthes, Samuel S., assignor.)
Ohnstrand, Enoch, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass. Bolt and socket construction. 1,483,474; Feb. 12.
Oil Conservation Engineering Company. (See Brooks, Stephen H., assignor.)
O'Kneel, George W. (See Fisher, Emanuel, assignor.)
Olson, Charles J., Muskegon, Mich., assignor to The Olson Pneumatic Saw and Valve Company, Indianapolis, Ind. Pressure-regulating valve. 1,483,240; Feb. 12.
Olson Pneumatic Saw and Valve Company, The. (See Olson, Charles J., assignor.)
Opderbeck, Emil, Gelsenkirchen, Germany. Method and apparatus for granulating liquid slag. 1,483,241; Feb. 12.
Osann, Frederick, Company. (See McCann, Michael, assignor.)
Ostdiek, Laurence J., Ottumwa, Iowa. Desk. 1,483,832; Feb. 12.
Osterhoudt, Rodney B., Kingston, N. Y. Golf-club bag. 1,483,475; Feb. 12.
Oversewing Machine Company. (See Reavis, W. E., and Frey, assignors.)
Owen, Newton C., assignor to Owen-Pennsylvania Corporation, Wilkes-Barre, Pa. Method and apparatus for cleaning railway ballast. 1,483,674; Feb. 12.
Owen, Ole A., Detroit, Mich. Motion-picture film. 1,483,109; Feb. 12.
Owen-Pennsylvania Corporation. (See Owen, Newton C., assignor.)
Owensboro Ditcher & Grader Company. (See Steele, William A., assignor.)
Page, Frank H., Waverly, Iowa. Soil pulverizer. 1,483,743; Feb. 12.
Page, Samuel H., Stratford, Conn., assignor to The American Fabrics Company. Lace. Des. 63,959; Feb. 12.
Page, Samuel H., Stratford, Conn., assignor to The American Fabrics Company. Lace. Des. 63,960; Feb. 12.
Palmer-Bee Company. (See McBride, Jesse M., assignor).
Palmer, Herman D., and J. W. Brhel, assignors to The Kissel Motor Car Company, Hartford, Wis. Apparatus for measuring materials in concrete construction. 1,483,643; Feb. 12.
Parker, Fred J., assignor of two-fifths to T. F. Acheson, Yorkton, Saskatchewan, Canada. Toothbrush. 1,483,476; Feb. 12.
Parkersburg Rig & Reel Company, The. (See Bloss, R. R., and Schwemlein, assignors.)
Patheal, Herschel P., Greenville, Ill. Extension-wheel-rim connecter. 1,483,477; Feb. 12.
Payne, Matt, London, England. Means for coupling vehicles. 1,483,613; Feb. 12.
Peacock, Henry L., Dallas, Tex. Earring. Des. 63,961; Feb. 12.
Pearce, Jesse C., Sullivan, assignor of one-half to H. A. Frederick, Kirksville, Ill. Level. 1,483,242; Feb. 12.
Pearce, Oscar, and I. Bales, Houston, Tex. Pipe wrench. 1,483,110; Feb. 12.
Pearson, Carl F., Chicago, Ill. Pump. 1,483,189; Feb. 12.
Peck, William W., Muncie, Ind. Speed change and reverse gearing. 1,483,373; Feb. 12.
Pelstring, Henry G., Covington, Ky., assignor, by mesne assignments, to The Kemper-Thomas Company, Norwood, Ohio. Match-box holder. 1,483,592; Feb. 12.
Penberthy Injector Company. (See Yoder, Howard D., assignor.)
Penwell, Lewis, Chicago, Ill., assignor, by mesne assignments, to Refrigerator Car Equipment Company. Refrigerating system. 1,483,593; Feb. 12.
Pepper, Frederick V., Los Angeles, Calif. Tire valve. 1,483,374; Feb. 12.
Perin, Charles P. (See Eustis, Frederic A., assignor.)
Perkins, Louis J., Lewiston, Idaho. Wheel. 1,483,478; Feb. 12.
Permutit Company, The. (See Tiger, Howard L., assignor.)
Perry, Charles T., Staten Island, N. Y., assignor to General Electric Company. Trolley-sleet cutter. 1,483,518; Feb. 12.
Perry, Eugene R., Everett, Mass., assignor to The William Bayley Co., Springfield, Ohio. Wall strip for window frames. 1,483,851; Feb. 12.
Peters, Frederick W., et al. (See Thiemer, William H., assignor.)
Peters, Guy M., trustee. (See Hough, Earl B., assignor.)
Peters, Stanley E., assignor, by mesne assignments, to Kritikson Bros. Inc., Chicago, Ill. Feed bar for fountain pens. 1,483,675; Feb. 12.
Petersen, Frederick C., Los Angeles, Calif. Fruit parer. 1,483,676; Feb. 12.
Petersen, Henry C., Ste. Genevieve, Mo. Evaporating apparatus. 1,483,194; Feb. 12.
Peterson, Henning E., Duluth, Minn. Perforator for printing presses. 1,483,677; Feb. 12.
Pfeiffer, Charles G., assignor to Specialty Engineering Company, Philadelphia, Pa. Grading machine. 1,483,594; Feb. 12.
Phair, Robert A., Allendale, N. J., assignor, by mesne assignments, to H. Kohnstamm & Co., Inc. Souring composition and method. 1,483,519; Feb. 12.
Phillips, Theodore, Washington, D. C. Overwinding preventer for spring motors. 1,483,744; Feb. 12.
Pickard, Greenleaf W., Newton Center, assignor to Wireless Specialty Apparatus Company, Boston, Mass. Protective means for condenser installations. 1,483,552; Feb. 12.
Pierce, Joseph R. (See Barth, C. J., and Pierce.)
Pinkerton, Edward E., assignor of one-half to J. R. H. Potts, Chicago, Ill. Display box. 1,483,195; Feb. 12.
Pittsburgh Lamp, Brass & Glass Company. (See Yokel, Frank, assignor.)
Platschick, Benvenuto, Paris, France. Artificial tooth. 1,483,479; Feb. 12.
Pluck, Howard J. (See Pluck, Wilbur L. and H. J.)
Pluck, Wilbur L. and H. J., McGuffey, Ohio. Oil-testing device. 1,483,375; Feb. 12.
Poole, Arthur F., Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y. Calculating machine. 1,483,553; Feb. 12.
Poole, Arthur F., Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y. Calculating machine. 1,483,678; Feb. 12.
Poole, Arthur F., Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y. Combined typewriting and calculating machine. 1,483,679; Feb. 12.
Poritz, Frederick M., assignor to Star Chandelier Company, Inc., New York, N. Y. Electric canopy. Des. 63,962; Feb. 12.
Poritz, Frederick M., assignor to Star Chandelier Com- Electric-socket cover. Des. 63,963; Feb. 12.
Postum Cereal Company. (See Lippen, Jonathan K., assignor.)
Potter & Buffington Company. (See Weed, Edward L., assignor.)
Potter, Charles W., Rising Sun, Ind. Sanitary spoon and ladle holder. 1,483,833; Feb. 12.
Potts, Joshua R. H. (See Pinkerton, Edward E., assignor.)
Price, Albert M. (See Gronberg, Clarence O., assignor.)
Price, Edgar F., Port Chester, N. Y. Manger for dairy barns. 1,483,376; Feb. 12.
Price Engine Corporation. (See Price, William T., assignor.)
Price, Helen C., executrix. (See Price, William T.)
Price, William T., deceased, by H. C. Price, executrix, Easton, Pa., assignor to Price Engine Corporation, New York, N. Y. Filter. 1,483,111; Feb. 12.
Prince, William H., Minneapolis, Minn. Sanitary wrapper for ice-cream containers. 1,483,196; Feb. 12.
Process Engineers Incorporated. (See De Cew, Judson A., assignor.)
Propson, Carl F., assignor to American Optical Company, Southbridge, Mass. Magnifier. 1,483,745; Feb. 12.
Providence Stock Company. (See Harrison, George D., assignor.)
Purvis, William R. (See Dawson, A. T., Buckham, and Purvis.)
Putterman, Philip, New York, N. Y. Fruit bowl or similar article. Des. 63,964; Feb. 12.
Quigley, John T., assignor to Costmeter Company, Boston, Mass. File. 1,483,834; Feb. 12.
Quigley, Robert, and J. Cunningham, Portage, Pa. Automatic mine-shaft gate. 1,483,243; Feb. 12.
Ral, Dhanpat. (See Mehta, Vaikunth P., assignor.)
Ramage, Alexander S., assignor to Bostaph Engineering Corporation, Detroit, Mich. Preparing chemical products from olefines and olefine-containing mixtures. 1,483,835; Feb. 12.
Ragsdale, Darryl W. (See Ragsdale, Jesse M. and D. W.)
Ragsdale, Jesse M. and D. W., Holden, Mo. Hog chute. 1,483,377; Feb. 12.
Rainsford, Francis F., assignor to Stephen Sanford & Sons, Inc., Amsterdam, N. Y. Rug. Des. 63,965; Feb. 12.
Ramig, Adolph R., A. G. Shafer, and A. J. Krumpeck, Chicago, Ill.; said Krumpeck assignor to said Ramig and said Shafer. Radiator cap for automobiles. 1,483,520; Feb. 12.
Rasmussen, Laurits T., Council Bluffs, Iowa, assignor of one-half to N. K. Skriver, Omaha, Nebr. Machine for treating tobacco stems. 1,483,244; Feb. 12.
Reach, William F., assignor to A. G. Spalding & Bros., Chicopee, Mass. Golf club. 1,483,614; Feb. 12.
Read, Frederick O. (See Barker, W. G., and Read.)
Read, Linus G., Bridgeport, Conn. Golf-club-gripping device. 1,483,595; Feb. 12.
Reardon, Robert E., Washington, D. C. Shooting-practice dummy gun. 1,483,378; Feb. 12.
Reavis, Winfred E., Los Angeles, and E. E. Frey, Long Beach, Calif., assignors to Oversewing Machine Company. Book-sewing machine. 1,483,521; Feb. 12.
Reece Button Hole Machine Company, The. (See Klewicz, John, assignor.)
Reed, William, Engineering Company. (See Reed, William M., assignor.)
Reed, William M., assignor to William Reed Engineering Company, Louisville, Ky. Air filtering and cleaning device. 1,483,379; Feb. 12.
Reede, Sidney A., New Brighton, N. Y. Musical notation. 1,483,380; Feb. 12.
Refrigerator Car Equipment Company. (See Penwell, Lewis, assignor.)

Reid, James H., Pittsburgh, Pa., assignor to International Nitrogen Co., Cleveland, Ohio. Producing nitrogen-containing compounds. 1,483,197; Feb. 12.
Reid, Thomas A., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electric-furnace control system. 1,483,480; Feb. 12.
Remillard, Joseph O., assignor of twelve per cent to A. Gorman and fifty per cent to J. A. H. Cameron, trustee, Montreal, Quebec, Canada. Antitheft automobile license and owner's title. 1,483,836; Feb. 12.
Remington Accounting Machine Corporation. (See Hart, Frederick A., assignor.)
Remington Accounting Machine Corporation. (See Poole, Arthur F., assignor.)
Remington, Joseph P., assignor to Remington Manufacturing Company, Philadelphia, Pa. Fuel-supply system. 1,483,596; Feb. 12.
Remington Manufacturing Company. (See Remington, Joseph P., assignor.)
Remington Typewriter Company. (See Barr, John H., assignor.)
Remington Typewriter Company. (See Smith, Charles E., assignor.)
Republic Fireproofing Company. (See Katcher, M., and McWilliams, assignors.)
Revere Rubber Company. (See Gilson, Henry R., assignor.)
Rex Manufacturing Company. (See Hull, Matthew R., assignor.)
Reynolds, John J., Gifford, Ill. Shock absorber. 1,483,481; Feb. 12.
Reynolds, Joseph S., Santa Barbara, Calif. Single and double tandem disk harrow. 1,483,381; Feb. 12.
Rhed, Floyd M., Kansas City, Mo. Delivery wagon. 1,483,112; Feb. 12.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Filling-carrier support for automatic filling-replenishing looms. 1,483,482; Feb. 12.
Ricardo, Harry R., London, England. Power-transmitting mechanism. 1,483,245; Feb. 12.
Rich, Abe, Birmingham, Ala., assignor to Southern Coupon Company. Safety coupon book. 1,483,313; Feb. 12.
Richardson, George, Pittsfield, Mass. Snowplow. 1,483,382; Feb. 12.
Rieser, Gottlieb, et al. (See Fahrni, Otto, assignor.)
Right-of-Way Signal Company. (See Faull, Alfred E., assignor.)
Rimailho, Emile, assignor to the Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Distant-control installation for antiaircraft artillery. 1,483,483; Feb. 12.
Riuman, Erik L. Djursholm, and G. F. Magnuson, Skoghall, near Karlstad, assignors to Aktiebolaget Cellulosa, Stockholm, Sweden. Furnace for dry distillation of waste liquors and similar masses. 1,483,554; Feb. 12.
Ripken, Hugo F., assignor of one-half to C. A. McCulloch, Minneapolis, Minn. Cap for containers. 1,483,680; Feb. 12.
Ritchie, David A., Centralia, Ill. Signaling device for vehicles. 1,483,615; Feb. 12.
Robeson, William A. (See Smith, Ralph H., assignor.)
Robinson, Eddie, and A. F. Abreo, Kansas City, Mo. Waffle-baking iron. Des. 63,966; Feb. 12.
Robinson, Francis W. J., Germiston, Transvaal, South Africa. Shutter for the headlights of motor cars, motor cycles, and other vehicles. 1,483,616; Feb. 12.
Roderick, Charles. (See Whitworth, J., and Roderick.)
Rollins, Le Roy W., Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Heel-trimming machine. 1,483,113; Feb. 12.
Root, Francis H., Watertown, N. Y. Change-speed power-transmitting mechanism. 1,483,114; Feb. 12.
Root, Fred N., Kalamazoo, Mich. Spring-scraper construction. 1,483,246; Feb. 12.
Rork, Charles E., Douglas, Ariz., and A. Sandberg, New York, N. Y., assignors to W. A. Butchart, Denver, Colo. Impeller for flotation machines. 1,483,115; Feb. 12.
Rose, Henry, deceased, by W. H. Rose, administrator, Gainsborough, England. Wrapping machine. 1,483,681; Feb. 12.
Rose, Jacob, and F. E. Bowne, Montclair, N. J. Mousetrap. 1,483,644; Feb. 12.
Rose, John F., Davenport, Iowa, assignor to Kil-Nock Company. Automatic bearing adjuster. Re15,761; Feb. 12.
Rose, William H., administrator. (See Rose, Henry.)
Rosen, Hyman, New York, N. Y. Button-making machine. 1,483,522; Feb. 12.
Rosenbrook, August C., Madison, Wis. Inlet and exhaust manifold. 1,483,314; Feb. 12.
Rosenstein, Ludwig, San Francisco, Calif., assignor to Great Western Electro Chemical Company. Making zinc chloride. 1,483,852; Feb. 12.
Ross Gear and Tool Company, The. (See Kummer, Arthur H., assignor.)
Ross-Tacony Crucible Company. (See Brockbank, Clarence J., assignor.)
Rossebo, George H. (See Waltman, H. A., and Rossebo.)
Rostron, Joseph A., Boston, Mass. Electromagnetic apparatus. 1,483,682; Feb. 12.
Rothschild, Max, New York, N. Y., assignor to Susquehanna Silk Mills. Textile fabric. Des. 63,967; Feb. 12.
Rowe, William J., Portland, Me., assignor to Westbrook Garage & Machine Company. Snowplow. 1,483,247; Feb. 12.
Ruatti, Joseph B., Los Angeles, Calif. Safety-razor-blade-sharpening device. 1,483,746; Feb. 12.
Rubert, Leigh, Forestburg, S. Dak. Attachment for separators. 1,483,484; Feb. 12.
Rubin, Frederick W., Indianapolis, Ind. Car mover. 1,483,116; Feb. 12.
Ruediger, Ernest H., Bismarck, N. Dak. Bimetallic electric thermoregulator. 1,483,597; Feb. 12.
Ruggles-Cole Engineering Company (See Finch, F. E., and Glomb, assignors.)
Runne, Henry G., assignor to E. M. Trimble, Rochester, N. Y. Caster wheel. 1,483,598; Feb. 12.
Runyan, Geniah B., Kusa, Okla. Meat cutter. 1,483,617; Feb. 12.
Rush, James L., Memphis, Tenn. Poultry feeder. 1,483,683; Feb. 12.
Russell Manufacturing Company, The. (See Fisher, William C., assignor.)
Russell, Zachary E., assignor to C. W. Warren, Sauk Rapids, Minn. Ventilating shade hanger. 1,483,117; Feb. 12.
Ruttenberg, Samuel, and M. F. Leibowitz, New York, N. Y. Current regulator. 1,483,629; Feb. 12.
Rutter, John M., Guildford, England. Range or stove. 1,483,118; Feb. 12.
Ryder, John W., and W. O. Skipper, Enterprise, Ala. Stump puller. 1,483,684; Feb. 12.
Saal, Henry G., Chicago, Ill. Head telephone receiver. 1,483,315; Feb. 12.
Sammis, Walter, Brooklyn, N. Y. Folding match safe. 1,483,747; Feb. 12.
Sandberg, August. (See Bork, C. E., and Sandberg.)
Sandell, Henry K., assignor to Mills Novelty Company, Chicago, Ill. Radio receiving system. 1,483,383; Feb. 12.
Sands, Charles F. (See Lonaberger, R. F., and Sands.)
Sandstrom, Albert H., assignor of one-fourth to P. M. Hall-Lewis and one-fourth to E. W. Hansen, Portland, Oreg. Fireplace lining. 1,483,384; Feb. 12.
Sanford, Francis C., Bridgeport, Conn. Grinding machine. 1,483,748; Feb. 12.
Sanford, Stephen, & Sons, Inc. (See Farrell, John A., assignor.)
Sanford, Stephen, & Sons, Inc. (See Rainsford, Francis F., assignor.)
Sanitary Scale Company. (See Whitworth, J., and Roderick, assignors.)
Saunders, Kenneth H. (See Green, A. G., and Saunders.)
Scharpen, Bertha, Fessenden, N. Dak. Hat. Des. 63,973; Feb. 12.
Scheffler, Siegfried, Rostock, Mecklenburg, Germany. Blower. 1,483,523; Feb. 12.
Schenkein, Samuel M., Lyndhurst, N. J. Bottle stopper. 1,483,119; Feb. 12.
Schinkes, Albert, assignor to William H. Keller, Inc., Grand Haven, Mich. Rotary piston drill. 1,483,198; Feb. 12.
Schinez, Albert, assignor to William H. Keller, Inc., Grand Haven, Mich. Rotary piston drill. 1,483,199; Feb. 12.
Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. 1,483,599; Feb. 12.
Schneider, Peter F. and R. J., Detroit, Mich. Washing machine. 1,483,838; Feb. 12.
Schneider, Raymond J. (See Schneider, Peter F. and R. J.)
Schoenwetter, Reinhold D., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md. Coating machine. 1,483,120; Feb. 12.
Schoenwetter, Reinhold D., assignor to National Manufacturing Company, Baltimore, Md. Conveyer mechanism. 1,483,121; Feb. 12.
Schoyen, Oscar, Minneapolis, Minn. Detachable cross chain. 1,483,385; Feb. 12.
Schroeder, Anthony, assignor of one-half to J. M. Finney, Cleveland, Ohio. Bung for metal containers. 1,483,122; Feb. 12.
Schroeder, William, jr., Brooklyn, N. Y. Industrial truck. 1,483,600; Feb. 12.
Schultz, Henry F., Fairmont, Minn. Elevating means for hovers. 1,483,485; Feb. 12.
Schwartz, Chester L., Ithaca, assignor of one-half to J. H. Kraus, Detroit, Mich. Ironer. 1,483,386; Feb. 12.
Schwemlein, William. (See Bloss, R. R., and Schwemlein.)
Schwerd, Francis J., New York, N. Y. Buckle. 1,483,853; Feb. 12.
Scofield, Sherman W. (See Le Rue, J. B., and Scofield.)
Scott, Elizabeth, Westmoreland, Kans. Electric cooker. 1,483,837; Feb. 12.
Scott, Floyd L., assignor to Hughes Tool Company, Houston, Tex. Pipe wrench. 1,483,486; Feb. 12.
Scott, Floyd L., Houston, Tex. Roller earth-boring drill cutter. 1,483,487; Feb. 12.
Scott, James L., Melbourne, Victoria, Australia. Mechanism for automatically rewinding the music rolls of player pianos and the like. 1,483,685; Feb. 12.
Scott-Ullman Company. (See Ullman, Albert, assignor.)
Searfoss, Lyman, Ashley, Pa. Tire-chain lever hook. 1,483,686; Feb. 12.

Sears, Claud A., assignor to Chero-Cola Company, Columbus, Ga. Bottle. Des. 63,968; Feb. 12.
Sears, Claud A., assignor to Chero-Cola Company, Columbus, Ga. Bottle. Des. 63,969; Feb. 12.
Sears, Claud A., assignor to Chero-Cola Company, Columbus, Ga. Bottle. Des. 63,970; Feb. 12.
Sears, Claud A., assignor to Chero-Cola Company, Columbus, Ga. Bottle. Des. 63,971; Feb. 12.
Sears, Roebuck and Co. (See Hoffman, Rudolph, assignor.)
Sebring, Charles L., and E. Brooks, assignors to The Sebring Pottery Company, Sebring, Ohio. Covered dish. Des. 63,972; Feb. 12.
Sebring Pottery Company, The. (See Sebring, Charles L., assignor.)
Secor, Thornton, New York, N. Y. Sign. 1,483,618; Feb. 12.
Seear, Alfred H., Wembley Park, England. Rotating platform. 1,483,749; Feb. 12.
Seelinger, William J., Cleveland, Ohio. Automobile door-check. 1,483,316; Feb. 12.
Serin, Maurice C. H., Paris, France. Chain-saw machine. 1,483,387; Feb. 12.
Sessions, Charles R., San Francisco, Calif. Centrifugal pump. 1,483,645; Feb. 12.
Sevigne, Henri A., Winthrop, Mass., and F. K. Arnold, Nashua, N. H., assignors to National Bread Wrapping Machine Company, Boston, Mass. Web tension mechanism for wrapping machines. 1,483,555; Feb. 12.
Shafer, Adam C. (See Ramig, N. R., Shafer, and Krumpeck.)
Shapiro, Leon. (See Toelcke, K. L., Mikkola, and Shapiro.)
Shepard, John W., Tucson, Ariz. Packing. 1,483,750; Feb. 12.
Shepard, John W., Tuscon, Ariz. Wheel lock. 1,483,687; Feb. 12.
Shepherd, Bruce P., and M. Hotchkiss, Nashville, Tenn. Loose-leaf binder. 1,483,388; Feb. 12.
Sheppard, Monroe. (See Stacy, Albert, assignor.)
Shields, Lowell W., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt-buckle frame. Des. 63,974; Feb. 12.
Shimp, Frederick A., assignor to Skillkrafters Incorporated, Philadelphia, Pa. Ring. Des. 63,975; Feb. 12.
Siegert, Alexander G., Chicago, Ill. Loose-leaf binder. 1,483,123; Feb. 12.
Signode System, Inc. (See Guenther, Arthur G. G., assignor.)
Silvis, Richard S. (See Byers, Theodore, assignor.)
Simmons, Harry. (See Meyers, A., and Simmons.)
Simmons, Ralph C., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Heel-building machine. 1,483,124; Feb. 12.
Singer, Joseph B., and A. B. Levy, New York, N. Y. Folding display box. 1,483,125; Feb. 12.
Skillkrafters Incorporated. (See Shimp, Frederick A., assignor.)
Skipper, William O. (See Ryder, J. W., and Skipper.)
Skreberg, Hans, Big Bend Township, Chippewa County, Minn. Game. 1,483,488; Feb. 12.
Skriver, Niels P. (See Rasmussen, Laurits T., assignor.)
Skold, John F., Chicago, Ill. Flow meter. 1,483,200; Feb. 12.
Slater, Harvey, assignor to Charles F. Elmes Engineering Works, Chicago, Ill. Press. 1,483,126; Feb. 12.
Slauson, Stephen A., assignor of twenty-five one-hundredths to J. H. Brookman and twenty-five one-hundredths to L. O. Hatch, Cedar Rapids, Iowa. Connecting-rod bolt. 1,483,317; Feb. 12.
Sleeper, Otis H., assignor to P. B. Sleeper, Exeter, N. H. Swivel. 1,483,556; Feb. 12.
Sleeper, Perley B. (See Sleeper, Otis H., assignor.)
Slingland, Leonard, Paterson, N. J. Phonograph record. 1,483,751; Feb. 12.
Smith, Charles E., Brooklyn, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,483,201; Feb. 12.
Smith, Charles E., Brooklyn, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,483,524; Feb. 12.
Smith, George W., Jr., Riverton, N. J. Internal-combustion engine. 1,483,619; Feb. 12.
Smith, George Z., and E. B. Herbert, Follansbee, W. Va. Feeder for pulverized coal. 1,483,557; Feb. 12.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,483,202; Feb. 12.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,483,525; Feb. 12.
Smith, May R., Brooklyn, N. Y. Doll. Des. 63,976; Feb. 12.
Smith, Percival J. G., Port St. Mary, Isle of Man. Animal trap. 1,483,688; Feb. 12.
Smith, Ralph H., Wilton, assignor to W. A. Robeson, Saratoga Springs, N. Y. Composition for treating coal. 1,483,318; Feb. 12.
Smith, Walter H., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa. Feeding device. 1,483,526; Feb. 12.
Smith, William C., Cleveland, Ohio. Overdrive for motor vehicles. 1,483,389; Feb. 12.
Smith, William R., Buffalo, N. Y. Tubular tile. 1,483,689; Feb. 12.
Snow, Barton S., Batavia, assignor to T. W. Snow Construction Co., Chicago, Ill. Valve mechanism. 1,483,390; Feb. 12.
Snow, Barton S., Batavia, assignor to T. W. Snow Construction Co., Chicago, Ill. Building structure. 1,483,391; Feb. 12.
Snow, T. W., Construction Co. (See Snow, Barton S., assignor.)
Snyder, Elmer L., Sioux City, Iowa. Lamp shade. Des. 63,977; Feb. 12.
Societe Anonyme de Commentry, Fourchambault & Decazeville. (See Girin, Pierre, assignor.)
Societe Chimique des Usines du Rhone. (See Altwegg, Jean, assignor.)
Société des Etablissements Ed. Jaeger. (See Weymann, Charles T., assignor.)
Southern Coupon Company. (See Rich, Abe, assignor.)
Spalding, A. G., & Bros. (See Beach, William F., assignor.)
Spearing, John C., Cleveland, Ohio. Automatic pressure valve for flushing tanks. 1,483,392; Feb. 12.
Specialty Engineering Company. (See Pfeiffer, Charles G., assignor.)
Spedding, Thomas, Welling, England. Brake mechanism for pedal-driven bicycles, tricycles, and like machines. 1,483,690; Feb. 12.
Sperry, Elmer A., and E. Meitner, assignors to The Sperry Gyroscope Company, Brooklyn, N. Y. Signaling system for warships. 1,483,489; Feb. 12.
Sperry Gyroscope Company, The. (See Sperry, E. A., and Meitner, assignors.)
Spinola, Charles, Vancouver, British Columbia, Canada. Means for administering an anæsthetic. 1,483,620; Feb. 12.
Sponsel, Charles W., Wethersfield, assignor to The Sponsel Company, Hartford, Conn. Machine for stringing tobacco leaves. 1,483,558; Feb. 12.
Sponsel Company, The. (See Sponsel, Charles W., assignor.)
Stacy, Albert, assignor of one-half to M. Sheppard, Lothair, Ky. Car coupler. 1,483,691; Feb. 12.
Standard Auto Parts Company of America. (See Campbell, Colin J., assignor.)
Standard Manufacturing Company. (See Voorhees, Walter K., assignor.)
Star Chandelier Company. (See Porits, Frederick M., assignor.)
Starc, Mark, Chicago, Ill. Wrench. 1,483,527; Feb. 12.
Starbuck, Ernest, Peoria, Ill. Dancing figure. 1,483,127; Feb. 12.
Starbuck, Ernest, Peoria, Ill. Toy pistol. 1,483,128; Feb. 12.
Stean, Jules H., assignor to Norton Company, Worcester, Mass. Abrasive stone. 1,483,854; Feb. 12.
Steber, Bernard T., Utica, N. Y. Precision jig-boring machine. 1,483,393; Feb. 12.
Steele, William A., assignor to Owensboro Ditcher & Grader Company, Owensboro, Ky. Ditching, grading and levee-builder machine. 1,483,752; Feb. 12.
Stephenson, James E., Rochester, assignor to General Railway Signal Company, Gates, N. Y. Hasp fastener. 1,483,855; Feb. 12.
Stettner, Herman, Hampton, Nebr. Door latch. 1,483,490; Feb. 12.
Stevens, William N., assignor to Gisholt Machine Company, Madison, Wis. Automatic table indexing and locking mechanism. 1,483,203; Feb. 12.
Stewart, Arthur L. (See Gleason, J. E., and Stewart.)
Stewart Motor Corporation. (See Maynard, Albert A., assignor.)
Stewart, Richard W., Auburn, N. Y. Stop for talking machines. 1,483,753; Feb. 12.
Stewart-Warner Speedometer Corporation. (See Whittington, Frederik G., assignor.)
Stiefel, William H., Angola, Ind. Coal saver. 1,483,528; Feb. 12.
Stillwell, Frank, Brooklyn, N. Y. Window-glass mounting. 1,483,491; Feb. 12.
Stimpson, Edward S., assignor to Draper Corporation, Hopedale, Mass. Automatically-threading shuttle for looms. 1,483,492; Feb. 12.
Stockett, John W., Washington, D. C. Line-throwing gun. 1,483,129; Feb. 12.
Stoneberg, Fred. (See McKee, R. J., and Stoneberg.)
Stoneman, Hovey B., Council, Idaho. Safety fuse. 1,483,692; Feb. 12.
Stow & Davis Furniture Company. (See McCargar, Joseph R., assignor.)
Stowe & Woodward Company. (See Adams, Raleigh B., assignor.)
Strand, David, assignor, by mesne assignments, to Marquette Tool & Manufacturing Company, Chicago, Ill. Die cushion. 1,483,204; Feb. 12.
Struthers, William G., Seattle, Wash. Shock absorber. 1,483,693; Feb. 12.
Stukenborg, Frederick W. (See Stukenborg, Louis C., assignor.)
Stukenborg, Louis C., assignor to F. W. Stukenborg, Chicago, Ill. Cotton picker. 1,483,248; Feb. 12.
Stukey, Albert F., East Hollywood, Calif. Breathing corrector. 1,483,694; Feb. 12.
Sturges, Arthur H., Omaha, Nebr. Tubular fire escape. 1,483,249; Feb. 12.
Sturmann, Robert E., Minneapolis, Minn. Valve. 1,483,250; Feb. 12.

Sturt, Alfred T., Flint, Mich., assignor to Durant Motors Incorporated. Transmission-supporting structure. 1,483,695; Feb. 12.
Submarine Signal Company. (See Hayes, Harvey C., assignor.)
Sullivan, Charles E. (See Sweeney, Bernard M., assignor.)
Sullivan, Patrick A., Cincinnati, Ohio. Carbon remover. 1,483,559; Feb. 12.
Susquehanna Silk Mills. (See Bunting, James H., assignor.)
Susquehanna Silk Mills. (See Rothschild, Max, assignor.)
Svensson, Victor A., New York, N. Y., assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden. Machine for grinding rollers having an arc-shaped generatrix. 1,483,754; Feb. 12.
Swaim, Angus A., Sunset, Tex. Vehicle jack. 1,483,251; Feb. 12.
Swanson, Gus W., assignor to The United States Window Glass Company, Morgantown, W. Va. Capping-off device. 1,483,755; Feb. 12.
Swanson, Gus W., assignor to The United States Window Glass Company, Morgantown, W. Va. Capping-off device. 1,483,756; Feb. 12.
Swartz, Edward M., Roxbury, assignor to Keystone Mfg. Co., Boston, Mass. Motion-picture machine. 1,483,319; Feb. 12.
Sweeney, Bernard M., Live Oak, assignor of one-half to C. E. Sullivan, Yuba City, Calif. Fastener-inserting tool. 1,483,394; Feb. 12.
Swendeman, Joseph E., Philadelphia, Pa. Compensator for submarines. 1,483,696; Feb. 12.
Sykes, George W., Vancouver, Wash. Automobile curtain container. 1,483,697; Feb. 12.
Sylvan, Joseph, Chicago, Ill. Bearing support for rotary ventilators, chimney tops, and the like. 1,483,130; Feb. 12.
Syme, James M., assignor to Brown Bag Filling Machine Company, Fitchburg, Mass. Spark plug. 1,483,395; Feb. 12.
Symmes, Whitman, assignor to Thomas Day Company, San Francisco, Calif. Detachable electric fixture. 1,483,252; Feb. 12.
Tabler, John H., Washington, D. C. Towing or pulling device. 1,483,253; Feb. 12.
Tanner, Hermann, Samaden, Switzerland. Device for quickly finding harmonious color combinations. 1,483,529; Feb. 12.
Tauss, Ferdinand, Cleveland Heights, and C. D. Benson, jr., Cleveland, Ohio. Liquid-level gauge. 1,483,131; Feb. 12.
Taylor, Minnie L. (See Harris, L. W., and Taylor.)
Teck Manufacturing Company. (See Kaufman, Tobias J., assignor.)
Terrell, Oliver C., Portland, Oreg. Book and loose-leaf holder. 1,483,396; Feb. 12.
Terry, David, Sacramento, Calif. Unloading apparatus. 1,483,254; Feb. 12.
Tetl, Alexander, Torrington, Conn. Boot. 1,483,530; Feb. 12.
Tetralin Gesellschaft mit beschränkter Haftung. (See Marx, Karl, assignor.)
Thatcher, J. H. (See Miller, Jesse P., assignor.)
Thiemer, William H., Cleveland, Ohio, assignor to F. W. Peters, J. H. Wills, and himself. Universal joint. 1,483,560; Feb. 12.
Thomas, Charles B., assignor of one-half to W. Blanton, Alto, Tex. Automobile rim-securing means. 1,483,698; Feb. 12.
Thomas, Sidney, London, England. Means for adjusting brake shoes used in tramway vehicles and the like. 1,483,531; Feb. 12.
Thompson, George K., New York, N. Y., assignor to Hoyt Metal Company, St. Louis, Mo. Sheet-metal conductor for roofs. 1,483,320; Feb. 12.
Thompson, Herbert F., Houston, Tex. Hand-operated vehicle. 1,483,321; Feb. 12.
Thompson, Herbert, assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Driving gear. 1,483,699; Feb. 12.
Thorsell, Lars W., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn. Hopper mechanism. 1,483,601; Feb. 12.
Tiger, Howard L., assignor to The Permutit Company, New York, N. Y. Hydrometer. 1,483,493; Feb. 12.
Tipping, William V., Marshall, Mo. Monument. Des. 63,978; Feb. 12.
Tobey, Harry W., Pittsfield, Mass., assignor to General Electric Company. Workholding apparatus. 1,483,532; Feb. 12.
Todt, Hartwich D., San Francisco, Calif. Dehydrating apparatus. 1,483,757; Feb. 12.
Toelcke, Karl L., A. Mikkola, and L. Shapiro, Chicago, Ill. Bracelet. 1,483,132; Feb. 12.
Tonge, Frank, Moose Jaw, Saskatchewan, Canada. Lid holder. 1,483,255; Feb. 12.
Toomey, John F., New York, N. Y., and G. Crisson, Hackensack, N. J., assignors to American Telephone and Telegraph Company. Electrical testing system. 1,483,133; Feb. 12.
Torp, Karl, Christiania, Norway. Pulley block. 1,483,758; Feb. 12.
Torrington Company, The. (See Calder, John A., assignor.)
Torrington Company, The. (See Cook, Harmon J., assignor.)
Townsend, John S., assignor to Whiting Corporation, Harvey, Ill. Safely-controlled sand cutting and screening machine. 1,483,646; Feb. 12.
Townsend, William S., and F. E. Douglass, Rochester, Pa. Visible display attachment for measuring pumps. 1,483,494; Feb. 12.
Travis, Jerome, Toledo, Ohio. Gas burner. 1,483,322; Feb. 12.
Travis, John M., St. Louis, Mo. Beverage-dispensing apparatus. Des. 63,979; Feb. 12.
Travis, John M., St. Louis, Mo. Beverage-dispensing apparatus. Des. 63,980; Feb. 12.
Traver, Oliver C., Schenectady, N. Y., assignor to General Electric Company. Protection of transmission lines. 1,483,533; Feb. 12.
Trimble, E. Maurice. (See Runne, Henry G., assignor.)
Trimont Manufacturing Company. (See Whitfield, Arthur J., assignor.)
Tromley, Claud R. (See Montgomery, C. K., and Tromley.)
Trout, L. E. (See Miller, Frank J., assignor.)
Trumbull Electric Manufacturing Company, The. (See Getchell, Benjamin E., assignor.)
Turner, Walter E., Springfield, Ohio. Liquid weigher. 1,483,397; Feb. 12.
U. S. Ball Bearing Company. (See Diesk, J. jr., and Cooper, assignors.)
Ullman, Albert, assignor to The Scott-Ullman Company, Cleveland, Ohio. Lighting-fixture unit. Des. 63,981; Feb. 12.
Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)
Underwood Typewriter Company. (See Waldheim, John, assignor.)
Ungar, Gustave A., Pelham Manor, assignor to F. R. Blair & Co. Inc., New York, N. Y. Flexible coupling. 1,483,561; Feb. 12.
Unger, Lloyd A., trustee. (See Lonsberger, R. F., and Sands, assignors.)
Union Bag and Paper Corporation. (See Witham, George S., jr., assignor.)
Union Metal Products Company. (See Gilpin, Garth G., assignor.)
Union Switch & Signal Company, The. (See Lewis, L. V., and Nicholson, assignors.)
United Metal Box Co. (See Hammer, Samuel, assignor.)
United Shoe Machinery Corporation. (See Johnson, Albert E., assignor.)
United Shoe Machinery Corporation. (See Manson, Arthur D., assignor.)
United Shoe Machinery Corporation. (See Rollins, Le Roy W., assignor.)
United Shoe Machinery Corporation. (See Simmons, Ralph C., assignor.)
United States Window Glass Company, The. (See Swanson, Gus W., assignor.)
V. V. Fittings Company. (See Burns, James F., assignor.)
Valentine, Harry M. et al. (See Cunningham, Edward J., assignor.)
Vance, Walter N., Chicago Heights, assignor to Durand Steel Locker Company, Chicago, Ill. Locker lock. 1,483,205; Feb. 12.
Van Meter, James W., San Francisco, Calif., assignor to Justinian Caire Company. Method of and means for chlorinating fluids. 1,483,256; Feb. 12.
Van Noy, George H., Lewistown, Mont. Electric water heater. 1,483,534; Feb. 12.
Van Orsdale, Allen A., Philadelphia, Pa. Vibratory lubricator. 1,483,535; Feb. 12.
Vapor Car Heating Company. (See Bliss, William L., assignor.)
Vasselli, Anthony, Newark, N. J., assignor to General Phonograph Corporation. Speed regulator for talking-machine motors. 1,483,647; Feb. 12.
Vickers Limited. (See Dawson, A. T., Buckham, and Purvis, assignors.)
Vigilant Automatic Fire Alarm Company Limited. (See Dixon, Thomas S., assignor.)
Vlshloff, John, Lundbreck, Alberta, Canada. Wool-combing implement. 1,483,495; Feb. 12.
Voigt, Edmund, Chicago, Ill. Art of a electrotyping. 1,483,621; Feb. 12.
Von Ballueseck, Eugen L., Godesberg-on-the-Rhine, Germany. Ditching machine. 1,483,257; Feb. 12.
Von Bronk, Otto, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany. Antenna arrangement for wireless telegraphy. 1,483,860; Feb. 12.
Voorhees, Walter K., assignor to Standard Manufacturing Company, Cedar Falls, Iowa. Street sign. 1,483,622; Feb. 12.
Voorhies, Felix E., and O. V Jones, Dallas, Tex. Pipe wrench. 1,483,623; Feb. 12.
Waaser, Frank L., Glenbrook, Conn. Combination inkstand and desk-supplies holder. Des. 63,982; Feb. 12.
Wagner, Rudolf E., assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden. Rotary pressing apparatus. 1,483,562; Feb. 12.
Wagner, William H., assignor to Burlington Blanket Company, Burlington, Wis. Needling machine. 1,483,134; Feb. 12.
Walaschek, Samuel J., New York, N. Y. Combination table and picture album. 1,483,135; Feb. 12.
Walbrecker, Ernest, Wyomissing, assignor to The Narrow Fabric Company, West Reading, Pa. Fabric ribbon. Des. 63,983; Feb. 12.

Walbrecker, Ernest, Wyomissing, assignor to The Narrow Fabric Company, West Reading, Pa. Fabric ribbon. Des. 63,984; Feb. 12.
Waldheim, John, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,483,206; Feb. 12.
Walker, Ernest A., assignor to The G. & G. Fixture Co., Newark, N. J. Bracket-back for lighting fixtures. Des. 63,985; Feb. 12.
Walker, Ernest A., assignor to The G. & G. Fixture Co., Newark, N. Y. Loop for lighting fixtures. Des. 63,986; Feb. 12.
Walker, Ernest A., assignor to The G. & G. Fixture Co., Newark, N. J. Canopy ring for lighting fixtures. Des. 63,987; Feb. 12.
Walker, James P., Columbus, Ohio. Stop hinge. 1,483,624; Feb. 12.
Walsh, John, Prides Crossing, Mass. Composition for paint. 1,483,136; Feb. 12.
Waltman, Homer A., and G. H. Rossebo, assignors to Holcomb & Hoke Mfg. Co., Indianapolis, Ind. Pop-corn machine. 1,483,137; Feb. 12.
Waple, Marshall J., Washington, D. C. Discharging device for vending machines. 1,483,700; Feb. 12.
Wappler Electric Company. (See Mutscheller, Arthur, assignor.)
Warren Clock Company. (See Warren, Henry E., assignor.)
Warren, Clyde W. (See Russell, Zachary E., assignor.)
Warren, Henry E., Ashland, Mass., assignor to Warren Clock Company. Automatic regulator. 1,483,536; Feb. 12.
Warren, Henry E., Ashland, Mass., assignor to General Electric Company. Governing mechanism. 1,483,537; Feb. 12.
Waterbury Farrel Foundry and Machine Company, The. (See Thorsell, Lars W., assignor.)
Waterbury Farrel Foundry and Machine Company, The. (See Wilcox, Richard L., assignor.)
Webber, Milton N., Fort Wayne, Ind. Rail joint connection. 1,483,138; Feb. 12.
Weber, Otto, Manteno, Ill. Tire gauge. 1,483,701; Feb. 12.
Weed, Edward L., assignor to Potter & Buffington Company, Providence, R. I. Badge. 1,483,139; Feb. 12.
Weingarten, Oscar, New York, N. Y. Garment lacing. 1,483,702; Feb. 12.
Wells, William A., Bethlehem, Pa., assignor to Johns-Manville, Incorporated. Spring-tension creel. 1,483,563; Feb. 12.
Wertheimer, Milton, Baltimore, Md. False head for cigars. 1,483,140; Feb. 12.
Westbrook Garage & Machine Company. (See Rowe, William J., assignor.)
Western Electric Company. (See Blattner, David G., assignor.)
Western Electric Company. (See Edwards, George D., assignor.)
Western Electric Company. (See Jammer, Jacob S., assignor.)
Western Electric Company. (See Wilbur, Ray S., assignor.)
Westinghouse Electric & Manufacturing Company. (See Allcutt, Chester T., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bastian, Arthur J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Eaton, George M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hall, Arthur J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hellmund, Rudolf E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hibbard, Lloyd J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hoey, Samuel C., assignor.)
Westinghouse Electric and Manufacturing Company. (See Huey, George W., assignor.)
Westinghouse Lamp Company. (See Johnson, Bernays, assignor.)
Westinghouse Electric & Manufacturing Company. (See Kasley, Alexander T., assignor.)
Westinghouse Electric & Manufacturing Company. (See Keyes, John J., assignor.)
Westinghouse Electric Products Company. (See Kruesheld, Henry, assignor.)
Westinghouse Electric & Manufacturing Company. (See Lind, Frederick A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Reid, Thomas A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Schmidt, Henry F., assignor.)
Wetherbee, Harry L. (See Hayes, J. C., jr., and Wetherbee.)
Wever, Fritz, Stuttgart, Germany. Apparatus for making feather-lined fabrics. 1,483,703; Feb. 12.
Weymann, Charles T., assignor to Société des Etablissements Ed. Jaeger, Paris, France. Zero-setting device for registers. 1,483,496; Feb. 12.
Wheeler, Charles H., assignor to The National Tire & Rubber Company, East Palestine, Ohio. Tire. Des. 63,988; Feb. 12.
White, Charles E., Newport, Wash. Snowplow. 1,483,141; Feb. 12.
Whitehead & Kales Company. (See Whitehead, Thomas C., assignor.)
Whitfield, Arthur J., Boston, assignor to Trimont Manufacturing Company, Roxbury, Mass. Wrench. 1,483,497; Feb. 12.
Whitehead, Thomas C., assignor to Whitehead & Kales Company, River Rouge, Mich. Vehicle wheel. 1,483,398; Feb. 12.
Whiting Corporation. (See Townsend, John S., assignor.)
Whitlock, James G., Richmond, Va. Dredging pump. 1,483,143; Feb. 12.
Whittington, Frederik G., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Automobile bumper. 1,483,142; Feb. 12.
Whittington, Frederik G., Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Dash switch. 1,483,399; Feb. 12.
Whitworth, John, and C. Roderick, Woodstock, assignors to Sanitary Scale Company, Chicago, Ill. Shipping crate. 1,483,648; Feb. 12.
Wicks, John, assignor to Automatic Electric Company, Chicago, Ill. Measured-service telephone system. Re15,762; Feb. 12.
Wickes, Frederick H., and C. H. Goodman, Roanoke, Va. Liquid-heating device. 1,483,564; Feb. 12.
Wightman & Hough Company. (See Hough, Herbert D., assignor.)
Wilbur, Ray S., Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,483,400; Feb. 12.
Wilcox, Philip W., Atlanta, Ga. Preventing an edible from adhering to the surface on which it is cooked. 1,483,704; Feb. 12.
Wilcox, Richard L., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn. Clearing mechanism. 1,483,144; Feb. 12.
Wildason, Frank A., Indianapolis, Ind. Hairpin. 1,483,145; Feb. 12.
Wiley, Samuel, Metuchen, N. J. Firearm. 1,483,146; Feb. 12.
Wilhjelm, Christian, assignor to The Brown Instrument Company, Philadelphia, Pa. Safety device for control instruments. 1,483,207; Feb. 12.
Willman, Edward J., sr., Louisville, Ky. Valve. 1,483,258; Feb. 12.
Wills, J. H., et al. (See Thiemer, William H., assignor.)
Williams, Keith, Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Assembling machine. 1,483,147; Feb. 12.
Williams Radio Company, The. (See Williams, R. R., and Malloy, assignors.)
Williams, Ralph R., Detroit, and J. T. Malloy, Richmond, assignors to The Williams Radio Company, Detroit, Mich. Horn. 1,483,759; Feb. 12.
Williams, William O., Redlands, Calif. Overshot water wheel. 1,483,705; Feb. 12.
Wilson, Leon T. (See Gaynor, E. G., and Wilson.)
Winkler, August, Zurich, Switzerland. Safety device for ladders. 1,483,148; Feb. 12.
Wireless Specialty Apparatus Company. (See Pickard, Greenleaf W., assignor.)
Witham, George S., jr., Hudson Falls, N. Y., assignor to Union Bag and Paper Corporation. Stock-blending mechanism. 1,483,149; Feb. 12.
Witten, Arthur P., Akron, Ohio. Toy balloon. 1,483,150; Feb. 12.
Wolcott, Frank E., Hartford, Conn. Condiment container. 1,483,401; Feb. 12.
Wolcott, Frank E., Hartford, Conn. Curling iron. 1,483,402; Feb. 12.
Woodward, Alma, New York, N. Y. Garter or armlet. Des. 63,989; Feb. 12.
Wottring, Charles L., Houston, Tex. Stalk cutter. 1,483,403; Feb. 12.
Wozniak, John, Chicago, Ill. Ship's safety cabin. 1,483,404; Feb. 12.
Wyland, William H., Sidney, Ohio. Transmission band. 1,483,959; Feb. 12.
Wyler, Leopold, et al. (See Fahrni, Otto, assignor.)
Yoder, Howard D., assignor to Penberthy Injector Company, Detroit, Mich. Ejector. 1,483,405; Feb. 12.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Band for chandelier fixtures. Des. 63,990; Feb. 12.
Yoshizawa, Ginjiro, San Francisco, Calif. Combined brush and scraper. 1,483,760; Feb. 12.
Young, A. R., Material Company. (See Young, Arthur R., assignor.)
Young, Arthur R., assignor to A. R. Young Material Company, Kansas City, Mo. Method and apparatus for fumigating grain. 1,483,406; Feb. 12.
Youngblood, Wesley T., Port Arthur, Tex. Combined roof square, try square, and bevel square. 1,483,761; Feb. 12.
Ziegler, Alfred M., Newton, Mass. Garment supporter. 1,483,260; Feb. 12.
Ziegler, Alfred M., Newton, Mass. Garment supporter. 1,483,261; Feb. 12.
Ziegler, Alfred M., Newton, Mass. Garment supporter. 1,483,262; Feb. 12.
Zim Manufacturing Co. (See McKee, R. J., and Stoneberg, assignors.)
Zimmerman, Harry C., Washington, D. C. Gun trail. 1,483,151; Feb. 12.
Zolnerevich, Foma, Detroit, Mich. Filtering drinking cup. 1,483,498; Feb. 12.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 12TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abrasive stone. J. H. Stean. 1,483,854; Feb. 12.
Accelerator pedals, Guard for. D. G. Christman. 1,483,717; Feb. 12.
Accelerator pedals, Spring attachment for. S. E. Armstrong. 1,483,625; Feb. 12.
Adding machines, Paper carriage for. C. E. Broman. 1,483,330; Feb. 12.
Advertising apparatus. W. G. Barker and F. O. Read. 1,483,269; Feb. 12.
Aircraft bodies, Door for. I. H. Driggs. 1,483,164; Feb. 12.
Air filtering and cleaning device. W. M. Reed. 1,483,379; Feb. 12.
Air humidifier. R. W. Hardie. Re15,766; Feb. 12.
Airplane-receiving apparatus. R. Gibbons. Re15,758; Feb. 12.
Alarm: *See*—
Tire alarm.
Alloy comprising iron, nickel, chromium, molybdenum, New. P. Girin. 1,483,298; Feb. 12.
Alloy flux for soldering aluminum and forming same. W. G. Bolus. 1,483,327; Feb. 12.
Aluminum, Device for soldering. M. S. Corsat. 1,483,337; Feb. 12.
Ammonia synthesis and means for effecting the same. J. C. Clancy. 1,483,411; Feb. 12.
Ammonia synthesis catalyst. J. C. Clancy. 1,483,412; Feb. 12.
Ammonia-synthesis catalysts, Regenerating. J. C. Clancy. 1,483,414; Feb. 12.
Ammonia, Synthetic production of. J. C. Clancy. 1,483,413; Feb. 12.
Amusement device, Electrical. E. M. Goodwin. 1,483,579; Feb. 12.
Anæsthetic, Means for administering an. C. Spinola. 1,483,620; Feb. 12.
Analgesic compound and producing the same. W. H. Engels. 1,483,217; Feb. 12.
Animal trap. P. J. G. Smith. 1,483,688; Feb. 12.
Antiaircraft artillery, Distant-control installation for. E. Rimailho. 1,483,483; Feb. 12.
Apron tie. P. Dilling. 1,483,338; Feb. 12.
Arm rest. L. W. Harris and M. L. Taylor. 1,483,346; Feb. 12.
Ash tray, receiver, and stand, Combined. S. D. Locke. Des. 63,949; Feb. 12.
Assembling machine. K. Williams. 1,483,147; Feb. 12.
Athletic protective pad. H. Goldsmith. 1,483,299; Feb. 12.
Automatic regulator. H. E. Warren. 1,483,536; Feb. 12.
Automobile antitheft device. J. W. Galloway. 1,483,222; Feb. 12.
Automobile bumper. F. G. Whittington. 1,483,142; Feb. 12.
Automobile curtain container. G. W. Sykes. 1,483,697; Feb. 12.
Automobile doorcheck. W. J. Seelinger 1,483,316; Feb 12.
Automobile doors, Connecter for two-part. M. R. Hull. 1,483,809; Feb. 12.
Automobile doors, Connecter for two-part. M. R. Hull. 1,483,811; Feb. 12.
Automobile hood-locking mechanism. E. S. Kline. 1,483,097; Feb. 12.
Automobile jack. T. W. Bibb. 1,483,603; Feb. 12.
Automobile license and owner's title, Antitheft. J. O. Remillard. 1,483,836; Feb. 12.
Automobile radiator cap. A. R. Ramig, A. G. Shafer, and A. J. Krumpeck. 1,483,520; Feb. 12.
Automobile radiators, Condenser for. C. Barnes. 1,483,764; Feb. 12.
Automobile rim-securing means. C. B. Thomas. 1,483,698; Feb. 12.
Automobile ventilator. E. Eggimann. 1,483,290; Feb. 12.
Automobiles and the like, Traffic signal for. W. J. Kramer. 1,483,734; Feb. 12.
Automobiles, Power-take-off-controlling mechanism for. A. A. Maynard. 1,483,231; Feb. 12.
Automobiles, Reverse brake control for. L. C Karcher. 1,483,096; Feb. 12.
Azodyestuff. J. Huismann. 1,483,447; Feb. 12.
Badge. E. L. Weed. 1,483,139; Feb. 12.
Bag: *See*—
Golf-club bag.
Bait, Artificial casting. T. J. Carter. 1,483,842; Feb. 12.
Ball: *See*—
Golf ball.
Bandage, Suspensory. C. S. Keirstead. 1,483,351; Feb. 12.
Barrel, Sheet-metal. H. J. Foster, E. Gruenfeldt, and G. C. Brainard. 1,483,293; Feb. 12.
Bathing cap with goggles. A. G. Johnson. 1,483,226; Feb. 12.
Bearing. L. Flesch. 1,483,170; Feb. 12.
Bearing adjuster, Automatic. J. F. Rose. Re15,761; Feb. 12.
Beet cutter. H. L. Hartburg. 1,483,803; Feb. 12.
Belt, Elastic. G. Langgons. 1,483,192; Feb. 12.
Belt, Fan. R. L. Goodbar. 1,483,578; Feb. 12.
Belt, Fan. L. Murray. 1,483,591; Feb. 12.
Berry-stripping machine. I. Harrison. 1,483,725; Feb. 12.
Beverage-dispensing apparatus. J. M. Travis. Des. 63,979–80; Feb. 12.
Bicycles, tricycles and like machines, Brake mechanism for pedal-driven. T. Spedding. 1,483,690; Feb. 12.
Bill folder. C. C. Cheney. 1,483,279; Feb. 12.
Binder, Loose-leaf. B. P. Shepherd and M. Hotchkiss. 1,483,388; Feb. 12.
Binder, Loose-leaf. A. G. Siegert. 1,483,123; Feb. 12.
Blasting by the use of electricity, Apparatus for. J. H. Bills. 1,483,209; Feb. 12.
Bleaching liquor and apparatus therefor, Making. J. R. MacMillan. 1,483,463; Feb. 12.
Block: *See*—
Pulley block.
Blower. S. Scheffler. 1,483,523; Feb. 12.
Blowpipe, Cutting. E. H. Medén. 1,483,467; Feb. 12.
Boat propeller. J. Alcorn. 1,483,762; Feb. 12.
Boll-weevil exterminator. W. H. and A. M. Gibson and G. S. Kluttz. 1,483,795; Feb. 12.
Bolt and socket construction. E. Ohnstrand. 1,483,474; Feb. 12.
Bolt sleeve. E. C. Coston. 1,483,282; Feb. 12.
Book and looseleaf holder. O. C. Terrell. 1,483,396; Feb. 12.
Book, Safety coupon. A. Rich. 1,483,313; Feb. 12.
Bookmarker. J. W. Harrison. 1,483,347; Feb. 12.
Bookrest. H. G. Farnham. 1,483,421; Feb. 12.
Boot. A. Teti. 1,483,530; Feb. 12.
Boots and shoes, Tool for operating upon insoles used in. J. R. Naugle. 1,483,471; Feb. 12.
Boring machine, Precision jig-. B. T. Steber. 1,483,393; Feb. 12.
Bottle. C. A. Sears. Des. 63,968–71; Feb. 12.
Bottle stopper. S. M. Schenkein. 1,483,119; Feb. 12.
Bowl or similar article, Fruit. P. Putterman. Des. 63,964; Feb. 12.
Box: *See*—
Display box. Outlet box.
Mail box.
Box. J. H. Greenstreet. 1,483,174; Feb. 12.
Box-making machine. A. T. Moore. 1,483,829; Feb. 12.
Box or similar article. W. Geib. Des. 63,941; Feb. 12.
Bracelet. K. L. Toelcke, A. Mikkola, and L. Shapiro. 1,483,132; Feb. 12.
Bracelet clasp. G. D. Harrison. 1,483,802; Feb. 12.
Brake-beam safety means. W. C. Hedgcock. 1,483,633; Feb. 12.
Brake-operating mechanism. A. F. Klasing. 1,483,665; Feb. 12.
Breathing corrector. A. F. Stukey. 1,483,694; Feb. 12.
Brush and scraper, Combined. G. Yoshizawa. 1,483,760; Feb. 12.
Bucket, Grab. S. E. Atherton. 1,483,707; Feb. 12.
Buckle. F. J. Schwerd. 1,483,853; Feb. 12.
Buckle, Belt. W. J. Morse. 1,483,236; Feb. 12.
Buckle frame, Belt. L. W. Shields. Des. 63,974; Feb. 12.
Building structure. B. S. Snow. 1,483,391; Feb. 12.
Bung for metal containers. A. Schroeder. 1,483,122; Feb. 12.
Burner. *See*—
Gas burner. Suction burner.
Burner. F. Bormann. 1,483,712; Feb. 12.
Burnishing tool. A. D. Manson. 1,483,098; Feb. 12.
Bushing extractor. W. E. Lloyd. 1,483,818; Feb. 12.
Button, Collar. L. L. Mann. 1,483,363; Feb. 12.
Button-making machine. H. Rosen. 1,483,522; Feb. 12.
Buttons, badges, or the like, Manufacture of. C. F. Gaunt. 1,483,223; Feb. 12.

Buttonhole and making the same. M. McCann. 1,481,384; Feb. 12.
Calculating machine. F. A. Hart. 1,483,580; Feb. 12.
Calculating machine. A. F. Poole. 1,483,553; Feb. 12.
Calculating machine. A. F. Poole. 1,483,678; Feb. 12.
Camp table, Collapsible. M. M. Larsen. 1,483,736; Feb. 12.
Can opener. S. J. Hall. 1,483,661; Feb. 12.
Canopy, Electric. F. M. Poritz. Des. 63,962; Feb. 12.
Capping-off device. G. W. Swanson. 1,483,755–6; Feb. 12.
Car and train-line coupling, Combined automatic. O. H. Le Compte. 1,483,356; Feb. 12.
Car coupler. A. Stacy. 1,483,691; Feb. 12.
Car coupler, Mine-. C. W. Lauby. 1,483,628; Feb. 12.
Car mover. F. W. Rubin. 1,483,116; Feb. 12.
Car seal. B. Borland. 1,483,504; Feb. 12.
Carbon remover. P. A. Sullivan. 1,483,559; Feb. 12.
Carburetor. R. M. Anderson. 1,483,323; Feb. 12.
Carburetor. D. Guelbaum. 1,483,634; Feb. 12.
Card holder. I. Bernstein. 1,483,408; Feb. 12.
Carriages, Rocking means for baby. H. S. Jackson. 1,483,813; Feb. 12.
Case: *See*—
Vanity case.
Casket construction. J. H. Donnelly. 1,483,544; Feb. 12.
Caster. H. A. Currie. 1,483,284; Feb. 12.
Caster. A. B. Hanna. 1,483,302; Feb. 12.
Caster wheel. H. G. Runne. 1,483,598; Feb. 12.
Casting machine. A. W. Morris. 1,483,550; Feb. 12.
Centrifugal machine. W. E. Bock. 1,483,326; Feb. 12.
Cereal flakes and making same. J. K. Lippen. 1,483,515; Feb. 12.
Chain, Detachable cross. O. Schoyen. 1,483,385; Feb. 12.
Chain links, Connecter for. J. Blaeker. 1,483,210; Feb. 12.
Chandelier-fixture band. F. Yokel. Des. 63,990; Feb. 12.
Charging device. J. N. Carey. 1,483,278; Feb. 12.
Chart. F. E. Mielke. 1,483,106; Feb. 12.
Chemical products from olefines and olefine-containing mixtures, Preparing. A. S. Ramage. 1,483,835; Feb. 12.
Cigar holder. A. F. Boreiko. 1,483,503; Feb. 12.
Cigars, False head for. M. Wertheimer. 1,483,140; Feb. 12.
Cinematograph film. G. G. Hegerman. 1,483,581; Feb. 12.
Cinematographic apparatus. G. Michetti. 1,483,105; Feb. 12.
Circuit-breaker system. Automatic reclosing-. F. H. Hedin. 1,483,438; Feb. 12.
Clamp. T. Billington. 1,483,769; Feb. 12.
Clasp: *See*—
Bracelet clasp.
Clasp. G. D. Harrison. 1,483,801; Feb. 12.
Clearing mechanism. R. L. Wilcox. 1,483,144; Feb 12.
Clippers, Attachment for hair. N. A. Moltrum. 1,483,310; Feb. 12.
Clock, Automatic time. H. G. Lundgren. 1,483,820; Feb. 12.
Clock, Electric. U. L. Collins. 1,483,783; Feb. 12.
Clock, Electric. M. F. Juruick. 1,483,814; Feb. 12.
Clothes protector. W. S. Perdon. 1,483,793; Feb. 12.
Coal, Composition for treating. R. H. Smith. 1,483,318; Feb. 12.
Coal, Feeder for pulverized. G. Z. Smith and E. B. Herbert. 1,483,557; Feb. 12.
Coal saver. W. H. Stiefel. 1,483,528; Feb. 12.
Coating machine. R. D. Schoenwetter. 1,483,120; Feb. 12.
Cock, Plug. H. Brunner. 1,483,508; Feb. 12.
Coke, Container for the dry cooling of. A. Moettell. 1,483,187; Feb. 12.
Color combinations, Device for quickly finding harmonious. H. Tanner. 1,483,529; Feb. 12.
Column guide. H. A. Henrikson. 1,483,176; Feb. 12.
Concrete construction, Apparatus for measuring materials in. H. D. Palmer and J. W. Brhel. 1,483,643; Feb. 12.
Concrete sheet piles, Method and apparatus for placing. D. J. Ermilio. 1,483,574; Feb. 12.
Condenser. H. F. Schmidt. 1,483,599; Feb. 12.
Condenser installations, Protective means for. G. W. Pickard. 1,483,582; Feb. 12.
Condiment container. F. E. Wolcott. 1,483,401; Feb. 12.
Connecting-rod bolt. S. A. Slauson. 1,483,317; Feb. 12.
Container cap. H. F. Ripken. 1,483,680; Feb. 12.
Control apparatus. A. J. Hall. 1,483,431; Feb. 12.
Control system. R. E. Hellmund. 1,483,439; Feb. 12.
Conveyer. J. E. McBride. 1,483,100; Feb. 12.
Conveyer mechanism. R. D. Schoenwetter. 1,483,121; Feb. 12.
Cooker, Electric. E. Scott. 1,483,837; Feb. 12.
Copyholder. A. S. MacDowell. 1,483,101; Feb. 12.
Core and making same, Reenforced sand. W. H. Millspaugh. 1,483,372; Feb. 12.
Corn-husking tool. F. Martin. 1,483,193; Feb. 12.
Cotton picker. E. F. Hand and F. T. Cavin. 1,483,848; Feb. 12.
Cotton picker. L. C. Stukenborg. 1,483,248; Feb. 12.
Cotton-square picker. R. T. Holton. 1,483,445; Feb. 12.
Couch or bed pan. P. E. J. Chabbert. 1,483,157; Feb. 12.
Coupling: *See*—
Flexible coupling. Pipe coupling.
Cow-tail holder. L. P. Brandewie. 1,483,772; Feb. 12.
Cracking device. J. P. H. Kroon. 1,483,456; Feb. 12.
Crate, Shipping. J. Whitworth and C. Roderick. 1,483,648; Feb. 12.
Creel, Spring-tension. W. S. Wells. 1,483,563; Feb. 12.
Crosstie, Steel. W. B. Miller. 1,483,827; Feb. 12.
Crushers, Adjusting device for. H. S. Anderson. 1,483,566; Feb. 12.
Cuff protector. V. E. Kirk. 1,483,731; Feb. 12.
Cultivator, Rotary. W. A. Earhart. 1,483,789; Feb. 12.
Cultivators, Planter attachment for walking. J. T. Beck. 1,483,271; Feb. 12.
Cup: *See*—
Drinking cup.
Curling iron. F. E. Wolcott. 1,483,402; Feb. 12.
Current-collector support. E. S. Lincoln. 1,483,608–9; Feb. 12.
Current-collector support. S. S. Matthes. 1,483,610; Feb. 12.
Current, Method and apparatus for transforming direct. G. B. Coleman. 1,483,281; Feb. 12.
Current regulator. S. Ruttenberg and M. F. Leibowitz. 1,483,629; Feb. 12.
Cushion: *See*—
Die cushion.
Cutter: *See*—
Beet cutter. Stalk cutter.
Drill cutter. Trolley-sleet cutter.
Meat cutter.
Cylinder ring, Automatic. E. Kiefer. 1,483,352; Feb. 12.
Cylinder, Slashing. E. L. Gladin. 1,483,343; Feb. 12.
Dancing figure. E. Starbuck. 1,483,127; Feb. 12.
Dash switch. F. G. Whittington. 1,483,299; Feb. 12.
Dehydrating apparatus. H. D. Todt. 1,483,757; Feb. 12.
Demand meter. C. I. Hall. 1,483,432; Feb. 12.
Deodorizing apparatus. A. Maclachlan. 1,483,229; Feb. 12.
Derrick fitting. R. R. Bloss and W. Schwemlein. 1,483,602; Feb. 12.
Desk. J. R. McCargar. Des. 63,953; Feb. 12.
Desk. L. J. Ostdiek. 1,483,832; Feb. 12.
Detachable handle. S. Hammer. 1,483,435; Feb. 12.
Die cushion. D. Strand. 1,483,204; Feb. 12.
Direction indicator. A. E. Faull. 1,483,655; Feb. 12.
Dish, Covered. C. L. Sebring and E. Brooks. Des. 63,972; Feb. 12.
Dishwashing cabinet. W. M. Moore. 1,483,234; Feb. 12.
Disk wheel. C. K. Montgomery and C. R. Tromley. 1,483,641; Feb. 12.
Disk wheel. J. R. Montgomery. 1,483,740; Feb. 12.
Display apparatus, Automatic. H. J. Baldwin. 1,483,324; Feb. 12.
Display box. E. E. Pinkerton. 1,483,195; Feb. 12.
Display box, Folding. J. B. Singer and A. B. Levy. 1,483,125; Feb. 12.
Display carton. W. M. and C. J. Doering. 1,483,289; Feb. 12.
Distances, Determining. H. C. Hayes. 1,483,547; Feb. 12.
Ditching, grading, and levee-builder machine. W. A. Steele. 1,483,752; Feb. 12.
Ditching machine. E. L. von Balluseck. 1,483,257; Feb. 12.
Doll. A. P. Handley. Des. 63,946; Feb. 12.
Doll. M. R. Smith. Des. 63,976; Feb. 12.
Door-lock-mounting unit, Combined. J. N. Capece. 1,483,333; Feb. 12.

Monument. W. V. Tipping. Des. 63,978; Feb. 12.
Motion-transmitting mechanism. E. B. Hough. 1,483,089; Feb. 12.
Motor. A. E. Hudd. 1,483,512; Feb. 12.
Motor-control system. L. J. Hibbard. 1,483,441; Feb. 12.
Motor-controlling device. B. S. Aikman. 1,483,064; Feb. 12.
Motor drives, Equalizing speeds of. A. J. F. Montabone. 1,483,470; Feb. 12.
Motor-testing apparatus. R. Chilton. 1,483,075; Feb. 12.
Motors, Overwinding preventer for spring. T. Phillips. 1,483,744; Feb. 12.
Mousetrap. J. Rose and F. E. Bowne. 1,483,644; Feb. 12.
Mud, foot scrapings, water, and the like deposited on steps, Means for collecting. C. E. Kain. 1,483,095; Feb. 12.
Music rolls of player pianos and the like, Mechanism for automatically rewinding the. J. L. Scott. 1,483,685; Feb. 12.
Musical instruments, Treating wood for the manufacture of. L. Kozelek. 1,483,733; Feb. 12.
Musical instruments, Tuning device for stringed. H. O. Hammer. 1,483,434; Feb. 12.
Musical notation. S. A. Reeve. 1,483,380; Feb. 12.
Mute holder. A. Cherniavsky. 1,483,334; Feb. 12.
N-sulphato-alkyl compounds, Manufacture of. A. G. Green and K. H. Saunders. 1,483,084; Feb. 12.
Needling machine. W. H. Wagner. 1,483,184; Feb. 12.
Net. R. R. Belknap. 1,483,542; Feb. 12.
Nitrogen-containing compounds, Producing. J. H. Reid. 1,483,197; Feb. 12.
Nonskid device. H. M. McCune. 1,483,102; Feb. 12.
Office indicator. O. G. Gerner. 1,483,724; Feb. 12.
Oil-level tester for crank cases. A. L. and W. P. Nash. 1,483,517; Feb. 12.
Oil-testing device. W. L. and H. J. Pluck. 1,483,875; Feb. 12.
Oils, Production of solutions of volatile. J. Altwegg. 1,483,152; Feb. 12.
Optical instrument. H. L. De Zeng. 1,483,786; Feb. 12.
Ordnance breech mechanism. A. T. Dawson, G. T. Buckham, and W. R. Purvis. 1,483,161; Feb. 12.
Ores, etc., Combined sulphidation and flotation of. F. E. Barrows. 1,483,270; Feb. 12.
Organic substances, Method of and apparatus for treating. L. F. Little. 1,483,668; Feb. 12.
Outlet box. H. G. Knoderer. 1,483,453; Feb. 12.
Ovens, Burner chamber for rotary baking. H. Eichner. 1,483,167; Feb. 12.
Packing. J. W. Shepard. 1,483,750; Feb. 12.
Packing, Piston. E. A. Isakson. 1,483,812; Feb. 12.
Pad: *See*—
Athletic protective pad.
Paint composition. J. Walsh. 1,483,136; Feb. 12.
Paper and preparing same, Scenery-forming. C. B. and H. P. Maurer. 1,483,466; Feb. 12.
Paper package, Toilet-. C. Fisher. 1,483,575; Feb. 12.
Paper pulp, Preserving and treating. J. A. De Cew. 1,483,630; Feb. 12.
Paper, Roofing. M. Blumenthal. 1,483,711; Feb. 12.
Patch, Blowout. H. W. Edwards. 1,483,791; Feb. 12.
Pea separator and grader. P. C. Kraska. 1,483,092; Feb. 12.
Peeling mechanism. A. Katzinger. 1,483,637; Feb. 12.
Pencil, Lead. C. O. Gronberg. 1,483,344; Feb. 12.
Pens, Feed bar for fountain. S. E. Peters. 1,483,675; Feb. 12.
Percussion tools, Lubricating attachment for. D. Brandriff. 1,483,569; Feb. 12.
Phonograph appliance. F. Darrow. 1,483,573; Feb. 12.
Phonograph record. L. Slingland. 1,483,751; Feb. 12.
Photographic exposures, Method and apparatus for determining. F. H. Norton. 1,483,473; Feb. 12.
Photographic shutter. P. J. Marks. 1,483,465; Feb. 12.
Piano-damper attachment. D. McIlwrath. 1,483,104; Feb. 12.
Picker: *See*—
Cotton picker. Cotton-square picker.
Picture film, Motion-. O. A. Owen. 1,483,109; Feb. 12.
Picture machine, Motion-. E. M. Swartz. 1,483,319; Feb. 12.
Piling, Sheet. A. A. Martinez. 1,483,825; Feb. 12.
Pipe-collar plate. E. G. Gaynor. 1,483,428; Feb. 12.
Pipe connection. D. A. Allee. 1,483,499; Feb. 12.
Pipe coupling. H. P. Kraft. 1,483,454–5; Feb. 12.
Pipe wrench. O. Pearce and I. Bales. 1,483,110; Feb. 12.
Pipe wrench. F. L. Scott. 1,483,486; Feb. 12.
Pipe wrench. F. E. Voorhies and O. V. Jones. 1,483,623; Feb. 12.
Piston drill, Rotary. A. Schinkes. 1,483,198–9; Feb. 12.
Piston ring. G. Jacobs. 1,483,582; Feb. 12.
Piston rings, Tool for compressing. C. J. Mathison. 1,483,826; Feb. 12.
Planting and marking machine. O. H. Kohlhaas. 1,483,815; Feb. 12.
Plate. T. C. Heisey. Des. 63,947; Feb. 12.
Plate or similar article. W. Geib. Des. 63,942; Feb. 12.
Platform, Rotating. A. H. Seear. 1,483,749; Feb. 12.
Plow. J. Bouchard. 1,483,771; Feb. 12.
Plow. R. H. Cadenhead. 1,483,776; Feb. 12.
Pop-corn machine. H. A. Waltman and G. H. Rossebo. 1,483,137; Feb. 12.
Poultry house. E. E. Garner. 1,483,295; Feb. 12.
Power-transmitting mechanism. M. McCann. 1,483,462; Feb. 12.
Power-transmitting mechanism. H. R. Ricardo. 1,483,245; Feb. 12.
Power-transmitting mechanism, Change-speed. F. H. Root. 1,483,114; Feb. 12.
Preheater, Engine. J. Good. 1,483,577; Feb. 12.
Press. G. G. Browne. 1,483,156; Feb. 12.
Press. H. Slater. 1,483,126; Feb. 12.
Pressing apparatus, Rotary. R. E. Wagner. 1,483,562; Feb. 12.
Pressure generator. A. N. Blazer. 1,483,409; Feb. 12.
Printing-press roller, Ventilated. C. H. Martin. 1,483,671; Feb. 12.
Printing presses, Perforator for. H. E. Peterson. 1,483,677; Feb. 12.
Puller: *See*—
Stump puller.
Pulley block. K. Torp. 1,483,768; Feb. 12.
Pump. F. J. Miller. 1,483,370; Feb. 12.
Pump. C. F. Pearson. 1,483,189; Feb. 12.
Pump, Centrifugal. C. R. Sessions. 1,483,645; Feb. 12.
Pump, Dredging. J. G. Whitlock. 1,483,143; Feb. 12.
Pump, Reciprocating. F. J. Miller. 1,483,369; Feb. 12.
Pumps, Visible display attachment for measuring. W. S. Townsend and F. E. Douglass. 1,483,494; Feb. 12.
Putty powder. C. A. Hamel. 1,483,224; Feb. 12.
Quick-break switch. B. E. Getchell. 1,483,846; Feb. 12.
Rack: *See*—
Umbrella rack.
Radio cabinet. W. A. French. Des. 63,938; Feb. 12.
Radio receiving system. H. K. Sandell. 1,483,383; Feb. 12.
Rail-joint connection. M. N. Webber. 1,483,138; Feb. 12.
Rail seat or brace. W. W. Blackwell. 1,483,770; Feb. 12.
Railway ballast, Method and apparatus for cleaning. N. C. Owen. 1,483,674; Feb. 12.
Railway crossing and making the same. W. T. Headley. 1,483,437; Feb. 12.
Railway draft rigging. J. F. O'Connor. 1,483,108; Feb. 12.
Railway rails, Boltless anticreeping device for. A. J. Cook. 1,483,416; Feb. 12.
Railway safe running device. A. R. Angus. 1,483,066; Feb. 12.
Railway-traffic-controlling apparatus. L. V. Lewis and F. H. Nicholson. 1,483,358; Feb. 12.
Range or stove. J. M. Rutter. 1,483,118; Feb. 12.
Razor-blade-sharpening device, Safety-. J. B. Ruatti. 1,483,746; Feb. 12.
Reamer. J. N. Goodall. 1,483,429; Feb. 12.
Reel: *See*—
Fishing-line reel. Wire reel.
Refractory and making same, Basic. A. P. Meyer. 1,483,468–9; Feb. 12.
Refractory article and making the same. C. J. Brockband. 1,483,507; Feb. 12.
Refrigerating system. L. Penwell. 1,483,593; Feb. 12.
Registers, Zero-setting device for. C. T. Weymann. 1,483,496; Feb. 12.
Regulator: *See*—
Automatic regulator. Current regulator.
Relay. C. I. Hall. 1,483,433; Feb. 12.
Repair plug. M. G. O'Brien. 1,483,311; Feb. 12.
Resilient wheel. E. J. Brandt. 1,483,275; Feb. 12.
Resilient wheel. R. H. Langdale. 1,483,191; Feb. 12.
Resins, Manufacture of. V. P. Mehta. 1,483,368; Feb. 12.
Ribbon, Fabric. E. Walbrecker. Des. 63,983–4; Feb. 12.
Rim tool. D. C. Carroll. 1,483,841; Feb. 12.
Ring: *See*—
Cylinder ring. Piston ring.
Ring. C. W. Bailey. Des. 63,925; Feb. 12.
Ring. C. J. Barth and J. R. Pierce. Des. 63,926; Feb. 12.
Ring. G. S. Bowden. Des. 63,931; Feb. 12.
Ring. F. A. Shimp. Des. 63,975; Feb. 12.
Ring-rolling machine. G. G. Browne. 1,483,069; Feb. 12.
Rivet-cutting device. J. A. Calder. 1,483,072; Feb. 12.
Rivet-cutting machine. J. A. Calder. 1,483,073; Feb. 12.
Rivet machines, Feeding mechanism for. J. Diesk, jr., and S. R. Cooper. 1,483,720; Feb. 12.
Riveting machine. J. A. Calder. 1,483,071; Feb. 12.
Rod: *See*—
Strut rod.
Roller: *See*—
Printing-press roller.
Rollers having an arc-shaped generatrix, machine for grinding. V. A. Svensson. 1,483,754; Feb. 12.
Roof square, try square, and bevel square, Combined. W. T. Youngblood. 1,483,761; Feb. 12.
Roofs, Constructing. B. C. Kridler and J. C. Boyle. 1,483,785; Feb. 12.
Roofs, Sheet-metal conductor for. G. R. Thompson. 1,483,320; Feb. 12.
Roost, Chicken. F. Heinrich. 1,483,086; Feb. 12.
Ropes and like articles, Retriever for. W. K. Monroe. 1,483,828; Feb. 12.
Rotary jar. J. A. Kammerdiner. Re15,760; Feb. 12.
Rubber articles from forms, Machine for removing thin. J. A. Kempel. 1,483,664; Feb. 12.
Rubberized fiber composition, Manufacturing. P. Beebe. 1,483,856; Feb. 12.
Rug. J. A. Farrell. Des. 63,936; Feb. 12.
Rug. F. F. Rainsford. Des. 63,965; Feb. 12.
Safes and the like, Door fastening for. A. H. M. Basart. 1,483,541; Feb. 12.
Sand cutting and screening machine, Safely-controlled. J. S. Townsend. 1,483,646; Feb. 12.
Sash lock. M. Oesterling. 1,483,312; Feb. 12.
Saw machine, Chain-. M. C. H. Serin. 1,483,387; Feb. 12.
Scales, Nose iron for. J. J. Magrady. 1,483,464; Feb. 12.
Scooter, Sliding. A. E. Lindberg. 1,483,183; Feb. 12.
Scoreboard, Electrical. C. A. Hendrix. 1,483,806; Feb. 12.
Sealing device. A. G. G. Guenther. 1,483,175; Feb. 12.
Self-controlling heater. F. H. Cherry. 1,483,280; Feb. 12.
Selvaged fabric, Tool for forming. W. C. Fisher. 1,483,425; Feb. 12.
Separable fastener. W. B. Murphy. 1,483,188; Feb. 12.
Separator: *See*—
Dust separator. Mineral separator.
Separator attachment. L. Rubert. 1,483,484; Feb. 12.
Settings, System for transmitting. R. V. Morse. 1,483,235; Feb. 12.
Sewage-screening apparatus. C. P. Landreth and W. H. MacVaugh. 1,483,667; Feb. 12.
Sewing machine, Book. W. E. Reavis and E. E. Frey. 1,483,521; Feb. 12.
Sewing-machine motor-driving unit. H. Maimin. 1,483,103; Feb. 12.
Sewing machines, Pull-off mechanism for buttonhole-. M. McCann. 1,483,185; Feb. 12.
Sewing machines, Thread trimmer for. J. Kiewics. 1,483,307–8; Feb. 12.

Shade hanger, Ventilating. Z. E. Russell. 1,483,117; Feb. 12.
Shade holder. L. W. Andersen. 1,483,264; Feb. 12.
Ship's safety cabin. J. Wozniak. 1,483,404; Feb. 12.
Shock absorber. J. J. Reynolds. 1,483,481; Feb. 12.
Shock absorber. W. G. Struthers. 1,483,693; Feb. 12.
Shoe-heating device. A. Leaskowics. 1,483,737; Feb. 12.
Shoe-tree. A. K. Anderson. 1,483,065; Feb. 12.
Shoe vamp. R. Centrone. Des. 63,933; Feb. 12.
Showcase. H. Trestholm. 1,483,723; Feb. 12.
Sign. T. Secor. 1,483,618; Feb. 12.
Sign, Interchangeable and adjustable. C. T. Berry. 1,483,067; Feb. 12.
Sign, Street. W. K. Voorhees. 1,483,622; Feb. 12.
Signal. A. W. Harvey. 1,483,511; Feb. 12.
Signaling system. D. K. Gannett. 1,483,172; Feb. 12.
Silk and materials containing it, Dyeing and printing acetyl. A. G. Green and K. H. Saunders. 1,483,797; Feb. 12.
Sink hanger and outlet fixture, Combination. W. Johnson. 1,483,063; Feb. 12.
Slag, Method and apparatus for granulating liquid. E. Opderbeck. 1,483,241; Feb. 12.
Smokestacks, Movable cap for. W. A. Collver. 1,483,784; Feb. 12.
Snow remover. P. E. Larson. 1,483,586; Feb. 12.
Snowplow. F. S. Currie. 1,483,080; Feb. 12.
Snowplow. G. Richardson. 1,483,382; Feb. 12.
Snowplow. W. J. Rowe. 1,483,247; Feb. 12.
Snowplow. C. L. White. 1,483,141; Feb. 12.
Socket cover, Electric. F. M. Poritz. Des. 63,963; Feb. 12.
Soda and active carbon, Recovering. M. J. Creighton. 1,483,160; Feb. 12.
Sofa, Convertible. S. Barrile. 1,483,501; Feb. 12.
Soil pulverizer. F. H. Page. 1,483,743; Feb. 12.
Sound-absorbing method and material. J. Maxer. 1,483,365–6; Feb. 12.
Souring composition and method. R. A. Phair. 1,483,519; Feb. 12.
Spark arrester, Locomotive. C. S. Chalfant. Re15,765; Feb. 12.
Spark plug. E. O'Connell. 1,483,673; Feb. 12.
Spark plug. J. M. Syme. 1,483,395; Feb. 12.
Speed change and reverse gearing. W. W. Peck. 1,483,373; Feb. 12.
Speeds, Indicating device for average. E. Jaeger. 1,483,448; Feb. 12.
Spoke connection. H. J. Cook. 1,483,075; Feb. 12.
Spooling device. C. Byler. 1,483,332; Feb. 12.
Spoon and ladle holder, Sanitary. C. W. Potter. 1,483,533; Feb. 12.
Spray device. C. M. McArthur. 1,483,360; Feb. 12.
Spring: *See*—
Vehicle spring.
Spring oiler. S. Baruch. 1,483,208; Feb. 12.
Spring removing and applying tool. H. B. Maples. 1,483,821; Feb. 12.
Spring-scraper construction. F. N. Root. 1,483,246; Feb. 12.
Sprinkler head. S. Broome. 1,483,277; Feb. 12.
Stalk cutter. C. L. Wottring. 1,483,403; Feb. 12.
Stamp, Hand. W. T. Cressler. 1,483,283; Feb. 12.
Stanchion, Cow. J. C. Fitzgerald. 1,483,292; Feb. 12.
Stand: *See*—
Iron stand.
Statuette. A. V. Hendley. Des. 63,948; Feb. 12.

Tire gauge. O. Weber. 1,483,701; Feb. 12.
Tire tread. C. G. Lundstrom. Des. 63,950; Feb. 12.
Tire tread. G. C. McConnell. Des. 63,954; Feb. 12.
Tire valve. F. V. Pepper. 1,483,374; Feb. 12.
Tires, Antiskid, wear resisting armor for. H. S. Brickell. 1,483,773; Feb. 12.
Tires, Tool for removing. J. J. O'Brien. 1,483,331; Feb. 12.
Tobacco leaves, Machine for stringing. C. W. Sponsel. 1,483,558; Feb. 12.
Tobacco stems, Machine for treating. L. T. Rasmussen. 1,483,244; Feb. 12.
Toilet preparations, Container for. T. W. Foster. 1,483,220; Feb. 12.
Tool, Pressure-fluid-actuated. W. H. Keller. 1,483,180; Feb. 12.
Tooth, Artificial. B. Platschick. 1,483,479; Feb. 12.
Toothbrush. F. J. Parker. 1,483,476; Feb. 12.
Towing or pulling device. J. H. Tabler. 1,483,253; Feb. 12.
Toy animal. R. H. Marchant. Des. 63,951; Feb. 12.
Toy balloon. A. P. Witten. 1,483,150; Feb. 12.
Toy doll. P. E. Corrubia. 1,483,718; Feb. 12.
Toy, Floating. A. C. Moss. 1,483,672; Feb. 12.
Toy gun. A. C. Heffner. 1,483,804; Feb. 12.
Toy pistol. E. Starbuck. 1,483,128; Feb. 12.
Tractor attachment. M. E. Ness. 1,483,238; Feb. 12.
Tractor hitch. C. Kiel. 1,483,514; Feb. 12.
Tractor sweep hitch. O. Brooks. 1,483,774; Feb. 12.
Tractors, Clearer or shield for. J. F. Klein. 1,483,782; Feb. 12.
Transformation-making machine. A. Bourgeois. 1,483,713; Feb. 12.
Transmission band. W. H. Wyland. 1,483,380; Feb. 12.
Transmission lines, Protection of. O. C. Traver. 1,483,533; Feb. 12.
Transmission-supporting structure. A. T. Starr. 1,483,695; Feb. 12.
Trap: *See*—
Animal trap.
Trap. W. J. Hamilton. 1,483,800; Feb. 12.

Tray-making machine. H. Brady. 1,483,211; Feb. 12.
Tree: *See*—
Shoe-tree.
Trolley-sleet cutter. C. T. Perry. 1,483,518; Feb. 12.
Truck, Industrial. W. Schroeder, jr. 1,483,600; Feb. 12.
Truck, Six-wheel railway-car. J. A. Lamont. 1,483,638; Feb. 12.
Tube cap. T. J. Dobbins. Des. 63,935; Feb. 12.
Tube system and cleaner, Combined. F. W. Linaker and T. M. Bruback. 1,483,460; Feb. 12.
Tube welding. R. O. Berg. 1,483,272; Feb. 12.
Tungsten oxide from tungsten ores, Producing. K. Anjow. 1,483,567; Feb. 12.
Turbines, Steam-chest construction for. A. J. Kasley. 1,483,605; Feb. 12.
Turpentine substitute. K. Marx. 1,483,739; Feb. 12.
Type-duplicating machines, Printing member for. C. F. Green. 1,483,659; Feb. 12.
Typewriting and calculating machine, Combined. A. F. Poole. 1,483,679; Feb. 12.
Typewriting machine. J. A. B. Smith. 1,483,202; Feb. 12.
Typewriting machine. J. H. Barr. 1,483,500; Feb. 12.
Typewriting machine. C. E. Smith. 1,483,201; Feb. 12.
Typewriting machine. C. E. Smith. 1,483,524; Feb. 12.
Typewriting machine. J. A. B. Smith. 1,483,525; Feb. 12.
Typewriting machine. J. Waldheim. 1,483,206; Feb. 12.
Umbrella rack. E. C. Kovarik. 1,483,666; Feb. 12.
Underreamer. P. J. Forrest. 1,483,219; Feb. 12.
Universal joint. W. H. Thiemer. 1,483,560; Feb. 12.
Unloading apparatus. D. Terry. 1,483,254; Feb. 12.
Vacuum tubes, Safety device for. A. Mutscheller. 1,483,642; Feb. 12.
Valve. P. P. Dean. 1,483,081; Feb. 12.
Valve. T. Evers. 1,483,545; Feb. 12.
Valve. E. Fisher. 1,483,656; Feb. 12.
Valve. G. E. Hazard. 1,483,436; Feb. 12.
Valve. J. Kincheloe. 1,483,585; Feb. 12.
Valve. R. E. Sturman. 1,483,250; Feb. 12.
Valve. E. J. Willman, sr. 1,483,258; Feb. 12.
Valve and priming cup, Combination inlet. E. Minge. 1,483,186; Feb. 12.
Valve for automatic train-control apparatus, Selective application. A. J. Brookins. 1,483,276; Feb. 12.
Valve for flushing tanks, Automatic pressure. J. C. Spearing. 1,483,392; Feb. 12.
Valve grinder. D. F. Dunham. 1,483,721; Feb. 12.
Valve mechanism. C. A. Baker. 1,483,153; Feb. 12.
Valve mechanism. B. S. Snow. 1,483,890; Feb. 12.
Valve mechanism for liquid-vending machines. J. Fritsche. 1,483,083; Feb. 12.
Valve-operating mechanism. W. L. Bliss. 1,483,568; Feb. 12.
Valve-operating mechanism. J. W. Forbes. 1,483,631; Feb. 12.
Valve, Pressure-regulating. C. J. Olson. 1,483,240; Feb. 12.
Valve, Reversing. J. E. Greensmith. 1,483,430; Feb. 12.
Valve tool. W. D. Carrow. 1,483,074; Feb. 12.
Vanity case. H. D. Hough. 1,483,350; Feb. 12.
Vanity cases, Compact holder for. E. W. Loesser. 1,483,639; Feb. 12.
Vapor-conservation system. S. H. Brooks. 1,483,212; Feb. 12.
Varnish and paint removing composition and using same. G. H. Mains. 1,483,587; Feb. 12.
Vault, Grave. J. C. Fitch. 1,483,341; Feb. 12.
Vault light. F. A. Leers. 1,483,182; Feb. 12.
Vehicle body. E. A. Corbin, jr. 1,483,650; Feb. 12.
Vehicle, Hand-operated. H. F. Thompson. 1,483,321; Feb. 12.
Vehicle jack. A. A. Swaim. 1,483,251; Feb. 12.
Vehicle spring. C. H. Crockett. 1,483,214; Feb. 12.
Vehicle spring suspension. R. Y. Bovee. 1,483,154; Feb. 12.
Vehicle wheel. A. Eschwig. 1,483,654; Feb. 12.
Vehicle wheel. T. C. Whitehead. 1,483,398; Feb. 12.
Vehicles and other structures, Folding top for. J. H. Cloyes. 1,483,076; Feb. 12.
Vehicles and the like, Means for adjusting brake shoes used in tramway. S. Thomas. 1,483,531; Feb. 12.
Vehicles, Locality indicator for. S. H. Holmes. 1,483,728; Feb. 12.
Vehicles, Means for coupling. M. Payne. 1,483,613; Feb. 12.
Vehicles, Overdrive for motor. W. C. Smith. 1,483,389; Feb. 12.
Vehicles, Signaling device for. D. A. Ritchie. 1,483,615; Feb. 12.
Vehicles, Top for motor. M. R. Hull. 1,483,810; Feb. 12.
Vehicles, Transmission for motor. R. V. Martin. 1,483,009; Feb. 12.
Vending machine. J. W. McCommins. 1,483,309; Feb. 12.
Vending machine, Refrigerating. C. F. Callahan. 1,483,777; Feb. 12.
Vending machines, Discharging device for. M. J. Wapie. 1,483,700; Feb. 12.
Ventilating device. W. Miller-Peacock. 1,483,232; Feb. 12.
Ventilator: *See*—
Automobile ventilator.
Ventilators, chimney tops, and the like, Bearing support for rotary. J. Sylvan. 1,483,130; Feb. 12.
Vest, Sportsman's. F. Horak. 1,483,635; Feb. 12.
Vibration, Method and system for detecting sources of. G. D. Edwards. 1,483,790; Feb. 12.
Vibratory lubricator. A. A. Van Orsdale. 1,483,535; Feb. 12.
Waffle-baking iron. E. Robinson and A. F. Abreo. Des. 63,966; Feb. 12.
Wagon, Delivery. F. M. Rhed. 1,483,112; Feb. 12.
Wagons and sleighs, Hay-rack or body supporting cleat for. P. J. Michaelis. 1,483,589; Feb. 12.
Wall pocket. A. A. Hartogh. 1,483,804; Feb. 12.
Warship signaling system. E. A. Sperry and E. Meitner. 1,483,489; Feb. 12.
Washing machine. P. F. and R. J. Schneider. 1,483,838; Feb. 12.
Washtub. M. Kylar. 1,483,816; Feb. 12.
Waste, Reclaiming. J. P. McCarthy. 1,483,361; Feb. 12.
Waste with lubricating oil, Impregnation of. J. P. McCarthy. 1,483,362; Feb. 12.
Watch, Silent-alarm wrist. R. Bickerton. 1,483,768; Feb. 12.
Water heater. R. J. Hutchins. 1,483,090; Feb. 12.
Water heater and steam generator, Combined. A. H. Kohlmeyer. 1,483,227; Feb. 12.
Water heater, Electric. G. H. Van Noy. 1,483,534; Feb. 12.
Water-power device. J. R. Bradshaw. 1,483,505; Feb. 12.
Water wheel, Overshot. W. O. Williams. 1,483,705; Feb. 12.
Weigher, Liquid. W. E. Turner. 1,483,397; Feb. 12.
Weight indicator. H. W. Fletcher. 1,483,426; Feb. 12.
Welding and operating the same, Apparatus for. H. D. Morton. 1,483,612; Feb. 12.
Wheel: *See*—
Caster wheel. Resilient wheel.
Disk wheel. Vehicle wheel.
Gear wheel. Water wheel.
Wheel. L. J. Perkins. 1,483,478; Feb. 12.
Wheel lock. J. W. Shepard. 1,483,687; Feb. 12.
Wheel-rim connecter, Extension. H. P. Patheal. 1,483,477; Feb. 12.
Windmill, Power. G. C. Halkias. 1,483,301; Feb. 12.
Window frames, Wall strip for. E. R. Perry. 1,483,851; Feb. 12.
Windshield screens. H. G. Donigan. 1,483,652; Feb. 12.
Windshields, Weatherstrip for motor-vehicle. M. R. Hull. 1,483,305; Feb. 12.
Wire reel. D. B. and P. D. Beavers. 1,483,766; Feb. 12.
Wire reel. D. B. Beavers. 1,483,765; Feb. 12.
Wire-rope-connecting means. J. D. McIntosh. 1,483,516; Feb. 12.
Wireless telegraphy, Antenna arrangement for. O. von Bronk. 1,483,860; Feb. 12.
Wires, Clamp for tie. J. R. Bullis. 1,483,213; Feb. 12.
Wool-combing implement. J. Vishloff. 1,483,495; Feb. 12.
Wool, Domestic device for winding and holding. A. E. Isted. 1,483,729; Feb. 12.
Work-holding apparatus. H. W. Tobey. 1,483,532; Feb. 12.
Work or tool holders, Centering device for. A. Kaegi-Treulin. 1,483,190; Feb. 12.
Wrapping machine. H. Rose. 1,483,681; Feb. 12.
Wrapping machines, Web tension mechanism for. H. A. Sevigne and F. K. Arnold. 1,483,555; Feb. 12.
Wrench: *See*—
Pipe wrench.
Wrench. M. Starc. 1,483,527; Feb. 12.
Wrench. A. J. Whitfield. 1,483,497; Feb. 12.
Wringer. O. T. Anderson. 1,483,265; Feb. 12.
Zinc chloride, Making. L. Rosenstein. 1,483,852; Feb. 12.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 12, 1924.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 50: 1,483,394
2— 54: 1,483,338
58: 1,483,230
61: 1,483,635
74: 1,483,702
79: 1,483,731
106: 1,483,226
1,483,626
122: 1,483,390
143: R. 15,757
4— 18: 1,483,392
112: 1,483,187
170: 1,483,663
203: 1,483,850
5— 38: 1,483,501
82: 1,483,607
8— 2: 1,483,519
5: 1,483,707
19: 1,483,263
10— 7. 2: 1,483,156
162: 1,483,144
167: 1,483,601
12— 1: 1,483,737
30: 1,483,093
40: 1,483,471
50: 1,483,124
88: 1,483,112
105: 1,483,096
128. 2: 1,483,085
15— 25: 1,483,476
111: 1,483,760
16— 2: 1,483,218
18: 1,483,598
46: 1,483,302
47: 1,483,284
172: 1,483,367
18— 2: 1,483,359
1,483,664
47. 5: 1,483,507
50: 1,483,856
78: 1,483,857
19— 115: 1,483,495
146: 1,483,708
20— 4: 1,483,365
1,483,366
22— 69: 1,483,550
165: 1,483,372
23— 3: 1,483,256
13: 1,483,197
1,483,463
1,483,567
1,483,852
21: 1,483,411
1,483,413
22: 1,483,637
28: 1,483,412
1,483,414
24— 60: 1,483,686
101: 1,483,363
123: 1,483,274
1,483,516
163: 1,483,853
191: 1,483,236
1,483,802
213: 1,483,188
227: 1,483,849
235: 1,483,801
238: 1,483,210
240: 1,483,536
245: 1,483,349
265: 1,483,357
25— 45: 1,483,513
131: 1,483,213
27— 17: 1,483,544
29: 1,483,286
28— 4: 1,483,134
29— 50: 1,483,208
85: 1,483,670
88. 3: 1,483,074
88. 4: 1,483,536
87. 1: 1,483,147
1,483,321
88. 2: 1,483,318
30— 1: 1,483,310
3: 1,483,661
10: 1,483,662
30— 20: 1,483,063
32— 9: 1,483,479
12: 1,483,781
13: 1,483,158
33— 93: 1,483,761
213: 1,483,242
34— 4: 1,483,343
6: 1,483,424
39: 1,483,757
36— 2: 1,483,782
50: 1,483,530
37— 33: 1,483,382
